a *Madam*, too alluring to be very seducing, for it warns off by a manifest design to make victims; but this beautiful She-Moloch is most attractive on canvas—there we can idolize her. The workmanship has a cleanness, the tone a pale bloominess (if we may so call it), rare in Sir Joshua's pictures, and precious whether rare or not. 'Earl Amherst,' No. 59, harmonized well on a neutral basis, exhibits no other remarkable character. 'Count Ugolino,' No. 48, links the portraiture and the poetic efforts of our artist together: Ugolino is plainly a face taken from life, and from low life, too. This, which stamps failure on its forehead, was the united fault of Reynolds and Burke, or Goldsmith, who persuaded the credulous painter, that a hired model's mendicant visage, sketched without purpose, had within it all the qualities befitting Dante's lion-lord in the toils, did or could represent the terrific poet's idealized conception of high-souled, yet heart-sunken dumb Vindictiveness and Incarnate Despair. Michaelangelo himself would have beaten his brain a little for features and forms to approach this combination. Sir Joshua's modesty (strange enough!) made him think his random sketch sufficient, because a scholar deemed it so, and hence the intense meanness of Ugolino's countenance, the condemned vagrant's look about his attitude, the very want of massive developement about his contours,—not traits sharpened by famine, but narrow by original structure—the very want of breadth in the treatment quite uncommon with Reynolds. Hair well frizzled and grizzled is poor amends for that pitiful, pining mouth; well-painted ghastliness, for those small grey eyes that seem to ask halfpence, not Heaven's vengeance, having still less grandeur of expression than of orbit. The Sons are ideal, yet as ill conceived, and as little noble or suitable; throughout this entire work we observe a defective imagination, which cannot hit the true distinction between purifying, exalting tragical terror and vulgar horror, or hitting it with the sense, cannot hit the means to render it perceptible. Reynolds was happier in works of Fancy than of Imagination: the 'Fortune-teller'* is much nearer perfection than 'Ugolino.' Nothing can exceed the vivid truth with which our artist delineates shame-faced maiden curiosity in a rustic girl, who half withdraws her head, but still holds forth her hand, listening to her marriage fate, and laughing as if her heart were tickled through her palm by what the wise woman told upon the latter. *Valentino* may have painted more *secundum artem*—he never thought so originally, nor threw lustre so lavishly over his canvas. Mr. Rogers's four pictures come next: they are, like his whole collection, choice, but his liberal exhibition of them at home has made them almost public treasure long since, and renders description superfluous; otherwise we could enlarge upon the incomparable 'Puck,' that quintessence of trickiness, that exquisite embodiment of Shakspeare's most fantastic sprite; he is a very bottle of *elixir vitæ*—restless fun from top to toe, unmalignant mischief personified; wantonnest laughter peeps through his eyes,—his little pointed satyric ears seem erect with animation: he balances himself in childish caprice, yet skilfully withal, on the mushroom, and waves a nosegay to show his utter indifference at its unsteadiness. Never was poet better illustrated by painter! 'Cupid and Psyche,' No. 44, Reynolds's first great piece of chiaroscuro, and the 'Sleeping Girl,' No. 3, perhaps his best, exhibit his peculiar talents for this magical operation. 'The Strawberry Girl,' No. 8, displays great freedom of pencil, and once displayed more splendour. Such indeed were his riches in the province of colour, that he seems as if he felt them a burthen, and got rid of them rapidly upon picture after picture. Look at Sir Robert Peel's 'Snake in the Grass,' No. 20; Reynolds might be almost accused of unthriftiness, from the prodigal accumulation of luxurious tints he has thrown there; the Nymph is a kind of Spring and Autumn together, revelling amidst the freshest and mellowest hues of each season. Look again at the 'Infant-Academy,' No. 21; its masses of colour resemble wedges of gold, prodigious rubies, sapphires, emeralds, and other jewels, molten into one plate, and suffered to cool. Mark the large style of the flower-bunch, set here through exuberance of imagination, not through desire to make a vast point by pink posies—the ne-plus-ultra of a modern fancy-monger's invention. Lord Palmerston sends this picture, and Lord Aylesford another, the 'Sleeping Child,' No. 39, bright enough to give a *coup-de-soleil;* seriously, it would kill—annihilate, any picture near it, save one of Sir Joshua's own. No. 57, 'Innocence,' might stand beside it without peril, for this, which represents a single cherub-girl in white, looks as if the beams of a noontide sun had been collected by some huge, powerful lens, into one focus, and thrown upon the figure. It belongs to Mr. Jeremiah Harman. Lord Lonsdale's 'Robinetta,' No. 1, is not what it was; the portions of richest colour have melted into a paste, perhaps oftentimes from their very richness: still it retains great beauty. We had no leisure to discuss the sentiment of these pictures, nor indeed wish, for they possess little or none; splendour and luminous effect were their aim, which they fulfil without gaudiness or glare. 'Lady Hamilton as a Bacchante,' No. 34, has pretensions to both sentiment and colour; the mythologic spirit is somewhat mistaken, notwithstanding Sir William's classical help, and her ladyship looks more of a Neapolitan vintage-girl than a Bacchante; call it *La Vendemmiatora*, and its claims are undeniable; the colour, though beautiful, was better before it suffered restoration, which made one black clot of the clouds, and be-varnished the hair, till it shines like a Hottentot's unctuous head-dress. Will collectors never be on their guard against ignorant, sacrilegious picture-cleaners? Almost every picture here, as well as Mr. Chamberlayne's just mentioned, has been defiled by their cleanings. They have either scrubbed off a beauty, or rubbed on an abominable compost of their own. 'Doctor Newton,' No. 32, for instance, seems to be flayed alive, so raw is the surface of his portrait; 'Lord Camden,' No. 23, also; whilst the 'Infant Academy' has endured positive desecration—we can call it no less—at the hands of some uncrucified malefactor, entitling himself a *restorer!* We must not conceal, however, that Reynolds's original materials were often of a perishable nature, or ill compounded, or negligently or empirically used. "Contemplation's" neck is cracked across, like a dry clay statue's; this comes of the painter's own unhandiwork! Various other pieces are fractured, blistered, plastered, chilled, faded, blackened, or otherwise so injured, that visitors have rather many fine mouldering remains to admire than any complete fabric. They should make all due allowance, therefore, and judge of these pictures as of noble edifices half dilapidated. A terrible mildew has fallen upon the 'Piping Boy,' Sir Joshua's sweetest work, and blighted its beauty of tint altogether; this painted pastoral, it is true, was always in a quiet tone, accordant with its peaceful theme and gentle action; no tumultuous contrasts of colour were here to disturb the eye more than the shepherd's simple notes would the ear, but a broad placid radiance spread amidst the shadows, and told of solitudes far remote, where Heaven's beneficent smile threw light enough of joy on the Minstrel's loneliness. Reynolds had a more poetic spirit than his profound good sense implies. Sir George Phillips possesses the picture. What shall we say of 'Garrick between Tragedy and Comedy'? What, except that which every discriminating person must declare it—a splendid misnomer? It is Garrick without any dramatic air about him, between a lovely, gamesome, sylphlike girl, and a sour-faced curtain-lecturer in her nightrail. As to the admixture of allegory and reality, we care little for it—that has highest names to authorize it—and, however indefensible, would be unimportant if poetic truth and appropriate character were preserved. Excellent painting, and the glories of colour, will always make this picture a cynosure, despite its defects: Mr. Angerstein sends, likewise, the 'Portrait of John Julius Angerstein,' No. 41, a good, plain work. No. 5, 'Death of Cardinal Beaufort,' errs, we think, in the same way as 'Ugolino,' and worse; it mistakes the *frightful* for the *fearful;* still it reads an impressive lesson against crime, and may be considered a most cogent "damnation sermon," which many persons deem the shortest way with the sinful. Its colour has great richness, and its tone a fine grand gloom suitable to the subject. Colonel Wyndham contributes other pictures—but we must have done; we must postpone the Third Saloon till next week.

* *Not* the Fortune-teller, properly speaking, a very different composition at Blenheim. It should be catalogued the 'Gipsy telling Fortunes.'

OUR WEEKLY GOSSIP.

On Monday last, the piece of plate subscribed for by the lovers of the national drama, as a testimonial to Mr. Macready of their appreciation of his merits, in the effort made for its restoration, was presented to that gentleman, by His Royal Highness the Duke of Cambridge, in the great room at Willis's; amid a throng of the patrons of the drama and of literature, the members of the committee under whose direction the memorial had been manufactured, and the members of his own profession. The subscription originated in a design to commemorate Mr. Macready's management of Covent Garden Theatre from 1837 to 1839; but the lapse of time and subsequent events have enlarged the ground of the memorial; and the proceedings of the meeting, on Monday, naturally let in, and added to the objects of the testimonial, the continuation of the same experiment, subsequently made, and just abandoned, at Drury Lane. Mr. Macready, in his reply to the address of the Duke of Cambridge, briefly touched on an accusation brought against him, he said, by "persons, whose thoughts, like 'the eyes of Mammon, are ever downward bent,'" and who considered that he had taken Covent Garden Theatre, from sordid motives. "Did I merit this reproach," said Mr. Macready, "the disappointment would have been most bitter; but although I have sustained some personal loss, I trust that the experiment to revive the taste for the legitimate drama was not wholly unsuccessful. I have been accused of having left too much to the mechanic's art, but I have merely endeavoured to furnish the stage worthily for the great poet whom we all honour." Mr. Macready still holds to the faith that his present failure rests less on the public than upon absurd restrictions beyond their direct control—in the removal of which they may, nevertheless, exercise a voice potential. He, therefore, resigns the contest, for the present, contemplating its future renewal—encouraged, as he says, "to hope that the cause will yet be triumphant in a well-regulated theatre," and satisfied that he has found sympathy sufficient to justify that hopeful view of its prospects. This memorial of the public approbation he of course accepts, as among the signs of that sympathy; and sees in the tribute to himself, under the circumstances, a pledge to the drama. In all this, we cordially concur, and rejoice—though our remarks of last week point at some of the ingredients which we think necessary to a "well-regulated theatre" at the present day.

The completion of a testimonial, of another kind of interest, was celebrated, on the same day, on the field of Chalgrove, where Hampden first unfurled his flag, and where also he died two centuries ago,—by the inauguration of a monument to the memory of that illustrious patriot and martyr. The surrounding counties had poured out their population to witness this tardy tribute to their hero:—and the memorial was dedicated by Lord Nugent, on the removal of the sail-cloth which screened it, with these few, but emphatic, words:—"May this monument last to all posterity, and remain undisturbed and honoured by our children's children!"—The following is the inscription on the pillar:—

"Here,
In this field of Chalgrove,
John Hampden,
After an able and strenuous
But unsuccessful resistance
In Parliament,
And before the Judges of the land,
To the measures of an arbitrary Court,
First took arms,
Assembling the voices of the associated counties
Of Buckingham and Oxford,
In 1642;
And here,
Within a few paces of this spot,
He received the wound of which he died
While fighting in defence
Of the free Monarchy
And ancient liberties of England,
June 18, 1643.
In the two hundredth year from that day
This stone was raised
In reverence to his memory."

A monument is about to be erected, by subscription, to the memory of the late Admiral Sir Sydney Smith, in the burial-ground of Père-la-Chaise. The subscription list contains the names of many of the officers and soldiers of the French army who served in Egypt—a sacrifice of national prejudice worthy of general imitation.—The Hollanders are preparing to

Digitized by Google

erect a monument at Amsterdam to the memory of Rembrandt.

On Thursday the Museum at King's College, London, was opened to the public, in the presence of H.R.H. Prince Albert and several noblemen and gentlemen. A Latin address was read by one of the students, and the national anthem was sung by Mr. Hullah's pupils in the school and college. Prince Albert apparently took great interest in the works of art, &c., which were explained to him by Professors Wheatstone, Daniell, and Cowper. A salute was to have been fired from the top of the shot tower, opposite Somerset House, by means of the galvanic battery; this however failed, through some fault in the arrangements.

The President of the Institution of Civil Engineers, instead of his annual conversazione, issued cards of invitation for two evenings, both of which were very fully attended. Several interesting models —among others was Mr. Cotton's invention for weighing sovereigns—were displayed in different parts of the rooms. The upper room was lighted by gas chandeliers, the burners of which were inclosed in glass globes, on Prof. Faraday's principle of ventilation, by carrying off the noxious products of combustion. In the lower rooms Defries's dry gas meter was exhibited by a meter formed entirely of glass. On the second evening, Prince Albert, the Duke of Wellington, and a large party of noblemen and gentlemen, were present.

On Monday, Prince Albert, the new President of the Society of Arts, presided at the distribution of the prizes awarded by the Society to the individuals to whom they had been adjudged. The Society, from the time of its foundation, has disbursed more than 100,000*l.* in rewards; and among many eminent men who received its medals, are mentioned Sir T. Lawrence, Nollekens, Flaxman, Ross, Landseer, and others.

The American papers announce the death of Noah Webster, in the eighty-fifth year of his age. He is best known on this side of the Atlantic as the author of a very copious English dictionary.

The Exhibition on Saturday last, at Chiswick, was one of which the Horticultural Society has just reason to be proud. It was not merely the beauty of the plants themselves—it was not the glorious bank of Orchidaceæ, one hundred feet in length, unmatchable in the world, or the infinite variety in the beautiful groups of heaths,—it was the consummate skill, manifest in the cultivation of all, that most excited astonishment and admiration. It is indeed impossible to believe that it can be carried to much higher perfection. The day, considering the season, was, on the whole, favourable, and more than 11,000 persons were present.—We have great pleasure in being able to announce that the Duke of Devonshire, the President of the Society, has signified his intention to throw open the beautiful gardens and grounds at Chiswick to the visitors, at the next, the last Exhibition for the season, which is to take place on the 12th of July.

The committee formed at Munich in aid of the funds for the completion of the cathedral at Cologne, have collected the sum of 28,495 florins for the present year. It has been arranged that the Bavarian contributions shall be applied to the completion of the northern transept, and the north side of the nave. The King of Prussia devotes 50,000 thalers per annum to the southern side, and 10,000 to the chief entrance. The temporary roof has already been removed, and gigantic scaffoldings, both inside and outside the cathedral, show that the work has commenced in earnest.—The King of the French has given Horace Vernet a commission to paint a picture representing the taking of Warsaw, for which he is to receive 200,000 francs.—A medal in gold has been struck at Milan, by Luigi Costa, with a portrait of Mdlle. Taglioni; and is to be presented to her by several of her admirers;—while the Emperor of Russia has invited M. de Klenze, the Bavarian architect, to St. Petersburgh, to consult him with regard to some new buildings designed to decorate the capital of the Czars.

The Neapolitan sculptor, Persico, has just completed a marble group, the execution of which was intrusted to him by the Congress of the United States. It is destined for the Capitol at Washington, and consists of two figures, one of Columbus, the other of an Indian woman, turning away from him, with a look of shy curiosity. It is spoken of in Naples as a work of great merit.—The Danish papers mention that the collection of pictures and marbles belonging to Thorwaldsen has been opened to the public at Copenhagen. It is rumoured that the whole collection is to be presented to the city after the sculptor's death—an event, we trust, still far distant.

The meeting at the Mansion House, on Saturday last, of the Committee for the City Memorial to the Duke of Wellington, did not decide the question as to the appropriation of the surplus metal accruing from the government grant. The claims of the rival West-end Committees led to a somewhat sharp debate: and has given rise to some discussion in the papers, to which we may hereafter advert.

We have but a line to mention the Second Choral Meeting, conducted by Mr. Hullah, which was held on Wednesday evening, and was honoured by the presence of H.R.H. Prince Albert. The performances were most satisfactory; and Lord Wharncliffe's announcement, in a brief address delivered at the close, that the singing classes are about to have a hall of their own, is not less so, as arguing stability and prosperity to an undertaking which is in every way worthy.

The removal of the Records of the Lord Treasurer's Remembrancer of the Exchequer, and of the Pipe Office, from the vaults in Somerset House to the Branch Office at Carlton Ride, has been going on recently. The removal, we understand, is likely to occupy some weeks, and to bring to light many records of value and antiquity.

The large work on the Etruscan Museum Gregorianum, published at the expense of the Pope, has at last appeared in two volumes folio, containing upwards of two hundred plates. It was reported to be finished more than a year past, but it seems that a thorough revision and material alterations were found necessary. The author of the descriptions is Achille Gennarelli.—A letter from Nice, of the 27th March, announces that an artist named Iller has succeeded in obtaining daguerreotypes with all the colours of life, the rapidity of taking them being undiminished.

The French papers mention that M. Botta, the French consul at Mossoul, commenced, twelve months since, making excavations on the site of the ancient city of Nineveh, situated on the Tigris, opposite the present town of Mossoul. The walls are still traceable, as also some huge piles of bricks, which served as foundations of the palace of the kings of Assyria. In one of the piles he found the remains of a palace, the walls of which are covered with bas-reliefs and inscriptions in cuneiform characters. This is the more important, as no sculptured Assyrian monuments have been hitherto discovered. The Government has sent M. Botta a sum of money to forward his undertaking.

We learn, by letters from Odessa, that the medical commission, sent by the Russian government into Egypt, had sent home a report, in which they state, that the experiments applied to the purification of objects infected with the plague, by means of caloric, have been entirely successful; and express the hope that they shall establish, by further experiments, the efficacy of the same agent as a specific means of destroying the miasma.

Our attention has been called to a somewhat equivocal assertion in an article on Classed Catalogues, in the last *Quarterly*, in which it is stated, with reference to a Catalogue lately published by the Royal Society, that there is no mention therein of five works, heretofore in the library, and among the most remarkable of its treasures, viz. "three books printed on vellum, which formed part of the Howard library," a Dante of 1472, and an Aldine Dante of 1502. This is true enough, and those who prepared the Catalogue could perhaps explain these and other omissions; but for the satisfaction of a correspondent, we have ascertained that the books themselves are still in the Library.

We mentioned last week, that we were somewhat startled by an "audacious piracy" which figured in the programme of Miss Binckes's concert, where a song, 'The Letrilla,' written by Lady Blessington, and long since quoted in this Journal, was described as, "*The words by Samuel Mullen, Esq.*, the music by William Aspull." In consequence, we have received a letter from Mr. Mullen, the purpose of which is "not to claim but to disclaim."

"I am not the author," says Mr Mullen; "I have no pretensions of the kind. My name being used has occurred without my previous knowledge, and consequently without my consent. The simple truth is this, that Mr. Aspull called on me a week or ten days previous to Miss Binckes's concert, and told me of a song he had written and set, which she was to sing, and observing that he could not get the words to please him, he wished me to throw them into a better shape. On looking them over I found the measure irregular, and as the music was already set, I judged it necessary to retain it in the same form.

Well then, Mr. Mullen is morally acquitted; but the "audacious piracy" remains, and how are we to characterize the conduct of his friend, Mr. Aspull?

The meeting of the British Association will take place on the 17th of August.

ROYAL ACADEMY OF ARTS, TRAFALGAR SQUARE.
The EXHIBITION of the ROYAL ACADEMY is NOW OPEN. Admission (from 8 o'Clock till 7), 1s. Catalogue, 1s.
HENRY HOWARD, R.A., Sec.

The THIRTY-NINTH ANNUAL EXHIBITION of the SOCIETY of PAINTERS in WATER COLOURS at their GALLERY, PALL MALL EAST, WILL CLOSE on SATURDAY, July 15. Open each Day from Nine till Dusk. Admittance, 1s.; Catalogue, 6d. R. HILLS, Secretary.

The NEW SOCIETY of PAINTERS in WATER COLOURS.—The NINTH ANNUAL EXHIBITION of this Society is NOW OPEN, at their GALLERY, 53, PALL MALL, next the British Institution, from 9 till Dusk, daily. Admittance, 1s. Catalogue, 6d.
JAMES FAHEY, Secretary.

DIORAMA, REGENT'S PARK.
JUST OPENED, with a NEW EXHIBITION, representing the CATHEDRAL of NOTRE DAME at Paris, with effects of Sunset and Moonlight, painted by M. REMOUX, and the BASILICA of ST. PAUL, near Rome, before and after its destruction by Fire, painted by M. BOUTON. Open from Ten till Five.

AERIAL NAVIGATION.—ROYAL POLYTECHNIC INSTITUTION.—A LECTURE on this subject, illustrated by MODELS of several kinds, which elevate themselves by MECHANICAL FORCE alone, is delivered at Two o'Clock daily, and on Monday, Wednesday, and Friday Evenings, at Eight o'Clock. The Exhibition of the COLOSSAL ELECTRICAL MACHINE, the DIVER, DIVING BELL, NEW DISSOLVING VIEWS, and the other varied and instructive Objects of the Institution, continue as usual. The original CRAYON DRAWINGS, from the CARTOONS at HAMPTON COURT, by the late Mr. Holloway, with numerous other WORKS of ART, have recently been placed in the Gallery.—Admission, One Shilling. Schools, Half-price. Open Mornings and Evenings, except Saturday Evening.

SCIENTIFIC AND LITERARY

ROYAL SOCIETY.—Colonel J. Lecouteur, G. Bassevi, J. Tulloch, J. M. Arnott, Esqrs., and S. E. Hoskins, M.D., have been elected into the Society.

The President informed the Meeting that the Council had voted an Address of Condolence to Her Majesty the Queen, on the occasion of the demise of His Royal Highness the Duke of Sussex.

The following papers have been read:—

'Variations de la Déclinaison et Intensité horizontale magnétique observées à Milan pendant vingt-quatre heures consécutives le 22 et 23 Mars, et le 19 et 20 Avril, 1843,' par F. Carlini.

'Note regarding the Observations of T. W. Jones, Esq., 'On the Blood Corpuscles,' by M. Barry, M.D.

'Experiment on the Gas Voltaic Battery, with a view of ascertaining the rationale of its Action and on its application to Eudiometry,' by W. R. Grove, Esq.

'Contributions to Terrestrial Magnetism,' No. IV., by Lieut.-Colonel Sabine, R.A.—In the present number of these contributions, the author resumes the consideration of Capt. Sir Edward Belcher's magnetic observations, of which the first portion, namely, that of the stations on the north-west coast of America, and its adjacent islands, was discussed in No. 2. The return to England of H.M.S. *Sulphur*, by the route of the Pacific Ocean, and her detention for some months in the China Seas, have enabled Sir Edward Belcher to add magnetic determinations at thirty-two stations to those at the twenty-nine stations previously recorded.

'Meteorological Journal, from January to April inclusive, 1843, kept at Guernsey,' by S. E. Hoskins, M.D.

'On the Respiration of the Leaves of Plants,' by William Haseldine Pepys, Esq.—The author gives an account of a series of experiments on the products of the respiration of plants, and more particularly of the leaves; selecting with this view, specimens of plants which had been previously habituated to respire constantly under an inclosure of glass; and employing for that purpose the apparatus which he had formerly used in experimenting on the combustion of the diamond, and consisting of two mercurial gasometers, with the addition of two hemispheres of glass closely joined together at their bases, so as to form an

Digitized by Google

air-tight globular receptacle for the plant subjected to experiment. The general conclusions he deduces from his numerous experiments, conducted during several years, are, first, that in leaves, which are in a state of vigorous health, vegetation is always operating to restore the surrounding atmospheric air to its natural condition, by the absorption of carbonic acid and the disengagement of oxygenous gas: that this action is promoted by the influence of light, but that it continues to be exerted, although more slowly, even in the dark. Secondly, that carbonic acid is never disengaged during the healthy condition of the leaf. Thirdly, that the fluid so abundantly exhaled by plants in their vegetation is pure water, and contains no trace of carbonic acid. Fourthly, that the first portions of carbonic acid gas contained in an artificial atmosphere, are taken up with more avidity by plants than the remaining portions; as if their appetite for that pabulum had diminished by satiety.

Asiatic Society.—The 20th Anniversary Meeting was held on the 10th inst., to which day it had been postponed from the 13th of May preceding, in consequence of the death of the President.—The Right Hon. Sir A. Johnston took the chair.—The Report opened with an expression of sorrow at the loss of their late President, who had so soon followed his predecessor, the Earl of Munster. The deaths of the Duke of Sussex and the Marquis Wellesley, two of the Vice-patrons, were then adverted to. Amongst the losses by death of the Society during the present year were, the extraordinary Hungarian Oriental scholar, Csoma Körösi; the Tamil scholar, the Rev. Robert Anderson; Capt. Conolly, whose murder at Bokhara there appears unhappily little reason to doubt; Sir William Ouseley; the celebrated Hebraist, Gesenius; and Gonzalves, the retired Sinologist of Macao. The contents of the Society's forthcoming Journal were then adverted to. Among other papers, mention was made of the translation from the Persian, by H. H. Wilson, Esq., of the Travels of Mir Izzet Ullah, a native of India, in the employ of Moorcroft, who had succeeded in reaching Yarkand, in the Chinese Empire, which, it appears, no modern European traveller had ever visited. This translation had appeared in an Indian periodical; but as such publications are with difficulty procurable, and, in fact, almost unknown in Europe, the Council had resolved, that in case of valuable papers, which had been thus printed, but, as far as Europe is concerned, not published, the rule of never printing anything that had appeared before should be rescinded.—Some details were then read, of the proceedings of the Oriental Translation Committee. Since the last annual meeting, they had published the 'Sama Veda,' translated by Dr. Stevenson (*Athen.* No. 782); the 'Popular Poetry of Persia,' by M. de Chodzko (*Athen.* Nos. 775—779); the first volume of 'Ibn Khallikàn's Biographical Dictionary,' by the Baron Maeljuckin de Slane, and the 'History of Hyder Ali,' by Col. Miles (*Athen.* No. 785). The announcement was also made of some valuable Biographies of Persian Poets, translated from original sources by Sir Gore Ouseley, who had in his possession a complete, and, in many cases, exclusive, collection of similar works. The publication of the text of the 'Sama Veda,' and that of the 'Theophania of Eusebius,' and of the 'Kítab Tahzib al Asmá,' by the Oriental Text Committee, was also announced. When the report was finished, and the financial details had been gone through, it was moved by Sir G. Staunton, seconded by the Right Hon. Holt Mackenzie, and carried unanimously, that the Earl of Auckland should be elected President. The following gentlemen were elected into the Council in the room of those who went out by rotation:—The Marquis of Lansdowne, J. Ewing, Esq., Sir G. G. de H. Larpent, Bart., Sir J. L. Lushington, Major J. Oliphant, Dr. J. Phillimore, J. Sullivan, Esq., and Major Sir H. Willock.—The officers of the preceding year were re-elected.

Statistical Society.—*June.*—The Right Hon. Lord Ashley, M.P., President, in the chair. Two Fellows were elected. The Fifth Report of the Education Committee of the Society was read. The committee appointed to inquire into the state of education in the metropolis have completed their examination of schools and scholars in the cities of London and Westminster, in the boroughs of Marylebone and Finsbury, and in the lower parts of the Tower Hamlets: the survey of the parishes of Bethnal Green, Spital Fields, and Shoreditch is postponed, in consideration of the changes which are taking place in the ecclesiastical divisions, and consequently in the educational statistics of those parishes.

A second paper was read by Professor Guy, 'On the Influence of Employments upon Health.' The materials from which this paper was compiled, were obtained from the registers of the out-patients of King's College Hospital, and comprised upwards of 3000 individuals, all engaged in various occupations. A series of elaborate Tables accompanied the paper, showing the different diseases to which males and females had been subject, from which the author arrives at the following conclusions. In females, the ratio of cases of pulmonary consumption, to those of all other diseases, is highest in those following sedentary employments, less in those having mixed in-door employments, and least in those occupied out of doors. The highest ratio occurs in the case of females whose habits of life are irregular. In men, the ratio of cases of pulmonary consumption to those of all other diseases is somewhat higher in those following in-door occupations, than in those working in the open air. The ratio of cases of pulmonary consumption to those of all other diseases in the case of men following in-door employments varies inversely as the amount of exertion, being highest where there is least exertion, and lowest in employments requiring strong exercise. Neither a constrained posture, nor exposure to a high temperature nor a moist temperature appear to have any marked effect in promoting pulmonary consumption. The ratio of cases of pulmonary consumption to those of all other diseases, is highest in the case of men whose employments expose them to the inhalation of dust, there being, in persons so employed, two cases of consumption, for less than three of all other diseases. The ratio is also high in the case of persons addicted to habits of intemperance, there being two cases of pulmonary consumption to five of all other diseases. The age at which pulmonary consumption makes its attack varies with the employment, being earlier in those occupations characterized by a high ratio of consumptive cases. Thus it is earlier in those following in-door occupations than in those employed in the open air, and in those using little exertion than in those using much. It also occurs very early in those who indulge in intemperance, and in those whose occupations lead to the inhalation of dust. The practical rule to be deduced from the preceding observations, is, that those persons who have an hereditary tendency to consumption should make choice of occupations which are carried on in the open air, and that if they are obliged to choose some in-door employment, it should be one requiring strong exercise, and that they, more than others, should avoid exposure to dust and habits of intemperance.

The President announced that this would be the last meeting that the Society would hold in the present apartments, and that in the course of a week, the Society would move to more commodious premises at No. 11, Regent Street, near Waterloo Place.

Institution of Civil Engineers.—*June* 13.—A paper was read from Mr. G. Hurwood, describing the method by which he got rid of an accumulation of water from the warehouses, cellars, &c. in the lower levels of the town of Ipswich, caused by the formation of the new dock at that port. The communication was accompanied by a plan showing the dock and part of the town, together with several tide flaps, valves, drain-boxes, &c. The paper describes a combination by which the sewers become reservoirs, so that a continual free discharge is secured although the tide rises far above them; the outlet for a considerable period of time prevents any discharge. The method was designed and executed by the author, and has been in operation for a considerable time.—A paper from Mr. Thorn, on the formation of Embankments for reservoirs to retain water, was read. After describing a model designed to show that the proper slope of such embankments should not be less than 3 to 1 on the water face, and remarking that waves act more severely on the pitching or paving of the inner face in proportion to the steepness of the slope, the author proceeds to describe in detail the mode of forming embankments by excavating the foundation to such a depth as was found firm and capable of preventing the passage of water, then by spreading alternate layers of puddled peat or alluvial earth and gravel, beating them together with wooden dumpers until they are completely mixed; the slopes are covered with a puddle made with small stones or furnace cinders mixed with clay, so as to prevent the possibility of moles or other vermin penetrating into the embankment. He condemns the practice of forming embankments with puddle trenches, and refers to many made by him at Greenock, Paisley and elsewhere, having remained firm and having stood the test of time without paving them, and particularly mentions one at Greenock, sound after a rush of water passing over it a height of ten feet caused by the breaking down of another embankment situated about one hundred and fifty yards above it. He recommends instead of the puddle trenches that the whole of the inner part of the embankment should be made water-tight during the formation of it, by which means it will more effectually resist either any casual injury or any effect of the swelling of the puddle trench. The paper was entirely of a practical nature, and was intended to illustrate the author's peculiar views, founded on experience.

A paper by Mr. J. Faraday was read, containing a description of his new mode of obtaining ventilation of lamp burners (see *ante*, p. 394).

June 20.—Among the numerous presents announced, was particularly noticed another contribution of books, selected by Mr. R. Young, from the library of his brother, the late Dr. Young, and a gauge for measuring a small amount of pressure of gas, &c. by Mr. A. King: this machine appeared simple, accurate, and not liable to get out of order.

A paper by Mr. J. Taylor, describing a machine for raising and lowering the miners in the deep mines of Cornwall. It is composed of two wooden rods, with platforms fixed at given distances upon them, and placed either vertically or following the inclination of the vein, as is the custom for the shafts in tin and copper mines. These rods receive an alternating motion from a steam-engine, and at the moment of pause caused by the crank passing over the centres, the men step from one platform to another, and thus either ascend or descend in the pits without fatigue. By the usual mode of arriving at or leaving their labour, the workmen are exhausted, traversing ladders to the depth frequently of more than 200 fathoms, and their health has been found to be severely injured. This machine has been successfully at work in the Tresavean mines upwards of a year, and its use will, it is hoped, be soon extended.

A short description was then read, of an annular valve constructed by Mr. Hosking, and said to be in use with advantage at the Vauxhall Waterworks, and attached to some large engines for draining fens.

A paper by S. C. Homersham, described the original leather flap valves generally used for pumps, their defects, and the modifications which had been introduced in them. It then gave the reasons why the self-acting double-beat valve of Messrs. Harvey and West needed some alterations for certain peculiar situations, and then described the three-ring pyramidal valves which had been introduced by Mr. Simpson at the Chelsea, Lambeth, and other waterworks. It was stated, that by increasing the area for the passage of the water, and properly proportioning the weight of the valve-rings, so that they should close before the engine returned upon its stroke, according to a rule which was given, all the concussion formerly objected to in the valves was done away with, and their durability was materially increased. The paper entered fully into the details of the construction of the valves and their qualities. The subject was illustrated by drawings and models.

At the last monthly ballot the following gentlemen were elected:—Messrs. R. B. Dockray and R. Baldas, Members; and Messrs. J. Zohrab, A. Liddell, W. Llewellin, jun., B. Sörenson, W. Alcard, W. H. Hatcher, A. H. Roosmalecocq, H. L. Renny, A. J. Dodson, and J. Hauser, as Associates.

Horticultural Society.—*June* 6.—Sir O. Mosley, Bart., in the chair. Viscount Howick, M.P., Lord Farnham, C. F. Bamford, Esq., W. Purling, Esq., H. M'Kellar, Esq., and Mr. Glendinning, were elected Fellows.—A communication from Captain

Digitized by Google

Hall, Berwick-upon-Tweed, was read, relating to a new vegetable, which it is considered easy to acclimate in the southern parts of England, and for which the climate of Britain is thought peculiarly suitable. The plant is a variety of some species of Aramanthus, possibly oleraceus, and is markedly distinguished by the milk-white appearance of its stem, branches, and leaf-stalks. As its excellence depends on the succulency and tenderness of its nature, it requires to be grown rapidly, so as to be fit for use at the age of a month or so; and this is effected by a rich light soil, abundance of moisture, and a high temperature; the latter may be carried occasionally as high as 90° in the day, and regulated at from 70° to 75° at night. It is rather impatient of much light. In India, it is grown to the greatest perfection during the rainy season, towards the end of June. A common melon frame is recommended to grow it in; and the plants grow from a foot to a foot and a half high. The seeds should be sown in rather shallow rich earth, and the part of the fermenting materials beneath the soil should be in a partially decomposed state, that the roots may penetrate into them. The plants may be pricked out, when young, at six inches apart, and require a slight shading in bright weather. The early part of the year is preferred for growing it. It is used as a vegetable in two ways. First, the leaves are plucked and dressed like spinach, when they are considered not inferior to those of any similar plant. Secondly, the stems and side-branches (being the white parts of the plant) are separated from each other, cut into proper lengths, boiled, and placed on toast, like asparagus, and eaten with meat, either with butter, sauce, or gravy. They are very like asparagus or sea-kale.—C. B. Warner, Esq., exhibited an ornamental wire basket, made of iron, and coated with zinc by the electro process. The object is to avoid paint, which soon peels off in hothouses, and to prevent rust. The cost of zincing is said to be about equal to four coats of paint.—Specimens of the Horn Slug were shown.

Medico-Botanical Society.—*June* 8.—A communication, by Dr. Houlton, 'On Roots and Leaves,' in continuation of his paper 'On the Preservation of Roots,' was read. Dr. Houlton observes, that on further consideration he is of opinion that all true roots of herbaceous plants should be dried in their entire state; and that probably bulbs and corms might be dried in the same way, if the rudiments of the new plants, with which they are furnished, be first removed. When roots are thus dried, their juices are not exposed to the action of the atmosphere, which is the case when they are previously sliced; and, for the same reason, Dr. Houlton employs the carefully dried and pulverized medicinal leaf in preference to extracts prepared from it. The leaves should be kept in a well-stoppered bottle, and secluded from the light, and only powdered in small quantities at a time, according to the consumption of the practice.—A paper, by Prof. Tenore, of Naples, on 'The Candidea, a new genus in the natural order Synantheraceæ,' was then read. The Candidea, named after a celebrated Neapolitan naturalist, is a perennial herbaceous plant; the root consists of a fasciculus of fusiform tubers; the stem is cylindrical, ramose, and in the form of a cyme; the leaves are alternate, and spirally arranged, dentate, lanceolate, and rugose; the inflorescence is disposed in corymbs. It flowers in October; the seeds mature slowly. The plant is a native of Senegal.

Linnean Society.—*May* 2.—The Bishop of Norwich, President, in the chair. M. A. Richard, and Prof. J. F. Schow, were elected Foreign Fellows. Dr. Salt was elected a Fellow, and Mr. Lanson an Associate.—A present of fruits, collected by Mr. Backhouse in his visit to Australia, was exhibited; amongst others were the fruits of a species of Cycas, of *Callitris pyramidalis*, *Guilandina Bonduc*, *Barringtonia speciosa*, &c. No paper was read.

June 6.—E. Forster, Esq., in the chair. T. Turner, Esq., and J. Tullock, Esq., were elected Fellows.—A pair of live Cameleons were exhibited by Dr. J. Brown.—A paper was read on the Ophiuridæ, a family of Star-fishes, from Prof. E. Forbes.—A paper was read, from G. Gardner, Esq., on a new genus of plants called Pentaphyllum. This genus was made by Mr. Gardner for a little plant, which is allied, in many of its characters, to the genus Triuris.

Ashmolean Society.—At a late meeting Dr. Buckland read some interesting letters detailing the discovery of the bones of a gigantic bird, which must have recently inhabited New Zealand, should it not be proved to be still an inhabitant of that colony. The first announcement of its supposed existence was conveyed in a letter from Mr. William Williams, dated February 28, 1842, in which he says, that hearing from the natives that an extraordinary monster inhabited a cave on the side of a hill near the river Weiroa, he was induced to offer a reward to any one who should produce either the bird, or one of its bones. In consequence, a large bone, but much worn, was soon produced; and shortly after, another of smaller size was found in the bed of a stream which runs into Poverty Bay. The natives were then induced to go in large numbers to turn up the mud in the bed of the same river, and soon brought a large number of bones, which proved to have belonged to a bird of gigantic dimensions. The length of the large bone of the leg is two feet and ten inches; they have been found a little below the surface, in the mud of several other rivers, and in that situation only. The bird to which they belonged is stated to have existed at no very distant period, and in considerable numbers, as bones of more than thirty individuals had been collected by the natives. Mr. Williams had also heard of a bird having been recently seen near Cloudy Bay in Cook's Straits, by an Englishman accompanied by a native, which was described to be not less than fourteen or sixteen feet in height, which he supposes to be about the size of the largest of those to which the bones belonged. Of these bones one case has already arrived, and a second is daily expected. A letter from Prof. Owen detailed the contents of the box, which has arrived; and from these fragments it was clear that they had belonged to the species of bird which the Professor had already described in the Zoological Transactions, vol. iii. from a fragment of a femur which he had received some time previous.

June 12.—Dr. Buckland exhibited a jaw of the common fossil species of elephant, and the jaw of a beaver, in a beautiful state of preservation. They were discovered in excavating on the Great Western Railway, in order to construct a bridge over the Avon, in the parish of Christian Malford, near Chippenham. Many other bones were dug up at the same spot, some imbedded in the bank and others in the mud at the bottom of the river. Dr. Buckland made a communication on other modes of locomotion than swimming in the family of fishes, and showed that the fins in certain genera performed the functions of feet and wings. Several fishes of the Lophius family, or "fishing frogs," have the fins converted into feet, or paddles, by means of which some species have the power of crawling and hopping on sand and mud, whilst the *Lophius histrio* can live three days out of water, and walk upon dry land. The climbing perch, *Perca* or *Anabas scandens*, of the Indian rivers, is known to live a long time in the air, and to climb up the stems of palm trees in pursuit of flies, by means of spinous projections on its gill covers. Fishes of the Silurus family have a bony enlargement of the first ray of the pectoral fin, which is also armed with spines, and this organ is not only an offensive and defensive weapon, but may also give ambulatory movements along the bottom of the fresh waters which these fish inhabit. The flying fishes are notorious examples of the conversion of fins into an organ of movement in the air. M. Deslongchamps has lately published in the Transactions of the Linnæan Society of Normandy, 1842, an account of his observations on the ambulatory movements of the Gurnard (Trigla) at the bottom of the sea. In 1839, he had an opportunity of observing these movements, in one of the artificial sea ponds, or fishing traps surrounded by nets, on the shore of Normandy. He saw a score of Gurnards closing their fins against their sides, like the wings of a fly in repose, and without any movement of their tails, walking along the bottom by means of six free rays, three on each pectoral fin, which they placed successively on the ground. They moved rapidly forwards, backwards, to the right and left, groping in all directions with these rays, as if in search of small crabs: their great heads and bodies seemed to throw hardly any weight on these slender rays or feet, being suspended in water, and having their weight further diminished by their swimming bladder. During these movements the Gurnards resembled insects moving along the sand; when M. Dealongchamps moved in the water, the fish swam away rapidly to the extremity of the pond; when he stood still, they resumed their ambulatory movement, and came between his legs. On dissection, we find these three anterior rays of the pectoral fins to be supported, each with strong muscular apparatus to direct their movements, apart from the muscles that are connected with the smaller rays of the pectoral fin.

Numismatic Society.—*June* 15.—The sixth Annual Meeting was held this day, the President, Prof. Wilson, in the chair. The Secretary read the Report of Council, by which it appears that the funds are more ample than at any period since its institution. Among the Foreign Associates whom the Society has lost by death are, M. Mionnet, Dr. Gesenius, and the Chevalier P. O. Bronstedt.—The ballot for officers then took place, when Lord Albert Conyngham was elected President; Prof. Wilson and C. F. Barnwell, Esq. Vice-Presidents; J. B. Bergne, Esq. Treasurer; H. W. Diamond, Esq. Librarian; and Messrs. J. Y. Akerman and C. R. Smith, Hon. Secretaries.

MEETINGS FOR THE ENSUING WEEK.

Sat. Asiatic Society, 2, P.M.
Mon. Geographical Society, half-past 8.
— Institute of British Architects, 8.
Tues. Institution of Civil Engineers, 8.—'On the present state of the Streets of the Metropolis, and the importance of their amelioration,' by C. Cochrane.—'On the relative merits of Granite and Wood Pavements, and of Macadamized Roads,' by D. T. Hope.—Description of the large 'Auger,' or 'Miser,' used for sinking wells through difficult Strata, by F. Clark.—Description of a Roof erected at the Chartered Gas Company's Works, Westminster, by F. T. Evans.—'On the Pressure and Density of Steam, with a proposed new Formula for the relation between them, applicable particularly to Engines working with high pressure steam expansively,' by W. Pole.
— Zoological Society, 8.—Scientific Business.
Thurs. Medico-Botanical Society, 8.

FINE ARTS

NEW PUBLICATIONS.

Amidst the host of new publications continually issuing from the great manufactories of "works of art," and bearing the brand of trade upon them, we occasionally find a venture proceeding from the workshop of the solitary craftsman, to whom it has been not the less a "labour of love," because he must needs look to the encouragement of the discriminating few to recompense him for the time and expense bestowed upon its production. Towards all such works we feel a partiality, which, it should be confessed, predisposes us in their favour, making us "to their merits very kind, and to their faults a little blind": they seem to be real things among a multitude of shams, and their genuineness atones for their homeliness. To this class belongs Mr. F. C. Lewis's volume of studies from the *Scenery of the Devonshire Rivers*,—"painters' etchings" in the true sense of the term, for Mr. Lewis is not only an engraver, unsurpassed for the fidelity and artistic feeling and skill of his fac-similes of sketches, but a landscape painter of original talent. The union of these qualifications is strikingly apparent in these 'Studies in Devon,' which recall to mind the etchings of Rembrandt, without suggesting the idea of imitation. Mr. Lewis has evidently studied Nature with the devotion of a true artist, and he has rendered her various aspects, in light and shade, with the freedom and daring of one who trusts to the soundness of the principles on which he proceeds for ensuring the success of the means in attaining his end; this being, as he expresses it in his introductory remarks, to exemplify "the truths both of art and Nature," which he believes are contained in the pictures from which he has made these engravings. The main principle he thus sets forth:—"Convinced that Nature, as a whole, is to be represented, he has been regardless of minute detail; aiming solely at the impression, the character of the scene, and for which alone he considered it a fit subject for representation." The whole of the 'Introduction' is worthy of attentive perusal; and though we may think that Mr. Lewis's pictures do not demonstrate the application of his theory so completely as could be desired, his etchings are convincing as to its validity. River scenery is the most rich in picturesque beauties of any, for besides including water—that element without which landscape wants one of its most charming features—it commonly includes rock and foliage, dell and plain, the stately pile and the rustic mill, the arched bridge and the

Digitized by Google

simple stepping-stones, among its attractions. The rivers of Devonshire are fertile in these and other local characteristics, presenting greater varieties and of a more pleasing kind than those of many English counties. The Tay, the Tamar, the Tavy, and the Dart, furnish the greater number of subjects; though the town and castle of Okehampton, a romantic glen, and a mill embedded in trees on the Okement, attest its claims to pictorial attention. The Swiss Villa and grounds of the Duke of Bedford, and the grounds of Cotele, on the Tamar, Dartmoor, Holne, and its neighbourhood, and Buckland Rock on the Dart, are points that the pencil has made familiar to many who have never visited the places. Various are the atmospheric effects under which Mr. Lewis has presented the scenes: rain clouds, with gleams of light, being necessarily the most frequent in so moist a district, the reflections have that peculiar depth and lustre which a stream fresh from a shower exhibits, and the twilight partakes of the mellow tone that enriches its sombre hues, melting, by insensible gradations, the golden tinge of sunset into the vaporous gloom of darkness. The combination of aquatint and mezzotint grounds with etching has enabled the artist to vary the quality of his chiaroscuro, so as to suit a particular effect, and the sameness and scratchiness of mere etching is thus avoided.

Of a very different character and interest are the *Views on the Nile from Cairo to the Second Cataract, from sketches taken in the years* 1832-3, by Messrs. Owen Jones and Jules Goury. These are tinted lithographic sketches of the wondrous monuments of all ages and character, scattered over the old Nile borders, varied by a few specimens of Egyptian landscape. The tinting of these drawings is in fine artistic feeling, and powerfully increases the sombre magnificence of the giant ruins. Of all the wonders, whether of history, religion or arts, which that strange land presents, some of these ancient monuments are, perhaps, the most marvellous. Their vast proportions, (and placed as they are in immense deserts, nothing but such vastness could rescue them from insignificance,) combined with that marking characteristic, their perfect repose, give us an idea of solidity, grandeur, and majesty, such as no other architecture on earth can suggest. They seem to be memorials of another world, when mammoths and behemoths were clothed with flesh, as living denizens of the earth—when everything was on a gigantic scale. The accompanying descriptions are by Mr. S. Birch, of the British Museum; who adds to the researches of Champollion, Vyse, Wilkinson and others, the resources of his own hieroglyphical knowledge, that wonderful acquirement which has given us a nearer aquaintance with Egyptian history, than ever Greek or Roman traveller possessed. Among the more interesting engravings are the views of Cairo with its quaint and curious houses, and its stately minaret: the bridal procession, and the shopkeeper enjoying a *dolce far niente* with his grave face and long pipe, add to the spirit of the scene. The *Mosque of the Sultan Hassan* is a fine specimen of Arabic architecture of the 14th century, forming a strange contrast to the calm and massive forms of ancient Egyptian remains. Among the latter we have the *Pyramids of Geezeh*, standing alone in the vast desert, and the *Sphinx* with its huge, yet mild and unruffled Nubian features. The temples of Denderah, Karnak, and Philœ, perhaps, surpass all others in grandeur. Their lofty columns surmounted by grave Sphinxes, or by the leaves of the lotus, the papyrus, or the doum palm, look as though time could not affect their tremendous proportions. We have, besides these, the remains of Koom Ombos, a work of the Ptolemies,—the statue of Memnon, with 72 inscriptions attesting its miraculous powers; (among the names of the witnesses are those of Germanicus and Adrian), and as a softer scene, *The Landing Place at Philæ*, whose elegant little temple, built probably in Trajan's reign, peeps from behind a clump of palm trees, and forms a pretty landscape, which looks quite a stranger in this land of sands and deserts. We can only repeat of this beautiful work, that it is full of interest, and admirably executed.

A formidable volume of outlines—*The Paradise Lost of Milton translated into Fifty-four Designs*, by J. J. Flatters, sculptor—has been submitted to our notice, and has received very careful attention, in the hope of discovering some good quality besides that of indefatigable industry, which this attempt to render the poet's ideas in a graphic shape certainly exhibits, but we have not been able to discern either corporeal or spiritual beauty, originality or propriety of conception, skilful grouping or correct drawing, in these designs. Whether Mr. Flatters be a native of the Netherlands or not, his figures, both mortal and angelic, male and female, are decidedly of the Dutch build, the gravitating tendency of structure in the falling angels being equally conspicuous in the spirits of light; neither are they correctly drawn according to these squat and bulbous proportions, though the defects of drawing may be ascribable to the engraver, F. P. Becker; indeed, some of them are so glaring, that no "sculptor" of ordinary experience could have fallen into such obvious errors. The most conspicuous instance of bad drawing is the figure of Satan invoking the hosts of hell. The burning words "Awake! arise! or be for ever fallen!" never were put into the mouth of so impotent a form as here is supposed to utter them; and the grisly shape of Death, "if shape it could be called that shape had none," was never so theatrically embodied,—not even by West in his 'Death on the Pale Horse': Satan has neither malignity nor sublimity of aspect; Eve neither grace of form nor beauty of feature; in a word, the designs of Mr. Flatters are alike devoid of natural character and poetic feeling.

The Hon. Miss E. Eden's sketches, the exhibition of which we noticed a few weeks since, are in course of publication, and the first of the four parts has just appeared under the title of *Portraits of the Princes and People of India*. The drawings are lithographed, with tint and white lights, by Mr. Lowes Dickinson, who has shown himself, by the skill and spirit with which he has rendered the coloured sketches into the neutral tints of lithography, one of the first figure draughtsmen on stone. The Part contains six subjects, of which the most interesting are the group of Dost Mahomed and his kinsmen; Shere Singh, sitting cross-legged in a chair of state,—his legs, by the way, are a little out of drawing; a Hindoo Fakeer, with an expression of profound hypocrisy and cunning; and a group of Alkalees, fanatics of a murderous faith, who carry on their arms and round the neck and turban sharp-edged steel rings, which they throw with deadly aim, lopping off a limb, or even the head of an adversary.

Lieut. Eyre, who was the first to give to the world the melancholy details of the calamitous disasters in Affghanistan, has also furnished some graphic memorials of the scenes of those events and portraits of his fellow prisoners, which he sketched in their captivity: these are published in a form to bind up with his own and Lady Sale's Journal, of which they are interesting illustrations. Among these *Portraits of the Cabul Prisoners* we eagerly looked for that of Lady Sale, the heroine of Cabul, and in her countenance of smiling serenity and clear-sighted firmness we read that contempt of danger and cool determination which characterized the conduct of this dauntless woman, in scenes that tried the constancy of the bravest veterans accustomed to the horrors of warfare. The Europeans appear to great advantage in their Asiatic costumes, with flowing beards and turbans with picturesque varieties of fold; and the feminine gentleness of the ladies of the party, Mrs. Waller and Mrs. Eyre, in contrast with the scenes of horror that they passed through, is touching. The likenesses have a look of verisimilitude, and they are accounted faithful by the friends of the parties. Portraits of Sir Wm. McNaghten, Sir Alexander Burnes, and Lieut. Eyre, are added from miniatures belonging to their families; and Mr. Vigne's sketch of Akbar Khan is also introduced. The cliffs of Bameean are pierced with caves, and sculptured with stupendous figures, two hundred feet high; but it will be long before any European antiquary retraces that hideous track to investigate their character.

A pair of Portraits of two Missionaries, the Rev. John Williams, who was massacred at Erromanga, and the Rev. Robert Moffatt, have been printed in oil colours, by Mr. Baxter's patent process, of which these are the most striking and perfect specimens we have seen; indeed, they have the appearance of highly finished water-colour drawings heightened with gum, but on closer inspection the gloss is seen to be that of oil paint, and the flesh tints to be stippled engraving. They seem to be produced by several plates printed in different colours, stipple, aquatint, or mezzotint being used according to the effect to be produced; and the result is a degree of solidity not obtainable by prints washed over with colour by hand, though wanting in transparency of tone.

The renowned *Gates of Somnauth* have been sketched by Major Luard, and lithographed for the amusement of the curious,—exhibiting in their dilapidated condition the ravages of time and violence as conspicuously as their capture did the folly of the Governor Bombastes, who made them and himself immortal in the annals of absurdity.

The Outlines of Celebrated Pictures, by James Dickson, are drawn with care, and have a soft easy pencil effect—but are not very vigorous. The finished portrait of Raphael is tame and woolly, and, considering the state of the lithographic art, cannot be commended.

Two specimen plates of a forthcoming series of *Views of Venice*, by Mr. Lake Price, which are being lithographed by Mr. Nash, prepare us to expect that the oft-pictured "Sea Cybele," with her wave-washed palaces of marble, will appear under a new and animated aspect in this work.

The *Map of Europe* in relief, embossed and printed by Bauerkeller, exemplifies the utility of model-maps in teaching the geography and geology of the earth, and is admirable as an effort of ingenuity: the land is raised above the sea-level, in its due proportions of elevation, according to scale we presume, and the mountains rise above the plains, their snow-capped summits and volcanic craters being marked by white and red; the courses of rivers are as distinctly traced as chains of mountains, and in short all the external features of the earth's configuration are indicated in form and colour. A terrestrial globe on this principle would be a valuable aid to the teacher; nothing would so well impress upon the mind of the learner the relative proportion of elevations of the earth's surface to its whole mass, as a model of our planet.

The last paragraph was scarcely written, when we received from Messrs. Dobbs & Co. a *Relievo Map of England and Wales*, which is announced as the first of a series. It is very neatly, and, we doubt not, carefully executed; and we hope to see these Maps in general use in schools; but the scale should be enlarged.

MUSIC AND THE DRAMA

PHILHARMONIC CONCERTS.—The *Seventh Concert* was well attended: the great feature in its *programme*, and the one symphony of the evening, being Mendelssohn's Symphony in A minor, introduced last year under the conduct of the composer. This time the baton fell to the charge of Mr. Lucas, to whom new and difficult works appear to be, *ex proposito*, confided. On this occasion he laboured under serious disadvantages, for most persons present remembered the symphony of last year. On Monday the orchestra merely kept together; all the nice shades of expression, a due rendering of which is essential, being forgotten: hence a monotonous slovenliness of effect, most detrimental to the work. Yet there are many who, because certain of the movements produced less effect than compositions with which the band is familiar, such as Beethoven's overture to 'Fidelio' and Spohr's to 'Jessonda,' will criticize the music as sharply as if it were not one of the unfortunate conditions of the Philharmonic Society, that there is no getting sufficient rehearsal save by performance. This might have been excusable twenty years ago, but should be now amended. It would be an instructive thing in any Professor to communicate the number of practisings, by the orchestra of the *Conservatoire* or of the Leipsic concerts, thought necessary to the production of any new work; and both these bodies, it will be remembered, have the advantage over ours of an unchanging conductorship. Happily, however, the Symphony is beyond the reach of indifferent execution. It was relished on Monday; and the *scherzo encored*. In the second act of the concert, Sig. Camillo Sivori played the violin concerto which he had performed at the Opera House and at his own concert with great success. This performer certainly gains on acquaintance; the best testimony which can be offered to the solidity of his merits. The other *solo* was Mendelssohn's

Digitized by Google

First Pianoforte Concerto, played by Madame Oury,—and, for what reason, let the Sibyls declare. The lady has abundant confidence, fair execution, and is a good musician; but, in these days, such a sum of gifts is not beyond mediocrity; and a score of pianists could be mentioned, all sitting quietly among the audience,—to whom such an opportunity is never allowed—ten times more capable of doing justice to the concerto, than the one chosen. The vocal selection offers no ground for a word of praise: it would be hard to surpass the triteness of 'Deh parlate,' and 'Per pietà,' and 'Come ti piace.' Mr. Weiss made his *début* at these concerts in Bishop's 'Fast into the waves,' one of the old rambling *scenas*, with descriptive accompaniments, which we had hoped was safe in "Lethe's river." Mr. Weiss, however, is certainly improving, in spite of the serious disadvantages of his position—*i. e.*, being compelled to learn his profession in the presence of the public.

HER MAJESTY'S THEATRE.—The four elements have been "done in dancing" a little beyond our heart's content; none however so copiously as Water. 'La Fille du Danube,' 'Le Lac des Fées,' are among the more recent and popular *ballets*: and now we have 'Ondine,' the scene of which, with a true operatic contempt of propriety, is transferred from the beautifully indefinite "lake and forest and mountain brook" to the Sea of Naples, for the sake of introducing *pifferari, tarantellas*, and, above all, a grand *tableau vivant* after Leopold Robert's picture of the 'Festa della Madonna.' Briefly—though we cannot go the whole length of certain writers, whose agonies of zeal for the Opera and its present management are almost touching—'Ondine' is a beautiful *ballet*, in right of grouping, costume, and variety of dances. But the Grieves have painted better scenery, and the story does not admit of that pantomimic interest which makes 'Giselle,' and 'La Tarentule,' and 'Le Diable Amoureux' so charming. On the other hand, we have a dance of Naiades which is poetically graceful; a *saltarella*, by a rout of joyous Italian peasants, wrought up with delirious enthusiasm; and a shawl dance, in which Cerito, two sister spirits, and that wonderful man, St. Léon, *commit* some most novel and difficult attitudes and *pas*. Madame Guy-Stephan deserves a good word, for her bold and lively execution; greater favourite, though she obviously be, with herself than the audience. Perrot was on the stage, but, to the comfort of our nerves, he hardly danced at all. The *finale*—a composition of many fountains, each with its own Naiad—does great credit to the property-man. One more good point in the *ballet*—it is not too long. The music, by Signor Pugni, is very poor. Why could the management not have secured Mr. W.S. Bennett's beautiful overture to the Naiades, in place of the nonsensical and meagre prelude which at present commences the work?

MISCELLANEA

Paris Academy of Sciences, May 29.—A communication was received from Prince Louis Napoleon, on the theory of the voltaic pile. The experiments of the prisoner of Ham have been directed to the point which separates the hypothesis of Volta from the chemical theory which has succeeded it. The Prince has endeavoured to show, in a direct manner, that the presence of two different metals in the circuit is not a necessary condition of the production of the current, and he conceives that he has established this point by an arrangement in which the metallic contact takes place between two cylinders of copper plunged in two different liquids.—A communication was received from MM. Rouen and Busson, the patentees of a mode of lighting by means of a self-generating gas, on the advantages to be derived from the adoption of their system in brilliancy of light and economy. The substance employed by these gentlemen is coal naphtha, an essence obtained from the distillation of the coal tar, which is one of the products of the distillation of coals for gas-lighting. The mode by which these gentlemen obtain a more perfect combustion of the naphtha than was ever before reached is simple. They contrive, by the apparatus of the lamp or burner, that the gas should be projected to some distance in the air before it takes fire, there being, however, within the tube of the burner a constant flame, which serves the double purpose of igniting the gas projected from the openings of the burner, and by its heat, in decomposing the naphtha with which the lamp is supplied, generating new gas for continued combustion. The gas, being consumed at a short distance from the burner, is thoroughly supplied with air, and this free supply causes perfect combustion, and a brilliant light without smoke; but it may be presumed that, as the gas escapes from the burner before it is in a state of perfect combustion, the smell is more offensive than it would be if consumed at the immediate orifice. MM. Rouen and Busson estimate that the use of this light is attended with an economy of five-sixths as compared with oil, an equal quantity of light being furnished at a sixth of the expense.—*June 5.*—M. Arago called attention to the action of lightning conductors. Hitherto it has been thought that these rods are a preservative against the electric fluid for a horizontal distance of three times their own height. During the thunderstorm on the 1st inst., however, a building in the Rue St. Jacques, near the Val-de-Grâce, where there is a lightning-conductor, was injured by the electric fluid. This building is quite within the distance which has usually been supposed to be free from danger. The Academy appointed a commission to inquire into this matter.—A letter was received from Prince Demidoff on the rapid extension of the extraction of gold from the auriferous sands of the Russian empire. Those of Siberia alone, he states, yielded in 1842 more than 10,000 kilogrammes of gold, representing a value of 15 millions of francs. A mass of gold, weighing 35 kilogrammes, and worth 120,000fr., was found in Siberia last year.—A memoir was received from M. Dussourde on the preservation of meats by ferruginous syrup—a syrup which undergoes no deterioration by keeping. Meat which has been steeped in this syrup dries with only a slight diminution of volume, and is not affected by the most active agents of putrefaction. When required for use, the meat is put into cold water, and it soon assumes its original size. Its colour and odour are then like those of fresh meat, of which it has all the properties. The syrup is made by boiling iron in an impalpable powder with common syrup until the latter becomes sufficiently impregnated with the iron.—*June 12.*—A communication was made by Messrs. Pelouze and Gelis on the means of obtaining the acid called butyric acid in abundance, by the simple transformation of common sugar in an alcoholic fermentation by contact with some animal substance.—M. Arago laid before the Academy a communication from M. Leymerie, Professor of the Faculty of Sciences at Toulouse, on the discovery of native mercury in the Department of the Aveyron. M. Leymerie having perceived in the house of a peasant a considerable quantity of mercury, was led to make inquiries as to the way in which it was obtained, and ascertained that it was frequently collected in the beds of rivulets, and on the surface of the soil.

Möser's Discovery.—It is easier to demolish old theories than establish new ones; and though I must continue to think the experiments detailed in my Essay on Möser's discovery *prove* the effect is neither due to heat nor light, I did not presume to say they proved the correctness of the chemico-mechanical theory proposed by myself. That theory seems to me the most satisfactory one hitherto advanced, but perhaps future experiments may require it to be modified. At present, however, I have met with no experiments whose results are incompatible with such theory. I have lately looked over the papers of Prof. Draper and Mr. Hunt in the *Philosophical Magazine*, published during the last three or four months; but as in none of these experiments interposed substances or screens were used, nor the necessary precaution of *boiling* as well as polishing used, I cannot see that either Fizeau's or my own experiments proved, in any way, inconclusive by the results obtained by the gentlemen just mentioned. Mr. Hunt did a great service to the subject by his discovery of the power of heat to increase the effect; but as he has not shown he can decompose the iodides of copper, or gold, by mercurial plates, placed nearly a quarter of an inch above them, *when a screen is interposed*, the probability is, that the iodides merely volatilized (as Mr. Faraday some time ago proved, even mercury itself, as well as many other substances, to do,) at the common temperatures of the air. The effect then in question seems to be a mere chemical action produced by direct *contact*. If future experiments prove it can be done without such contact, it will then be time to think about some new mysterious agency. But even admitting Prof. Draper's very valuable experiments to countenance such an agency (at present doubtful, as Mr. Hunt himself has well attempted to show), I do not see we are at all nearer proof that such agency is concerned in Möser's images; FOR THESE CANNOT BE TAKEN AT ANY DISTANCE FROM THE PLATE, WHEN POLISHING, BOILING, OR SCREENS are used; a fact that was not known when Prof. Möser or Mr. Hunt wrote their essays. Your obedient Servant,

HOR. PRATER.

P.S. I did not use mercury or iodine in my experiments, because I believe results equally satisfactory may be got without them, if we lengthen the time of experiment.

Printing.—Amongst the fanciful novelties of the day is a patent, which has been taken out for a mode of printing called *mi-type*, by means of which the expenses of printing, paper, and binding would, according to the patentee, be diminished by half. The *mi-type* may be thus shown. Take a flat rule, and place it on a line of print, so as to cover the lower half of the letters, and the line may be read with ease. The reason is, says the inventor, that we never look at the lower part of printed letters, but always the upper part. This, however, is not the case, if we cover the upper half. The patentee, therefore, proposes to have a type composed of the upper half of the letters.—*Galignani.*

British Institution.—In calling your attention to the fact of artists being compelled to pay for admission to the Exhibition of the British Institution, I am assured that I shall not ask in vain for your assistance in removing such an anomaly. Here is an Exhibition, supported by a long list of the wealthy and the titled, professedly to encourage and advance art: can anything be more ridiculous, than that those anxious to avail themselves of the means thus offered, should be told at the portals of this Institution, "We do not admit any such" without payment? Where then is the facility afforded for study by the British Institution more than that afforded by a dealer in pictures who opens an exhibition? Indeed, I have ever found the latter ready to admit artists, and in many cases inviting them. Painters do not, I imagine, go to an exhibition for so much "gapeseed;" their object is to study the means by which a few, whom they delight to honour, have arrived at the point which excites their admiration, and to accomplish this, they must visit it again and again. That these pictures, lent by the patrons of art, should, like the circulating portfolios of a modern stationer, be studied at so much per hour, surely was never contemplated by those noblemen and gentlemen who, at personal inconvenience, allow their galleries to be dismantled, and their valuable pictures transferred to the Institution. They do it to promote Art, and it behoves those who have to carry out their intentions, to consider if this is best done by excluding artists as much as possible from the contemplation of the works so sent. If it be asserted that the Exhibition is a speculation, I would ask, where is the necessity for drawing upon the purses of the Governors? Who would not willingly provide a place for the exhibition of such pictures, without any subscription at all from the governors, well content with the shillings taken at the doors? Surely some of these gentlemen will see the propriety of examining more carefully the working of this system. I send you my name, but subscribe myself, Yours, &c,

A MEMBER OF THE INSTITUTE OF THE FINE ARTS.

Ship-building.—Captain Couch, R.N., has introduced what is described as an improvement in naval architecture.—The improvement "consists in filling up the vacant space between the ship's sides and the chain plates with solid wood, and a differently-constructed plate and dead-eye, so that when a vessel at sea is dismasted, the wrecks of yards, masts, sails, &c., are detached by merely cutting away the lanyards of each shroud; the dead-eyes and chain plates, instead of pulling with and under the vessel, remaining in their proper place."

St. Margaret's, Westminster.—The following is the history of the stained glass in the beautiful east window of this church, given in the *Ecclesiologist*.—The magistrates of Dort, in Holland, desiring to present Henry VII. with something worthy to adorn his magnificent Chapel then building at Westminster, directed this window to be made, and Henry and his Queen sent their pictures to Dort, whence their portraits in this window are delineated. King Henry dying before the window was completed, it became the property of an Abbot of Waltham, who placed it in his abbey, where it remained until the dissolution of it in 1540. Robert Fuller, the last Abbot, removed it to a chapel in New Hall, Lord Ormond's seat, in Wiltshire, which was afterwards possessed by Thomas Bullen, father of Anne Bullen. In Elizabeth's reign, New Hall belonged to the Earl of Sussex; of *his* family the Duke of Buckingham bought it. *His* son sold it to General Monk, who buried the window under ground, but after the Restoration replaced it in the chapel. *His* son dying without issue, and the Duchess neglecting the seat, the chapel became ruinous. John Olivius, having probably purchased the estate from the heirs of the Monk family, demolished both house and chapel, but preserved the glass, in the hope of selling it for some church. It lay cased up in boxes till Mr. Conyers purchased it for his chapel at Copt Hall, near Epping, when he employed Price, an artist, to repair it. Mr. Conyers building a new house, sold the window for 400 guineas to the Parliamentary Committee for repairing St. Margaret's church in 1758.

BRITISH EMPIRE LIFE ASSURANCE, ANNUITY, and ENDOWMENT COMPANY, 5, Whitehall, and 36, Old Jewry, London.

Directors—Sir George Staunton, Bart. M.P. *President.*
Sir Herbert Compton, *Vice-President.*

Charles Forbes, Esq.	Arthur Helps, Esq.
James Mackillop, Esq.	Thomas E. Headlam, Esq.
J. Phillimore, Esq. D.C.L.	Robert J. Grigg, Esq.
W. Wilkinson, Esq.	G. Bicknell, Esq. (Resident).

Bankers—Messrs. Coutts & Co.
Solicitors—Messrs. Ogle & Younghusband.

The peculiar advantages offered by this Company are:—
1st. That where the assurance is for life, one-half of the premiums may remain unpaid for seven years.
2nd. A Table peculiarly fitted for policies for loans, the premiums commencing very low, and varying every three years.

Age.	1st period of 3 years.	2d period of 3 years.	3d period of 3 years.	4th period of 3 years.	Remainder of Life.
27	1 3 7	1 8 7	1 15 9	2 4 6	2 14 10

3rd. For Survivorship Annuities, on a principle peculiar to this Office, avoiding the loss of the premium paid, if the party does not survive to take the annuity.
Every information may be obtained at the Offices, at Whitehall, and 36, Old Jewry.
The usual Commission to Solicitors and Agents.
GEO. BICKNELL, Resident Director.

BRITANNIA LIFE ASSURANCE COMPANY, 1, Princes-street, Bank, London.
This Institution is empowered by *Special Act of Parliament*, (4 Vict. cap. 9), and is so constituted as to afford the benefits of Life Assurance in their fullest extent to Policy-Holders, and to present greater facilities and accommodation than are usually offered by other Companies. The decided superiority of its plan, and its claim to public preference and support, have been proved incontestibly, by its extraordinary and unprecedented success.
Assurances may either be effected by Parties on their own Lives, or by Parties interested therein on the Lives of others.
The effect of an Assurance on a person's own life is to create at once a property in reversion, which can by no other means be realized. Take, for instance, the case of a person at the age of thirty, who by the payment of 5*l.* 2*s.* 4*d.* to the Britannia Life Assurance Company, can become at once possessed of a bequeathable property, amounting to 1000*l.*, subject only to the condition of his continuing the same payment quarterly during the remainder of his life,—a condition which may be fulfilled by the mere saving of EIGHT SHILLINGS weekly in his expenditure. Thus, by the exertion of a very slight degree of economy —such, indeed, as can scarcely be felt as an inconvenience, he may at once realize a capital of 1000*l.*, which he can bequeath or dispose of in any way he may think proper.
Detailed Prospectuses, and every requisite information as to the mode of effecting Assurances, may be obtained at the Office.
PETER MORRISON, Resident Director.
A Board of Directors attend daily at 2 o'clock, for the dispatch of business.

THE DISSENTERS' and GENERAL LIFE and FIRE ASSURANCE COMPANY. Empowered by Special Act of Parliament, 3rd Vic. cap. 20., 62, King William-street, London Bridge, London; 21, St. David-street, Edinburgh; 6, King-street, Queen-square, Bristol; and St. Andrew's Hall Plain, Norwich.—Capital, One Million.

Trustees, with a Seal at the Board.

Thomas Challis, Esq.	Thomas Piper, Esq.

Directors.

George Bousfield, Esq.	Sir John Pirie, Bart. and Ald.
Sir J. Easthope, Bart. M.P.	Thomas B. Simpson, Esq.
Peter Ellis, Esq.	Edward Smith, Esq.
Joseph Fletcher, Esq.	Hon. C. P. Villiers, M.P.
Richard Hollier, Esq.	John Wilks, Esq.
Charles Hindley, Esq. M.P.	Edward Wilson, Esq.

On the return of the Midsummer Quarter, the Directors beg leave to remind their Friends and the Public, that in the FIRE DEPARTMENT they receive risks of all descriptions, including Chapels, School-Rooms, Mills, Goods and Shipping in Dock, Farming Stock, &c., at the same reduced rates as other respectable Companies, and make no charge for Fire Policies transferred from other Offices; and in the LIFE DEPARTMENT they continue to transact all business relating to Life Assurances, Annuities, and Family Endowments, upon the most liberal terms consistent with sound principles and public security.
A liberal allowance to Solicitors, Surveyors, and other Agents. By order of the Board,
THOMAS PRICE, Sec.

FAMILY ENDOWMENT SOCIETY, LIFE ASSURANCE and ANNUITY OFFICE,
12, Chatham-place, Blackfriars, London.

Directors.
William Butterworth Bayley, Esq. *Chairman.*
John Fuller, Esq. *Deputy Chairman.*

Henry Bowden, Esq.	Elliot Macnaghten, Esq.
Robert Bruce Chichester, Esq.	William Prinsep, Esq.
Alexander Colvin, Esq.	Joshua Walker, Esq.
Edward Lee, Esq.	Major Willock, K.L.S.

CAPITAL 500,000*l.*

The objects of Life Assurance may be accomplished at this Office on terms as low as is consistent with security.

Examples of Life Assurance for 100*l.*

Age.	30	40	50	60
Annual Premium..	£. s. d. 2 4 7	£. s. d. 3 0 3	£. s. d. 4 4 9	£. s. d. 6 2 5

Endowments for future and existing children, and Annuities of all kinds are granted by this Society.
The usual commission allowed to Solicitors and others, and 5*l.* per cent. extra on the first premium.
JOHN CAZENOVE, Secretary.

YORK AND LONDON LIFE ASSURANCE COMPANY, King William-street, London. Empowered by Act of Parliament. *Directors.*
George Frederick Young, Esq. *Chairman.*
Matthew Forster, Esq. M.P. *Deputy Chairman.*

Benjamin Agar, Esq.	James Gadesden, Esq.
James Andos, Esq.	Thomas Gregory, Esq.
William Baker, Esq.	William Haigh, Esq.
H. S. Belcombe, Esq. M.D.	George Hudson, Esq.
Lord Ernest Bruce, M.P.	Jos. Bulkeley Johnson, Esq.
Matthew Carr, Esq.	William Matterson, Esq.
J. Walbanke Childers, Esq. M.P.	John Parker, Esq. M.P.
Henry Cooper, Esq.	Sir John Simpson
Sir James Eyre, M.D.	Edward Thomas Whitaker, Esq.

The superiority of the system of Assurance adopted by this Company, will be found in the fact that the premium required by a bonus office to assure 1,000*l.* on the life of a person in the 30th year of his age, would in this office insure 1,231*l.* 7*s.* 6*d.*
Assurances at other ages are effected on equally favourable terms, and thus the assured has an immediate bonus instead of a chance dependent upon longevity and the profits of an office. In cases of assurance for a limited number of years, the advantage offered by this Company is still greater, no part of the profits of a bonus office being ever allotted to such assurances.
Prospectuses, containing tables framed to meet the circumstances of all who desire to provide for themselves, or those who may survive them, by assurance, either of fixed sums or annuities, may be had at the Office, as above, or of the agents.
J. REDDISH, Secretary.

ACHILLES BRITISH and FOREIGN LIFE ASSURANCE ASSOCIATION, No. 24, Lombard-street.
Loans granted to Policy Holders.
Every description of Life Assurance may be effected, upon a moderate scale of premium, either with or without participation in profits.
Endowments for Children or Widows, and immediate or deferred Annuities, granted upon fair and equitable terms.
Loans may be obtained on personal or other security by individuals Assuring their lives with this Association,
Risks taken on the Lives of Master Mariners and Passengers by sea, either for the whole term of life, or for the voyage.
EDWARD GILBERTSON, Secretary.
Prospectuses, and every other information, may be obtained by applying at the Offices, No. 24, Lombard-street, City.

NATIONAL LOAN FUND LIFE ASSURANCE, ANNUITY, and DEFERRED ANNUITY SOCIETY, 26, Cornhill, London.—Capital, 500,000*l.*—Empowered by Parliament.

Directors—T. LAMIE MURRAY, Esq. *Chairman.*

John Elliotson, M.D. F.R.S.	George Lungley, Esq.
John Griffith Frith, Esq.	John Rawson, Esq.
H. Gordon, Esq.	Clement Tabor, Esq.

Joseph Thompson, Esq.
Auditors—Prof. Wheatstone, F.R.S.; Prof. Graves, A.M. F.R.S.
Actuary—W. S. B. Woolhouse, Esq. F.R.A.S.

The superior advantages to those Assured with this Society will be best understood by a comparison of its principles and a reference to the last Annual Bonus declared on Policies of five years' standing, viz.:

Entry	Policy No.	Age	Sum	Annual Premium.	Bonus added.	Cash Bonus.	Premium reduced.
			£	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1837	89	59	1000	67 8 4	132 14 6	58 19 9	8 19 4
1838	114	56	3000	175 15 0	296 9 7	123 0 6	16 9 7

Policies now entered upon entitled to participation in next Annual Division. Two-thirds of all premiums paid can be borrowed by the assured without loss of Policy.
F. FERGUSON CAMROUX, Secretary.

STONE-COLOURED CEMENT.
FELIX AUSTIN, of the New Road, Regent's Park, begs to inform Architects, Builders, Plasterers, &c. that during the process of manufacturing a very superior composition which has greatly improved his well-known Artificial Stone Ornaments, he has succeeded in making an excellent STONE-COLOURED CEMENT, adapted to building, more especially for facing brick walls and repairing decayed stone work, which he can supply at 2*s.* 6*d.* per bushel, at his Manufactory, near the Thames Tunnel, Rotherhithe.

IMPORTANT PATENT IMPROVEMENTS in CHRONOMETERS, WATCHES, and CLOCKS.—E. J. DENT, sole patentee, has OPENED his West-end PREMISES, 33, Cockspur-street, Charing-cross, in addition to 82, Strand, with an entirely new stock of Watches and Clocks, Ladies' Gold Watches, 8 guineas each; Gentlemen's ditto, 10 guineas; and Silver Levers at 6 guineas each.—A new edition of Dent's Lectures, price 1*s.*, but to customers gratis.

METCALFE'S NEW PATTERN TOOTH-BRUSH and SMYRNA SPONGES.—The Tooth-Brush has the important advantage of searching thoroughly into the divisions of the teeth, and cleaning them in the most effectual and extraordinary manner, and is famous for the hairs not coming loose—1*s.* An improved Clothes-Brush, that cleans in a third part of the usual time, and incapable of injuring the finest nap. Penetrating Hair-Brushes, with the durable unbleached Russian Bristles, which do not soften like common hair. Flesh-Brushes of improved graduated and powerful friction. Velvet-Brushes, which act in the most surprising and successful manner. The Genuine Smyrna Sponge, with its preserved valuable properties of absorption, vitality, and durability, by means of direct importations, dispensing with all intermediate parties' profits and destructive bleaching, and securing the luxury of a genuine Smyrna Sponge. Only at METCALFE'S Sole Establishment, Oxford-street, two doors from Holles-street.
CAUTION—Beware of the words "From Metcalfe's" adopted by some houses.

WATCHES by WEBSTER & SON, Chronometer Makers to the Lords of the Admiralty (Established 128 years), 3, BIRCHIN-LANE. The largest assortment of fine Second-hand Watches of any house in London, by the most eminent makers—many nearly equal to new, and at little above half their original cost, all of which W. & Son warrant. They consist of fine Repeaters, Duplex, Lever, and Horizontal Escapements, all of superior manufacture. New Watches of the most elegant patterns upon the principle of their Chronometers, to which the Government awarded the prizes three years in succession, with compensation balances to counteract the variations of temperature. Also a large assortment of Lever and elegant Horizontal Watches, for Ladies and Gentlemen, at considerably reduced prices. Old Watches taken in exchange. The most experienced workmen are employed on the premises in the repairing department.
Webster & Son, 3, Birchin-lane, Cornhill.

MOULD CANDLES to BURN WITHOUT SNUFFING.—KEMPTON'S PATENT.—These candles do not require snuffing; they burn longer and are cheaper than any other candle; the flame is steady and brilliant. No metallic or deleterious matter is used in the manufacture. Price 8*d.* per lb. Sold by G. E. Parish, agent for exportation, 71½, Bread-street, City, and by Sladden & Stocking, 43, High-street, Marylebone; W. Gethen, Broadley-terrace, Blandford-square; W. Evans, Italian warehouse, Greenwich; John Hawkins, grocer, High-street, Whitechapel; George Hawley, grocer, Pitfield-street, Hoxton; S. Game, Fish-street-hill; J. Pain, grocer, Bethnal-green-road; G. H. Hudson, 239, Blackfriars-road; C. H. Nicholas, 19, Bolingbroke-row, Walworth; and at the manufactory, Old Bargehouse, Christchurch, Surrey.

MESSRS. BARRY & SON, Stationers and Engravers, beg to inform the Nobility and Gentry that they are now enabled to PRINT ARMS, CRESTS, &c., for book plates, in their proper heraldic colours, and at very moderate prices. Crests engraved on visiting cards in the first-rate style, 6*s.*; without the crest, 2*s.* 6*d.*; and 100 cards, 2*s.* 6*d.*: also every description of elegant engraving. Specimens of the above may be selected from a large and fashionable assortment, at their warehouses, Egyptian Hall, Piccadilly, and 132, Bishopsgate-street Within, or sent on application any distance free of expense. Superfine letter papers, 27*s.*, 22*s.*, 20*s.*, 18*s.*, 17*s.*, 14*s.*, 12*s.* and 8*s.* per ream; Note ditto, 18*s.*, 16*s.*, 12*s.*, 8*s.*, 6*s.* and 4*s.* per ream. An additional charge is made for stamping either of the above with arms, crest, coronet, or initials. Their miscellaneous stock, which is very large and particularly adapted for presents, consists of dressing cases, writing desks, inkstands, envelope cases, albums, blotting-books, bibles and prayers, gold and silver pencil cases, penholders, toilet and smelling bottles, souvenirs, ladies' companions, sachets, card and glove cases, pocket-books, papeterie, and envelopes suitable for invitations, complimentary notes, weddings, &c. Either of the above articles may be had plain, or of the most costly description, with every description of useful stationery. Postage stamps and envelopes at Government prices. Messrs. Barry & Son are also the West-end Agents for Mr. Robert Best Ede's Perfumery.

WARM WEATHER.—Ease and Comfort for the Feet.—HALL & CO. Wellington-street, Strand, London, sole Patentees of the PANNUS CORIUM, or Leather Cloth Boots and Shoes. These articles have borne the test and received the approbation of all who have worn them. Such as are troubled with corns, bunions, gout, or tenderness of feet from any other cause, will find them the softest and most comfortable ever invented; they never draw the feet or get hard, and for warm climates they are found easier and more durable than any other kind of shoes; they resemble the finest leather, and are cleaned with common blacking. Their Elastic Spring Boots are worthy attention; they supersede lacing and buttoning, and effectually support the ankle. The material sold by the yard in any quantity. Any respectable boot and shoe maker may be appointed agent.—The much-improved PATENT INDIAN-RUBBER GOLOSHES are light, durable, and perfectly waterproof.—HALL & CO.'S PORTABLE WATERPROOF DRESSES claim the attention of all who are exposed to the wet. Ladies' Cardinal Cloaks, with hoods, from 18*s.* Gentlemen's Dresses, comprising Cape, Overalls, and Hood, 21*s.* The whole can be carried with convenience in the pocket.

COMPOSITION FOR WRITING WITH STEEL PENS.
STEPHENS' WRITING FLUID.
THESE COMPOSITIONS, which have so remarkably extended the use of the STEEL PEN, are brought to very great perfection, being more easy to write with, more durable, and in every respect preferable to the ordinary Ink. In warm climates they have become essential. They consist of—An INSTANTANEOUS BLACK INK—A BLUE FLUID, changing to an intense Black colour—PATENT UNCHANGEABLE BLUE FLUIDS, remaining a deep Blue colour —A SUPERIOR BLACK INK, of the common character, but more fluid—A SUPERIOR CARMINE RED for Contrast Writing —A CARBONACEOUS RECORD INK, unchangeable by any Chemical Agent—Also, a new kind of MARKING INK for Linen; and Inkholders adapted for preserving Ink from Evaporation and Dust. Bottles at 3*d.* each, convenient for writing from, are prepared, which will enable those who may wish to try either of these articles to do so at a small expense. Prepared by HENRY STEPHENS, the Inventor, 54, Stamford-street, Blackfriars-road, London; and sold by Stationers and Booksellers.—N.B. These unchangeable Blue Fluids are Patent Articles; the public are therefore cautioned against imitations, which are Infringements; to sell or use which is illegal.
STEPHENS' SELECT STEEL PENS.—The utmost possible care having been bestowed upon the manufacture of these articles so as to procure the highest finish, they can be confidently recommended both for flexibility and durability.

LEA & PERRIN'S 'WORCESTERSHIRE SAUCE.' Prepared from the Recipe of a Nobleman in the County.—The above celebrated Sauce has, from the time of its introduction, been steadily progressing in public favour. Its peculiar piquancy, combined with exquisite flavour, establish it of a character unequalled in sauces. Noblemen and others, of acknowledged goût, pronounce it to be 'the only good sauce;' and for enriching gravies, or as a zest for fish, curries, steaks, game, cold meat, &c., especially unrivalled. As a rapidly-increasing inquiry is now made for it in all parts of the kingdom, the Proprietors beg to state that druggists, grocers, and others may be supplied by their agents—Messrs. Barclay & Sons, Farringdon-street; Mr. J. Harding, 59, King-street, Stepney; Messrs. Metcalfe & Co. 16, Southampton-row; and by the Wholesale Oil and Italian Warehousemen in London, upon the same terms as at their Warehouse at Worcester.—Sold retail, in half-pint bottles, at 1*s.* 6*d.*; pints, 2*s.* 6*d.*; and quarts, 5*s.* each, with the Proprietors' stamp over the cork of every bottle.

FOR GOUT, RHEUMATISM, AND RHEUMATIC GOUT
SIMCO'S GOUT and RHEUMATIC PILLS are a certain and safe remedy; they restore tranquillity to the nerves, give tone to the stomach and strength to the whole system. No other medicine can be compared to these excellent pills, as they prevent the disorder from attacking the Stomach or Head, and have restored thousands from pain and misery, to health and comfort. Sold by A. Willoughby & Co., late B. G. Windus, 61, Bishopsgate Without, and nearly all Medicine Vendors, at 1*s.* 1½*d.* or 2*s.* 9*d.* per box.

FOR BEAUTIFYING THE SKIN.—GODFREY'S EXTRACT of ELDER FLOWERS, a most fragrant perfume, and delightful cosmetic. It speedily and completely removes tan, redness, &c., and by its cooling, balsamic, and healing qualities, renders the skin soft, pliable, and free from dryness, scurf, &c., and clears it from every humour, pimple, or eruption. By its use the skin becomes, and continues, delicately clear and soft, and the complexion fair and beautiful. In shaving, it is invaluable, rendering the skin smooth and firm, and protects it from the effects of sun and dust. It is beyond all praise as a general family lotion. Sold in bottles, price 2*s.* 9*d.*, by all respectable Medicine Venders and Perfumers.

ROWLAND'S MACASSAR OIL, under the Special Patronage of Her Most Gracious Majesty, the Royal Family, and the several Courts of Europe.—This Oil has acquired celebrity for its truly extraordinary efficacy and fecundity in nourishing, preserving, and beautifying the Human Hair. It imparts an additional vigour to the roots, together with glossy brightness, and a beautiful tendency to curl. For inducing an accelerated growth of Whiskers or Moustaches, the MACASSAR is unfailing in its stimulative operation. In reference even to the Hair of early childhood, the use of the Oil is found attended with the happiest effects.—Mild, invigorating, stimulative, and purifying, it materially assists in dispelling scurf or dandriff, and renders supererogatory the use of the fine-comb. Price 3*s.* 6*d.*, 7*s.*, Family (equal to four small) 10*s.* 6*d.*, and double that size 21*s.* per Bottle.
CAUTION.—Ask for 'ROWLAND'S MACASSAR OIL,' and see that those words are on the Wrapper, as much pernicious trash is now offered to the Public as 'MACASSAR OIL' by Perfumers of apparent respectability.
Sold by the Proprietors, A. ROWLAND & SON, 20, Hatton-garden, and by Chemists and Perfumers.

TWENTY YEARS' LOSS of HAIR, and WONDERFUL RESTORATION. Church-street, Whitby, Oct. 19, 1841.—Gentlemen—Of the last supply of Oldridge's Balm of Columbia every bottle was sold immediately on receipt, and I have many more bespoke, only waiting for a further supply, which I hope you will send without the least delay. Orders have poured in more than ever since the powerful effects of the Balm have been so decisively demonstrated in the cases of several credible and respectable inhabitants of the town. One instance, among others which have attracted particular attention, is the case of a gentleman who had had little or no hair for twenty years: he had tried numerous preparations in vain, and ultimately had his head shaved and wore a wig. At my recommendation he tried the Balm; and after using it according to the directions for a short time, the young hair appeared, and he has now as fine a head of hair as any person in Whitby.
Yours, &c. JOHN KILVINGTON.
To Messrs. Kennaby, Brothers, 10, Westmoreland-buildings, Aldersgate-street, London.
OLDRIDGE'S BALM prevents the hair turning grey, produces a beautiful curl, frees it from scurf, and stops it from falling off; a few Bottles generally restore it again. Price 3*s.* 6*d.*, 6*s.* and 11*s.* per Bottle. *No other prices are genuine.* Ask for OLDRIDGE'S BALM of COLUMBIA, 1, Wellington-street, Strand.

To be completed in about Fifteen Monthly Parts.
CHINA AND INDIA.
This day, Parts I. to VI., price 1s. each, of
THE HISTORY of CHINA and INDIA, Pictorial and Descriptive: exhibiting a complete and familiar view of the people of those interesting countries, and their governments, from the earliest period to the present time. By MISS CORNER, Author of 'The Historical Library,' &c. &c. Illustrated with Plates, executed in the New Style of Tint, and superior Wood Engravings, from accurate local drawings.
London: Dean & Co. Threadneedle-street; and, by order, of every Bookseller in the United Kingdom.

Fourth Edition, on Monday, June 27,
ORION: an Epic Poem, in Three Books. By R. H. HORNE, Author of 'Cosmo de' Medici,' 'Gregory VII.' &c. 8vo. pp. 137, price One Shilling.
To prevent any misconceptions as to the alteration of the price, the Publisher begs to state that the Author having directed him to print and publish three entire editions of 'Orion' at less than the value of waste paper, has now permitted him to make a little change. For transmission by post, the weight and payment will require the enclosure of one shilling and six penny stamps. There are no important revisions or interpolations in this Edition; no illustrations; no wrappers; no hot-pressing; and the paper is very little better than before. Nor will there be any difference when the price is raised to half-a-crown.
J. Miller, 404, Oxford-street.

Third Thousand, People's Edition, price 2s. 6d.
FALLACIES of the FACULTY.—Errors of the Schools—All Diseases periodic or fitful—Ague, Asthma, Epilepsy, Gout, Rheumatism, Consumption, &c. all come on in fits, with Chills and Heats—Unity of Disease—Periodic mode of Treatment, with numerous successful cases in illustration—Attention to temperature the end of all Physic—Blood-letting the greatest of Medical mistakes, cases of Byron, Scott, Malibran, &c. in proof.
Simpkin & Marshall, 5, Stationers'-court; and J. Ollivier, 59, Pall Mall.

AN ELEGANT PRESENT.
Now ready, price One Guinea, tastefully bound in a new style,

THE ATHENÆUM

Journal of English and Foreign Literature, Science, and the Fine Arts.

No. 818. LONDON, SATURDAY, JULY 1, 1843. PRICE FOURPENCE (Stamped Edition, 5d.)

For the convenience of Subscribers residing in remote places, the weekly numbers are reissued in Monthly Parts, stitched in a wrapper, and forwarded with the Magazines.—Subscriptions for the Stamped Edition for the Continent, for not less than Three Months, and in advance, are received by M. BAUDRY, 3, Quai Malaquais, Paris, or at the Athenæum Office, London. For France, and other Countries not requiring the postage to be paid in London, 28fr. or 1l. 2s. the year. To other Countries, the postage in addition.

[JAMES HOLMES, TOOK'S COURT, CHANCERY LANE.]

UNIVERSITY OF LONDON.

NOTICE IS HEREBY GIVEN, That the following CLASSICAL SUBJECTS have been selected for Examination in this University: viz.

For the MATRICULATION EXAMINATION in 1844.

HOMER.—Iliad, Book XIII.

SALLUST.—The War with Jugurtha.

For the EXAMINATION for the DEGREE OF BACHELOR OF ARTS in 1845.

SOPHOCLES.—Œdipus Coloneus.

TACITUS.—Agricola, Germania, and the Fifth Book of the Histories.

Somerset House, June 21st, 1843. By order of the Senate, R. W. ROTHMAN, Registrar.

LAND SURVEYING AND LEVELLING.—KING'S COLLEGE, LONDON.

THE LONG VACATION CLASS for PRACTICAL FIELD WORK will this Year commence on TUESDAY, the 4th day of July, and will be continued four days in the week for six weeks, under Mr. HENRY CASTLE, Surveyor and Civil Engineer, Lecturer at the above Institution, and Author of a Treatise on Land Surveying and Levelling. Fee 5l. 5s.

CIVIL ENGINEERING, SURVEYING, &c.—A PRIVATE TUTOR proposes leaving London during the months of August and September, with Six Pupils, for the purpose of Practical Instruction in the Field. It is probable the county of Derby will be selected, on account of its natural advantages. TWO VACANCIES remain open.—Apply, by letter, to A. B., Mr. Macrae, Optician, 31, Aldgate High-street.

CLASSICAL—LONG VACATION.

A GRADUATE of CAMBRIDGE, who ranked high in the first class of the Classical Tripos, would be glad to TAKE PUPILS IN LONDON during the Vacation, either Cambridge men, or preparing for that University.—Address J. G., care of Mr. Wright, Bookseller, 60, Pall Mall.

PRIVATE TUITION.—A DISSENTING MINISTER, having TWO PUPILS, would be happy to ADD TWO OTHERS to the number. Brothers would be preferred. Terms moderate, and include every expense.—Address, Q.Q., Post-office, Hammersmith.

SELECT INSTITUTION, for the INSTRUCTION of ELDER YOUNG LADIES, in which the benefits of a public establishment and of a domestic circle are combined; the Principal, in her habitual intercourse with her pupils, uniting, with the advantage of long experience, the influence of an instructress and the affection of a friend.—Address, Miss Vines, Hackney, near London.

EDUCATION.—HOFWYL HOUSE, STAMFORD HILL, MIDDLESEX.—At this Establishment YOUNG GENTLEMEN are EDUCATED on plans founded on the principles so successfully practised by Pestalozzi and De Fellenberg. The most assiduous attention is bestowed on the culture of the feelings, the development of the mental faculties, and the general improvement of the health and physical capabilities.

Knowledge is presented in its simplest form, and every exertion is made to render its acquirement a source of pleasure, and a means of further progress in virtue and intelligence.

The Course of Instruction includes:—

The English, French, German, Latin, and Greek Languages.
The Mathematics, Experimental Philosophy, and Chemistry.
The Elements of Natural and Civil History, Geography and Astronomy.
Writing, Drawing, Singing, Gymnastics, &c.

To facilitate the acquirement of knowledge, and furnish means of general improvement, a select library is provided, and an extensive collection of philosophical and chemical apparatus, with cabinets of minerals, shells, &c. A laboratory, bath, workshop, &c.

TERMS, including every expense, from SIX to EIGHT GUINEAS per Quarter.

A Prospectus may be obtained at Messrs. Jones & Co.'s, 20, Lower Holborn; or at the Establishment.

THE Subscribers to the ROYAL POLYTECHNIC UNION OF LONDON are respectfully requested to attend the GENERAL MEETING for the DISTRIBUTION of the PRIZES, on SATURDAY EVENING, the 8th of July, at 8 o'clock precisely, at No. 5, Cavendish-square. The Report of the Committee will be introduced at the Meeting.

R. J. LONGBOTTOM, Hon. Sec.

PHOTOGRAPHY.—CLAUDET'S DAGUERREOTYPE PORTRAITS, taken daily at the ADELAIDE GALLERY.—The wonderful art by which perfect Likenesses are taken in a few seconds, has lately received very important improvements, and has arrived to such perfection that former productions, however extraordinary they were, cannot be compared with the new specimens produced by M. Claudet, and which are exhibited at the Adelaide Gallery. These pictures are fixed, and do not fade. Price of a single Portrait 1 guinea, upon plates 3½ by 2½ inches; and 5 guineas upon plates 8½ by 6½ inches; intermediate sizes in proportion. Colouring from 5s. to 10s. Duplicates at half price, and inferior Portraits produced by the old process exchanged without any charge.

FREEMASONS' and GENERAL LIFE ASSURANCE COMPANY.—DIVIDENDS.

NOTICE IS HEREBY GIVEN, that from and after the 9th instant, the HALF-YEARLY DIVIDEND, to the 30th ultimo, will be in course of payment to the respective Shareholders.

11, Waterloo-place, Pall Mall, July 1, 1843. JOSEPH BERRIDGE, Secretary.

CAUTION to PROFESSORS and TEACHERS of GERMAN, BOOKSELLERS, PUBLISHERS, and OTHERS.—NOTICE is hereby given, that an Injunction in a cause, "FEILING v. SCHWABE," has been awarded by the Vice-Chancellor of England to restrain the Publication and Sale of the Defendant Ludwig Schwabe's work, entitled 'A Progressive German Reader,' containing the Notes and Explanations in English contained in the Plaintiff's work, entitled 'A Complete Course of German Literature for Beginners,' composed by the Plaintiff, and copied by the Defendant in violation of the Plaintiff's Copyright.

NICHOLSON & PARKER, 23, Throgmorton-street, Solicitors for the Plaintiff, Charles Augustus Feiling.

GRATIS AND POST FREE.

BULL'S JULY CIRCULAR is ready for READING SOCIETIES and FAMILIES, THROUGHOUT ENGLAND, IRELAND, and SCOTLAND, who can now obtain it, describing all the Valuable and Interesting New Publications to the present time, and the ADVANTAGEOUS TERMS on which they are supplied, regularly and in any quantity, with whatever New and Standard Works, Magazines, and Reviews, they may desire for Perusal. Apply to Mr. Bull, English and Foreign Public Library, 19, Holles-street, four doors from Cavendish-square.

Just published,

SAMUEL MAYNARD'S CATALOGUE of MATHEMATICAL and PHILOSOPHICAL BOOKS, containing an extensive collection, from the earliest period to the present time, both in English and Foreign, among which will be found many articles of rare occurrence at the lowest possible prices, chiefly selected from the Libraries of deceased Mathematicians and Philosophers in England, France, and Germany. S. M. wishes further to state that he has two other Catalogues of Scientific Books on sale, comprising nearly 4,000 works, many of which will be found exceedingly rare. To Scientific Gentlemen these Catalogues will be found a valuable desideratum, and may be transmitted by post at the expense of one shilling's worth of post stamps, or may be had gratis by application to the Publisher, Samuel Maynard, 8, Earl's-court, Leicester-square, London.

DERBY.—OPTICAL AND PHILOSOPHICAL INSTRUMENT REPOSITORY.

JOHN DAVIS, OPTICIAN, Derby (late Cheltenham), has the honour to inform his Patrons that he has centralized his extensive connexion in Derby, where, in future, he will be happy to receive orders. He begs to call attention to his celebrated Pocket Telescopes, measuring but 3½ inches when closed, and are capable of defining clearly Jupiter's moons. Oberhäuser's Objectives supplied to the trade. Several second-hand Telescopes, by Dollond, on sale.—No connexion with any house in London.

TO THE PROPRIETORS of EAST INDIA STOCK.

LADIES and GENTLEMEN,

Having returned from India, after a career of service in the Bengal Presidency of Thirty-four years, which terminated in the Council of India, I am induced to offer myself as a CANDIDATE for A SEAT in the COURT OF DIRECTORS for the Affairs of the East India Company. I make this early announcement, in order that my intentions may be generally known, and shall more fully submit my claims and pretensions when personally soliciting your suffrages and support.

I have the honour to be,
Ladies and Gentlemen,
Your most obedient humble servant,
H. T. PRINSEP.

London, June 15, 1843.

Immediately will be published,
In 2 vols. 8vo. with numerous plates, some coloured,
EXCURSIONS, ADVENTURES, and FIELD-SPORTS in CEYLON, its Commercial and Military Importance, and numerous advantages to the British Emigrant. By Lieut.-Colonel JAMES CAMPBELL, formerly of the 45th and 50th Regiments, and for several years Commandant of the Districts of Galle, &c., and Judicial Agent of Government.
"There is continual spring and harvest there."
London: T. & W. Boone, 29, New Bond-street. Oliver & Boyd, Edinburgh; J. Cumming, Dublin.

8, New Burlington-street, July 1, 1843.
MR. BENTLEY WILL IMMEDIATELY PUBLISH THE FOLLOWING NEW WORKS:

2 vols. 8vo. with Portraits,
CONCLUDING VOLUMES OF
GEORGE SELWYN AND HIS CONTEMPORARIES, WITH MEMOIRS AND NOTES.
By J. HENEAGE JESSE, Esq.
Author of 'Memoirs of the Court of England under the Stuarts,' and 'The Court of England under the Houses of Nassau and Hanover.'

II.
New Work by the Author of 'The Clockmaker,' &c.
In 2 vols. post 8vo.
SAM SLICK IN ENGLAND; or, THE ATTACHÉ;
By the Author of 'The Clockmaker; or, Sayings and Doings of Sam Slick of Slickville.'

III.
In 1 vol. 8vo. with Map.
DISCOVERIES ON THE NORTH COAST OF AMERICA; EFFECTED BY THE OFFICERS OF THE HUDSON'S BAY COMPANY, during the Years 1836-1839.
By THOMAS SIMPSON, Esq.

IV.
In 3 vols post 8vo.
THE BUSY BODY;
A Novel.

Richard Bentley, New Burlington-street,
(*Publisher in Ordinary to Her Majesty.*)

8, New Burlington-street, July 1, 1843.
MR. BENTLEY HAS JUST PUBLISHED THE FOLLOWING NEW WORKS:

Unpublished Letters of Horace Walpole.
2 vols. 8vo. with Portraits from original Paintings, &c.
LETTERS OF HORACE WALPOLE,
EARL OF ORFORD,
TO SIR HORACE MANN, H.B.M. Resident at the Court of Florence, from the year 1760 to 1785.
Now first published from the Original Manuscripts.
Concluding Series.

II.
In 3 vols. post 8vo.
THE CIRCASSIAN CHIEF;
A ROMANCE OF RUSSIA.
By WILLIAM H. G. KINGSTON, Esq.

III.
2 vols. 8vo. with Portraits.
GEORGE SELWYN AND HIS CONTEMPORARIES, with MEMOIRS and NOTES. By J. HENEAGE JESSE, Esq., Author of 'Memoirs of the Court of England under the Stuarts,' and 'The Court of England under the Houses of Nassau and Hanover.'

IV.
In 3 vols. post 8vo.
THE FALSE HEIR. A Romance. By G. P. R. JAMES, Esq.
Author of 'Darnley,' 'De L'Orme,' 'Forest Days,' &c.

V.
In 2 vols. 8vo. with Embellishments.
THE RHONE, the DARRO, and the GUADALQUIVIR:
A Summer Ramble in 1842. By Mrs. ROMER,
Author of 'Sturmer,' &c.

RECREATION HAND-BOOK GUIDES
By FELIX SUMMERLY.
[See more explanatory Advertisement in last *Athenæum*.]
HAND-BOOK for HAMPTON COURT PALACE; or, Guide to the Architecture, Tapestries, Paintings, Gardens and Grounds of Hampton Court: with numerous Embellishments on Wood, engraved by Ladies, Maps and Plans from Official Sources, and bound in a Cover designed by Holbein for Cardinal Wolsey. Price 5s. In cloth, and Holbein's cover in gold, with Maps and Plans; and 2s. 6d. not gilt, and without Maps.
"Decidedly the best Popular Guide to the Picturesque Beauties of Hampton Court."—*Spectator.*
Hand-Books for the National Gallery. Price 6d., 3d., and 1d.
Also, now ready,
An Illustrated Edition, with Reminiscences of the most celebrated Pictures, drawn expressly from the Originals by Messrs. John James and William Linnell.
Hand-Book for Free Picture Galleries; being a Guide to all the Pictures in the National Gallery, the Dulwich Gallery, the Soane Museum, the Society of Arts, and the British Museum. Price 1s. 6d. Each Gallery published separately at proportionate prices.
Hand-Books for Westminster Abbey: a Guide to the Architecture, Sculptures, Tombs and Decorations, with 56 Embellishments on Wood, engraved by Ladies, 4 Etchings, a Specimen of Encaustic Tiles in the Chapter House, and an Illumination. Price 7s. Another Edition, without Tiles and Illumination, 3s.
Abridged Edition, with 4 Etchings, price 1s.
———, with Plan of the Abbey, 6d.
A Glance at the Temple Church, with Eight Illustrations and Ornamental Borders printed in three Colours. Price 1s. Second Edition.
Hand-Book for Holidays; or, Guide to the London Sights, price 6d., will be published during the present Season.
A Hand-Book for Canterbury, with 35 Illustrations, 3s. 6d.; cloth extra, 5s. 6d.
Nearly ready, Days' Excursions out of London.
George Bell, 186, Fleet-street.

NEW WORKS
JUST PUBLISHED BY
Messrs. LONGMAN, BROWN, GREEN, and LONGMANS.

Dr. Pereira's New Work.
A TREATISE ON FOOD AND DIET;
With Observations on the DIETETICAL REGIMEN suited for Disordered States of the Digestive Organs;
And an Account of the Dietaries of some of the principal Metropolitan and other Establishments, for Paupers, Lunatics, Criminals, Children, the Sick, &c.
By JON. PEREIRA, M.D. F.R.S. L.S. &c. 8vo. 16s. cloth.
BY THE SAME AUTHOR,
ELEMENTS OF MATERIA MEDICA.
Second Edition, 2 vols. 8vo. with nearly 400 Woodcuts, 30s. cloth.

Danish Historical Romance.
KING ERIC AND THE OUTLAWS;
Or, the THRONE, the CHURCH, and the PEOPLE, in the THIRTEENTH CENTURY.
Translated from the Danish of INGEMANN,
By JANE FRANCES CHAPMAN.
3 vols. post 8vo. 31s. 6d. boards.

The Cartoons in Westminster Hall.
THE HAND-BOOK OF TASTE;
Or, HOW TO OBSERVE WORKS OF ART; especially Cartoons, Pictures, and Statues. By FABIUS PICTOR.
Fcap. 8vo. 3s. boards.
"A sensible, intelligent, and well-timed little book. The principles of the arts of design are briefly and simply stated; and their application in the exercise of taste and judgment is pointed out, and exemplified by reference to celebrated and accessible pictures and statues. There are many otherwise well-informed persons who will find this unpretending little manual useful in guiding them to a correct and satisfactory appreciation of the qualities of works of art; because it enables them to assign a reason for their likes and dislikes."—*Spectator.*
"The writer displays the right feeling and appreciation of the importance of his subject; and having evidently read and reflected much upon it, he has produced a most appropriate work, which cannot be too carefully considered."—*Lit. Gaz.*
"A timely little book excellently done. The best critics and the best artists of all ages supply its materials. The most striking principles of Da Vinci, Winkelmann, Mengs, Millizia, Lessing, and Reynolds, are condensed into this little handbook. It was not the work of a common compiler to do this. With the learning these great men used, Sir Joshua and the rest used to teach their student to become a good artist; Fabius Pictor's object is to instruct his observer how to distinguish a good artist. And he achieves it admirably. We cannot wish anything better for the cause of good taste, than that the majority of visitors to the forthcoming exhibitions in Westminster Hall may be provided with this handbook. By its opportune publication, Fabius Pictor has done good service to the best order of art."
Examiner.

De Pombal's Portuguese Memoirs.
THE MEMOIRS OF THE MARQUIS OF POMBAL.
By JOHN SMITH, Esq.
Private Secretary to the Marshal-Marquis De Saldanha.
2 vols. 8vo. with Portrait and Autograph, 21s. cloth.
These Memoirs of this illustrious Portuguese Statesman, designated by his countrymen the "GREAT MARQUIS," contain details of the terrible earthquake in 1755—the energy of Pombal on that awful occasion—the establishment of the Oporto Wine Company—the Duke of Aveiro's conspiracy—rupture with the Court of Rome—strange hallucinations of the Jesuit Malagrida—suppression of the Jesuit order throughout Europe effected by Pombal's energy and address—family compact, and war with France and Spain—extensive reforms and flourishing condition of Portugal—death of the king—Pombal's resignation, examination, sentence, illness, and death. The whole interspersed with extracts from the despatches of Mr. Hay, Lord Kinnoul, Mr. Walpole, &c. never before published.

REVIEWS

Medical History of the Expedition to the Niger during the Years 184–12, *&c.* By J. O. M'William. Churchill.

THIS is the medical history of an expedition remarkable on many accounts, but chiefly remarkable, from the medical point of view, for having been conducted on valetudinarian principles; or, to use another mode of expression, this is the history of the mortality attending an expedition, in which the greatest pains seem to have been taken to keep the minds of all engaged in it intent on disease and death. Precautions were carried to such a length, that even the very air was physicked. Dr. Reid's system of ventilation—a fine example of science for the million—was applied to the vessels built for the expedition; but as it seemed that ventilating with unwholesome air, was only beating up with much ado from Scylla to Charybdis, an empirical method was hit upon of freeing the air from the impurities with which Nature's chemistry is supposed to have filled it. Accordingly, the air gathered in the wind-sails aloft was conducted into a chamber where its floating poisons were extinguished, or supposed to be extinguished, by the superior poison of chlorine; and the zephyrs thus sweetened, *secundum artem*, with the balmy influence of quicklime and sulphuric acid, were diffused below decks.

Thus the men under cover respired only medicated air. On deck, of course, they were obliged to breathe fresh air unmedicated, but in that case they were taught the danger of inhaling air which the Doctor had not overhauled. "Those who are obliged to be on deck on duty (we quote Capt. Trotter's general orders) will be supplied, when in unhealthy localities, with respirators." Supplied with respirators! Alas, poor Jack! how wretched and chopfallen you must have felt, when obliged to breathe through a respirator! The quid shut out, the yarns shut in, your heart and soul kept under gratings, why you must have thought it hardly worth while to breathe at all, when, with a chest capable of respiring great guns, you were compelled to discharge it through contemptible scuttle-holes.

"Moral impressions (observes Dr. M'William) are intimately connected with the maintenance of health, as well as with the production of disease; a conviction that the ship herself is 'sweet,' that there is nothing in her to generate disease, will, I am persuaded, go far to fortify men against the evils of the coast climate."

Yet what could be the use of the persuasion that the ship was sweet, while the men were at the same time led to believe that the atmosphere around them was charged with pestilence; that the natural fragrance of the air was deadly, and that their safety lay in the vitriolic fumes below deck? The following sentence briefly confesses the equivocal and fallacious character of the above-mentioned wholesome moral impressions:

"Moral causes came also into operation after leaving Iddah: many of those who were well, were dispirited; and not a few when taken ill, became speedily despondent."

Dr. M'William does not explain what he means here by moral causes, but he shows clearly that apprehension of disease and gloomy forebodings had taken possession of those engaged in the expedition. Perhaps he alludes to the tediousness of the river navigation. As we look forward to the publication, at no distant day, of a complete narrative of the expedition, we shall here refrain from any remark on its course of proceeding, further than to say that any unnecessary delay in the lower part of the river, in the vicinity of the mangrove swamps, appears to us to have been inexcusable. In a medical history of the expedition, however, it is necessary to state that the river was entered on the 13th of August; that the *Albert*, the vessel which proceeded furthest, commenced descending on the 5th of October, and gained the sea on the 16th of the same month; so that of sixty-four days spent in the river, only eleven were occupied in the voyage downwards. To this brief statement may be advantageously subjoined the following paragraph from our author:

"During the period when the river is high, a steam vessel, combining light draught of water with good speed, carrying three white officers, including a surgeon, coloured engineers, and manned wholly by Kroomen and other natives of Western Africa, might enter the Niger, and, avoiding unnecessary delay, reach Aboh, Iddah, the Confluence, Egga and Rabba, and return to the sea in less than fourteen days."

Rabba, one of the chief Felatah towns, is about 430 miles up the river, or 100 miles further than Egga, and yet, we are informed, that a steam vessel could go there and return in about a fourth of the time employed by the expedition in reaching the latter place. The great importance of being able to abridge to this extent the period spent in the river, will appear from what follows:—

"In no case did the fever break out before the sixteenth day after commencing the ascent of the river, or sooner than the twenty-first day from entering the river. The Albert, Amelia, and Soudan were twenty-three days inside the river before fever made its appearance, and the Wilberforce about two days less; therefore, as the invasion of the disease was nearly, if not wholly, simultaneous on board the ships, a case may be said to have occurred in the Wilberforce on the twenty-first day. Assuming that the poison was not inhaled until the vessel steamed upwards, which will reduce the period of latency to the shortest probable duration, and taking the cases on board the Albert, the ship the longest in the river, I find that out of fifty-five cases among the whites, and six among the people of colour entered in England, the days of seizure were as follows: on the 16th day three; on the 17th, two; on the 18th, two; on the 19th, three; on the 20th, four; on the 25th, one; on the 26th, three; on the 29th, three; on the 30th, three; on the 31st, three; on the 33d, five; on the 34th, four; on the 35th, two; on the 36th, one; on the 37th, six; on the 42d, three; on the 45th, one; on the 47th, one; on the 48th, one; on the 51st, one; on the 60th, three: average day of invasion 33.286. Among the six people of colour, two were attacked on the 16th day, one on the 18th, one on the 21st, one on the 29th, and one on the 42d, day; making the average period of attack the 25th day, (25.200). Bearing also in mind that about one ninth of the white crew escaped the river fever altogether; that the people of colour only who had resided for some time in a temperate climate were affected by it, but in small proportion and in a mild degree; and that the blacks entered in Africa did not suffer at all,—we shall have some data for the selection of crews for future operations in the Niger."

From this it would appear that, due attention being given to dispatchfulness, a vessel might ascend the Quorra as high as could be necessary for purposes of trade, and return to the sea in less time than the river fever requires to manifest itself. The seeds of disease, it is true, might be imbibed in the mean time; but it is probable that beyond the pestilential region, and at sea, the fever would assume a less malignant character, and with diminished mortality would cease the alarm which is the most formidable ally of the disease.

Among 145 Europeans engaged in the expedition, all vigorous young men, there were no fewer than 130 cases of fever, 40 of which terminated fatally. How long the survivors continued to be affected with the consequences of the malady, we are unable to say. Our author has established the fact, that one effect of the morbific influence which usually produces fever, is to disorder the mucous membranes in general, and particularly to cause ulceration of the intestines, whence ensues the dysentery so frequent and severe on the coast of Africa. The violence of the fever fell wholly on the Europeans:—

"Of the blacks, consisting of natives of various parts of Africa, including Kroomen, Americans, West Indians of African origin and East Indians to the number of 158, eleven only were affected by the fever in the river: they (the eleven) had all been in England, and for some years absent from their respective countries. The disease in them assumed a comparatively mild form, and in no case did it prove fatal; showing that the immunity from endemic disease in warm countries, which is enjoyed by the dark races, is to a certain extent destroyed by a temporary residence in another climate."

It is obvious that the blacks engaged in the expedition were much less open to what our author calls "moral impressions" than the Europeans. They could hardly be so well acquainted with white men's customs, as to be able to perceive in every instance how far the regulations of the ship originated in the fear of disease. We do not mean, however, to reject altogether the influence of climate, or physical causes of disease; but we believe that these physical causes have been much magnified, as well as distorted by hypothesis. The whole system of medicating (as it was called) the ships, was grounded on the supposition, that the atmosphere of the Quorra is filled with miasmata or noxious effluvia, and much trouble was taken to combat those imaginary enemies. Our author intimates his belief that these poisonous particles being inhaled mingle with the blood, which thus becomes the first seat of disorder; but to us it appears that he really knows as little of the progress of the poison, as he knows of the poison itself, respecting which he thus ingenuously confesses his ignorance:—

"But the nature of the poison to be combated was unknown, and therefore it was impossible to predict what the effect of various materials might be. Such materials, therefore, were provided as were known to be most powerful in acting upon those poisonous bodies that have been found in the air, more particularly acids, lime, and chlorine; and to these were added substances capable of influencing the hygrometrical condition of the atmosphere. I do entertain the opinion that had we been fortunate enough to discover the precise nature of the poison, and had it been confined to no very extended district, that by keeping the white men below as much as possible, and steaming rapidly through that situation, the medicator might have been brought into much more efficient operation than was possible when, with every attention to experiment that circumstances permitted, no clue as to the constitution of the virus was obtained."

Now the fact that 147 black men totally escaped disease in the Niger expedition, while 130 Europeans suffered from it, appears to us to be a sufficient proof that we must attribute the disease to the ordinary accidents of climate, heat and humidity, but not to any poison or specific substance which a chemist and physiologist could say is prejudical to life. Dr. M'William, it is true, found that in those who died of fever, the blood was fluid after death, but in his deductions from this fact, he mixes nine parts of theory with one of reason. He supposes that some miasmata, absorbed in the system, poisons the blood and hinders its coagulation. "The general character of the morbid anatomy," he observes, "seems to prove, that the cause of the disease was a poison introduced into the blood, through some channel." But can he imagine any poison which would thus operate on the blood of a white man and not on that of a black? Since the Kroomen and other blacks of Western Africa were found

Digitized by Google

wholly exempt from the malady which attacked the whites, it necessarily follows that there is nothing in the air of the Quorra which is essentially injurious to human life, but that the different manner in which it affects natives and Europeans, must be assigned wholly to the difference of their constitutions, which lies chiefly in the power of absorbing and generating heat. In short, we would explode the doctrine of miasmata altogether, as being worse than useless.

Not long ago an opinion, which emanated from high authority, obtained currency, that sulphuretted hydrogen, disengaged from the putrescent vegetable matter carried down by the rivers, or washed off the shores, in mixed salt and fresh water, is the cause of the malignant fevers prevalent on the coasts of Africa. Plausible as this seemed at first sight, a little attention was sufficient to discover its unsoundness. Our author, too, observes, "I consider the absence of the gas in question (sulphuretted hydrogen) from the sea and river waters, and superincumbent atmosphere, to be distinctly proved." Here then is the end of the best attempt hitherto made to give the much talked of miasmata a distinct chemical form.

There are two important questions respecting the African fever, viz. 1. Whether it be contagious; and 2. Whether a person once attacked by the disease, is rendered thereby less liable to it for the future; which questions we shall allow our author to answer in his own words:—

"The question as to whether contagion contributed to the spread of the disease on board of the ships may, in my opinion, be briefly disposed of. All were exposed to the same influences, and nearly all were attacked with fever. Two only of the four medical officers who died had been in attendance on fever patients. Dr. Pritchett, Mr. Thompson, Mr. Stirling and Dr. Stanger were among the few who escaped being seized with fever, although they were in constant intercourse with the sick; and I was the last person in the Albert laid down with fever. The nurses on board the Albert were among the latest taken ill, and one escaped altogether. No fact came under my observation affording the slightest evidence that the disease was communicable from one person to another. Does one attack of river fever afford any protection against a second? My own experience, added to information obtained from many of my brother officers, and from Mr. King, the surgeon of the Ethiope, who has been more in the Niger than any other medical man, is wholly unfavourable to the opinion that one attack of river fever affords any immunity from a second. On the contrary, those who have once suffered from this treacherous disease seem particularly predisposed to it, if they again venture within malarious influence. Of those who had the Niger remittent, on board the Wilberforce in 1841, many were again attacked with fever, on the return of the vessel to the coast the following year, while surveying the Cameroon river and Amboises islands; and when that vessel proceeded up the Niger the second time, in July 1842, six out of seven who had already passed through river fever, were again seized with it, from the effects of which two died. In many cases the character of the second attack may not be exactly like that of the first, but Mr. Stirling, who saw the patients on the return of the vessel to Fernando Po, considered the fever as in no way differing from that which had come under his observation when in the river during the previous year."

We confess that we find nothing in Dr. M'William's volume calculated to convince us that there is any particular noxiousness in the atmosphere of the Quorra. Extensive flats overgrown with wood, a wide and swampy delta, and mangrove thickets, are, no doubt, sufficient to horrify one who stands habitually in awe of miasmata: at the very sight of a river's banks covered with dense foliage, he already feels the first shiverings of the coming fever. But if we calmly compare the mortality of the Quorra, as derived from the experience of all the vessels which have hitherto visited it, with that of Sierra Leone, or the Gambia, or of Western Africa collectively, the result, we believe, will be the conviction, that there is no greater risk of life in the Quorra than is perseveringly incurred elsewhere. It will be no easy matter, we are aware, to overcome the horror of miasmata; yet let the mortality of Tuckey's expedition be considered—an expedition which passed through a country where every appearance was favourable to health; let it be considered, too, that Ascension Island, which is elevated and almost quite bare of vegetation, has been visited by fever, although no one can suspect it of generating marsh miasmata. When travellers shall have thrown aside the solicitude arising out of theories of disease, then we hope to see the Quorra explored as fearlessly as the Senegal or Gambia.

Popular Cyclopædia of Natural Science—Mechanical Philosophy. By W. B. Carpenter, M.D., Author of 'Principles of Physiology.' Orr.

To write a book without sufficient reason, is, in this era, to commit a double sin—against the author himself, and against the public. To write a book on a new subject—to write on an old subject new things—to write learnedly on that which has been formerly but loosely and vaguely treated—or to write intelligibly on what has been only learnedly, and abstractly, and drily treated—or to mix with water and dilute and sweeten with sugared and honeyed words, for the palate of the youthful scholar, the hard and bitter truths of science—all these are apologies for writing, printing, publishing, which we frankly admit; and any one of them is sufficient to convert our task as reviewers into an unmitigated pleasure, especially wherever we find the work honestly and sincerely performed. But a new book without such an apology is an unmitigated evil. The task of reveiwing becomes irksome (thankless it always is) and ungracious; but, as a duty, it is not to be omitted simply because it happens to be unpleasant.

We have read over with great care the publisher's preface, next the author and editor's, and lastly, with pains-taking, this book itself, and we have formed a very simple opinion on the subject—the book was not wanted; others of the same kind, and better, are already in existence; the subject has already been served up *ad nauseam;* the author knows his subject imperfectly, and what little he does know is ill communicated.

This book is called a 'Popular Cyclopædia'; had we not a popular Cyclopædia before? Pray what is the 'Cabinet Cyclopædia' if it is not a popular Cyclopædia? are not its volumes small enough, are not its woodcuts sufficiently numerous? is it not sufficiently diluted? must the diet be made poorer still? the intellectual regimen of a people ground down to a poor-house dietary? Is not Lardner popular enough? does Carpenter think he can write more popularly than that prince of popular writers? But the prince is dethroned! Lardner is down, he has no friends; and so Messrs. Carpenter and Orr publish their 'Popular Cyclopædia.'

But if the 'Cabinet Cyclopædia' is to be despised as worthless, because its quondam editor committed a folly and a sin, pray let it be so, and let us understand each other, and admit the cause. Lardner committed a folly and a sin, and so let him suffer, and let all the pure throw stones at him without mercy; but shall one sin efface all the multitude of merits of his books, and most of his Cyclopædia,—and shall the works of Herschel, and Brewster, and Kater, and many others, parts of that Cyclopædia, all be blotted out by this one mighty sin,—and shall we think and act as if they had never been? Then still so be it. But, then, is there not already a popular Cyclopædia, called the 'Library of Useful Knowledge'; and is it not popular enough in all conscience, and must it be watered down "lower and lower still"? And then have we not 'Scientific Dialogues' for the boys, and 'Conversations' for the girls, and 'Scientific Wanderings' for the old ladies? Faugh—enough, *ad nauseam.*

But let us hear the publisher. "No works at present before the public appear to be altogether suitable to this purpose" (instruction of youth); other works being "behind the present state of science"—"inaccurate copies of one another"—"destitute of the striking novelties which scientific research is constantly bringing into view," &c. Very well; so be it. And all this is *now* to be set right. Let us see how these censures of the past and promises of the future are to be fulfilled—popular without puerility, profound without pedantry, truthful yet not trite, new and startling yet not superficial or empirical,—let us see.

"Popular without puerility," page 21. "A washerwoman, who leaves an apron-string hanging down from *one* side of her tub at night, would probably find in the morning that a great part of the water had been drained by it upon the floor." How wonderful!!! (*Le verre d'eau*—great effects from small causes.) A little apron-string and a great one-sided tub. Try—try the apron-string; it will not do it—only very little. In the same page the writer speaks of a *hyperbola,* and, instead of it, draws a *circle*—fig. 2.

"Profound without pedantry," next page, 22. Put paragraph 28 into the hands of any boy or man, who previously knew nothing about it but what the book tells him, and then ask him what is endosmose? what it is, and how it is? Whatever notion was in the author's head, he has assuredly conveyed nothing like an adequate idea of the subject. But go on a little further: in page 25, a ring of platinum is *welded* to a tube of glass. This welding of glass and platinum together is certainly a new and clever process. But to proceed:—"Solids exercise attractions over gaseous particles....Shown by the floating on water of bodies which are really heavier than itself, but which are buoyed up by a layer of air that adheres to them....Thus, with a little care, we may lay a fine sewing-needle on the surface of water in such a manner that it will not sink; but if the needle be too thick, its weight will bear a larger proportion to the quantity of air that surrounds it, so that it cannot be made to float."

Here is novel and startling scientific discovery with a vengeance. Alas! poor Monge and Segner;—alas! thou universal Dr. Young;—alas! poor Laplace, and poorer Poisson;—oh! poor Gauss, ye knew nothing of the matter; ye lived too early in the world; ye have spent the strength and substance of your thought and your calculus in vain upon the theory of capillary attraction; ye were born too soon, for now we see that ye troubled your heads in vain to discover the measures and resultants of all these capillary attractions. The needle swims on the top of the water, just as a shipwrecked cockney would, by being specially furnished for the occasion with an air jacket—a patent Mackintosh (Carpenter's?) water-proof air safety life-preserver.

Now, dear authors, and publishers, and patient readers, is it our fault that we have to say all this? are we to blame that we find such ignorance of first principles in a book that professes to teach? Verily, then, it is a good precaution not to read the book before reviewing, for reading is somewhat apt to raise a prejudice against it.

Shall we go on? Shall we say, in page 29, that fig. 4, as arranged, will not act;—that the

Digitized by Google

arch, fig. 31, will not stand, never was executed, and never will be; — that in pages 209 and 210, the nature of the cycloid is wholly misunderstood, and in the figure wholly misrepresented; and the point O is twice as far from D, both in the verbal demonstration and in the diagram, as in truth it should be.

We need dwell no longer on the subject. The passages we have remarked on are not selected, but such as lay on the pages we opened while writing. They are sufficient to show that the author is imperfectly acquainted even with the elements of the subject he proposes to teach, and that the little knowledge he has is derived from a cursory perusal of books. Science is hardly a subject to be thus trifled with: the path to science is too full of traps and pitfalls, in the shape of erroneous plausibilities, to be safely trodden in the wake of a half-learned guide; and we know, when the blind lead the blind, where they generally land. No! popular writing is, doubtless, a very useful commodity, and for which there is demand in the market; but, if we mistake not, successful popular writing on science requires much more sound knowledge and original thought, than the majority who attempt it seem to have any notion of. Very few have succeeded in it; and those, generally, who have been most successful, have been those who had been beforehand most thoroughly versed in their subjects, so as to have no anxiety for *their own* status, and leave their minds wholly occupied with the *mode* of instilling what they knew into the minds of their hearers. But those who attempt to get up a knowledge of the subject *pro re nata*, and to write before their own ideas are settled and matured, are sure of failure, and all we can say of them, at the best, is that— **They have been at a feast of learning, and stolen the scraps.**

The Closing Events of the Campaign in China. By Capt. G. G. Loch. Murray.

The Last Year in China. By a Field Officer. Longman & Co.

"Anxious to see China, and witness the operations then proceeding there," Capt. Loch, in December 1841, asked and obtained permission to join the Expedition, and on the 23rd of January sailed from Plymouth Sound. On the evening of the 26th of April he entered the Straits of Sunda, the western entrance to the China Sea, and from this point he begins to record his observations. Capt. Loch's remarks extend over the greater part of the year 1842, and form lively illustrations of the close of the Chinese campaign, and the character of the singular country and people against whom the British arms were for the first time directed.

After touching at Hong-Kong, and making a hurried visit to Macao, the fleet departed for the scene of operations, and arrived in time to be present at the dismantling of the Woo-sung Forts; and here Capt. Loch mentions some instances of Chinese bravery worth recording. An officer twice led his troops to the very point of the British bayonets, rallying them when repulsed, till he fell, shot through the loins:—

"When he was carried to the rear, an interpreter, seeing tears streaming down his cheeks, told him not to fear—that mercy and every kindness would be shown him—'Mercy,' he said, 'I want no mercy. I came here to fight for my Emperor, and neither to give nor to accept mercy; but if you wish to gain my gratitude, and can be generous, write to my revered sovereign, and say I fell in the front, fighting to the last.'"

Nor was this a solitary instance:—

"The Chinese have shown many individual instances of conspicuous gallantry: it may be sufficient to remark one in particular that occurred on the ramparts of Chin-kiang-foo. A Mandarin led a small party of about thirty men against a company of General Schoedde's advancing column; a volley dispersed his soldiers, but he marched up to the points of the bayonets; and, after firing his matchlock, succeeded in pulling over the ramparts with him two of the grenadiers. I feel persuaded that, if drilled under English officers, they would prove equal, if not superior, to the Sepoys; they have greater physical power, greater obstinacy, and, consequently, minds that retain impressions with greater tenacity, and would be slow to lose confidence after it was once built upon the foundation of their vanity."

At Chan-hai, the writer was quartered in some tea-gardens, of which he gives the following description:—

"In the centre of a serpentine sheet of water, there is a rocky island, and on it a large temple of two stories, fitted up for the accommodation of the wealthy public. Pillars of carved wood support the roof; fretted groups of uncouth figures fill up the narrow spaces; while moveable latticed blinds screen the occupants from the warmth of the noonday sun. Nothing can surpass the beauty and truth to nature of the most minutely carved flowers and insects prodigally scattered over every screen and cornice. This is the central and largest temple. A number of other light aërial-looking structures of the same form are perched upon the corners of artificial rocky precipices, and upon odd little islands. Light and fanciful wooden bridges connect most of these islands, and are thrown across the arms of the serpentine water, so that each sequestered spot can be visited in turn. At a certain passage of the sun, the main temple is shaded in front by a rocky eminence, the large masses of which are connected with great art and propriety of taste, but in shape and adjustment most studiously grotesque. Trees and flowers and tufts of grass are sown and planted, where art must have been taxed to the utmost to procure them lodgment. In another part of the gardens there is a miniature wood of dwarf trees, with a dell and waterfall; the leaves, fruit, and blossoms of the trees are in proportion to their size. This ingenious science (if science it can be called), to bring it to perfection, requires the most assiduous care and patient watching. A small branch of a forest tree is deprived of a ring of bark, and the bare place covered round with prepared unctuous earth; this is kept moist, and when the radicles have pushed into the loam, the branch is separated from the tree, and planted in a trough or porcelain flower-pot. The pot is then filled with bog earth, manure and clay, and water is applied according to the necessity of the plant. The branches are repressed by cutting and burning, and bent into shapes resembling an old forest tree; and even to the roughness of the bark and hollow knots of pruned and decayed branches, they are complete in resemblance. The roughness is produced by ants, attracted by smearing the bark with sweet substances. Tortuous pathways lead to the top of the artificial mountain, each turning formed with studied art to surprise and charm, by offering at every point fresh views and objects. Flowers and creepers sprout out from crevices; trees hang over the jutting crags; small pavilions crested with the white stork, their emblem of purity, are seen from almost every vista, while grottos and rocky recesses, shady bowers and labyrinths, are placed to entrap the unwary, each with an appropriate motto, one inviting the wanderer to repose, another offering quiet and seclusion to the contemplative philosopher."

A party sent on shore to obtain vegetables, saw a proclamation affixed to one of the principal houses:—

"It mentioned our victories, and hinted at the possibility of our ascent up their great river; in the event of which occurring, the people were implored to remain in their houses, and not to leave the country exposed to the inroads of banditti; it stated that we (the English) had always shown ourselves anxious to conciliate the peasantry, and consequently would not injure them, nor allow the robbers to commit depredations, if they remained. This single document is of itself, I think, evidence sufficient to lead to the conclusion that the Emperor will never again have the inclination to command, allowing he may have the power to compel, his subjects to retire inland, and thus meet an invading enemy by passive resistance. It would expose his richest provinces to be plundered by native robbers,—the evil, above all others, he has the greatest reason to dread."

After the taking of Chin-kiang-foo, the writer entered a large house in that city, belonging to a Tatar of distinction, and thus describes the pitiable scene which presented itself:—

"After we had forced our way over piles of furniture, placed to barricade the door, we entered an open court strewed with rich stuffs and covered with clotted blood; and upon the steps leading to the 'hall of ancestors' there were two bodies of youthful Tartars, cold and stiff, much alike, apparently brothers. Having gained the threshold of their abode, they had died where they had fallen, from the loss of blood. Stepping over these bodies, we entered the hall, and met, face to face, three women seated, a mother and two daughters; and at their feet lay two bodies of elderly men, with their throats cut from ear to ear, their senseless heads resting upon the feet of their relations. To the right were two young girls, beautiful and delicate, crouching over, and endeavouring to conceal, a living soldier."

Such a scene could not have been witnessed without horror, even during the excitement of a battle, but Capt. Loch saw it after the city was taken and all danger at an end. He thus proceeds:—

"I stopped, horror-struck at what I saw. I must have betrayed my feelings by my countenance, as I stood spell-bound to the spot. The expression of cold unutterable despair depicted on the mother's face changed to the violent workings of scorn and hate, which at last burst forth in a paroxysm of invective, afterwards in floods of tears, which apparently, if anything could, relieved her. She came close to me, and seized me by the arm, and with clenched teeth and deadly frown pointed to the bodies—to her daughters—to her yet splendid house, and to herself; then stepped back a pace, and with firmly closed hands, and in a hoarse and husky voice, I could see by her gestures spoke of her misery—of her hate, and I doubt not of revenge. It was a scene that one could not bear long; consolation was useless; expostulation from me vain. I attempted by signs to explain, offered her my services, but was spurned. I endeavoured to make her comprehend that, however great her present misery, it might be in her unprotected state a hundred-fold increased; that if she would place herself under my guidance, I would pass her through the city gates in safety into the open country, where, doubtless, she would meet many of the fugitives; but the poor woman would not listen to me; the whole family were by this time in loud lamentation; so all that remained for me to do was to prevent the soldiers bayoneting the man who, since our entrance, had attempted to escape."

The following anecdote illustrates the danger with which the *beautifying* of the Chinese women, by making the feet small, is accompanied. It reminds us forcibly of tight lacing and its consequences:—

"The means taken to effect the alteration of the women's feet in China are decidedly prejudicial to the health, and frequently attended with fatal consequences. This fact was ascertained by a clever young naval surgeon who was for some time stationed at Chusan. It happened that during an excursion into the country, he one day entered a house where he found a child about eight years old very ill, and suffering under severe hectic fever; on examination he discovered that her feet were undergoing the process of distortion; he was informed that she had been a year under this treatment. Moved by pity for the little sufferer, he proceeded to remove the bindings, and fomented the feet, which were covered with ulcers and inflammation. The change in shape had already commenced by the depression of the toes. The child was much relieved by, and evidently grateful for his treatment. On taking his leave he warned the mother that she would certainly lose her child if the bands were replaced; but his remonstrances were of no avail. Whenever he returned (and this happened frequently), he always found them on again, the woman urging as an excuse that her daughter had better die than remain unmarried, and that without improved feet such a calamity would be her inevitable lot. As might be expected, the child grew worse and worse. After a longer interval than usual, he once again revisited the house, but found it untenanted,

Digitized by Google

and a little coffin lying at the door, in which he discovered the body of his poor young patient."

On the 14th of August, Capt. Loch accompanied Major Malcolm and Messrs. Morrison and Thom to meet some Chinese mandarins, and if possible to negotiate a treaty:—

"We were received at the entrance of the spacious court of the temple by a bevy of mandarins, from the blue to the brass button. Different from us, they rustled in embroidered silks and flowered muslin of a design and beauty of texture worthy even to deck the forms of our own fair dames. They marshalled us with many obsequious bows, and really much graceful courtesy, into the great hall of audience, where Mr. Secretary 'Whang' and the Tartar General 'Chin' were standing to receive us. After Mr. Morrison had severally introduced us, we sat down in chairs that would have held two Daniel Lamberts, round a square table, Whang opposite Malcolm, I next to Chin, and Mr. Thom opposite me. Mr. Morrison retired to another table to translate some papers. Whang, a man of seven or eight and thirty, is considered one of the most rising statesmen in China, and his manners and conversation marked him a perfect gentleman. I do not remember ever having met, even in my own country, a person of more gentle and polished manner or courteous breeding than this Chinese, so different from the majority of his countrymen in their intercourse with foreigners. The General was a portly old veteran of about sixty, wearing a little grey tufted beard, a plain dress, crystal ball, and peacock's feather. His red ball had been taken away for some offence shortly before our arrival. The other mandarins stood round among the servants, and listened, as is the universal custom, to all that was discussed. At the door were a few peace-keepers or police, wearing red felt conical caps, each topped with a cock's feather, which traversed round upon a swivel. They were armed with cow-hide whips, which they kept in pretty frequent use upon the shoulders of the pressing and chattering rabble outside."

Whilst Mr. Morrison was copying the papers tea was handed round:—

"When the writing was finished, Malcolm produced the patent from Her Majesty, appointing him Secretary of Legation: this was to show that he was the accredited and proper person to negotiate on the part of the Envoy. After this was looked at, he displayed Sir Henry Pottinger's, which was translated *verbatim* by Mr. Thom, and the Queen's seal and signature pointed out to the deputies. Major Malcolm then demanded to see the Emperor's commission, which, after some little delay and great ceremony, was brought forth from a chest by a mandarin, under whose special charge it appeared to be. He carried the roll of yellow silk in both his hands, and proceeded—his eyes reverentially fixed upon it—with slow and solemn steps towards the table, and placed it in the hands of Whang with tenderness and forced resignation. The produce of the silk wrapper was a little shabby yellow box, badly made, and worse painted, containing the power, which Morrison on examination pronounced, as far as he was able to judge, authentic. I was greatly amused watching the anxious and horrified faces of the various Chinese when Mr. Morrison touched the commission, and I thought the old keeper would have fainted on the spot when he, for an instant, held it in one hand. In China the same respect is paid to an Imperial edict, or the mark of the vermilion pencil, that with us, the sovereign only receives in person."

Previous to signing the final treaty, our author accompanied Sir H. Pottinger on a visit to the Chinese commissioners:—

"A more tolerable band than we had yet heard commenced, as we sat down, a tune resembling a pibroch, and continued to play throughout the repast. Young white-buttoned mandarins handed round tea, hot wine, and sweetmeats, while a conversation upon general subjects was maintained between the Commissioners and Sir Henry through the medium of the interpreters. Numerous patties of minced meat, pork, arrow root, vermicelli soup, with meat in it, pig's ear soup, and other strange dishes, were served in succession, in small china and silver basins, and in proportion to our various capabilities in making these messes disappear, we seemed to rise in the estimation of the beholders. But human nature could not support this ordeal long, and, as a *coup de grace*, Ke-ying insisted upon Sir Henry opening his mouth while he with great dexterity shot into it several immense sugar-plums. I shall never forget Sir Henry's face of determined resignation after he found remonstrances were of no avail; nor the figure of Ke-ying, as he stood planted before him, in the attitude of a short-sighted old lady threading a needle, poising the *bonne bouche* between his finger and thumb preparatory to his successful throw."

The Captain and a large party now set off to visit Nanking and the Porcelain Pagodas. On their route they came upon a burial ground situate at the corner of a vast plain:—

"Near the foot of the grassy slope, at about the centre of the hill, a large joss house stands fronting an avenue of colossal granite figures of men and animals, extending in a semicircular sweep for about a mile, to two square, brick, Egyptian-shaped buildings, which are hollow, open on each side, and empty. These, we were told, were the tombs of the emperors of the Ming dynasty; but our guide also said, that there was a large excavation in the rock behind the joss house containing coffins; so I fancy that it must be the place of general interment, and that the huge figures were merely intended to dignify the approach to the cemetery. We had not time to visit the joss house, but we trotted our startled horses between these silent guards, and examined with great interest the sculpture of a departed age—they are about three times the size of life. A tablet gate marks the commencement of the avenue; then in succession appear two upright shafts of granite in single blocks, four warriors dressed in long loose shirts of scale armour, leaning with folded hands upon their swords, (they front each other, as do all the statues,) next to them lions, bears, horses, camels, elephants, and so on to the two buildings, a repetition of the same figures, each alternate pair (with the exception of the men) crouching. Most of them have been hewn into shape from single blocks: they rest upon flat slabs of granite, on unlevelled ground, and, strange to say, although centuries have passed since they were first placed there, no weeds are growing around, nor have they sunk three inches. The elephants are accurately shaped, and fairly sculptured; the rest are all most rudely executed."

The Porcelain Pagoda is—

—"an octagonal building of nine stories, rising to the height of 261 feet; bright with many-coloured porcelain, which throws off a glittering light like the reflected rays from gems: it is in perfect preservation. The porcelain is fastened to the tower with mortar, as Dutch tiles are upon a stove, except the projecting cornices and bas-reliefs of grotesque monsters, which are nailed. The various colours are white, yellow, red, and green; the roofing tiles are all of the imperial yellow. It stands in a spacious court, surrounded on three sides by a wall, the fourth open to two extensive flights of granite steps descending to the joss house attached to the pagoda facing the town. Another large enclosure planted with regular rows of trees extends to the road and suburbs. The projecting flanges, if I may so term them, of the separate stories curve upwards at the points, to which are suspended bells of size proportioned to the taper of the tower. A priest assured me that when they were first hung up, after the complete repair of the paoută, or pagoda, in the last century, they used to ring forth charming melodies at the command of the mistress of the tower, 'the Queen of Heaven,' until she, wrathful at the indifference and falling off of her followers, in a fit of anger, deprived them of sound. The greater portion are certainly tongueless, and all of them cracked, which is not surprising, for the bells and cast gongs in China (made of the same metal) are very brittle, from the absence of an adequate proportion of alloy."

Having secured their horses, the party entered the pagoda, and found themselves in an octagonal corridor surrounding the body of the building—

—"which is square and elaborately ornamented with figures of the Budha faith in bas-relief—the whole profusely gilt: each story contained a shrine, with the universal idol, the sitting figure of 'the Queen of Heaven.' A single door under the niche, in which the principal deity was placed, leads into a square chamber in the shaft of the building, occupied by another image. The walls are all lined with square porcelain tiles, each separate one embossed with a small device in the centre: those upon the ground-floor are entirely covered with gilding. The others of the eight upper stories differ, by having a black edging round the gilded device, which has a good effect: the concluding step of each story is of stone, the flooring and stairs of wood. The ample view from the summit surpassed our expectations. Facing the south, a little river from the distant hills came winding like the Forth near Stirling: it passes by the south and western walls, and helps to supply the canal with water. Towards the S.W., as far as the sight could reach, flowed the princely Yang-tze-kiang, leaving between us and it, as it passed Nanking, a richly cultivated flat of paddy land about three miles in breadth. Facing the north, we looked down upon the walls and roofs of a dense cluster of houses—the Chinese city; through the centre, eastward, ran a canal. The streets seemed very narrow; the buildings principally of two low stories; and upon every slight rise of ground public temples, granaries, and government offices, surrounded by spacious yards or courts were discernible."

Here we must take leave. The narrative is plainly the work of one who travels with his eyes open, recording what he sees, and seeing all that is to be seen.

'The Last Year in China' escaped our notice at the time of publication. It is less full in its details, and less amusing than Capt. Loch's little volume.

Anti-Duel; or, a Plan for the Abrogation of Duelling, &c. By John Dunlop. Houlston & Stoneman.

IT is strange that such practices as duelling should be tolerated in defiance of reason, and without the support of anything approaching to a single undeniable argument; and it is still more strange and melancholy that such a defiance of conviction should not proceed from the blandishments of passion, but be maintained at a sacrifice of the natural feelings. Inexplicable, however, as the fact may be, it is neither new nor rare. There is not an opinion that has passed irremediably into the class of vulgar prejudices, but had preserved a protracted influence for long years, after all the knowledge necessary for its refutation had been widely disseminated and respectfully received. Even when opposing public opinion no longer hesitates, and practices are universally admitted to be absurd, mischievous, and immoral, they continue active and influential, like the hero in the Italian epic, who went on fighting, after death, because, though he was killed, he was too busied in the contest to be aware of the fact.

Without saying much for the wisdom or the morality of the age, we may aver, that it is fully convinced that there is nothing satisfactory in what is called gentlemanly satisfaction—that the loss of any given quantity of brains will not make that to be true which has been falsely uttered; or that being "winged" in a duel does not predispose us to greater comfort under the infliction of an injury so justified. As for the opposite contingency of putting the saddle on the right horse, that makes no difference, as to the result, which, according to the code of honour, is as effectually, though not as pleasantly, "washed out" in your own blood, as in that of him who had offended you: so that the pleasure of revenge, the only natural motive for entering into the transaction, is repudiated and excluded, as savage, ferocious, and ungentlemanly. All this is known and acknowledged; and yet men who never refuse themselves a pleasure or submit to an annoyance except "on compulsion," in this one instance place themselves unresistingly at the beck and call of all the world, and are the bond

Digitized by Google

slaves of any one who asserts his desire to face them at ten paces.

This view of the case is not very favourable to the attempt at reasoning down the abuse; but though true enough in the main, as respects those who fight when they must, but back out when they can, it does not lay bare the whole state of the entire practice. In the present condition of society, the greater number of duels actually fought are entered upon either by men of strong and bad passions, tending to bring them into hostile collision with each other, or by men who have a sort of animal pleasure in the taking of life. Since the abuse of wine has ceased to be habitual, the instances of educated gentlemen engaging in personal encounters, have become exceptional; and in the army where the *punctilio* must be the most sensitively treated, the appeal to the pistol is daily becoming more rare. Although, therefore, when the *casus belli* occurs, most gentlemen submit to the necessity imposed by what is mistaken for public opinion, still it is not less true, that the abuse is becoming unpopular, is confined to smaller circles, and is open to efficient attacks from those who are disposed manfully to wrestle with it: men of sense are tired of fearing to be thought afraid. Of those so disposed, Mr. Dunlop, author of the pamphlet now before us, is one. This writer is known to our readers, by our notices of more than one strenuous effort made by him in behalf of humanity. Of his work on the tendency of mankind to associate, (*Athen.* No. 665) the present publication is a corollary: the purpose being to induce the public to avail themselves of that tendency, and to put down duelling, by the voluntary union of large numbers in protest against the practice. In recommendation of the scheme, Mr. Dunlop very reasonably dwells on our experience of the happy influence of temperance societies, in abating the drinking nuisance.

There is, however, this great difference in the cases, that temperance societies are popular institutions founded by the people for the people, on a powerful personal feeling of the necessity of the case: whereas anti-duelling associations must be established and brought into vogue by the masses, who are in a very trifling degree exposed to the evil, and whose ways of thinking are but rarely in harmony with those of the parties they would have to address. As far as our experience has gone, and it is now extended over a long series of years, argument, by whomsoever offered, has been wholly wasted in contending with the evil. The practice, reposing on opinion alone, has best been checked by ridicule; and accordingly we have observed, that one absurd encounter, by persons not entitled to "the honours of the duello," or conducted upon principles repugnant to "the code of honour," has done more towards preserving the public peace than all direct attacks. So too, *per contra*, a duel by men of station and character can hardly fail to produce a temporary increase of the practice.

In offering these remarks, we would not be understood as undervaluing Mr. Dunlop's effort, or of insinuating that his proposed end is not in the highest degree interesting to humanity. It is some gratification to know, that the growing civilization of the world is actually telling; and that every day something is gained towards a final abolition of the custom. On the whole a professed duellist is already regarded with contempt, by the most respectable and respected members of society; and a knowledge of the fact is not without its influence even on the worthless. It may, therefore, be presumed that a reduction of the proposition to black and white, and a formal protest of large majorities, taken from the most religious and reflecting part of society, would not be wholly lost in such a state of things. The difficulty is to extort such an overt act from those, to whose habits of thought and of action the practice of duelling is not wholly alien.

The Original History of Ancient America, founded upon the Ruins of Antiquity: the Identity of the Aborigines with the People of Tyrus and Israel: and the Introduction of Christianity by the Apostle St. Thomas. By George Jones, R.S.I., M.F.S.V., &c. Longman & Co.

Mexico, Guatemala, and Peru—[*L'Univers Pittoresque, &c.*] By M. Lacroix. Paris and London, Didot.

Horace records that an author of his day, named Fannius, fearing that the world would not form a just estimate of his merits, carried his statue and his works to the Palatine Library, and insisted that they should occupy the highest niche of merit. Mr. George Jones has more than rivalled the self-complacency of Fannius; having revived, with very slight modification, an old theory, long since exploded for its palpable absurdity, he presents himself before us, displaying his portrait and heralding his advent with a flourish of trumpets, the loudness of which is in direct proportion to the hollowness of his pretensions. His theory is, that the natives of the American Continent are descended from two stocks, the Tyrians and the Israelites, and he declaims on this crude conjecture in a strain of bombast imitated from the worst style of Macpherson's Ossian; he duly chronicles that he has had an invitation to dinner from the Duke of Cambridge, that his publishers wrote him a civil note when they accepted his manuscript, and that the recommendation to dedicate his book to the Archbishop of Canterbury, came from very high authority. These matters are obviously of great interest to Mr. George Jones, but we cannot see any necessity for parading them before the public.

Mr. Jones's theory of the colonization of America is precisely the same as that which forms the basis of the Book of Mormon, for the superadding of the Tyrians can scarcely be called a change, as the Phœnicians and Israelites were closely affiliated branches of the great Semitic race, speaking nearly the same language, with so little dialectic difference, that every Phœnician or Punic name recorded in authentic history can be resolved into Hebrew compounds. Now, in order to show that the American aborigines are descended from a Semitic race, it would be necessary to establish structural analogies in physiology, language, and social institutions; not such accidental coincidences as would identify a bashaw and a barrister because each has three tails. On the subject of physiology Mr. Jones is silent; he is modest enough to decline collision with Cuvier and Blumenbach. He is equally reserved on the subject of language. Every one who has studied ethnography is aware, that though words continually vary, the grammatical structure of language is indestructible; that the principles, for instance, of declension, conjugation, prefixes and suffixes, substantially remain the same, though the materials on which they work may be changed, just as the same general principles of construction may be seen in edifices of wood, of brick, or of marble. The structure of the Semitic languages is known to the generality of scholars; the root or sign of the principal idea remains as nearly as possible unchanged amid all the varieties of inflection; we have examined the grammars of Indian languages, published and manuscript, of several tribes both in North and South America, and there is not one exhibiting a trace of this principle, or of any near approach to it.

Let us next examine the analogies of social institution. Mr. Jones, so far as we can understand him, for the Ossianic dialect is not the most intelligible, gives us the following: the women of both races seclude themselves for a limited number of days after child-birth;—if the arbitrary number of days had been the same with both, this might have been a coincidence worth noting, but the simple fact of seclusion is common to the greater part of the human race. The American aborigines have a tradition of the deluge; so have all the races of ancient Asia, and this, of course, proves nothing. They have a chest which the priests keep hidden from the people, and Mr. Jones asserts this to be the Ark of the Covenant! They have festivals as the Israelites had, and as every other nation on the face of the earth still has. They use medicine-bags, containing charms, and because the said charms are deemed to be "preservatives," Mr. Jones identifies them with the Jewish phylacteries, which, he says, were also regarded as amulets. Mr. Jones ought to have known that "phylactery" was a name given by the Greeks to the slip of parchment on which a portion of the Law was inscribed; the Israelites called them תפלין *Tephillin*, from תפלה *Tephillah*, "a prayer," because they used them in public and private worship. This, we suppose, will settle the question of their identity with medicine-bags. Finally, says Mr. Jones, they have the rite of circumcision, a fact however resting on questionable authority, and proving nothing, inasmuch as the practice has been found in various parts of the globe where no Israelite connexion has been pretended.

So much for the Israelite portion of the theory; let us now turn to the Tyrian. Mr. Jones sets out by proving what is known to all the world, that there are remains of ruined cities and edifices in Central America, but inasmuch as those of Phœnicia have disappeared, we were a little at a loss to discover how he was to make out any analogy between the Fine Arts of Tyre and Mexico; in truth, he does not attempt it; he aims merely at finding similarities between the Mexican and Egyptian architecture, quietly assuming that the latter was identical with the Tyrian. He next informs us, that the Tyrians and Mexicans were idolators, and that they offered human sacrifices; but as something more was wanting to establish a similarity, he asserts in the teeth of all history, that the Tyrian Hercules was the same as Apollo, and that Apollo, or the Sun, was the chief object of Mexican idolatry, quoting as his authorities Kotzebue and Sheridan! To mend the matter, these dramatists never made any reference to Mexico, for Rolla notoriously was the hero of Peru.

Baron Humboldt's authority is adduced to prove a similarity between the ornaments found on the mummies of the Guanches in Teneriffe and the Guippoes of the Peruvians and Mexicans; Mr. Jones slips in, that the Guanches were Tyrians, though in the very same sentence the Baron mentions, that the anatomical character of the Guanches is perceptibly different from that of the ancient Egyptians, and of course from that of the cognate races. We have been present at the examination of Peruvian mummies, and can testify that the structural differences between them and the skeletons of every branch of the Caucasian race, are as strong as can well be imagined. This, however, is not a point of any importance, as the identity of the Peruvians and Mexicans has never yet been established.

But Mr. Jones's great argument is derived from his interpretation of certain prophecies of Isaiah; he even goes so far as to insinuate, that

Digitized by Google

those who do not assent to his conclusion must be sceptics or atheists. The two passages in the prophecy material to the issue are, that the land of Tyre should be "utterly spoiled," but that a remnant should be left, which "should cry aloud from the sea." These predictions would of course be fulfilled, if a portion of the Tyrians had escaped to any of their colonies; but Mr. Jones has forgotten, that though the twenty-third chapter of Isaiah refers to Tyre, the twenty-fourth is a prediction respecting the Israelites, and that the verse following that which Mr. Jones has quoted indisputably applies the prophecy to the Israelites,—

> Wherefore glorify ye the Lord in the islands,
> Even the Lord God of Israel in the isles of the sea.

With most Biblical critics, we have adopted Lowth's rendering of the first line; but the second is that which bears upon the argument, for neither the Tyrians nor the Mexicans worshipped the Lord God of Israel. As the Bible is so much more frequently quoted than read, Mr. Jones may have hoped to escape detection when he omitted that portion of the prophecy which completely overthrows his entire deduction from Isaiah's words.

The voyage of the Tyrians to the Fortunate Islands exists only in Mr. Jones's imagination; all Alexander's historians declare, that the few Tyrians whom that conqueror spared, were allowed to remain in their land under their ancient King Azelmic. We may remark, that the history of the siege of Tyre ought to have saved Mr. Jones from his error about the Tyrian Apollo; he will find that the Tyrians chained the statue of Apollo, from fear that the god would desert to the Greeks; and if he refers to the thirteenth book of Diodorus Siculus, he will find the reason of this strange proceeding: it was because Apollo was a Grecian and not a Phœnician deity; indeed, the statue thus chained was taken by the Carthagenians at Gela, and sent to the parent city as a homage to the national god, Hercules, just as the Philistines placed the captured ark before the shrine of Dagon.

Mr. Jones makes large pretensions to extensive learning; he has only afforded us one opportunity of testing his learning, and that is pretty decisive. He proposes to change the name Lathyrus, given to one of the Ptolemies, into Latyrus, which he interprets "the Tyrian." Would he be pleased to tell us in what ancient language *La* is used as a definite article? Every school-boy knows that Lathyrus signifies "a pea," and that Ptolemy derived his name from a pea-shaped excrescence on his face. We have felt much reluctance in performing the painful duty of exposing so shallow a writer as Mr. Jones. Had he exhibited anything like modesty in propounding his theory, we should have been disposed to bestow upon him the charity of silence. But he has come before us with such a parade of pretension, that it was impossible to evade an examination of his claims, and we have limited ourselves to a few of his errors; were it necessary or desirable, we could point out others equally egregious.

It is a more pleasurable task to turn to the second work named at the head of this article, which contains a condensed and accurate summary of all that is known respecting the ruined cities of Central America. The volume forms part of an interesting geographical series, called 'L'Univers Pittoresque.'

The Return of the Druses. By Robert Browning. Moxon.

This is a five-act drama,—the scene is laid in an island of the Southern Sporades, supposed to be inhabited by a party of Druse Christians, who, flying from Lebanon, before the arms of Osman, had planted their faith amid the sea, and called in the Knights of Rhodes to garrison their colony and help them to guard the sacred deposit for posterity. The policy of the Prefect appointed by the Grand Master of the Hospitallers, who had aimed at the absolute subjugation of the islanders by the massacre of their sheikhs, has prepared the latter for revolt; and during the temporary absence of the Prefect (who, to escape the consequences to himself of his tyrannous proceedings, has made a bargain for the sale of his office to the Patriarch), the aid of the Venetians has been secured; and the play opens when the Prefect, the Patriarch, and the fleet of the Republic are severally expected at the island. The plan of the revolt has been arranged by Djabal, a child, saved from the massacre of the sheikhs and their families; who, grown to manhood, with the secret of his wrongs at his heart, had wandered through the world, seeking to secure the means of vengeance, and presented himself to his countrymen when these were ripe. The difficulty, however, was to appear in a character of sufficient authority to rouse the oppressed Christians to instant and unanimous action; and for this purpose, he has called in the aid of religious deception, as helping him to the only motive strong enough to insure the political redress to which his life is devoted. A tradition had been preserved among his people, that their Khalif, who perished long ago "on red Mokattam's brow," was, in the day of their extreme need, to reappear in the flesh, and lead them back in triumph to their ancient home, beside the hill of Cedars. The island Druses had, accordingly, like the Jews, been long looking out for a promised Messiah, when Djabal presented himself amongst them as the returned Hakeem,—veiled in the flesh, to work out their deliverance, and when the blow which was to free them from their tyrant should have been struck, to be transfigured before their eyes, and lead them back, in his divine character, to Lebanon. Our readers will see that these are powerful dramatic elements; and, in many respects, the author has used them with great poetical skill. The interest and action are, of course, complicated by the introduction of other characters and episodes, —the principal of which are the heroine Anael, —and the love betwixt her and Djabal. Anael, who had been secreted by her brother, Khalil, from the licentious pursuit of the Knight-Prefect, in the abode where Djabal found them when seeking partizans amongst the islanders,—had made a vow, in the spirit of a Grecian maiden, to love "only one who should revenge the Druses;" and Djabal, coming to her at once an avenger and almost a god, had both fulfilled its condition and dazzled her with his assumed glory. Out of this double character in which he wooed her, the author has extracted a means of interest finely conceived,—but not quite so finely managed. In Djabal's heart, a fear springs up, that Anael's love is rather for the Hakeem than for the wandering sheikh, and that the knowledge of his imposture would change it to contempt: and his nature is shaken between the struggle of a generous impulse to confess to her his secret, and the fear of ruining the conspiracy by its betrayal. On the other hand, the heart of Anael has had certain revelations, which lead her to fear that she loves the man more than the Khalif—that the bright transformation to which he is destined before her eyes is a change for the worse—and hence she is disturbed by an apprehension, that her love is not such a love as he expects, and she ought to entertain for a prophet. It must be confessed that the means by which she arrives at this secret of her nature are of a rather questionable description, and our author has not been poetically felicitous in their adoption. There is a certain Christian knight, a model of chivalry, who has fallen in Anael's way; and she, in analyzing her feelings, finds that Loys de Dreux makes an impression upon her so nearly similar to that which, barring his spiritual character, Djabal creates, that her mind is reduced to a state of great uncertainty and disturbance. Certainly, although this desecration of his heroine, we believe, is not exactly what the author intends, he has so managed this portion of his scheme, that there is more than one scene in which she seems greatly at a loss to know which of the candidates for her favour she prefers, and so, consequently, is the reader, as to which she is likely finally to choose. The following passage will at once describe, in the author's own language, this rather complicated condition of things, and give a good specimen of the poetry of his drama:—

Enter Anael *and* Maani, *who is assisting to array her in the ancient dress of the Druses.*

An. Those saffron-vestures of the tabret-girls!
Comes Djabal, think you?
Maa. Doubtless Djabal comes.
An. Dost thou snow-swathe thee kinglier, Lebanon,
Than in my dreams?—Nay, all the tresses off
My forehead—look I lovely so? He says
That I am lovely.
Maa. Lovely! nay that hangs
Awry.
An. You tell me how a khandjar hangs!
The sharp side, thus, along the heart, see, marks
The maiden of our class. Are you content
For Djabal as for me?
Maa. Content, my child.
An. Oh, mother, tell me more of him. He comes
Even now—tell more, fill up my soul with him!
Maa. And did I not....yes, surely....tell you all?
An. What will be changed in Djabal when the change
Arrives? Which feature? Not his eyes!
Maa. 'Tis writ,
Our Khalif's eyes rolled fire and clove the dark
Superbly.
An. Not his eyes! His voice perhaps?
Yet that's no change; for a grave current lived
—Grandly beneath the surface ever lived,
That, scattering, broke as in live silver spray
While....ah, the bliss....he would discourse to me
In that enforced, still fashion, word on word!
'Tis the old current that must swell thro' that,
For what least tone, Maäni, could I lose?
'Tis surely not his voice will change?
—If Hakeem
Only stood by! If Djabal, somehow, passed
Out of the radiance as from out a robe;
Possessed, but was not it!
He lived with you?
Well—and that morning Djabal saw me first
And heard my vow never to wed but one
Who saved my people first—that day....proceed!
Maa. Once more, then: from the time of his return
In secret, changed so since he left the Isle
That I, who screened our Emir's last of sons,
This Djabal, from the Prefect's massacre
—Who bade him ne'er forget the child he was,
—Who dreamed so long the youth he had become—
I knew not in the man that child; the man
Who spoke alone of hopes to save our tribe,
How he had gone from land to land to save
Our tribe—allies were sure, nor foes to dread;
And much he mused, days, nights, alone he mused;
But never till that day when, pale and worn,
As by a persevering woe, he cried,
"Is there not one Druse left me?"—and I showed
The way to Khalil's and your hiding-place
From the abhorred eye of the Prefect here,
So that he saw you, heard you speak—till then,
Never did he announce—(how the moon seemed
To ope and shut the while above us both!)
His mission was the mission promised us—
The cycle had revolved—all things renewing,
He was lost Hakeem clothed in flesh to lead
His children home anon, now veiled to work
Great purposes—the Druses now would change.
An. And they have changed! And obstacles did sink,
And furtherances rose! And around his form
Played fire, and music beat her angel wings!
My people, let me more rejoice, oh, more
For you than for myself! Did I but watch
Afar the pageant, feel the Khalif pass,
One of the throng, how proud were I—tho' ne'er
Singled by Djabal's glance! But to be chosen
His own from all, the most his own of all,
To be exalted with him, side by side,
Lead the exulting Druses, meet....ah, how
Worthily meet the maidens who have watched
Ever beneath the cedars—how deserve
This honour in their eyes? So bright are they
That saffron-vestured sound the tabrets there—
The girls who throng there in my dreams! One hour
And all is over: how shall I do aught
That may deserve next hour's exalting?—How?—
[*Suddenly to* Maäni.]
Mother, I am not worthy him! I read it
Still in his eyes! He stands as if to tell me
I am not, yet forbears! Why else revert
To one theme ever?—how mere human gifts

Digitized by Google

Suffice him in myself—whose worship fades,
Whose awe goes off ever at his approach,
As now, that as he comes....
[*As Djabal enters.*] Oh, why is it
I cannot kneel to you?
Dja. Rather 'tis I
Should kneel to you, my Anael!
An. Even so!
For never seem you....shall I speak the truth?....
Never a God to me! 'Tis the Man's hand,
Eye, voice! Oh, do you veil these to our people,
Or but to me? Them, let me think, to them!
And brightness is their veil, shadow—my truth!
You mean that I should never kneel to you
—So I will kneel!
Dja. [*Preventing her.*] No—no! [*Feeling the khandjar as he raises her.*]
Ha, have you chosen....
An. The khandjar with our ancient garb. But, Djabal,
Change not, be not exalted yet—give time
That I may plan more, perfect more. My blood
Beats—beats!
[*Aside.*] O must I then—since Loÿs leaves us
Never to come again, renew in me
Those doubts so near effaced already—must
I needs confess them now to Djabal?—Own
That when I Loÿs saw and Loÿs heard,
My faith fell, and the woeful thought flashed first
That each effect of Djabal's presence, taken
For proof of more than human attributes
In him by me whose heart at his approach
Beat fast, whose brain while he was by swam round,
Whose soul at his departure died away,
—That every such effect might have been wrought
In others' frames, tho' not in mine, by Loÿs
Or any merely mortal presence? Doubt
Is fading fast; shall I reveal it now?
And yet to be rewarded presently
With doubt unexpiated, undisclosed!
Dja. [*Aside.*] Avow the truth? I cannot! In what words
Avow that all she loves in me is false?
—Which yet has served that flower-like love of hers
To climb by, like the clinging gourd, and clasp
With its divinest wealth of leaf and bloom:
Could I take down the prop-work, in itself
So vile, yet interlaced and overlaid
With painted cups and fruitage—might these still
Bask in the sun, unconscious their own strength
Of matted stalk and tendril had replaced
The old support thus silently withdrawn!
But no; the beauteous fabric crushes too.
'Tis not for my sake but for Anael's sake
I leave her soul this Hakeem where it leans!
And yet—a thought comes: here my work is done
At every point; the Druses must return—
Venice is pledged to that: 'tis for myself
I stay now, not for them—to stay or spare
The Prefect who imports it save myself?
What would his death be but my own reward?
Then, mine I will forego. It is foregone!
Let him escape with all my House's blood!
Ere he can land I will have disappeared,
And Hakeem, Anael loved, shall, fresh as first,
Live in her memory, keeping her sublime
Above the world. She cannot touch that world
By ever knowing what I truly am,
Since Loÿs,—of mankind the only one
Able to link my present with my past,
That life in Europe with this Island life,
Thence able to unmask me,—I've disposed
Safely at last at Rhodes.—

From this point of the drama, the author's intentions are not quite clear. Impelled, as it would seem, by a wish to prove her faith in Djabal's mission, and do something in testimony of her attachment to his supernatural character, Anael with her own hand stabs the Prefect—a portion of the plot which the pretending Khalif had reserved for himself. Djabal finds her with the blood upon her hand; and then, in the excitement of the moment, comes a confession of his imposture. Then we have Anael's struggle between the sense of his degradation and the joy of his restoration to the level of her woman's heart; and, urging him to make confession to the people on whom he has imposed, she offers to share his shame. Djabal, however, refuses to abandon his deception till its object shall have been achieved; and Anael, therefore, denounces his fraud,—with what object we can only *conjecture* from what follows. Called upon by his own adherents to show his power upon the unknown blasphemer of that power, he is confronted with Anael, who is brought in veiled: and who, on the veil being removed, hails him, before them all, as HAKEEM, and falls dead! Why, or by what instrument, she dies, is no way explained. The presumption seems to be, that her denunciation had been made with the view of confirming his authority, by seeming, afterwards, to perish before his eyes, the victim of her own sacrilege,—and that she had previously secured the means of her unexplained death. If this be not the author's meaning, we have no clue to what *is*. If it *be*, the catastrophe is managed in a manner bungling and obscure,—and might readily be mended. The end of all is, that Djabal, retaining his character of Hakeem, thus awfully confirmed, but announcing his mission as ended, delegates the "leading home" to Khalil, under the escort of the good Knight Loÿs, and the protection of the Venetians; and, advancing at their head a few steps, on the way back to the Cedars, falls dead before their eyes, —supposed, of course, to have fulfilled the tradition, and returned to his slumber of ages!

OUR LIBRARY TABLE.

Windsor Castle: an Historical Romance, by W. H. Ainsworth, Esq. 3 vols.—Master Page's question—

Will none but Herne the hunter serve your turn?

may be fairly addressed to Mr. Ainsworth, by all who grieve to see the history, the historic sites, and the traditions of "merry England," that is, of old England, manufactured into tawdry pictures for the million. When Mr. Ainsworth establishes himself in a new position, he seems to take an inventory of all its features with as methodical an accuracy as if he were one of Sir Phœnix Clearcake's guild, that he may subsequently dwell on its beauties and mysteries with the flourish usually preceding the knock-down of the hammer. The personages of History are used as a make-weight. Who could believe that, in a romance of Henry the Eighth and Anne Boleyn—Queen Katharine and Wolsey—Surrey and the fair Geraldine—these august personages could be shuffled in and out as unceremoniously as if they were mere "Jacks and Gills"? Yet it is so. The bluff "wife compeller" here figures as a "fantastical duke of dark corners," who prowls about the lofts and garrets of the castle, and goes out with a pack of hounds to track the demon of the forest; while Queen Katharine (*Shakspeare's* Queen Katharine!) distinguishes herself by scoldings as vehement, and imprecations as melodramatic, as those which a Mistress Sheppard might launch against Mister Wild! poor Anne Boleyn and Wolsey receiving no worthier treatment. The real hero of the romance is Herne the hunter—a wondrous ghost, concocted of Mephistopheles and Spalatro, Caliban and Dick Turpin, who sticks at nothing, especially when set on horseback, delivers himself in good English, and leaves us at last, as he found us—agape with weariness, not wonder. In brief, this is one of the worst of Mr. Ainsworth's books—the construction of the tale being looser than usual, and the dialogue less life-like. The progress—we should say *gallop*—of the story is needlessly interrupted in the second volume, by a matter-of-fact sketch of the rise and progress of Windsor Castle, which, if anywhere, should have been given in a preface or appendix.

The Stranger in India, by G. W. Johnson, Esq. 2 vols.—contains much useful information for persons who are about to visit Bengal. The author is an Advocate of the Supreme Court at Calcutta, and has therefore been able to communicate clearer accounts of the administration of justice than those published by unprofessional writers. His descriptions of "things" may be safely received as accurate, but his accounts of "men" must be taken with large allowances for the prejudices of position and political partialities.

Egypt and the Holy Land in 1842, by W. D. Stent, B.A.—Written in a slovenly style, quite unworthy of an Oxford student, and printed in a slovenly manner, being disfigured by the most absurd misprints. The work may, however, be of some use as a guide-book, for it records the prices charged for the various kinds of conveyance; the accommodations provided at hotels, and their cost; directions respecting passports, and several other particulars practically useful to travellers.

An Inaugural Lecture on Botany, by E. Forbes, F.L.S.—This lecture was delivered by Prof. Forbes at King's College, London, and forms the first of his course as Professor of Botany in that Institution, to which office he has recently been elected. It is an interesting introduction to that most interesting science, treating it however less as an independent study than as a branch of medical education. On this subject —the combining scientific with professional knowledge—Prof. Forbes well observes—"A time was when an acquaintance with the purely practical parts of their profession was all too many practitioners thought it necessary to acquire. This degrading idea was favoured by the non-professional public, and to gain a prominent position in literature or sciences was too often to close the gates of professional success. But that time is either gone by or is fast waning away. That profession, the investigations of which involve some of the deepest problems in human philosophy, must become more and more scientific every day. * * One great evil which has tended to retard the intellectual advancement of the medical student, especially in this great city, has been the separation of his studies from all association with the pursuits of the scholar and the philosopher. The air of a hospital is mentally unwholesome, unless mingled with a full proportion of collegiate atmosphere. The very neighbourhood of literary and scientific studies has a purifying and elevating effect on the mind of the student. In eastern cities men are grouped into castes, each confined to one occupation and inhabiting one quarter. Civilization is thereby impeded: men's minds become narrowed into mechanical modes of thinking, and, in the end, the whole nation suffers. Is there not something of the same kind in exclusive professional education?—a contraction of the mind, from its association during the most active and impressible phase of its earthly existence with such minds only as are absorbed in similar pursuits? Shut out from the spirit of letters, of science and of art, exclusively occupied with one set of thoughts and practices, the man sinks into the drudge."

Protestant Non-Conformity, by R. Vaughan, D.D. —An Inaugural Discourse, delivered at the opening of the Lancashire Independent College. It contains a spirited review of Non-Conformist principles and writers, and an exhortation to the class of Dissenters to whom Dr. Vaughan belongs, to educate their ministers as much as lies in their power. The lecture is ably and temperately written.

Thoughts on the Mental Functions, Part I.—An attempt is made to treat metaphysics as a branch of physiology. According to the author, all mental phenomena are the results of nervous action of different kinds.

The British and Foreign Traveller's Guide is a directory to every part of the kingdom, comprising the time of starting and the fares of the railway trains and steam-boats of Great Britain, as also of the Continental steamers and railways, the value of foreign coins, mode of obtaining passports, and other useful information. It is announced that the work will be revised and corrected every month; and if this be observed, it will be a most useful publication.

List of New Books.—Piety and Intellect relatively Estimated, by Henry Edwards, 2nd edit. 12mo. 6*s.* 6*d.* cl.—A Practical Exposition of the Epistle to the Philippians, in Twelve Discourses, to which are added several Sermons, by Rev. Robert Hall, 12mo. 4*s.* 6*d.* cl.—Adam's Select Lessons (a translation of Lectiones Selectæ), 18mo. 1*s.* 6*d.* cl.—Parochial Sermons, by Rev. J. Garbbett, 1 vol. 8vo. 12*s.* cl.—Jebb on the Choral Service of the Church, 8vo. 16*s.* cl.—Female Missionaries, in India, by Mrs. Weitbrecht, 18mo. 2*s.* cl.—South Indian Sketches, Part II., 'Tinnevelly and Travancore,' fc. 8vo. 4*s.* cl.—A Course of Sermons addressed to his Parishioners, by the Rev. Thomas Knowles, B.A., 12mo. 4*s.* 6*d.* cl. —The Rector's Note Book, by Mrs. Jane K. Stanford, 12mo. 4*s.* 6*d.* cl.—Neale's (Rev. J. M.) Ayton Priory, or the Restored Monastery, fc. 8vo. 4*s.* cl.—The Book of British Ballads, edited by S. C. Hall, with 230 wood engravings, small 4to. 21*s.* cl. gilt.—Rev. J. Perkins's Residence in Persia among the Nestorians, 27 plates, royal 8vo. 18*s.* cl.—Reminiscences of Syria, by Lieut. Colonel Napier, 2 vols. post 8vo. 21*s.* bds.—Abbott's Journey from Heraut to Khiva, 2 vols. 8vo. 24*s.* cl.—Nelsonian Reminiscences, by Lieut. Parsons, p. 8vo. 10*s.* 6*d.* cl.—The Poles in the Seventeenth Century, by Count Henry Krasinski, 3 vols. p. 8vo. 31*s.* 6*d.* bds.—Hand-Book of the Language of Flowers, new edit. 12mo. 1*s.* cl. swd.—Sir W. Scott's Life of Napoleon, Vol. III., fc. 8vo. 4*s.* cl.—The Works of Beaumont and Fletcher, by Rev. Alexander Dyce, to be completed in 11 vols. 8vo. Vols. I. to III., 12*s.* each, cl.—The Circassian Chief, a Romance of Russia, by W. H. G. Kingston, 3 vols. post 8vo. 31*s.* 6*d.* bds.—The Culture of the Grape Vine in Australia and New Zealand, by G. Sutter, post 8vo. 6*s.* cl.—Suggestions for the Improvement of our Towns and Houses, by T. J. ALEXANDER BETHUNE.

IF a life of domestic affection, exertion, and self-sacrifice under privation,—if intellectual cultivation achieved under every possible discouragement, claim respect, then Scotland has lost one of her Worthies in Alexander Bethune, who died in Fifeshire, on the 14th instant, scarcely four years after his brother John Bethune. The life of the latter, written by Alexander,—of its kind among the most remarkable biographies extant,—was noticed at length in the *Athenæum* (No. 678), but we must refer to it now, as containing also some account of the deceased. From this record, we must remind the reader that Alexander Bethune belonged to that humbler class of the Scottish peasantry who gain their livelihood by daily labour. Not strong by Nature, he was further severely injured twice by the explosion of gunpowder while working as a quarryman;—his family was not prosperous, and his parents became a charge upon him (it were sin against such virtue to call it a burden): and among the other duties accomplished by the brothers, after their daily twelve hours of heavy toil, not the least eminent was their building a house, out of the small pittance which the uttermost frugality could reserve from their wages, for their aged father and mother. And yet, in the midst of this incessant labour and privation, Alexander Bethune, like his brother, contrived to nourish and to mature literary habits,—not merely to murmur remembered verses, but to weave them for himself in the momentary intervals of repose and meditation his day's labour permitted,—not merely to study the biographies and legends of his own country, but to imagine, also, and to record, in a style which bore no traces of the hard hand and the scanty schooling of the peasant. So often as what may be called the rural literature of Great Britain shall be collected, his 'Tales and Sketches' (see *Athen.* No. 536), but, above all, the biography to which we have referred, must claim a prominent place. But Alexander Bethune's literary attainments, in one so scantily privileged by Fortune, were less remarkable than the resolution by which they were accompanied. A proof of this has been laid before us, since his decease, which must be recorded, to the honour of humanity.

It appears that on the publication of the Life of his brother, a few individuals were thereby sufficiently interested for the writer, to be anxious to see his fortunes improved, and a small sum of money was anonymously conveyed to Bethune, through the agency of his publishers, to be applied as he might deem best. This was immediately returned, with a letter, to the mediating parties, from which the following is an extract. The letter was written immediately after Bethune's protracted death-bed attendance on his mother, during which it is fair to conclude that all his resources had been exhausted. It should be added, too, that even when he conceived himself to be thriving, the Poet's personal habits were thrifty and self-denying, to the point which ninety-nine English operatives out of the hundred would have rated as starvation:—

"As I am not in want, and as all those for whom I had all along been more anxious than for myself are now gone, I do think I should be doing wrong in appropriating to myself those funds which may be made to do the work of benevolence elsewhere. It is not pride which makes me decline accepting the gift so generously and delicately tendered; but, upon principle, I consider it a duty in every man, so far as Providence may enable him, to provide for his own wants; and I have always felt a sort of pleasure in the consciousness of being able to keep my wants within my means of supplying them, however limited these might be. I do not trust to literature, moreover, but to the labours of my hands, for my support; and therefore I cannot be subjected to those vicissitudes which literary men so often experience. With an ordinary share of health, the task of supplying myself with the necessaries of life, will be a light one: and if spared for a few years, I may even provide a small fund for sickness or accidents. For these reasons I would still beg you to forward the letter. * * I must say, also, that though I had not the slightest hankering after the money, yet, from an idea of the disappointment which it might occasion, it was only by a painful effort that I could bring myself to write the letter in which I declined accepting it. * * I would humbly beg to suggest, that the money may be bestowed upon literary men who have no other means of earning their bread, and who, in the absence of literary rewards, might be reduced to a state bordering on starvation."

The money was placed in a bank, to Alexander Bethune's credit, in the hope that time might induce him to change his determination. But there it remained, untouched, even during the gradual and exhausting illness which brought the Peasant Poet to his grave. Only a few days before his decease, he was earnest with his executor that the few pounds collected for his use should be returned to the donors; his own hopes and wishes being fulfilled, inasmuch as he had saved sufficient from his scanty earnings to provide for the expenses of his illness and his funeral. Assuredly such patient and high-principled virtue ought not to be forgotten!

MR. JOHN MURRAY.

Mr. John Murray—the John Murray of Lord Byron and of the literature of the last five and thirty years—died on Tuesday last, the 27th, at his house in Albemarle Street, after a very short illness. His death was occasioned by general debility and exhaustion, but he had rallied so often, that no fears were entertained by his family or his physicians till Monday morning, when all hope was at an end.

His father was a bookseller of good circumstances and repute in Fleet Street, where John, the only son of a second marriage, was born, on the 22nd of November, 1778. Old Mr. Murray was the successor in trade (by purchase, we believe) of W. Sandby, for we read, in an advertisement of the year 1765, that "Mr. Sandby's customers continue to be served with the same care as usual; and they and all other gentlemen in town or country who shall be pleased to favour J. Murray with their commands, may depend on having their commissions executed by him in the speediest and best manner." 'Langhorne's Plutarch,' 'Dalrymple's Annals,' and 'Mitford's Greece,' are three of old Mr. Murray's surviving publications. The poet Falconer was his intimate friend, and was to have entered into partnership with him on his return from a voyage in the *Aurora* frigate, the vessel in which poor Falconer was lost. A ship figures in full sail on the bill-heads of all Mr. Murray's old accounts. He had been originally in the Marines, which may account for his bookselling sign, and his friendship with Falconer.

Mr. Murray's father died in 1793, when John was in his fifteenth year, an age too young to conduct the business unaided. He was, however, assisted by Mr. Samuel Highley, the assistant and shopman of old Mr. Murray, and the father of the present Mr. Highley, the bookseller, of Fleet Street. When Mr. Murray was of age, he entered into partnership with Highley, but this was not of long continuance, as the deed of separation is dated 25th March, 1803. They drew lots for the house, and Murray had the good fortune to remain at No. 32; Highley setting up for himself at No. 24, and taking away with him, by agreement, the large medical connexion of the firm, a connexion enjoyed by his son to this day.

Mr. Murray now started on his own account, and began a career of publication unrivalled in the history of letters. D'Israeli's 'Curiosities of Literature,' and Strutt's 'Queenhoo Hall' were among his first publications. In 1807 he added 'The Art of Cookery,' by Mrs. Rundell, to his list, in 1809 the *Quarterly Review*, and in 1811 'Childe Harold.' His name was now known beyond the sound of St. Dunstan's clock; all feared and read the *Quarterly Review*, all read and admired Lord Byron. The *Quarterly* was a work suggested by himself to counterbalance the effects of the *Edinburgh Review* (his letter to Canning on the subject is still in existence); and 'Childe Harold' was a poem of his own seeking, for he had been one of the first to foresee the budding genius of Lord Byron. He was a proud man, we have heard him say, when Dallas put the MS. of 'Childe Harold' into his hands. He had been a poet's publisher before, for he had a share in 'Marmion.'

In 1806 he married a Miss Elliot, the daughter of Mr. Elliot, the bookseller in Edinburgh; and in 1812 he bought the stock-in-trade, the good-will and house of Miller, removing at the same time from No. 32, Fleet Street, to the well-known No. 50, in Albemarle Street. His enterprising spirit was at all times remarkable, and from this period his career was one of triumph. The list of authors for whom he published embraces the whole catalogue of eminent men, and a bare list of his publications would make a volume of itself. He was the friend of almost all the distinguished characters of his age, in art, literature, and science. The readers of Lord Byron's Life will recollect the friendly tone in which he writes to Mr. Murray; and the reader of Lord Byron's works will remember, with pleasure, the exquisite rhyming letter of excuse, which the poet wrote in the name of his publisher, to Dr. Polidori, politely declining the proposed publication of his play. Nor can they have forgotten the many bagatelles in verse which the poet addressed to his enterprising friend, "the *avaξ* of publishers," as he calls him "and the Anak of stationers."

Mr. Murray's career as a publisher is one continued history of princely payments. His copyrights were secured at the most extravagant prices—for he never higgled about the sum if he wanted the work. To call him the—

Strachan, Tonson, Lintot of the times—

is awarding him but a portion of his praise. Contrast his liberal dealings with Lord Byron, with old Jacob Tonson's hard bargains with John Dryden, John Murray's *hard cash* with Jacob's *clipped coin*. But he did more very often than abide by his agreement. To Campbell he doubled the price agreed upon for his 'Specimens of the Poets,' by paying the stipulated 500*l.* and adding 500*l.* more. He gave 50*l.* per volume additional to Allan Cunningham for his 'Lives of the British Artists,' and made the payment retrospective. Another anecdote of his liberality of spirit we shall allow him to relate in his own words.

To Sir Walter Scott.

Albemarle Street, June 8, 1829.

"My dear Sir,—Mr. Lockhart has this moment communicated your letter respecting my fourth share of the copyright of Marmion. I have already been applied to, by Messrs. Constable and by Messrs. Longman, to know what sum I would sell this share for; but so highly do I estimate the honour of being, even in so small a degree, the publisher of the author of the poem, that no pecuniary consideration whatever can induce me to part with it.

"But there is a consideration of another kind, which until now I was not aware of, which would make it painful for me if I were to retain it a moment longer. I mean the knowledge of its being required by the author, into whose hands it was spontaneously resigned in the same instant that I read his request.

"This share has been profitable to me fifty-fold beyond what either publisher or author could have anticipated; and, therefore, my returning it on such an occasion you will, I trust, do me the favour to consider in no other light than as a mere act of grateful acknowledgment for benefits already received by, my dear sir, your obliged and faithful servant,

"JOHN MURRAY."

Five hundred anecdotes of the great spirits of his time have died with Mr. Murray—enough to make a second Spence, or another Boswell. His conversation was always entertaining, for he had a quiet vein of humour that gave his stories a palatable flavour, adding largely to their excellence, without destroying the *race* of their originality. His little back parlour, in Albemarle Street, was a sort of Will's, or Button's: his "four-o'clock visitors" embracing the men of wit and repute in London. Few men distinguished in literature, in art, or in science, but have partaken of the hospitalities of Mr. Murray's table. If Tonson had a gallery of portraits,

With here a Garth and there an Addison,

so had Mr. Murray; but Tonson's Kit-Kat Club pictures were all *presents*—Mr. Murray's kit-kats were all commissions; commissions to men like Lawrence, Phillips, Hoppner, Newton, Pickersgill, and Wilkie; and portraits, too, of Byron and Scott, Moore and Campbell, Southey and Gifford, Hallam and Lockhart, Washington Irving and Mrs. Somerville—a little gallery in itself of British genius. Scott and Byron were made personally known to one another through the friendly mediation of Murray, as were Southey and Crabbe, and Scott and Wilkie.

Mr. Murray let few good things, in literature, escape him, and his two last works, the Journals of Lieut. Eyre, and Lady Sale, were each, in the language of

Digitized by Google

the trade, a lucky hit. He might have had, it is true, 'The Bridgewater Treatises,' and he made a mistake with 'The Rejected Addresses.' "I could have had 'The Rejected Addresses' for ten pounds," he said to the writer of this notice, "but I let them go by as the kite of the moment. See the result! I was determined to pay for my neglect, and I bought the *remainder* of the copyright for 150 guineas." His daily paper was another mistake, for which he paid in a more serious and lasting way. But then he had the 'Navy List' and other publications, thus referred to by Lord Byron:—

> Along thy sprucest book-shelves shine
> The works thou deemest most divine,
> The 'Art of Cookery' and mine,
> My Murray.
>
> Tours, Travels, Essays too, I wist
> And Sermons to thy mill bring grist,
> And then thou hast 'The Navy List,'
> My Murray.

He said once, to the present writer: "Lord Byron used to come to my shop in Fleet Street, fresh from Angelo's and Jackson's. His great amusement was making thrusts with his stick, in fencer's fashion, at the spruce books, as he called them, which I had arranged upon my shelves. He disordered a row for me in a short time, always hitting the volume he had singled out for the exercise of his skill." He added, with a laugh, "I was sometimes, as you will guess, glad to get rid of him."

Let us illustrate his sagacity in business, by an anecdote which will be new to many of our readers. Constable published a little 'History of England' in one small volume, which, as it were, fell still-born from the press. Murray perceived its merits, bought Constable's share, and baptized his little purchase by the name of 'Mrs. Markham's History of England,' a name it still enjoys. The work flourished in his hands, and is, to this day, realizing a large annual profit.

Mr. Murray has left a widow, three daughters, and a son, the Editor of the Continental Handbooks, a series of publications widely and deservedly popular. For seventy-eight years *two* John Murrays have been connected, in an eminent degree, with all that is useful and elegant in literature; we have now a *third* John Murray, to whom we wish all the success he so well merits.

OUR WEEKLY GOSSIP.

THE prizes for the Cartoons have been adjudged, and the following is, we believe, a correct account of the fortunate artists, and of the subjects of their drawings:—

Prizes of 300l.

Armitage.	Landing of Julius Cæsar.
Watts.	Caractacus at Rome.
Cope.	The First Trial by Jury.

Prizes of 200l.

Horsley.	St. Augustine preaching before Ethelbert and Bertha, his Christian Queen.
Bell.	Queen Margaret taking sanctuary at Westminster.
Townsend.	The Fight for the Beacon.

Prizes of 100l.

Parris.	Joseph of Arimathæa.
Severn.	King Edward and Queen Eleanor.
Bridges.	Alfred presenting his Code of Laws to the Witan.
Frost.	Una surprised by the Fauns and Satyrs.
Selous.	Boadicea.

We may also mention, in connexion, the rumour which has reached us, that Messrs. Longman are making arrangements for an early publication of the successful Cartoons on such a scale and in such a character as will ensure justice being done to the original drawings. The prizes for the Cartoons having been adjudged, the private view to the privileged will take place this day, and the exhibition to the public will open on Monday next. During the first fortnight, the tide of the public curiosity is to be judiciously stemmed by the charge of one shilling, the money so received to be applied to the promotion of the Fine Arts, in some way to be hereafter determined on:—and in and after the third week, the public view will be gratis, with the exception of a few hours on the Saturday in each week, reserved at the price of a shilling, for those who may desire more room and freedom for their examination. Of this exhibition, and the report which it makes of the national resources in the art which it illustrates, we shall have something to say hereafter:—meantime it is worthy of remark, that no Academician has carried off a prize from this contest; and that the victors are all men comparatively little known,—a fact pregnant with observations, which go to the very foundations on which, in all probability, a great English School is to be built up. We must also, in justice to all parties, acknowledge that no Competition could have been conducted with a more earnest desire to give fair play to all, and to ensure justice: every step, in the proceedings of the Committee, appears to have been well considered.

While on the subject of Commissions and Competitions, we may as well, once again, advert to the extraordinary do-nothing policy of the parties engaged on the "West-End Wellington Memorial." We have more than once expressed our astonishment at the delay in completing this monument; but shall wonder no more, now that we have learned, incidentally, from a correspondent of the *Times*, that the committee "agreed with Mr. Wyatt," not for a specific sum, but "that he should take in payment *the whole amount of the subscription, whatever it might be!*" This statement has called forth an explanation, which is equally curious and instructive. It appears that the subscribers to the *City* Memorial believed, and acted on the belief, that it was really intended to erect a monument in honour of the Duke of Wellington, and that they had, therefore, a right to select the artist. Not so—the name and fame of the Duke were, it appears, mere *ad cap.* plausibilities, the object being to give employment to Mr. Wyatt. The project, we are told, originated in admiration of, not the illustrious Duke, but the pig-tail absurdity at Charing Cross; originated with persons "who *happened* to admire the statue of George the Third"—and the resolution of the Committee which gave the commission and the subscription, "close upon 10,000*l.*" to Sir Francis Chantrey, is characterized as "a disgraceful job!" In this "disgraceful job," it is admitted, originated (again, be it observed, not in admiration of the illustrious Duke) the idea of a *West-End* Memorial: and respecting the enormous amount of money collected for the latter, we have further explanations and of equal interest. The amount of the subscription, as announced in 1841, was 25,300*l.*! and, as from that hour to the present, the cry of "the daughter of the horseleech," "give, give," has never ceased, it is assumed that it must now have reached, in round numbers, somewhere about 30,000*l.*! But—and here is the mystery, and we suspect much of the history of these subscriptions—what Mr. Wyatt has received is not known; he is, it is true, by the conditions of the bond, to receive "the whole," but there are great deductions to be made from the amount advertised. What are they? the reader may naturally ask—"the sums subscribed, but not *received*." Ah, true, we have heard of these odd sort of defalcations before! But what is the Committee about? Why does not the secretary make a formal application to every man whose name has been published as a subscriber? It might then appear that, by some of those strange accidents to which public subscriptions are liable, money has been *paid* which has not been *received*. Another deduction, it appears, must be made for "the heavy expense of advertising and *other weighty charges*." This is a very comprehensive phrase—and we should like to know what it means. But what does the reader suppose is the probable—what is the possible amount of these deductions? The contributions for the Wyatt Testimonial have been assumed at 30,000*l.*, but we are now told that "the nearest amount in thousands" to what Mr. Wyatt has *received*," is 19,000*l.* or 20,000*l.*! Incredible! What, from 10,000*l.* to 11,000*l.* to be deducted for "sums subscribed, but not received," for "advertisements and other charges"! Impossible and absurd! If this statement be persevered in, the Committee—at least the "high, and noble, and honourable" gentlemen on the Committee, must for their own honour's sake, insist that the whole of the accounts shall be thoroughly examined by some clear-headed city accountant, and an explanatory statement published. No wonder, if Mr. Wyatt submits to such commissions, or omissions, or payments, or defalcations, that there are so many persons who "happen to admire" his works, or that he obtains so many of these subscription commissions.

We glean from the foreign journals that Petrarch's tomb at Arqua has just been restored by the care of Count Leoni. In the course of the works, the remains of the great poet were uncovered, and part of the body was found almost untouched by time. A fragment of cloth in which he was enveloped was taken away, and will be solemnly deposited in the parish church.—M. Triquetti has nearly completed the funeral monument of the lamented Duke of Orleans. The kneeling angel at the pillow of the dying Prince is from a sketch by the Princess Mary, and is said to be worthy of her Joan of Arc. In a few days the monument is to be removed to Sablonville, where workmen are finishing the pedestal that is to support it.

A marble bust of Hampden, from the chisel of Mr. Smith, presented, by Sir Henry Austen, to the Reform Club, in Pall Mall, was placed in the corridor, on the first floor of that institution, on the anniversary of the day on which the patriot died.

It is mentioned in the *Cork Examiner* that a letter has been received from the Hon. J. Anson, Private Secretary to Prince Albert, which holds out a hope that his Royal Highness will accept the invitation to attend the meeting of the British Association, to be held in Cork, in August next.

The French papers announce, that M. Thiers is about to visit England for the purpose of procuring information respecting the maritime wars of the empire.

A letter in the Prussian *Allgemeine Zeitung* gives some further particulars, though not of so late a date as our own letters, of the proceedings of Dr. Lepsius and his party. The writer speaks of the Colossus of Rhamses-Sesostris as one of the noblest specimens of Egyptian sculpture. "The outlines of the face are in good preservation, and so beautiful in execution and finish, as to fill us with regret at the thought of the ruin which has deprived us of so much in this neighbourhood. Not far distant are the fragments of another colossus of equal size (34 feet), together with a few small granite figures and other remains. This evidently points out the neighbourhood of the Temple of Phtha (Vulcan), almost the largest temple of ancient Egypt. Alas, that this should be all that remains to us of Memphis! We could not excavate here; the nature of the soil, and the buildings which in many places covered it, prevented us. Our field of labour is the desert. On the borders of this desert a magnificent scene presented itself. In the rocks behind us are vast graves, and among them one full of interest, with several chambers, its roof bedizened with stars, its walls covered with hieroglyphics, belonging to the times of Psammetichus. The subterranean graves alone are preserved to us: of the buildings above scarcely a trace remains. Many pyramids are almost level with the earth. How different a sight from the time when Strabo saw 'the eminence with many pyramids—the graves of kings.' Still the view is wonderful. To the N.E. on a high and steep rock stand the pyramids of Abu Roasch, of which only the lower portions are preserved; a mile farther south are the three giants of Gizeh; a mile and a half beyond these the group of Abusis, of which three are noticeable; beyond them, and due east, the two sets of pyramids of Sakhara; a half mile farther the remarkable group of Dashour, two gigantic pyramids, in style like those of Gizeh, and in size not inferior to that of Mycerinus, and two others of equal interest built of tiles. Near the second group at Sakhara is a large oblong sepulchral building, 120 steps long and 30 broad, called by the natives Mortabat el Farahan, the throne of Pharaoh. Our discoveries will enable us to add considerably to Colonel Wyse's observations. The best built pyramids and tombs are the most ancient, according to Dr. Lepsius, who has lately busied himself with comparing their style of architecture. Many of the older memorials were long since plundered or destroyed, yet we have found mummies undisturbed in more than one grave whose date we must fix in the times of the pyramids. The contents of the tombs at Thebes are far finer than those here, which are chiefly wonderful from their antiquity."

Apart from the first night of 'Don Pasquale' and the concert of *M. Hallé*—of which more hereafter—there has been more musical promise than performance this week. Arrivals have not ceased: the latest is that of M. Ernst, whose coming enables the Londoners to boast that, at present, we entertain the three most renowned violinists in Europe. Monday, however, was a busy day. In the morning *Miss Henrietta Rosckel* gave her concert, at which she presented

Digitized by Google

herself, for the first time, as a singer, on the strength of a voice promising because expressive, though its delivery was marred by timidity: she had formerly entitled herself to be credited with true musical feeling, by her pianoforte playing. In the evening *Mr. Stretton* took a musical benefit at Drury Lane, with the encouragement of a closely-packed audience. Rossini's '*Stabat*,' too, was given at Her Majesty's Theatre. A *pasticcio* of themes from this fine work, calling itself an overture by Mercadante, was performed by way of prelude: the other novelties to be noted, were the charming singing of Mademoiselle Brambilla, who, like Rubini, has become an exquisite artist only since her vocal powers have failed her,—and the utter inefficiency of Signor Fornasari, in the tempting 'Pro peccatis'—hardly a trace of which was discernible in his version. Of the 'Inflammatus,' as sung by Madame Grisi, we have elsewhere spoken.

ROYAL ACADEMY OF ARTS, TRAFALGAR SQUARE.
The EXHIBITION of the ROYAL ACADEMY is NOW OPEN. Admission (from 8 o'Clock till 7), 1*s.* Catalogue, 1*s.*
HENRY HOWARD, R.A., Sec.

Will shortly Close.
The NEW SOCIETY of PAINTERS in WATER COLOURS.—The NINTH ANNUAL EXHIBITION of this Society is NOW OPEN, at their GALLERY, 53, PALL MALL, next the British Institution, from 9 till Dusk, daily. Admittance, 1*s.* Catalogue, 6*d.*
JAMES FAHEY, Secretary.

Will be Closed in a few Days.
EXHIBITION of Sir GEORGE HAYTER'S GREAT PICTURE of the HOUSE of COMMONS, painted on 170 square feet of canvas, and containing portraits of all the Members of Parliament, also a portrait of Her Majesty Queen Victoria, and various other works, forming a collection of more than 800 portraits of eminent personages of the present day. Open from 10 till dusk. At the Egyptian Hall, Piccadilly. Admission, 1*s.*

DIORAMA, REGENT'S PARK.
JUST OPENED, with a NEW EXHIBITION, representing the CATHEDRAL of NOTRE DAME at Paris, with effects of Sunset and Moonlight, painted by M. RENOUX, and the BASILICA of ST. PAUL, near Rome, before and after its destruction by Fire, painted by M. BOUTON. Open from Ten till Five.

AERIAL NAVIGATION.—ROYAL POLYTECHNIC INSTITUTION.—A LECTURE on this subject, illustrated by MODELS of several kinds, which elevate themselves by MECHANICAL FORCE alone, is delivered at Two o'Clock daily, and on Monday, Wednesday, and Friday Evenings, at Eight o'Clock. The Exhibition of the COLOSSAL ELECTRICAL MACHINE, the DIVER, DIVING BELL, NEW DISSOLVING VIEWS, and the other varied and instructive Objects of the Institution, continue as usual. The original CRAYON DRAWINGS, from the CARTOONS at HAMPTON COURT, by the late Mr. Holloway, with numerous other WORKS of ART, have recently been placed in the Gallery.—Admission, One Shilling. Schools, Half-price. Open Mornings and Evenings, except Saturday Evening.

THE CHINESE COLLECTION, Hyde Park-corner.—This UNIQUE COLLECTION consists of objects *exclusively Chinese*, and surpasses in extent and grandeur any similar display in the known world. The SPACIOUS SALOON is 225 feet in length, and is crowded with rare and interesting specimens of virtù. The Collection embraces upwards of SIXTY FIGURES AS LARGE AS LIFE, portraits from nature, appropriately attired in their native costume, from the MANDARIN of the highest rank to the wandering Mendicant; also MANY THOUSAND SPECIMENS in Natural History and Miscellaneous Curiosities, the whole illustrating the appearance, manners, customs, and social life of more than THREE HUNDRED MILLION CHINESE.—Open from 10 till 10.—Admittance 2*s.* 6*d.* Children under 12 years, 1*s.*

MEETINGS FOR THE ENSUING WEEK.
TUES. Horticultural Society. 3, P.M.
THUR. Zoological Society, 3.—General Business.
FRI. Botanical Society, 8.

FINE ARTS

THE EXHIBITION OF ANCIENT MASTERS, PALL MALL.

[Concluding Notice.]

THERE now only remain for discussion the miscellaneous pictures by deceased modern painters, decorating the third saloon of the British Institution. This south room may be likened to the south hemisphere of the skies, which astronomers tell us is somewhat deficient in first-class stars; but it comprises several luminaries of other classes, from those that irradiate half the world, to those that emit just as much light as exhibits their own unimportance. The *minima sidera* far out-number the orbs of magnitude: pictures altogether insignificant have been contributed with a liberality quite oppressive, for the entertainment of the public, to whom a very small proportion of such lenten fare had proved more agreeable, and displayed more real kindness in whoever furnished out the feast. Third-rate works of third-rate British painters might perhaps be admitted now and then, to fill up odd nooks and crevices, but not almost half the saloon: no works, even *chefs-d'œuvre*, of British or any daubers, should be admitted at all. Here we find seven *Boningtons*—neat ineptitudes, tasteful trivialities, and nothing beyond. Six *G. S. Newtons* merit a like equivocal praise: pretty little pieces of affectation—bijoux for the boudoir, where they may cherish sentimentalism, so delightful to lovers of soft ottomans and emotions; or may, peradventure, breathe a new charm over that interesting sickliness of mind which our Rosa Matildas entitle "romance;" but in the present Exhibition, where prodigious gems shed purest, brightest lustre on every side, they fade into bits of coloured paste by comparison. We can understand why specimens equal to this artist's reputation should be difficult of discovery: why these, which discredit his fair fame, should alone be brought forward, passes our conception. Do no better ones exist? and if yes, are the precious things kept covered up in cotton and morocco cases, like ladies' trinkets, lest the breath of public applause should tarnish them? Here, too, we observe three works by *H. Thompson*, that, despite their ambitious character, and imposing dimensions, never obtained place among modern notabilities of the time; yet they now, in a turn of the sand-glass, figure as substitutes for ancient masterpieces! Death, we grant, is not always a leveller; he sometimes exalts those whom Life had bent low: Genius, whose very existence was disputed while it dwelt within a visible form, has afterwards risen from the grave, and reasserted and established amidst unanimous recognition, its claim to immortality. But it sometimes happens, also, that talent, after being neglected life-long by monopolizers of taste and *virtù* and Mæcenas's mantle, after being trampled down, and its owner trodden into the earth by the common herd of rational animals, has its peaceful death-slumber disturbed, and a three-months' resurrection forced, *nolens volens*, upon it, as full compensation for the patronage denied when it was useful and enjoyable. To have left these pictures enshrined within that dim exhibition room, the cave of oblivion, which they and numberless others so well adorn, had been, we think, more considerate towards their author,—certainly towards the public. A couple of tame 'Sea-pieces,' or pond pieces rather (if not taken from some very Pacific ocean indeed), by *Brooking:* another pair of unmomentous productions, *par ignobile*, though by the very clever artist *Liverseege:* a *Bird*, out of its proper element—sylvan life: a *Constable*, too deep in its peculiar element—green-pea soup: a *Mortimer*, in no element at all: these, and other quasi-nothings, make poor *Wheatley's* scrap of pathos look attractive—'A Fisherman's Wife and Children alarmed at a Storm,' No. 160. We might further swell this large account of littlenesses with two 'Boys' Heads,' mere sketches, and two early portraits, by *Lawrence*, conceding them, however, some merit, besides that the works of a celebrated man have an illustrative value extrinsic to their absolute claims.

Before we put off the black cap of criticism, let us pass judgment on the two foreign painters, *Herr Colbauch* [*Kaulbach?*], and *Prof. Hesse* [*Hess?*]. Could we believe Kaulbach, after his long apprenticeship under Cornelius, capable of nothing better than the 'Monk's Head'—a most frigid piece of Frenchified sublime—we should sentence him to be burnt in the right hand, for such a flagrant sample of mal-practice; but it furnishes an isolated and no real test of his powers, which, we apprehend, are limited to fresco and encaustic. 'Christ blessing the Little Children,' by Hess,* exhibits perhaps as choice a specimen of the very worst German workmanship as English prejudice against continental art would desire to see, or an English committee of taste could select to foster that noble feeling. Here we have a group of little blush-coloured figures, like wax puppets flattened upon a hard panel, and apparently not produced touch by touch with a camel-hair brush, but their plastic materials spread out, slick and smooth, with a delicate spatula. This is somewhat different from *Leonardo's* "united style," which the Germans ape rather than imitate; nor even half so good as old *Taddeo Gaddi's*. It suggests the idea of painting in tinted birdlime, or a vehicle so viscous that the pencil trails all over the surface, without power to get free for successive strokes. The general bad effect may be imagined: it wants the fine lucid glow, yet has all the heaviness of encaustic. *Vice versâ*, the composition looks piecemeal, and made out bit by bit, like a picture in *pietre comesse*, whose separate marble details, well cut and polished first, are then fitted together. Shall we endeavour to help, with another simile, our agrarian reader's conception of this style, curious among us islanders, though not uncommon abroad? The painting resembles a design stamped upon nicely-prepared *kidskin*, and the blank space *gilt;* as if an imitation of the miracles, long ceased, wrought by antique leather-dressers. Now let us be candid about the merits, no less than we have been about the faults, of this performance; and let generous Britons not be only generous towards their own portrait-takers. Well then, maugre its veneered look, the composition has much beauty: a severe ordonnance we must acknowledge best suited to a Biblical theme, and gives it back what it inspires, a character of grave, august impressiveness. Rigid contours and frigid colours are seldom defensible, but most so when, as here, they would express that religion which eschews all "pomps and vanities;" imparting a chastened, purified, primitive spirit to the subject. Many of the forms have considerable elegance in their statuesque attitudes, and their very movements betray a quiet dignity. Some of the female faces, upon closer view, brighten into loveliness, by their sweet and gentle expression. Some of the masculine heads, also, deserve great praise. After all, perhaps English criticism, however convinced (against its will), may admire this picture as a kind of "fair Quaker," at best, whose spotless complexion and costume are its chief attraction: we think it has higher qualities. Professor Hess, let us add, is more a decorative artist than a genuine historic painter: his gallery and cabinet productions take subordinate rank. The *Allerheiligen Kirche*, or modern Byzantine Chapel, at Munich, is the real theatre where his talents have been exhibited:—

> But for to tell the sumptuous array
> Of that great chamber should be labour lost,
> For living wit, I weene, cannot display
> The royall riches and exceeding cost
> Of every *pillour* and of every *post*.

A popular engraving from his easel-picture in the *Leuchtenberg Palace*—'Faith, Hope, and Charity'—gives too favourable an idea of its pretensions: the general sentiment retains its interest—the hardness, flatness, heaviness disappear. We should propound no paradox by the assertion that German painters ought never to paint their pictures; for their colouring is rather discolouring, and they blot out the beauty of their design with the ugliness of their pigments, or render it almost imperceptible. *Overbeck*, as we have said elsewhere, delights to steep his pencil in pea-green; *Bendemann* in water-blue; *Philip Veit* lets his luxuriate in muddled brown; while *Baron Cornelius* prefers an adust—we mean a brickdust—tone; and our amiable friend, *Professor Vogel*, of Dresden, a wannish yellow; *Schnorr* adopts a griminess which gives his *Nibelungen* master-pieces the sootiest complexion, by way of Giorgionesque "sfumatezza."† At Berlin, the Swedish Consul-General's collection of modern German cabinet pictures, unrivalled there, as well-informed Dr. Waagen told us, did not contain *one* sample attractive by sweet, or soft, or mellow, or transparent colouring—riches or splendour might better have been sought in so many japanned tea-trays. All the harmony they exhibited was that of uniform dulness and chilliness throughout their tints, however chequered and varied the chromatic diapason; together with a most perfect accord between frigid hues, hard outlines, and meagre impasto. German artists, we are aware, have received as ill our protests against their colour, as English our fulminations against their draughtsmanship; those accuse us of bigotted patriotism, these of anti-national prejudices; neither observe how these antagonist charges neutralize each other:—

> O prudent discipline! from north to south,
> Austria and France shoot in each other's mouth!

Verily we love Art itself a vast deal better than either German or English; yea, than Ancient Greek, or Middle-age Italian, and shall never spare our humble efforts to expose the errors of every school, if by such means we can promote the true catholic doctrine. Our digression upon this subject has arisen from a conjecture that Hess and Kaulbach's pictures will be made the ground for narrow-minded triumph over foreign painters and noxious laudation of our own; 'twere far wiser, as well as more liberal, if the latter acknowledged superior *aims*, at least, in their German brethren, and strove to accomplish such themselves by superior methods.

What a contrast between 'Christ blessing the Little Children' and the 'Trial of Queen Katharine'—*Harlow's* greatest performance! There, what repul-

* *Heinrich Hess*, we conclude from its style, not *Peter*, who paints more humble subjects.

† This very poetical thinker sent an oil-piece to the Louvre *Exposition* (see *Athen.* 1835) that we noticed as supereminently ill-painted, where such a palm was of difficult acquisition.

Digitized by Google

siveness at first sight; here, what immediate attractiveness! What an apparent feebleness opposed to striking effectiveness! How slowly *that* creeps upon your affections, and *this* loses them! Yet is this a wonderful production for so young a man, and quite miraculous for so exquisite a coxcomb. Rich texture, splendid colour, clever, off-hand mechanism, are its least merits. How skilful the general treatment; how admirable those heads, full of life and individuality; many amongst them finished with miniature truth, though with the broadest modelling! But, alas! what a want of elevated poetic spirit, and pure taste, and quiet power throughout! It is a flagrant *show-scene*. Nay, the fine subject from Henry the Eighth is degraded into—a multiple-portrait—a set of actors and actresses! Instead of these being raised, by proper idealization, to the level of the historical personages they represent, *vice versâ*, Shakspeare's characters are brought down, by unmistakeable particularities, to the level of green-room folk—Kembles, Terrys, Harrises, Conways, Stephenses, &c. &c.

O what a fall was there, my countrymen!

We shall say no more: to analyze the draughtsmanship were to dissect dolls, and when the grand principles of Art have found little attention from the painter, his details merit as little from the critic. A 'Portrait of Northcote' might serve Nature to reproduce him, had she lost the original mould—it surely resembled him, mind and body: this may not be the highest praise, but is so considered. Two other portraits here, likewise by Harlow, fall far short of it both in expression and execution; we never saw any by him which approached it. 'Death of General Wolfe,' by *West*, the well-known picture, badly painted, as are all his works, but composed with a feeling none other of them can pretend to: pity he did not always delineate Anglo-American subjects, or at least that he ever attempted classic! 'View on the Tiber,' by *Wilson*, No. 147: Claude seldom gave such depth of atmosphere to a landscape, such dewiness of verdure was quite beyond him; this work is, in our judgment, worth the 'Niobe,' No. 152, covered with double-sovereigns, a performance, we confess, no favourite of ours, albeit entitled sublime. There are several duplicate Niobes; one at Bridgewater House, and another at Trafalgar Square, seem both of them much superior to the present exemplar, which strikes us as chill, hard, and harsh. 'Celadon and Amelia,' by *ditto*, No. 183, illustrates the censure of Reynolds, justly passed, we think, upon Wilson's historic-landscapes—their figures, too futile for principals, too obstrusive for accessaries, disparage the theme while they encumber the scene. Here a clouterly Celadon and his Amelia to match—"matchless pair"!—over-match the landscape, yet vulgarize the subject; reversely, huge masses of rocks and clouds render Niobe and her Children quite insignificant, whom Apollo seems driving away as impertinent objects amidst so grand a solitude. 'Portrait of Mortimer,' No. 162, is a rare example of Wilson's abilities in this line. *Gainsborough*, however, surpassed him far in it; his 'Lord George Sackville,' No. 186, has brilliant and solid merits, some hardness of effect, but more decision of style. 'Horses at a Fountain,' No. 176, displays his wondrous splendour, showered with richest hand, though its effulgence tempered by mellowing shadows. No. 117, 'Girl with Pigs,' the picture for which when Gainsborough asked sixty guineas, Sir Joshua gave him a hundred—proof sufficient of its high deserts, of Reynolds's generous and unenvious spirit on that occasion also. Its noble style makes George Morland's taste, in such works, appear veritably swinish. We do not just see wherefore the little girl should look so pathetic—a *Penserosa* of her age and condition, feeding pigs, is somewhat uncommon—out of nature altogether, it might be said, unless we could imagine her a Prodigal Daughter. Gainsborough was, perhaps, rather given to sentimentalism, and first imbued the English school with what has tainted it ever since. No. 128, 'Brood Mares in a Landscape,' by *Stubbs*. No one probably could appreciate this work so well as the best Animal Painter now living, who must feel its excellence difficult to parallel; we speak of the caballine portion alone; the trees, &c., are mediocre enough.

What shall we say—what can we say—about inimitable *Hogarth?*

None but himself could be *his* parallel!

No one besides him ever ennobled Caricature into Dramatic Painting, save *Leonardo da Vinci*, and he scarce at all. 'The March to Finchley,' and 'Taste in High Life' have few competitors even among Hogarthian miracles of humour, wit, satire, nature, character, and imagination, each after its admirable kind. But why should we describe what every printshop window exhibits? Neither specimen, we will only add, is painted in the author's best style, though both with dexterous rudeness: Finchley has suffered much, fractured by the silent blows of that great dilapidator, Time. We thank the Governors of the Foundling Hospital, and Mr. Robert Gwilt, for lending these works, and Colonel Wyndham for the loan of piquant, debonaire 'Peg Woffington,' and the Governors again for their venerable 'Captain Coram,' founder of the Foundling-asylum, who looks sublime by force of philanthropy resplendent over his rugged figurehead countenance. This last is the finest portrait from Hogarth's pencil we have yet seen: the noble-hearted Seaman sits with an air of mild command, his foam-white locks in waves down his shoulders, and a fresh sea-breeze through that aperture fans his brow and his ruffles—how many a dead parent's thankful sigh accompanies it, to bless the protector of her little orphan! He deserved such a memorizer as Hogarth, and Hogarth such a sitter. 'Portrait of Mr. Porter,' No. 171, without any great pictorial merit, has still much interest, because by this the most thoroughly English among all our artists.

The present Exhibition by no means substantiates a rumour we announced, and had fain given credit to, that various fine works of forgotten British painters, discovered in the deepest mud of Lethe wharf, and but just dug up, would make their re-appearance here this season. None such can we récognize, save a single 'Portrait of Lord Camden,' by *Dance*, which, we acknowledge, was worth dragging Obscurity's bottomless pit for: its workmanship solid and sound, though somewhat hard; its admirable colour, and plenitude of characteristic spirit, suffice to prove the artist a master. Having obtained a rich wife and a baronetage, it is said he purchased back his works, that he might obliterate, with them, the recollection of his profession. Pilkington contradicts this charge, and says he continued, after his good fortune, an amateur exhibitor at the Royal Academy. One fact seems pretty clear,—he did not obliterate Lord Camden's portrait: perhaps the present Marquis could tell us whether Sir Nathaniel Dance Holland, Bart. ever sought to re-possess it? But another item, and we have done. The 'Arrest of the Five Members,' painted by *Copley*, does him much credit; more, we think, than his 'Death of Chatham,' as its theme is higher, and the general effect better, while its details are not inferior. It belongs to his illustrious son, Lord Chancellor Lyndhurst, who has no wish to prove the artist and himself aliens in blood, but has purchased back pictures which preserve the recollection of his origin from a man distinguished for talents, albeit pictorial and professional. Wisdom will evince itself on the settee, as well as the woolsack.

MUSIC AND THE DRAMA

CONTEMPORARY MUSICAL COMPOSERS.

LOUIS SPOHR.

In these days of "Handbooks," a few words may not be superfluous, by way of pointing out "*how* to admire" a great musician, now our guest; of whom the characters written in England have trenched too largely on caricature—unreasonable depreciation keeping time with extravagant praise.

In former numbers of the *Athenæum*, while noticing the symphonies (Nos. 650, 762) and operas (Nos. 656–7, 660), &c. of M. Spohr, some attempt has been made towards a fairer judgment than that of either the scorner or the idolator. We endeavoured to show how the highly educated, accurate composer failed, with little exception, as often as he attempted Imaginative or Dramatic subjects; and—while expressing a judgment, that some of the recent works of the master were but mistakes revealing his individuality strongly in proportion as he strove to disengage himself from it,—to call the student's attention to those admirable and symmetrical creations of an earlier period, in which either invention was more willing or aspiration less vague and dreamy. We wished, in short, to intimate the limits of the style, which, be it good or bad, our guest has created for himself, and beyond which he does not move easily. It is out of respect that we would now combine these scattered lines and touches, so as to furnish a sketch of the artistic direction and performances of M. Spohr's life.

Our guest, we believe, who was born some fifty-eight years ago at Seesen, in the Duchy of Brunswick, began his career at an early age as a violin performer. It was in this character, at all events, that he first became known to the European public; and during a period when the race of wonder-players numbered even a Paganini, no caprice of Fashion has ever deposed him from the sovereignty of that pure and classical school, to which the public will again and again return, and which, therefore, the newly-sprung race of fantastic and marvellous executants find it year by year necessary to approach more and more closely. We have always thought that M. Spohr's violin compositions were, of their order, superior to any of his other works. In particular, his Duetts for two violins can hardly be surpassed: their one only fault being a sating richness of harmony, which has led to too frequent an attempt at effects only attainable by a quartett. Less unique are M. Spohr's Concertos, though still to be placed in the highest rank, alike for the scope they afford the executant and for their musical construction. In his quartetts and double quartetts we begin to be more largely aware of one of the author's prevailing peculiarities—his resolution, we mean, to work out the first idea which presents itself, in every possible manner. Be it only a phrase of six notes (the phrase, however, rarely failing to be an expressive one) reply is certain to succeed reply—imitation, imitation; the main purpose of the movement to be insinuated, however discursive the episodes are intended to be, until the refinement of ingenuity, which at first was welcomed as something especially precious, at last loses much of its power to detain the ear; as perfumes, the first breath of which is delicious, become oppressive by excess of sweetness. The above character will apply to the few compositions for the pianoforte by M. Spohr, with which we are familiar; the most successful of which is his Quintett, with wind-instruments. Here his manner is in part concealed by the contrasts of tone existing among the ingredients of his score.

This brings us to speak of M. Spohr's grander instrumental works—Overtures and Symphonies. His admirable knowledge of the powers of his band enables him to draw from his orchestra combinations of sound, of a beauty and richness unequalled by any contemporary. But gorgeous colouring passes not unfrequently with him for majesty of form. The latter, however, exists in the overture to 'Faust,' while the preludes to 'Jessonda' and 'Macbeth,' have spirit, if not freshness; and in the overture to 'Der Berggeist' the curious common-place of the second subject of the *allegro* is so felicitously concealed, that the anatomy of it will startle the listener unused to such exercise. Generally, it may be said of M. Spohr's symphonies, that their first and final movements are the happiest; his minuets and *scherzi* want play and movement—that of the D minor symphony excepted—while his *adagios* languish, surcharged with harmony. The flow of our author's melody not unfrequently recalls to us Mozart. M. Spohr is too intensely individual to be a plagiarist,* and keeps by his own closes and cadences as religiously as the composer of 'Don Giovanni' and the 'Jupiter' symphony,—but a thousand turns and phrases occur to us, in which the sentimental mood of the elder composer finds a kindred answer, in spite of the original and elaborate harmonic language in which it is conveyed. In music of a bold and martial character, however, our author has an idea, as well as a way, of his own: we may instance the third movement in the descriptive Symphony, 'The Power of Sound,' where breadth of style bears out stateliness of

* Except perhaps in the minuet to his Symphony for two orchestras, which is note for note the theme of Weber's overture to the 'Ruler of the Spirits.' It is our most dramatic composers, who have pillaged the most royally: *vide* Handel, who took whatever he pleased from Clari, Corelli, and a hundred less known Italian writers: and Rossini, who respected no one's property that he thought might figure well on the stage: and Meyerbeer, who, from sheer tenuity of melodic idea, "conveys" with the minute patience of an ant or a beaver, here a trait, and there a phrase, thus making up a whole which it would puzzle the real owners to disentangle.

Digitized by Google

design: we may instance, too, the opening of the second act of 'Jessonda,' with its brilliant chorus of Portuguese soldiers.

When we come to secular vocal music, we encounter our master in his most mannered and least favourable aspect. To deny the value and beauty of M. Spohr's operas would be absurd. There are few songs of pretension finer than the great *soprano scena* from 'Faust'—few *terzetti* more graceful than that of the sisters in 'Zemira and Azor.' Beautifully solemn is the burial chaunt in 'Pietro von Abano,' and how beautiful and how solemn will hardly be better felt than by considering it, as regards melody and harmony, in comparison with a strain for a similar situation by a contemporary, who is strongest in grave music of combination,—we mean the funeral hymn in Halévy's 'Guido.' The duett, too, between *Amazili* and *Nadori*, in 'Jessonda,' in spite of the chromatic nature of its modulations, and a use of the *appoggiatura* not exceeded by Bellini's self, is a model of grace, expression, and high finish. No tenor songs by M. Spohr, which *circulate*, occur to us, and it requires a Lablache or a Staudigl to sustain the spirit of his bass airs; which, though generally more felicitous, are instrumented to a point at which the singer on the stage has to fight for prominence against viola, bassoon, trombone, &c. &c. Still, these are all insulated movements, not essentially devoted to action in music; and this, the essential of Opera, is wanting to M. Spohr's dramas: owing, in good part, to the disastrously heavy text which has fallen under his care, but largely too, to his organization, which makes him insensible to the true nature of contrast and dramatic personation. Hence, while judiciously-selected excerpts will always be charming in a concert room, none of these dramatic works, we believe, will ultimately keep the stage, even with the aid of the scenic magnificence which they are so well calculated to exhibit.

To complete this character, we should speak of M. Spohr as an oratorio writer; but, for this, the forthcoming performance of his 'Fall of Babylon' will offer a more opportune occasion. In the mean time, a hearty welcome to one whose life has been as honourable as his diligence in Art has been great!

MISCELLANEA

Moorfields.—In the course of the excavations now going on to the south of Sun Street, Bishopsgate, a large quantity of horns of bullocks and rams has been dug up, together with other bones of various animals. In Peter Street, part of a peat bed was discovered, near which was a well, and in it a pump formed from the trunk of a tree. A red earthen jug was in the well, in perfect preservation. Several red earthen pipes, said to be of Roman construction, and some coins, were scattered about. It is supposed that the whole space between Bishopsgate Street and the Finsbury Pavement, and north of the old Roman wall, contains similar remains. This space is said to have been a moor or marshy ground, whence the name Moorfields. It was here that much of the rubbish from the neighbourhood was thrown together after the great fire, and accordingly broken bricks, tiles, &c. are mixed up with the earth, many of which are blackened as if by the action of fire.

Progress of Lotteries.—Mr. Wilcocke's Prize Excursion, to Richmond and Twickenham, on board that elegant vessel, the ——, on ——, July the ——. Mr. Wilcocke has the pleasure of informing his friends and patrons, that in addition to a delightful excursion, each ticket purchased previous to the day, will entitle the holder to the chance of a Square Pianoforte, according to the following regulations, &c. Programme—on the company arriving at Twickenham, 200 tickets, &c. Tickets, 4*s.* each, or six for 1*l.* 1*s.* One ticket to admit two children under twelve years. To be had, &c.

Roman Theatre.—The remains of a Roman theatre have just been found at Evreux. The walls have been laid bare, and the Minister of the Interior has deemed the discovery so interesting, that he has granted funds for continuing the researches.

To CORRESPONDENTS.—A Correspondent informs us, that in the account (*ante*, p. 598) copied from the *Ecclesiologist*, respecting the stained glass window at St. Margaret's, for New Hall, *Wiltshire*, we should read *Essex*, and for Olivius, Olmius.

Erratum.—In the first paragraph of the article on Madden's 'United Irishmen' (*ante*, p. 581), the passage beginning "passions exasperated, disgraciously yielded," &c. should be thus read: "passions exasperated, concessions disgraciously yielded, prejudices more fondly cherished, untenable oppositions absurdly protracted," &c.

Lately published, 8vo. price 7*s.* cloth,

LECTURES on the WAVE-THEORY of LIGHT.
By the Rev. H. LLOYD, D.D. F.R.S. V.P.R.I.A. &c.
Erasmus Smith's Professor of Natural and Experimental Philosophy in the University of Dublin.
Printed by order of the Board of Erasmus Smith.
Dublin: Andrew Milliken; London: Whittaker & Co.

In the press, and shortly will be published, handsomely printed in royal 4to. with numerous Illustrations,

PROPORTION,
Or THE GEOMETRIC PRINCIPLE OF BEAUTY ANALYZED. By D. R. HAY,
Decorative Painter to the Queen, Edinburgh.

Also, lately published, by the same Author,

I.

The Natural Principles and Analogy of the Harmony of Form. In 1 vol. royal 4to. with 18 Engravings. 15*s.*

II.

The Laws of Harmonious Colouring adapted to Interior Decorations, &c. With 8 coloured Diagrams. The 4th edition. 7*s.*
William Blackwood & Sons, Edinburgh, and 22, Pall Mall, London.

THE FOREIGN QUARTERLY REVIEW,
No. LXII., is just published, price 6*s.*
Contents.
I. The Life and Works of Rabelais.
II. Habits and Superstitions of the Bretons.
III. Niebuhr's Posthumous Writings.
IV. Francesco Petrarca.
V. Russia in 1839. By the Marquis de Custine.
VI. Arago's Life of Herschel.
VII. Napoleon and Maria Louisa.
VIII. Gautier's Travels in Spain.
IX. Plato's Dialogues.
X. Lope de Vega and Calderon.
XI. Capefigue's Europe during the Revolution.
XII. Dr. Francia, and South America.
Short Reviews—Continental Intelligence, &c. &c.
Chapman & Hall, 186, Strand; and Longman, Brown & Co.

THE FOREIGN and COLONIAL QUARTERLY REVIEW. Just published, No. III. price 6*s.*
Contents.

Richard Bentley, New Burlington-street.

NATIONAL LOAN FUND LIFE ASSURANCE, ANNUITY, and DEFERRED ANNUITY SOCIETY, 26, Cornhill, London.—Capital, 500,000l.—Empowered by Parliament.

Directors—T. LAMIE MURRAY, Esq. *Chairman*.

John Elliotson, M.D. F.R.S.
John Griffith Frith, Esq.
H. Gordon, Esq.
George Lungley, Esq.
John Rawson, Esq.
Clement Tabor, Esq.

Joseph Thompson, Esq.

Auditors—Prof. Wheatstone, F.R.S.; Prof. Graves, A.M. F.R.S.
Actuary—W. S. B. Woolhouse, Esq. F.R.A.S.

The superior advantages to those Assured with this Society will be best understood by a comparison of its principles and a reference to the last Annual Bonus declared on Policies of five years' standing, viz.:

Entry	Policy No.	Age	Sum	Annual Premium.	Bonus added.	Cash Bonus.	Premium reduced.
			£	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1837	39	59	1000	67 8 4	132 14 6	54 19 9	8 19 4
1838	114	58	3000	175 15 0	296 9 7	123 0 6	16 9 7

Policies now entered upon entitled to participation in next Annual Division. Two-thirds of all premiums paid can be borrowed by the assured without loss of Policy.

F. FERGUSON CAMROUX, Secretary.

YORK AND LONDON LIFE ASSURANCE COMPANY, King William-street, London. Empowered by Act of Parliament.

Directors.

George Frederick Young, Esq. *Chairman.*
Matthew Forster, Esq. M.P. *Deputy Chairman.*

Benjamin Aray, Esq.
James Audus, Esq.
William Baker, Esq.
H. S. Belcombe, Esq. M.D.

Thomas Gregory, Esq.
William Haigh, Esq.
George Hudson, Esq.
Jos Bulkeley Johnson, Esq.
William Matterson, Esq.
John Parker, Esq. M.P.
Sir John Simpson
Edward Thomas Whitaker, Esq.

The superiority of the system of Assurance adopted by this Company, will be found in the fact that the premium required by a bonus office to assure 1,000*l.* on the life of a person in the 20th year of his age, would in this office insure 1,200*l.* 7*s.* 6*d.*

Assurances at other ages are effected on equally favourable terms, and thus the assured has an immediate bonus instead of a chance dependent upon longevity and the profits of an office. In cases of assurance for a limited number of years, the advantage offered by this Company is still greater, no part of the profits of a bonus office being ever allotted to such assurances.

Prospectuses, containing tables framed to meet the circumstances of all who desire to provide for themselves, or those who may survive them, by assurance, either of fixed sums or annuities, may be had at the Office, as above, or of the agents.

J. REDDISH, Secretary.

GLOBE INSURANCE, PALL MALL and CORNHILL, LONDON.

Edward Goldsmid, Esq. *Chairman.*
William Tite, Esq. F.R.S. *Deputy Chairman.*
George Carr Glyn, Esq. *Treasurer.*

Established 1803.

For FIRE and LIFE INSURANCE, and ANNUITIES, and the PURCHASE of REVERSIONS and LIFE CONTINGENCIES.

CAPITAL, ONE MILLION STERLING.

The whole paid up and invested, and entirely independent of the amount of premiums received.

Rates and Conditions of Fire and Life Insurance, or other information, may be obtained at the Offices in London, and of the Company's Agents in the Country; and where Agents are not appointed, persons in active life, and desirous of the appointment, may apply to the Secretary.

Fire Policies due at Midsummer must be paid on or before the 9th of July.

By order of the Board,
JOHN CHARLES DENHAM, Secretary.

London, June, 1843.

UNIVERSAL LIFE ASSURANCE SOCIETY, 1, KING WILLIAM-STREET, LONDON.

Directors—Sir Henry Willock, K.L.S. *Chairman.*
John Stewart, Esq. M.P. *Deputy Chairman.*

Major-Gen. Sir Rd. Armstrong, C.B. K.C.T. & S.
John Bagshaw, Esq.
Augustus Bosanquet, Esq.
Charles Dashwood Bruce, Esq.
Ellis Watkin Cunliffe, Esq.
Raikes Currie, Esq. M.P.
William Kilburn, Esq.
Francis Macnaghten, Esq.
Charles Otway Mayne, Esq.
Robert Saunders, Esq.
James Duncan Thomson, Esq.
Capt. Samuel Thornton, R.N.

The principle adopted by the Universal Life Assurance Society of an annual valuation of assets and liabilities, and a division of *three-fourths of the profits* among the assured, is admitted to offer great advantages; especially to those parties who may wish to appropriate their proportion of profit to the reduction of future premiums.

The following table will show the result of the last division of profits, as declared on the 10th of May, 1843, to all persons who had on that day paid six annual premiums:—

Age when Policy was issued.	Date of Policy.	Sum Assured.	Original Premium	Reduced Annual Premium.
20	On or before 10th of May, 1838.	£1,000	£19 6 8	£9 13 4
30		1,000	24 8 4	12 4 2
40		1,000	31 10 0	15 15 0
50		1,000	42 15 0	21 7 6
60		1,000	66 11 8	33 5 10

(By order of the Board)
DAVID JONES, Actuary.

PELICAN LIFE ASSURANCE OFFICES, 70, Lombard-street, and 57, Charing-cross.—Established 1797.

Directors.

Matthias Attwood, Esq. M.P.
W. Stanley Clarke, Esq. F.R.S.
John Coope, Esq.
William Cotton, Esq. F.R.S.
Sir William Curtis, Bart.
William Davis, Esq.
J. A. Gordon, Esq. M.D. F.R.S.
Sir W. Heygate, Bart.
Kirkman D. Hodgson, Esq.
R. Henshaw Lawrence, Esq.
J. Petty Muspratt, Esq.
George Shum Storey, Esq.
C. Hampden Turner, Esq.
Matthew Whiting, Esq.

The Plan of this Office will be found to comprise all the Solid Advantages of Life Assurance.

Persons have the option of insuring upon the Return or Non-Return Systems; and the Tables, which include Ascending and Descending Scales of Premium, have been framed to suit the convenience of all parties.

The Rates have recently been reduced agreeably to the most approved calculations; they are also verified by the experience of the Office during Forty Years, and are as low as consistent with safety; those adapted to the RETURN SYSTEM entitle its assured to an equitable participation in the surplus premium, according to the plan detailed in the Company's prospectus.

The Assured under both Systems will possess the guarantee of a large PAID-UP Capital, and the further security of a responsible body of Proprietors, without being exposed to the liabilities of partnership.

Policies are purchased on liberal terms when the object of an assurance is effected;—or, loans will be granted thereon to the extent of five-sixths of such purchase-money.

Prospectuses and every information obtained on application at the Offices as above, or to the Agents of the Company appointed in every City and principal Town in the Kingdom.

R. TUCKER, Secretary.

ATLAS ASSURANCE COMPANY, 92, Cheapside, London. Established 1808.

Actuary, Charles Ansell, Esq. F.R.S.
Solicitor—J. B. De Mole, Esq.
Surveyor—Thomas Hopper, Esq.
Assistant Surveyor—Thomas Lloyd, Esq.

FIRE DEPARTMENT.

RETURNS.—The Directors request reference to the fact, that *Twenty per Cent.* was returned by this Company on the amount of Premiums paid for the Five Years up to Christmas 1841, on all Policies for 300*l.* and upwards, which had been in force for one year at that time.

The next periodical Accounts for Returns will be made up to Christmas 1846.

RENT.—This Office (independent of the Returns and the late reduction in the rates of premium), offers to persons effecting Assurances, the further advantage of an allowance for the loss of rent on buildings rendered untenantable by Fire.

RENEWALS.—Policies due on Midsummer Day should be renewed within fifteen days thereafter.

LIFE DEPARTMENT.

The attention of the Public has, in the advertisements and proposals of this Company of late years, been called to a Table of Additions applicable to and expectant on Policies of particular dates and ages; the Directors now beg to refer to a Statement (which may be obtained on application at the Office in Cheapside, or to any of the Agents in the Country) of Sums *actually paid*, showing the sums respectively assured and the Bonuses thereon.

Persons assured for the whole term of Life in *Great Britain* or *Ireland* respectively, will have an Addition made to their Policies every seventh year, *or* an equivalent Reduction in the future payments of Premium, at the option of the Assured.

The Fourth Septennial Valuation will be made up to Christmas 1846.—Assurances for Short periods may now be effected in this Office at considerably reduced rates of Premium.

The Company's Rates and Proposals may be had at the Office in London, or of any of the Agents in the Country, who are authorized to report on the appearance of Lives proposed for Assurance.

HENRY DESBOROUGH, Secretary.

92, Cheapside, June, 1843.

CORPORATION of the LONDON ASSURANCE. Established by Royal Charter, A.D. 1720.

FOR FIRE, LIFE, AND MARINE ASSURANCES.

Offices, 19, Birchin-lane, Cornhill, and 10, Regent-street.

John Clark Powell, Esq., *Governor.*
Abel Chapman, Esq., *Sub-Governor.*
Lestock Peach Wilson, Esq., *Deputy Governor.*

Directors.

Robert Allen, Esq.
John A. Arbuthnot, Esq.
George Barnes, Esq.
Henry Blanshard, Esq.
John Watson Borradaile, Esq.
Edward Burmester, Esq.
Henry Cayley, Esq.
Aaron Chapman, Esq. M.P.
Robert Cotesworth, Esq.
Charles Crawley, Esq.
John Deffell, Esq.
James Dowie, Esq.
Richard Drew, Esq.
John Furse, Esq.
Edwin Gower, Esq.
Samuel Gregson, Esq.
Edward Harnage, Esq.
Robert King, Esq.
William King, Esq.
John Ord, Esq.
George Probyn, Esq.
John Rees, Esq.
Daniel Stephenson, Esq.
Thomas Weeding, Esq.

Persons effecting Life Assurances with this Corporation have the choice of two plans:

The one entitling them to an annual abatement of premium after five years' payment;

The other at a lower fixed rate without abatement.

The leading features which distinguish the first of these plans from those of other Life Assurance offices are—

The guarantee of the Corporation for the full payment of the sums assured:

Annual abatements of premium, commencing after five full years' payments:

Total absence of partnership of any kind whatever:

Absolute exemption from the possibility of being called upon to contribute towards making good any losses:

And freedom from all charges of management.

The abatement of premium for the year 1843 on policies of five years' standing, under the first of the above plans, was 31*l.* 10*s.* 2*d.* per cent.

It may be here sufficient to state, as an example, that under the above system a person having effected a policy on or before the 1st of January, 1838, at an annual premium of 100*l.*, had, on the 1st of January, 1843, only the sum of 68*l.* 9*s.* 10*d.* to pay as that year's premium.

The future annual abatement must vary according to the success of this branch of the Corporation's business.

In the Fire Department assurances are effected at the lowest rates.

Attendance daily, from Ten till Four, at both Offices, where prospectuses and every information may be obtained.

ABEL PEYTON PHELPS, Esq.,
Superintendent of the Office in Regent-street.
JOHN LAURENCE, Secretary.

METCALFE'S NEW PATTERN TOOTH-BRUSH and SMYRNA SPONGES.—The Tooth-Brush has the important advantage of searching thoroughly into the divisions of the teeth, and cleaning them in the most effectual and extraordinary manner, and is famous for the hairs not coming loose—1*s.* An improved Clothes-Brush, that cleans in a third part of the usual time, and incapable of injuring the finest nap. Penetrating Hair-Brushes, with the durable unbleached Russian Bristles, which do not soften like common hair. Flesh-Brushes of improved graduated and powerful friction. Velvet-Brushes, which act in the most surprising and successful manner. The Genuine Smyrna Sponge, with its preserved valuable properties of absorption, vitality, and durability, by means of direct importations, dispensing with all intermediate parties' profits and destructive bleaching, and securing the luxury of a genuine Smyrna Sponge. Only at METCALFE'S Sole Establishment, Oxford street, two doors from Holles-street.

CAUTION.—Beware of the words "From Metcalfe's" adopted by some houses.

WATCHES by WEBSTER & SON, Chronometer Makers to the Lords of the Admiralty (Established 132 years), 3, BIRCHIN-LANE. The largest assortment of fine Second-hand Watches of any house in London, by the most eminent makers—many nearly equal to new, and at little above half their original cost, all of which W. & Son warrant. They consist of fine Repeaters, Duplex, Lever, and Horizontal Escapements, all of superior manufacture. New Watches of the most elegant patterns upon the principle of their Chronometers, to which the Government awarded the prizes three years in succession, with compensation balances to counteract the variations of temperature. Also a large assortment of Lever and elegant Horizontal Watches, for Ladies and Gentlemen, at considerably reduced prices. Old Watches taken in exchange. The most experienced workmen are employed on the premises in the repairing department.

Webster & Son, 3, Birchin-lane, Cornhill.

MOULD CANDLES to BURN WITHOUT SNUFFING.—KEMPTON'S PATENT.—These candles do not require snuffing; they burn longer and are cheaper than any other candle; the flame is steady and brilliant. No metallic or deleterious matter is used in the manufacture. Price 6*d.* per lb. Sold by G. E. Parish, agent for exportation, 214, Broad-street, City, and by Sladden & Stocking, 42, High-street, Marylebone; W. Chem, Broadley-terrace, Blandford-square; W. Evans, Italian warehouse, Greenwich; John Hawkins, grocer, High-street, Whitechapel; George Hawley, grocer, Pitfield-street, Hoxton; S. Game, Fish-street-hill; J. Pain, grocer, Bethnal-green-road; G. H. Hudson, 229, Blackfriars-road; C. H. Nicholas, 19, Bolingbroke-row, Walworth; and at the manufactory, Old Bargehouse, Christchurch, Surrey.

MESSRS. BARRY & SON, Stationers and Engravers, beg to inform the Nobility and Gentry that they are now enabled to PRINT ARMS, CRESTS, &c., for book plates, in their proper heraldic colours, and at very moderate prices. Crests engraved on visiting cards in the first-rate style, 6*s.*; without the crest, 2*s.* 6*d.*; and 100 cards, 2*s.* 6*d.*; also every description of elegant engraving. Specimens of the above may be selected from a large and fashionable assortment, at their warehouses, Egyptian Hall, Piccadilly, and 122, Bishopsgate-street Within, or sent on application any distance free of expense. Superfine letter papers, 27*s.*, 22*s.*, 20*s.*, 18*s.*, 17*s.*, 14*s.*, 12*s.* and 9*s.* per ream. Note ditto, 18*s.*, 16*s.*, 12*s.*, 8*s.*, 6*s.* and 4*s.* per ream. An additional charge is made for stamping either of the above with arms, crest, coronet, or initials. Their miscellaneous stock, which is very large and particularly adapted for presents, consists of dressing cases, writing desks, inkstands, envelope cases, albums, blotting-books, bibles and prayers, gold and silver pencil cases, penholders, toilet and smelling bottles, souvenirs, ladies' companions, sachets, card and glove cases, pocket-books, papeterie, and envelopes suitable for invitations, complimentary notes, weddings, &c. Either of the above articles may be had plain, or of the most costly description, with every description of useful stationery. Postage stamps and envelopes at Government prices. Messrs. Barry & Son are also the West-end Agents for Mr. Robert Best Ede's Perfumery.

NORTON'S CAMOMILE PILLS are confidently recommended as a simple, but certain remedy, to all who suffer from Indigestion, Sick Headach, Bilious and Liver Complaints; they act as a powerful tonic and gentle aperient, imparting strength to the stomach, and composure to the nervous system. Sold in bottles, at 1*s.* 1½*d.* or 2*s.* 9*d.* each, by A. Willoughby & Co., late B. G. Windus, 61, Bishopsgate Without; and nearly all Medicine Venders.

THE SIXTH VOLUME OF

AGNES STRICKLAND'S LIVES OF THE QUEENS OF ENGLAND—

QUEEN ELIZABETH.

10*s.* 6*d.* bound, with Illustrations. (Just ready).

*** New and revised Editions of the first Five Volumes are also now ready.

LETTERS OF MARY, QUEEN OF SCOTS,

Illustrative of her Personal History, now First Published from the Originals. Edited by AGNES STRICKLAND. New and Cheaper Edition, with numerous Additions, uniformly with Miss Strickland's 'Lives of the Queens of England,' in 2 vols. with Portrait, 21*s.* bound. (In a few days.)

MARMADUKE WYVIL;

Or, THE MAID'S REVENGE: an Historical Romance.

By H. W. HERBERT, Esq.

Author of 'Oliver Cromwell.' 3 vols. (Now ready.)

"It gives us pleasure to find, after our commendation of 'Oliver Cromwell,' that the author has produced in his second effort a still better work—a very brightly coloured and animated work of art. We say further, in recommendation of this interesting romance, that it is as carefully finished as it is forcibly conceived."—*Athenæum.*

STEAM VOYAGES on the SEINE, the MOSELLE, and the RHINE;

With Railroad Visits to the Principal Cities of Belgium, &c.

By M. J. QUIN, Esq.

THE ATHENÆUM

Journal of English and Foreign Literature, Science, and the Fine Arts.

No. 819. LONDON, SATURDAY, JULY 8, 1843. PRICE FOURPENCE (Stamped Edition, 5d.)

For the convenience of Subscribers residing in remote places, the weekly numbers are reissued in Monthly Parts, stitched in a wrapper, and forwarded with the Magazines.—Subscriptions for the Stamped Edition for the Continent, for not less than Three Months, and in advance, are received by M. BAUDRY, 3, Quai Malaquais, Paris, or at the Athenæum Office, London. For France, and other Countries not requiring the postage to be paid in London, 28fr. or 1l. 2s. the year. To other Countries, the postage in addition.

[JAMES HOLMES, TOOK'S COURT, CHANCERY LANE.]

ACADEMICAL DEGREES.—Gentlemen of LITERARY or SCIENTIFIC PURSUITS, MINISTERS, or Others properly qualified, desirous of GRADUATING, may RECEIVE EFFICIENT ASSISTANCE from the Advertiser.—Address (pre-paid), stating qualifications, to M. D., 15, Tottenham-court New-road.

SCHOOL, FAMILY, and CLERICAL AGENCY, 20, SOHO-SQUARE.—Mr. HINTON, late of Trinity Hall, Cambridge, Author of 'Stenography for Schools,' &c., respectfully states that he forwards the views of Principals of Schools, Families, Clergymen, Tutors, and Assistants, in any changes they may contemplate; also in the transfer of Scholastic and Clerical Property.—Mrs. Hinton, who has resided many years on the Continent, can introduce superior English and Foreign Governesses, with good references. Letters must be free.

TO HEADS OF SCHOOLS AND FAMILIES.

LADIES and GENTLEMEN likely to be in want of either Governesses or Assistants, natives of England, or Foreigners, after the Vacations, are respectfully invited to forward the particulars, as to qualifications, age, salary, &c. No charge whatever is made.

Apply to Mons. de Porquet, School Agent, No. 11, Tavistock-street, Covent-garden. Attendance from 11 to 4 daily.

A CLERGYMAN, for many years accustomed to PREPARE a few PRIVATE PUPILS for their several stations in life, wishes to ADD ANOTHER to the three or four now with him. Any letter addressed to the Rev. D.D., to the care of Mr. West, No. 1, St. James's-street, London, will reach him in the country.

SELECT INSTITUTION, for the INSTRUCTION of ELDER YOUNG LADIES, in which the benefits of a public establishment and of a domestic circle are combined; the Principal, in her habitual intercourse with her pupils, uniting, with the advantage of long experience, the influence of an instructress and the affection of a friend.—Address, Miss Vines, Hackney, near London.

ADULT TUITION for LADIES.—A respectable WIDOW offers an agreeable HOME and good TUITION to any LADY whose Education may have been neglected, and who might not wish to go into a school of younger pupils. She lives in a genteel and comfortable style in a pleasant and healthy suburb near London, and can furnish the best references.—Application to be made by letters (post paid) to T. C., Collyer's Library, Cheyne-walk, Chelsea.

COMMERCIAL SCHOOL, GOTHIC HALL, ENFIELD, MIDDLESEX, by T. WEARE, Son and Successor to the Rev. W. WEARE.—T. WEARE respectfully informs his friends and those parents who are desirous of combining domestic comfort and liberal treatment with a sound and useful education, that he continues to receive Pupils on his usual moderate terms. Referees, Rev. J. J. Davies, Tottenham; Rev. T. Bourne, A.B., near Hinckley; D. M'Niel, Esq., Stock Exchange; and the Parents of the Pupils. No day scholars are admitted. Accommodation for Parlour Boarders. The present Vacation terminates on the 14th inst.

EDUCATIONAL ESTABLISHMENT, TWICKENHAM.—The scholastic labours of this School will be RESUMED on the 28th instant. Its object is to give that education which embraces the formation of character, along with a *real* as well as a verbal intellectual instruction. It is conducted as far as possible on the plan of a family. The Principal, Mr. Raymond de Vericour, resided two years, at the same time, as Professor and on a mission, in M. de Fellenberg's establishments at Hofwyl; and he endeavours to blend a moral education and general culture with the classical instruction usually given, thus forming a careful and systematic course of training, physical, moral, and intellectual. References of the first order.—Prospectuses sent on application.

LEICESTER COLLEGIATE SCHOOL RE-OPENS on MONDAY, July 31st.

The course of instruction pursued comprises a sound Classical and Mathematical training, by means of which the Pupils are enabled immediately to pass to either of the Universities.

The fundamental principles of a good English and Commercial Education are either combined with sound Classical Instruction, or are taught separately, according to the wish of parents.

TERMS OF THE SCHOOL.

Entrance Fee, 1l.

Classical Department { Upper Forms, 12l. per annum. Lower Forms, 10l. per annum.

Commercial Department, 8l. per annum.

TERMS FOR BOARDERS, EXCLUSIVE OF THE SCHOOL FEES.

With the Head Master, the Rev. A. Hill.

Above 10 years, 35 guineas per annum.
Under 10 — 30 —

With the Under Master, Mr. Wilkinson.

Above 10 years, 25 guineas per annum.
Under 10 — 20 —

No extras but for washing.

EDUCATION.—HOFWYL HOUSE, STAMFORD HILL, MIDDLESEX.—At this Establishment YOUNG GENTLEMEN are EDUCATED on plans founded on the principles so successfully practised by Pestalozzi and De Fellenberg. The most assiduous attention is bestowed on the culture of the feelings, the developement of the mental faculties, and the general improvement of the health and physical capabilities.

Knowledge is presented in its simplest form, and every exertion is made to render its acquirement a source of pleasure, and a means of further progress in virtue and intelligence.

The Course of Instruction includes:—

The English, French, German, Latin, and Greek Languages.
The Mathematics, Experimental Philosophy, and Chemistry.
The Elements of Natural and Civil History, Geography and Astronomy.
Writing, Drawing, Singing, Gymnastics, &c.

To facilitate the acquirement of knowledge, and furnish means of general improvement, a select library is provided, and an extensive collection of philosophical and chemical apparatus, with cabinets of minerals, shells, &c. A laboratory, bath, workshop, &c.

TERMS, including every expense, from SIX to EIGHT GUINEAS per Quarter.

A Prospectus may be obtained at Messrs. Jones & Co.'s, 20, Lower Holborn; or at the Establishment.

A VERY superior BOARDING SCHOOL, within eight miles of London. Terms 20 to 22 guineas per annum. The Principal, who is a clergyman, and of extensive experience in the scholastic profession, ventures to affirm that there is no establishment of superior advantage for salubrity, elegance, and convenience of premises, pleasure-grounds, baths, &c., together with domestic indulgences, which are under the superintendence of the proprietor's wife, who is the affectionate mother of a large family, and plans of education which cannot fail to ensure the greatest anxiety to improve without corporal punishment. Such confidence is entertained of satisfaction being afforded, that gentlemen are permitted to be withdrawn in case of dissatisfaction merely by paying to the time of their removal.—A Prospectus will be sent in answer to letters to T. O., Post-office, Lower Tooting, Surrey.

TO PARENTS and GUARDIANS.—A SOLICITOR, practising in the vicinity of the Inns of Court, has a VACANCY in his Office for an ARTICLED CLERK. As a young gentleman would have many advantages not usually found in a town office, a liberal premium will be expected.—Address, G. W., care of Wm. Macdonald, Esq., 23, Princes-street, Cavendish-square.

HORTICULTURAL SOCIETY of LONDON EXHIBITIONS at the GARDEN.—The LAST Exhibition will take place on WEDNESDAY, the 12th of July; on which occasion His Grace the Duke of Devonshire, the President of the Society, has kindly directed the doors of his Gardens and Pleasure Grounds to be opened for the reception of all persons who shall have been admitted into the Society's Garden by tickets.

SUBSCRIBERS are respectfully invited to the ALLOTMENT of PRIZES of the ROYAL POLYTECHNIC UNION of LONDON, on SATURDAY EVENING, the 8th instant, at No. 5, Cavendish-square.

The Chair will be taken at Eight o'clock precisely.

By order of the Committee,
R. J. LONGBOTTOM, Hon. Sec.

CONCHOLOGY.—LOVELL REEVE begs to remind all who may be interested in the science of CONCHOLOGY, that his cabinet is now replete with specimens of unusual rarity and interest, arranged (at the lowest possible prices) in illustration of the Lamarckian genera. Gentlemen residing in the country supplied with Specimens to any amount to select from at their leisure.

Conchologia Iconica, No. VI., now published.

Lovell Reeve, Naturalist, 8, King William-street, Strand.

DERBY.—OPTICAL AND PHILOSOPHICAL INSTRUMENT REPOSITORY.

JOHN DAVIS, OPTICIAN, Derby (late Cheltenham), has the honour to inform his Patrons that he has centralized his extensive connexion in Derby, where, in future, he will be happy to receive orders. He begs to call attention to his celebrated Pocket Telescopes, measuring but 3¼ inches when closed, and are capable of defining clearly Jupiter's moons. Oberhaüser's Objectives supplied to the trade. Several second-hand Telescopes, by Dollond, on sale.—No connexion with any house in London.

OFFICE of the GOVERNOR and COMPANY of COPPER MINERS in ENGLAND,
Old Broad-street, London,
7th July, 1843.

THE COURT of ASSISTANTS of the GOVERNOR and COMPANY of COPPER MINERS in ENGLAND hereby give Notice that the HALF-YEARLY INTEREST on the Debentures of the Company, due on the 15th instant, will be paid at this Office. The Coupons, with an accompanying list, must be left for examination one clear day.

By order of the Court of Assistants,
W. INGLIS, Secretary.

TO THE PROPRIETORS of EAST INDIA STOCK.

LADIES and GENTLEMEN,

Having returned from India, after a career of service in the Bengal Presidency of Thirty-four years, which terminated in the Council of India, I am induced to offer myself as a CANDIDATE for A SEAT in the COURT OF DIRECTORS for the Affairs of the East India Company. I make this early announcement, in order that my intentions may be generally known, and shall more fully submit my claims and pretensions when personally soliciting your suffrages and support.

I have the honour to be,
Ladies and Gentlemen,
Your most obedient humble servant,
H. T. PRINSEP.

London, June 15, 1843.

HORTICULTURAL FETE.—The GARDENERS' CHRONICLE of SATURDAY NEXT, July 15, will contain a FULL REPORT of the MEETING of the HORTICULTURAL SOCIETY on the 12th, with the award of the Prizes. The Gardeners' Chronicle, edited by Prof. Lindley, is published every Saturday, price 6d. stamped, to go free by post, and may be ordered of all Newsmen.

SCHOLASTIC.—Masters of Grammar and Commercial Schools are respectfully informed, that the Rev. HUGH BENTLEY'S BRITISH CLASS BOOK, or Exercises in Reading and Elocution, selected from the most classical Modern Authors, in Prose and Verse, may now be had at the Publishers, and a list of the contents of this admirable selection may be procured *gratis* on application at 48, Paternoster-row.

SCHOLASTIC.—GUY'S CHART of GENERAL HISTORY, a new and enlarged edition, may now be had on cloth, folded up as a book, and lettered, to stand in the library, for 10s. 6d.—This valuable work gives at a glance a view of history from the Flood to the present year. It is coloured to exhibit the spread of empires, and the stream of kingdoms. Lines cross the chart in centuries, to show the contemporary sovereigns, the great characters, inventions, and all transactions of the same period, in every part of the world. Such a chart is, in fact, to history what maps are to geography, giving a clearer idea of the rise, duration, and fall of each kingdom and empire, than would the bare perusal of many volumes. As a record of dates only, it is invaluable for hasty references.—The chart may also be had on canvas and mahogany roller for 10s. 6d.; or in the sheet for 7s.—48, Paternoster-row.

SCHOLASTIC.—As economy in educational books is now a prime consideration in all academies, the Publishers of GUY'S SCHOOL HISTORIES think they are doing a service by drawing the attention of masters to these cheap and valuable works. The volumes sell for only 3s. 6d. each, and contain, *viz.* that of Ancient History—Greece, Rome, Egypt, the Jews, Persians, and six other countries. Modern History contains America, France, Spain, Germany, Italy, Russia, and the remaining European States. British History includes England, Scotland, Wales, and Ireland, under separate heads. They are sufficiently copious for school histories, and they are admirably adapted for teaching. New and correct editions of the three volumes are now ready, and may be had, separate or together, at the Publishers, 48, Paternoster-row.

SCHOLASTIC.—The 10th edition, enlarged and stereotyped, of the Rev. JOS. S. FREY'S HEBREW GRAMMAR in the English Language, with Reading Lessons, Rules, and Analysis from Genesis and the Book of Psalms, for the use of students desirous of learning the language without the aid of a teacher, and for grammar schools, is now on SALE at the Publisher's, price 8s. 6d., 8vo., bound. With this Grammar the Hebrew language may be acquired with the greatest facility. —48, Paternoster-row.

Just published, price 3s. cloth boards.

THE LATIN GOVERNESS. By J. W. FREESE, B.A. T.C.C.

"Mr. Freese has, in this little volume, enabled mothers and governesses to give the earlier elementary lessons (in Latin); and in teaching others they must learn a great deal themselves, though they need not know a single word to begin with. It is a well-digested and applicable performance for the intended purpose."—*Literary Gazette*, May 20.

London: Simpkin, Marshall & Co.; and H. George, Westerham.

M. A. NATTALI begs to announce that he has REMOVED to 23, BEDFORD-STREET, COVENT-GARDEN.

NATTALI'S POST CIRCULAR of BOOKS, forwarded GRATIS to all parts of the Kingdom by applying PRE-PAID.

TESTIMONIAL OF ESTEEM TO MISS MARTINEAU.

MANY friends of MISS HARRIET MARTINEAU have intimated a wish that an opportunity might be afforded them of expressing their sympathy and esteem, and of giving some Testimonial of the sense they entertain of the valuable public services rendered by that lady in various ways, and of the exalted motives which have uniformly influenced her conduct.

In order to give effect to the wishes of such persons, the following gentlemen have agreed to receive Subscriptions, and it is proposed that the sum subscribed should be left entirely to the disposal of Miss Martineau.

E. DARWIN, Esq., 43, Great Marlborough-street.
The Rev. WM. HARNESS, 19, Heathcote-street, Mecklenburgh-square.
W. R. HICKSON, Esq., 18, Park-lane.
R. HUTTON, Esq., Putney Park.
The Rev. Dr. HUTTON, 5, Hamilton-place, King's-cross.
J. ROBERTSON, Esq., 122, Pall Mall.
S. SMITH, Esq., Combe Hurst, Kingston.
H. WEDGWOOD, Esq., 16, Gower-street, Bedford-square.

Post Office orders for any amount may be sent to any of the above named Gentlemen, and Subscriptions may also be paid at the Bank of Messrs. Coutts & Co., London; Sir B. Haywood, Bart. & Co. Manchester; Messrs. A. Heywood & Sons, Liverpool; Messrs. Gurney & Co. Norwich; Messrs. Brown, Janson & Co. Leeds; the West of England and South Wales Bank, Bath and Bristol; the Northumberland and Durham District Bank, Newcastle-upon-Tyne.

The Subscription will be closed at the end of the present month.

WESTMINSTER REVIEW.—BILLS and ADVERTISEMENTS for the next Number should be sent on or before MONDAY, the 24th instant.
Samuel Clarke, (late Hooper,) 13, Pall Mall East.

GRATIS AND POST FREE.

BULL'S JULY CIRCULAR is ready for READING SOCIETIES and FAMILIES, THROUGHOUT ENGLAND, IRELAND, and SCOTLAND, who can now obtain it, describing all the Valuable and interesting New Publications to the present time, and the ADVANTAGEOUS TERMS on which they are supplied, regularly and in any quantity, with whatever New and Standard Works, Magazines, and Reviews, they may desire for Perusal. Apply to Mr. Bull, English and Foreign Public Library, 19, Holles-street, four doors from Cavendish-square.

TO READING and BOOK SOCIETIES, CLERGYMEN and FAMILIES, throughout ENGLAND, SCOTLAND, and IRELAND.

New Plan for obtaining all the NEW PUBLICATIONS and STANDARD WORKS for Perusal without Purchase.

Now ready, *Gratis* and Post-free,

HINTS for the FORMATION of READING SOCIETIES.—The plan advocated in this little pamphlet will effect two important objects—that of adding to the supply of the current literature the choice of all the most valuable works in the various languages, and that of extending the choice of New Books to the entire productions of the press. It is especially adapted to provincial readers, as, by a small annual subscription, the perusal of all the New Works as they appear may be obtained.
Saunders & Otley, Publishers, Conduit-street.

CHEAP BOOKS.—Just published, E. & J. HOWARD'S CATALOGUE of ANCIENT and MODERN BOOKS, comprising an extensive Collection of Works in all branches of Literature now on Sale at 23, Gray's Inn-lane, (nearly opposite to Gray's Inn gate). Gentlemen favouring E. & J. H. with their address, can receive a Catalogue GRATIS, postage free.

On the 19th of July will be published,

JAMES TAYLOR & CO.'S CATALOGUE of ANCIENT and MODERN BOOKS, on Sale at 22, Pavilion-street, Brighton, at very low prices. Catalogues will be forwarded free to Gentlemen sending their address, and they may be obtained, GRATIS, of James Gilbert, 49, Paternoster-row, London.

BRITANNIA LIFE ASSURANCE COMPANY, 1, Princes-street, Bank, London.

This Institution is empowered by *Special Act of Parliament*, (4 Vict. cap. 9), and is so constituted as to afford the benefits of Life Assurance in their fullest extent to Policy-Holders, and to present greater facilities and accommodation than are usually offered by other Companies. The decided superiority of its plan, and its claim to public preference and support, have been proved incontestibly, by its extraordinary and unprecedented success.

Assurances may either be effected by Parties on their own Lives, or by Parties interested therein on the Lives of others.

The effect of an Assurance on a person's own life is to create at once a property in reversion, which can by no other means be realized. Take, for instance, the case of a person at the age of thirty, who by the payment of 5*l.* 2*s.* 4*d.* to the Britannia Life Assurance Company, can become at once possessed of a bequeathable property, amounting to 1000*l.*, subject only to the condition of his continuing the same payment quarterly during the remainder of his life,—a condition which may be fulfilled by the mere saving of EIGHT SHILLINGS weekly in his expenditure. Thus, by the exertion of a very slight degree of economy—such, indeed, as can scarcely be felt as an inconvenience, he may at once realize a capital of 1000*l.*, which he can bequeath or dispose of in any way he may think proper.

Detailed Prospectuses, and every requisite information as to the mode of effecting Assurances, may be obtained at the Office.
PETER MORRISON, Resident Director.

A Board of Directors attend daily at 2 o'clock, for the dispatch of business.

THE WESTMINSTER and GENERAL LIFE ASSURANCE ASSOCIATION,

At the WESTMINSTER FIRE OFFICE,
No. 27, King-street, Covent-garden,

For granting Assurances on Lives and Survivorships for any term of Years, and for Endowments.

Trustees—G. Dodd, Esq. M.P. | George Mercer, Esq.
Luke T. Flood, Esq. | Colonel W. H. Meyrick.

Directors—William Aldous, Esq. | General Douglas Mercer
George Barclay, Esq. | Richard Mott, Esq.
Frederick R. P. Barlow, Esq. | Wm. M. Nurse, Esq.
Henry Fredk. Cooper, Esq. | Thomas Parker, Esq.
George Cornell, Esq. | Thomas Parkinson, Esq.
William Crake, Esq. | Geo. Pitt, Esq.
Luke T. Flood, Esq. | Edward S. Stephenson, Esq.
William B. France, Esq. | John Sturges, Esq.
Richard Halliwell, Esq. | J. W. Thrupp, Esq.
Charles William Knight, Esq. | Howell Leny Vallotton, Esq.
Charles Mayhew, Esq. | John White, Esq.

Auditors.

John Chas. Burgoyne, Esq. | James Tilbury, Esq.
The Rev. Geo. Fisher, F.R.S. | John Walls, Esq.

Physician—Charles J. Roberts, M.D., 31, New Bridge-street, Blackfriars.
Surgeon—James M. Arnott, Esq. 2, New Burlington-street.
Solicitor—Thomas Burgoyne, Esq. 160, Oxford-street.
Bankers—Messrs. Cocks, Biddulph & Co. 43, Charing-cross.

A DIVIDEND OF THE PROFITS OF THIS SOCIETY WAS DECLARED ON THE 1ST JANUARY, 1842, by which an addition, amounting on the average to 45 PER CENT. on the Premiums received was made to all Policies entitled to share therein.

FOUR-FIFTHS, or 80 PER CENT. of the total profits, are divided among the Assured at intervals of five years; and all Policies on which two payments have been made, participate in the division.

The Profits respectively allotted may be received by the Assured in present money, by a reduction of the Annual Premium, or by adding to the Policy an equivalent reversionary sum.

All Persons Assured on their own lives for 1,000*l.* or upwards, have the right (after two Annual payments) to attend and vote at the General Meetings of the Society.
W. M. BROWNE, Actuary.

OFFICE for PATENTS of INVENTIONS and REGISTRATION of DESIGNS, No. 14, Lincoln's Inn-fields, where all business relating to the Securing and Disposing of BRITISH and FOREIGN PATENTS, Preparation of Specifications, Drawings of Inventions, is expeditiously and economically effected.

Also REGISTRATIONS under the New Consolidated Copyright of Designs Act, 5 & 6 Vict. cap. 100.

A Prospectus, containing much useful information, may be obtained, and references to an Alphabetical List of Patents and Registrations made, on application to Mr. Alexander Prince, 14, Lincoln's Inn-fields.

The Sunday Lessons; with Practical and Explanatory Notes. 12mo. 12s.

NEW FAMILY BIBLE,
BY THE REV. GEORGE TOWNSEND.
Now ready, in 8vo. price 6s.,
PART I., containing 31 Sections, (for the Mornings of one Month), of

SCRIPTURAL COMMUNION WITH GOD, or the HOLY BIBLE, containing the Old and New Testaments, arranged in Historical and Chronological Order, in such manner that the whole may be read as one connected History, in the words of the authorized Translation; newly divided into Sections, for Families and Individuals; with Introductions and Prayers; and Notes for the Student and Inquirer.
By the Rev. GEORGE TOWNSEND, M.A.
Canon of Durham; Author of 'The Historical and Chronological Arrangement of the Holy Bible.'
This Commentary is formed on the plan of separating the Devotional, Historical, and Critical Portions from each other, and is divided into Sections for daily reading. Each Section contains an Introduction, comprising the Historical and Expository matter given in the chief Commentaries—the Portion of Scripture—a Prayer founded upon the selected Portion of Scripture—and Notes original and critical.
Rivingtons, St. Paul's Churchyard, and Waterloo-place.

FAMILIAR ASTRONOMY.
By GEORGE DARLEY, A.B., Author of a System of Popular Geometry, &c. 12mo. with Engravings, 5s. cl. lettered.
"There is a vast deal of astronomical information conveyed in a most winning and unassuming manner in this delightful little volume, which, not less for the novelty of its plan, than the extent of its intelligence, reflects infinite credit on the taste and talents of its projector and editor, Mr. Darley."—*Sun*, April 5, 1830.
Taylor & Walton, Booksellers and Publishers to University College, 28, Upper Gower-street.

DARLEY'S SCIENTIFIC LIBRARY, for the Use of Schools, Private Students, Artists, and Mechanics.
It is the purpose of this Work to furnish a Series of Elementary Treatises on Mathematical Science, adapted to the wants of the public at large. To youth of either sex at public and private schools; to persons whose education has been neglected, or whose attention has not been directed in early life to such studies; and to Artists and Mechanics, these little works will be found particularly suited. The principles of the various Sciences are rendered as familiar and brought as near to our commonest ideas as possible; the demonstrations of propositions are made plain for the mind, and brief for the memory; and the Elements of each Science are reduced not only to their simplest but to their shortest form.

1. A System of Popular Geometry. Containing in a few Lessons so much of the Elements of Euclid as is necessary and sufficient for a right understanding of every Art and Science in its leading Truths and general Principles. By George Darley, A.B. Fourth Edition. 4s. 6d. cloth.

2. Companion to the Popular Geometry. In which the Elements of Abstract Science are familiarised, illustrated, and rendered practically useful to the various purposes of Life, with numerous Cuts. Second Edition. 4s. 6d. cloth.

3. A System of Popular Algebra, with a Section on Proportions and Progressions. Third Edition. 4s. 6d. cloth.

4. A System of Popular Trigonometry, both Plane and Spherical; with Popular Treatises on Logarithms, and the Application of Algebra to Geometry. Second Edition. 3s. 6d. cloth.

"For students who only seek this limited knowledge of these sciences, there are perhaps no treatises which can be read with more advantage than Darley's Popular Geometry and Algebra."—*Library of Useful Knowledge, Article 'Mechanics.'*

Taylor & Walton, Booksellers and Publishers to University College, 28, Upper Gower-street.

PUNCH'S CARTOONS.

The Exhibition of these exquisite Designs will be commenced in the Number for Saturday next, July 15.—Price 3d.
The Fourth Volume of 'PUNCH,' containing nearly 1,000 Illustrations, is now ready, price 8s. bound in cloth.
VOLUMES I., II., and III., are always kept on sale.
Office, 194, Strand; and sold by all Booksellers.

MR. AINSWORTH'S NEW ROMANCE.

WINDSOR CASTLE—ILLUSTRATED.

The ILLUSTRATED EDITION of MR. AINSWORTH'S NEW HISTORICAL ROMANCE of 'WINDSOR CASTLE,' CONTAINING 120 PLATES AND WOOD ENGRAVINGS BY GEORGE CRUIKSHANK, and other eminent Artists, complete in One handsome Volume 8vo., uniform with 'The Tower of London,' by the same Author, price 14s. elegantly bound, IS NOW READY, and may be had of all Booksellers.
"One of the best of the author's productions. The illustrations by George Cruikshank are of almost unprecedented force and spirit."—*Literary Gazette.*
HENRY COLBURN, Publisher, 13, Great Marlborough-street.

13, Great Marlborough-street, July 8.

VOL. VI. OF MISS STRICKLAND'S

'LIVES OF THE QUEENS OF ENGLAND—QUEEN ELIZABETH.'

IS NOW READY.

Also, complete in 2 vols., uniform with 'THE QUEENS,' price 21s. bound, the SECOND EDITION, with numerous Important Additions, of

LETTERS OF MARY, QUEEN OF SCOTS.

Edited, with an Historical Introduction and Notes,
By AGNES STRICKLAND.
HENRY COLBURN, Publisher, 13, Great Marlborough-street.

In a few days, in a handsome volume imperial 8vo.
Illustrated by a large Map of the *Mer de Glace* of Chamouni, Lithographed Views and Plans, and Engravings on Wood,

TRAVELS THROUGH THE ALPS OF SAVOY, AND OTHER PARTS OF THE PENNINE CHAIN,

With Observations on the Phenomena of Glaciers.

By JAMES D. FORBES, F.R.S., Sec. R.S.E.
Corresponding Member of the Royal Institute of France, and Prof. of Natural Philosophy in the University of Edinburgh.

CONTENTS:
CHAPTER I. The Alps and Alpine Travellers.—II. Some Account of Glaciers generally.—III. On the Geological Agency of Glaciers.—IV. and V. Description of the Mer de Glace of Chamouni.—VI. Account of a Survey of the Mer de Glace and its Environs.—VII. Account of Experiments on the Motion of the Ice of the Mer de Glace of Chamouni.—VIII. On the Structure of the Ice of Glaciers, and of the Mer de Glace in particular.—IX. The Tour of Mont Blanc—Chamouni to Courmayeur—X. The Glaciers of Miage and La Brenva.—XI. Environs of Courmayeur—Geology.—XII. The Passage of the Col du Géant.—XIII. From Courmayeur to Chamouni by the Col Ferret and Col de Balme.—XIV. Journey from Chamouni to Val Pelline by the Val de Bagnes and Col de Fenetres.—XV. From Val Pelline to Evolena by the Col de Collon.—XVI. From Evolena in the Valley of Erin to Zermatt in the Valley of St. Nicolas, by the Glaciers of Ferpecle and Zermatt.—XVII. The Environs of Zermatt.—XVIII. From Zermatt to Gressonay by the Col of Mont Cervin.—XIX. Gressonay—Monte Rosa.—XX. Tour of Monte Rosa concluded—From Gressonay to Visp by Macugnaga and Monte Moro.—XXI. An Attempt to Explain the leading Phenomena of Glaciers.
ADAM & CHARLES BLACK, Edinburgh; LONGMAN & Co. London.

In crown 8vo. 4s. 6d. bound, with 220 Diagrams engraved for the work,

COOLEY'S ELEMENTS OF EUCLID:

With EXPLANATORY APPENDIX,

AND SUPPLEMENTARY PROPOSITIONS FOR EXERCISE.
ADAPTED FOR THE USE OF SCHOOLS, OR FOR SELF-INSTRUCTION.
By W. D. COOLEY, A.B.
"This is the best edition of the Elements which has yet appeared. By the occasional use of algebraic symbols for words, the author has both shortened and simplified the reasoning. The few remarks on Geometrical Analysis in the Appendix are of great value; and the Supplementary Propositions will be found useful both to pupils and teachers."—*Athenæum.*

Uniform with the 'ELEMENTS,' price 3s. 6d.

COOLEY'S GEOMETRICAL PROPOSITIONS DEMONSTRATED:

Or, a SUPPLEMENT to EUCLID.

BEING A KEY TO THE EXERCISES APPENDED TO THE 'ELEMENTS,'
For the Use of Teachers and Private Students.
Upwards of 120 Propositions, deduced from the First Six Books of Euclid, are illustrated in it by new Diagrams.
"The Propositions form a Supplement to Euclid, and will be found of considerable value as an aid to teachers of the Mathematics."—*New Monthly Magazine.*

In fcp. 8vo. price 1s. 6d.

COOLEY'S FIGURES OF EUCLID.

BEING THE DIAGRAMS ILLUSTRATING THE 'ELEMENTS,'
With the Enunciations,
PRINTED SEPARATELY FOR THE USE OF SCHOLARS IN THE CLASS-ROOM.
WHITTAKER & Co. Ave Maria-lane. Orders received by all Booksellers.

FELIX SUMMERLY'S

RECREATION HAND-BOOK GUIDES,

Corrected for the Season of 1843.

"Recreation is a second creation, when weariness hath almost annihilated one's spirits. It is the breathing of the soul, which otherwise would be stifled with continual business.... As for those that will not take lawful pleasure, I am afraid they will take unlawful pleasure, and by lacing themselves too hard grow awry on one side."
FULLER'S HOLY AND PROFANE STATE.

"All work and no play makes Jack a dull boy."
OLD ENGLISH PROVERB.

Now ready, price 2s. 6d.
In an Ornamental Cover of the 16th Century,

HAND-BOOK FOR THE NATIONAL GALLERY,

WITH FIFTY REMINISCENCES OF THE MOST CELEBRATED PICTURES, DRAWN EXPRESSLY FROM THE ORIGINALS, BY MESSRS. JOHN JAMES AND WILLIAM LINNELL.

(Open daily, from Ten to Four, except Friday and Saturday.)
Other Editions, price 6d., 3d., and 1d. Also,

'Catalogue des Tableaux qui se trouvent dans la GALERIE NATIONALE, suivi par la Chronologie des Peintres.' Prix 6d.

HAMPTON COURT PALACE.

(OPEN DAILY, EXCEPT FRIDAYS.)

Being a Guide to the Architecture, Tapestries, Paintings, Gardens and Grounds of Hampton Court: with numerous Embellishments on Wood, engraved by Ladies; and Plans of the Palace and Grounds from Official Surveys. The Illuminated Cover is taken from a design for a book-cover produced by Hans Holbein for Cardinal Wolsey. Second edition, price 5s. in cloth, and Holbein's cover in gold, with Maps and Plans; and 2s. 6d. not gilt, and with plan only.

"Decidedly the best popular guide to the picturesque beauties of Hampton Court of any extant."—*Spectator.*

"A charming specimen of a Hand-book, literally crammed with information."—*Atlas.*

FREE PICTURE GALLERIES;

Being a GUIDE to all the PICTURES in the NATIONAL GALLERY, the DULWICH GALLERY, the SOANE MUSEUM, the SOCIETY of ARTS, and the BRITISH MUSEUM. Price 1s. 6d.

"These Catalogues are more raisonnés and correct than the correspondent official ones; are more portable, and to their limits every way commodious, whilst they cost together much less than several of the latter cost separate."—*Athenæum.*

HOLIDAYS; or, a Guide to London Sights.

Giving details of the Locality—Means of Access—Nature of Admission—Time when Open—Principal Objects, and Descriptive Catalogues of all the Permanent Sights. Notes for Days' Excursions out of the Metropolis. Price 6d.

WESTMINSTER ABBEY.

(The Abbey opens at 9 A.M., and closes, in the Summer, at 6 P.M. The Tombs are shown until half-an-hour before, and about an hour after, Divine Service, which commences at 10 A.M. and 3 P.M. Entrance to Poets' Corner, free; to the Nave, alone, 3d.; with the Chapels, 6d.)

A Guide to the Architecture, Sculptures, Tombs, and Decorations, with 56 Embellishments on Wood, engraved by Ladies, 4 Etchings, a Specimen of Encaustic Tiles in the Chapter House, and an Illumination. Price 7s. Cheaper Editions, 3s., 1s. 6d.

"Its pages are not disfigured by the usual Guide-book sentimentality, rambling on without method, and mixing inaccurate if not false information with indiscriminate and nauseating praise, but it gives a well arranged and correct description, neither too popular nor too pedantic, of the Sacred Edifice."—*Ecclesiologist*, published by the Cambridge Camden Society.

"A volume got up in excellent taste, and written in a right spirit; critical so far as criticism could be allowed, but always suggestive, and testing opinions by reference to principles. As if to perfect the interest of the work, its fifty-six illustrative engravings have all been executed by women; and some amateurs, Lady Callcott and Lady Palgrave, amongst others, have gracefully contributed drawings, and thus associated their names with their sister artists."—*Athenæum.*

Also, for Foreigners, GUIDE A L'ABBAYE DE WESTMINSTER. Par Félix Summerly. Prix 1sh.

TEMPLE CHURCH.

With Eight Illustrations. Printed in three colours, in novel combinations of lithography and type, with Ornamental Cover of the pattern of the Encaustic Tiles. Second Edition. Price 1s.

A HAND-BOOK for CANTERBURY; with 35 Illustrations, 3s. 6d.; cloth extra, 5s. 6d.

Will be ready in a few days,
DAYS' EXCURSIONS OUT OF LONDON; with Engravings on Wood, by Charlotte and Laura Bond.

GEORGE BELL, 186, Fleet-street.

1.

PERSONAL OBSERVATIONS ON SINDH,

The Manners and Customs of its Inhabitants, and its Productive Capabilities; with a Narrative of the Recent Events.
By CAPTAIN POSTANS,
Bombay Army, late Assistant to the Political Agent, Sindh.
8vo. with Map and Illustrations.
[*On Wednesday next.*

2.

MEREDITH.

By the COUNTESS of BLESSINGTON.
3 vols. post 8vo. 31s. 6d. boards.

3.

THE EMPIRE OF THE CZAR.

By the MARQUIS DE CUSTINE.
Translated from the French. 3 vols. post 8vo.
[*Nearly ready.*

4.

THE CORRESPONDENCE OF JOHN, FOURTH DUKE OF BEDFORD.

Vol. II., with an Introduction by LORD JOHN RUSSELL. 8vo.
[*Next week.*

*** This Volume will be of unusual interest at the present moment, as it contains the letters which passed when the Duke of Bedford was Lord Lieutenant of Ireland, and a detail of the trouble he met with from the Irish Parliament.

5.

KING ERIC AND THE OUTLAWS;

Or, the THRONE, the CHURCH, and the PEOPLE, in the THIRTEENTH CENTURY.
Translated from the Danish of INGEMANN,
By JANE FRANCES CHAPMAN.
3 vols. post 8vo. 31s. 6d. boards.

"The Roman Catholic church struggle to maintain ascendancy, and the defiance of King Eric to the Pope, his bulls, anathemas, and interdicts—like unto a parallel passage in the history of our own country, during the reign of the 8th Henry; and very applicable at this hour—form the basis of this novel."
Literary Gazette.

"Full of incident and adventure. We recollect few novels in which the attention of the reader is more quickly interested, or more completely absorbed. The characters are struck off with a shrewd intelligence, and contrast admirably; and the whole tale is original, lively, and varied, in no common degree."
Court Journal.

6.

A TREATISE ON FOOD AND DIET;

With Observations on the DIETETICAL REGIMEN suited for Disordered States of the Digestive Organs;

REVIEWS

Tracts relating to Ireland. Printed for the Irish Archæological Society. 4to. Dublin.

THE most important tract, in this collection, is the Statute or rather Statutes of Kilkenny, edited by Mr. Hardiman, the historian of Galway, and editor of the Jacobite relics of Ireland. It is the most valuable record which the Irish Archæological Society has yet issued; for it is, in fact, the foundation of the whole system of Anglo-Irish policy. A brief outline of the circumstances under which the parliament of Kilkenny was assembled, will be a proper introduction to an examination of some of the provisions of this celebrated statute, or rather Code.

The cruelty with which Edward I. treated the Scotch and the Welsh was extended to the native Irish; their chieftains took up arms, and harassed the English colonists by desultory wars, without having sufficient energy or wisdom to devise any plan of general revolt. The younger Bruce, soon after the establishment of his brother Robert on the throne of Scotland, came to Ireland, in the hope of gaining a kingdom for himself by the aid of the discontented chieftains; but he and his allies, by a series of political and military blunders, lost the fruits of their first successes, and Bruce's attempt was frustrated at the memorable battle of Dundalk. The Irish, though vanquished, were not intimidated; in fact, they had not before learned the secret of their strength; and the result of the discovery was several successful attacks on the English of the Pale,—that is, a district of about four counties round Dublin, which alone was governed by English law,—and on the colonists in the more distant parts of the kingdom.

The Anglo-Norman barons, or as they were subsequently called "The Lords of the Pale," whether their lands were within its limits or not, apprehensive of the eventual loss of their possessions, began to conciliate the Irish by intermarriages and other alliances, by the adoption of Irish usages and laws, and by exhibiting hostility to the local government in Dublin. About the middle of the fourteenth century, every ruler of whatever race beyond the precincts of the Pale had virtually withdrawn his allegiance from the crown of England. At this crisis, the representative of the De Burgho family, one of the most potent of those descended from the original invaders, was William Burke, Earl of Ulster and Lord of Connaught. He was murdered by his English attendants in Ulster, leaving an only daughter to inherit his vast estates. This lady married Lionel, Duke of Clarence, second son of Edward III., but brought him no other dowry than her charms, for the next male heirs of the deceased Earl seized upon his extensive territories in Connaught, and divided or gavelled them amongst themselves, according to the principles of Irish law. They adopted the laws, language, and manners of the Irish, set the English government at defiance, and transmitted the estates to their posterity.

Lionel, Duke of Clarence, came twice to Ireland as Lord Lieutenant, in the vain hope of recovering his lady's rich inheritance, but his efforts proving fruitless, he, in 1367, convened a parliament at Kilkenny, where several laws for restraining the degeneracy of the English settlers were passed, which, as they formed together a system of government, are commonly called the Statute of Kilkenny. We shall now proceed to examine some of the provisions of this celebrated Code, which has been not unjustly described as a declaration of perpetual war against the native Irish and all the English settlers who identified themselves with the Irish; we shall also avail ourselves of Mr. Hardiman's notes, to show that the baneful results of this impolitic measure continued to be felt long after the statute itself had fallen into desuetude.

The preamble sets forth that the English settlers at the Conquest and for a long time after conformed to English laws and usages, "in which time, God and Holy Church, and their franchises according to their condition, were maintained," but that now many English of the said land, forsaking the English language, manners, mode of riding, laws and usages, live and govern themselves according to the manners, fashion, and language of the Irish enemies, and also have made divers marriages and alliances between themselves and the Irish enemies aforesaid," whereby all due order and allegiance had been subverted.

In order to explain the introduction of "God and Holy Church" into this preamble, it is necessary to bear in mind, that the claim of the English monarchs to reign over Ireland rested on a grant made by Pope Adrian to Henry II., and we find this set forth as their only title in a statute of Edward IV., A.D. 1467, now first published, from the original roll, by Mr. Hardiman:

"As our holy Father Adrian, Pope of Rome, was possessed of all the seigniory of Ireland in his demesne, as of fee, in right of his Church of Rome, and to the intent that vices should be subdued, and virtue encouraged, he aliened the same land to the king of England, for a certain rent to be received in England, to hold to the king of England and his heirs for ever: by which grant said subjects of Ireland owe their obedience to the king of England, as to their sovereign Lord, as by said bull appears. It is, therefore, ordained, that all archbishops and bishops of Ireland shall upon the monition of forty days, proceed to the excommunication of all disobedient subjects, and if such archbishop or bishop be negligent or remiss in doing their dutics in the premisses, they shall forfeit one hundred pounds."

The religious excuse for the ensuing enactments is again repeated in the preamble, it being declared that the statute was designed "to the honour of God and of His glorious Mother and of holy Church;" and the very first clause enjoins that the civil power shall give due effect to sentences of excommunication pronounced by the ecclesiastical authorities. Indeed, in all the statutes under the Plantagenets, we find provision made for the maintenance of the authority of the Romish Church in Ireland, because it was from the Church that the State derived its authority, and by the aid of its clergy alone could the government, as then constituted, hope to reconcile the Irish to English rule.

The second enactment is the most celebrated, but it has hitherto been very inaccurately quoted by historians:—

"Also, it is ordained and established, that no alliance by marriage, gossipred, fostering of children, concubinage or by amour, nor in any other manner, be henceforth made between the English and Irish of one part, or of the other part; and that no Englishman, nor other person, being at peace, do give or sell to any Irishman, in time of peace or war, horses or armour, nor any manner of victuals in time of war; and if any shall do to the contrary, and thereof be attainted, he shall have judgment of life and member, as a traitor to our lord the king."

Gossipred was one of the strongest ties of friendship between Irish families, and it continues to be influential at the present day. Instances are not rare of godfathers and godmothers receiving as much of affection and obedience as parents, and on the other hand sponsors rarely neglect their obligation of watching over the child for whom they have answered at baptism. Fostering was a still more sacred tie; instances have been known where the nurse and her husband preferred the interest of the foster-child to the lives of their own offspring, and still more frequently have the children of the nurse devoted themselves to the service of their foster brother, not hesitating at the commission of crime for his interest or gratification. Those who are acquainted with the criminal records of Ireland, will remember that more than one lamentable instance of such devotedness has been exhibited in the present century; that the sons of nurses have not stopped short of savage murder, to fulfil what they deemed the sacred obligations of fosterage; hence it was that customs, so apparently innocent, were proscribed by the statute.

The prohibition to supply the Irish, whether in peace or war, with horses, armour or provisions, was frequently repeated. In fact, it was to the superiority of the Anglo-Norman battle array and iron armour that the defeats of the Irish in the field were ascribed by all parties. These precautions were effectual, for when The O'Neill visited Queen Elizabeth, his soldiers wore the saffron-coloured linen vests of their country, to the great surprise of the mail-clad warriors of England.

The third enactment of the Statute relates to the use of the English language, to which the Plantagenets and Tudors justly attributed great importance. Indeed, at the time of the Reformation, it was enacted, that every beneficed clergyman should keep, or cause to be kept, a school for teaching the English tongue. This enactment was evaded, and difference of language was unfortunately allowed to remain a permanent distinction of race.

English apparel was enjoined as well as English language, and so important did this enactment appear, that we find it repeated in 1447, under the Lord Lieutenancy of the Earl of Shrewsbury.

"As there is no diversity of habit between the English marchers and Irish enemies, by colour of which the Irish enemies come into the English counties as English marchers, and robb and pillage on the high way, and destroy the common people by lodging on them by nights, and slay the husbandmen, and take their goods to the Irish: it is enacted, that he that will be taken for an Englishman shall not use a beard upon his upper lip alone, and that the said lip shall be once shaved, at least in every two weeks, the offender to be treated as an Irish enemy.—Original Roll. This act was not repealed until A.D. 1635."

It is amusing to find the English of the Pale commanded to use saddles under pain of forfeiting their horses, and payment of a fine at the king's discretion. The Irish did not use saddles, and the English settlers seem to have taken a strange fancy to the fashion of riding bare-backed. So late as the reign of Henry VIII., A.D. 1534, it was enjoined "that every gentylman of the Inglyshrie, which may dispend 20*l.* by the year, shall ryde in a saddell and weare Inglyshe apparell." This was deemed of more importance than English common law; for the abolition of the Brehon law is far less emphatically expressed than the injunction to use saddles.

Passing over enactments against the use of nicknames, against the sport of hurling, against conspiracy and perjury, with other crimes, which give a horrible picture of the state of society, we find a law against landholders defrauding the clergy of their tithes, and another against the protectors and abettors of excommunicated persons. These are so far remarkable, as they explain the fact that under the Plantagenets sentence of excommunication was nearly always pronounced on those who revolted against the government. Church and State were in close alliance, and their interests were deemed identical. In fact, the Church was rendered too strong by the Plantagenets to be easily overthrown by the Tudors.

The enactments against private wars with the

Digitized by Google

Irish would require volumes to illustrate them fully; we turn, therefore, to that which prohibits Englishmen from permitting the Irish to pasture cattle on their lands. This is, we believe, the first instance of English hostility to Irish bulls; but we find, from the 'Depositions of Protestants relating to the conduct of the rebels in 1641,' that the Irish retorted after their own fashion.

"Thomas Johnson, vicar of Turloghe and Kellycomon, county Mayo, saith that the rebells in the baronies of Costelloe and Gallen, in meere hatred and derision of the English *and their very cattle*, and contempt and derision of the English lawes, did ordinarily and commonly prefer bills of indictment, and bring the English breed of cattle to be tried upon juries; and having, in their fashion, arraigned those cattle, then their scornful judge, then sitting amongst them, would say, 'they look as if they could speake Englishe, give them the book and see if they can read,' pronouncing the words 'legit an non,' to the jury; and then, because they stood mute and could not read, he would and did pronounce judgment and sentence of death against them, and they were committed and put to slaughtering.—Jurat. 14th Jan. 1543.—Co. Mayo. Andrew Adaire, late of Moygownagh, county Mayo, Esq., saith, that the name of the English was so hateful to the Irish, that they would not only kill all they met with (if not strangely prevented), but would kill all *the English breed of cattle*, sometyme jeeringly saying, they would speak English, and therefore they would kill them.—Jurat. 9th Jan. 1642."

Incidentally we may be permitted to join in Mr. Hardiman's wish that this very curious collection of Depositions should be published; we can testify that they contain matters fully as curious as the indictment of the cattle, and that the portions of them which have been already published, were unfairly selected and garbled to suit party purposes.

The thirteenth and fourteenth sections exclude the native Irish from all ecclesiastical benefices and from all religious houses within the Pale. This does not appear to have prevented some whimsical clauses finding their way into marriage contracts, of which the following may serve as a specimen worthy of a place in the next edition of Edgeworth's Irish Bulls.

"Know ye all that shall read or hear this writing, I Hu. Mac Melaghlin Modarra Mac Teige Hanile (Hanly), of Aghomannan, am taking Onora *nyn** Connall of Moybannan as and in the sort of my married wife, by the will of the Church, upon special terms, viz.: the first condition and tenure of it is, to marry the woman presently; and this is the number and some of goods and cattels that the said Onora doth give to me the said Hugh, viz., six incalfe cowes, and four cowes that hath milke, and three bulling *cowes* at the next somer, *and one of them a bull*, and five small *cowes*, called *Birogks*, at the next May, and *one of them a bull*, and *the other a great bull*, and this is in all twenty, lacking one."

In the fifteenth section we have a curious enumeration of the dangerous Irish characters who were to be strictly excluded from the Pale—viz. "pipers, story-tellers, rimers, mowers, and other Irish agents." The Irish bards, or rhymers, must have been very dangerous characters, for they are proscribed in several acts of parliament, which indeed is not wonderful, if, as Reginald Scott informs us, "Irishmen could rime either man or beast to death."

"On this subject there is extant a singular poem, addressed, in the sixteenth century, to the O'Briens of Thomond, by the Irish bard of that territory, Teige Mac Daire, in which he states that he has a deadly weapon—a poisonous satire—to cast, which would cause shortness of life, and against which neither the solitudes of valleys, the density of woods, nor the strength of castles, would protect his enemies. He then adduces examples from Irish history, of the destruction caused by the *satires* of ancient bards, among which he enumerates the satire composed by Crithmbheal the satirist, for Breas Mac Ealathan; the one composed by Neidhe for Caicher, king of Connaught, which at first, by supernatural means, disfigured his face, and finally caused his death; and the one composed by Dallan Forguill, which wounded and withered King Aodh Mac Ainmire. The bard then warns O'Brien not to force him to fling this ominous weapon at him—a weapon, which from its *miraculous* nature, would extinguish all his good deeds, raise a disgraceful blush in his cheek, check his prosperity, and shorten his life."

* Daughter.

Passing on to the eighteenth section, we find an enactment for giving employment to the Idlemen of Ireland, a very numerous class in all ages of its history. Idlemen were the poorer branches of the ascendancy, who regarded all industrial pursuits as derogatory, and lived as "hangers on" or "dependants" with the head of their family. They were generally treated with lenity by the government; but in 1461 we find the Parliament of Edward IV. making them the subject of the following severe enactment:—

"'That every lord and gentleman shall vouch and answer for such *Idlemen* as they take into their service, either within doors or without, and that every such lord or gentleman shall come to the guardian of the peace of every barony, or by their letter of seals shall certify an account of all their *Idlemen*, for whom they will vouch and answer; and if they or any of them shall not do so, then if any *Idlemen*, either on horse or foot, shall come into any barony, that it shall be lawful for any of the King's liege people to seize and apprehend them and their horses, to remain at the will of the King; and if any lord or gentleman shall maintain such man so taken and arrested, unless he be entered on record, with the guardians of the peace in every barony, that then said lord, or whoever he be who maintains and supports him, shall suffer the penalty of 10*l.*, one half to the king, and the other to him who will sue for the same.'—Original Roll. Another unpublished Act of the same reign, A.D. 1472 (12 Edw. IV. c. 19), recites, that 'Laurence Taaf knight, John O'Mulmyghell *idleman*, servant to the said Laurence, and others came, with divers English rebels and Irish enemies, to Lowanstown and Kellystown, in the ninth year of the King, and robbed and spoiled the tenants of James Fleming, Esq., Baron of Slane, of 140 cows, value 4*s.* each; 11 bullocks, price 5*s.* each; 7 score sheep, price 10*d.* each; and 60 hogs, price 20*d.* each.'"

So perilous were these Idlemen, that in 1324 the king entered into a compact with his powerful nobles that "they would take and cause to be taken the felons, robbers, and thieves of their family and surname," and cause them to be brought to justice. They are treated leniently in the Statute of Kilkenny, probably because they were the most likely to supply recruits to the militia, which forms the subject of several succeeding enactments.

We have quoted sufficient of this famous statute to show that, as Plowden observes, there was scarcely "an extreme of antipathy and hatred and revenge to which this code of aggravation was not calculated to provoke both nations." Yet we find it made the theme of extravagant eulogy by Sir John Davies (Attorney General to King James I.), who attributes all the evils of Ireland to the neglect of enforcing its most penal provisions. He tells us that it was confirmed in every parliament held from the time of its enactment for the greater part of a century, and it was solemnly renewed in Sir Edward Poyning's celebrated parliament (10 Henry VII., 1494), except so far as related to speaking the Irish language and riding in saddles. To point out its impolicy would be an unnecessary task; even Dr. Leland expresses regret that such a course of policy was adopted at the crisis. He justly says, "The reign of a renowned monarch in England and the presence of his son in Ireland, the husband of a lady of Irish birth, and of an illustrious family, an heiress of vast possessions, were circumstances highly favourable to a generous conciliating scheme, whose apparent equity might warrant the addition of military vigour against the most desperate and abandoned." Unfortunately, the Parliament of Kilkenny were exceedingly liberal of force, but utterly rejected conciliation, and an opportunity was lost which has never since been recovered. It deserves to be observed, that those Lords of the Pale who sacrificed the welfare and tranquillity of Ireland to the maintenance of the spirit of ascendancy and exclusiveness, were the ancestors of those Catholic lords and gentry who became, in a subsequent age, the victims of a similar spirit, slightly disguised by alteration of name. *Hac fonte derivata clades:* the example is not without its use, and its moral may be read without difficulty.

The Attaché; or Sam Slick in England. By the Author of 'The Clockmaker.' 2 vols. Bentley.

"WE stop the press," as the daily papers used to say, to announce the arrival of our old friend Sam Slick. Whether he came by Liner, or Steamer, or Ariel, he sayeth not—nor does it signify—come how he may or when he will, he is sure to be welcome. But as Mr. Slick has now an official character to uphold, and could not rush into St. James's or Downing Street as unceremoniously as he was accustomed to walk into our office, he thought it best, after addressing a formal letter to her Majesty, or Sir Robert, or Mr. Bentley, we know not which, to spend a few days with a friend's friend in Gloucestershire, to allow time for courtly ceremonials. The public, therefore, must wait another week before they can be formally introduced to him; but to gratify his many friends, we shall take leave to publish some extracts from his "pencilling" on what he calls

A Juicy Day in the Country.

"'A wet day is considerable tiresome, any where or any way you can fix it; but it's wus at an English country house than any where else, cause you are among strangers, formal, cold, gallus polite, and as thick in the head-piece as a puncheon. You hante nothin' to do yourself and they never have nothin' to do; they don't know nothin' about Ameriea, and don't want to. Your talk don't interest them, and they can't talk to interest nobody but themselves; all you've got to do, is to pull your watch and see how time goes; how much of the day is left, and then go to the winder and see how the sky looks, and whether there is any chance of holdin' up or no. Well, that time I went to bed a little earlier than common, for I felt considerable sleepy, and considerable strange too; so as soon as I cleverly could, I off and turned in.'"

Sam is, at all times, an early riser, but he was awakened earlier than usual by "hundreds and hundreds of them nasty, dirty, filthy, ugly, black devils of rooks located in the trees at the back eend of the house":—

"'Well, when a man's in a feeze, there's no more sleep that hitch; so I dresses and sits up; but what was I to do? It was jist half past four, and as it was a rainin' like every thing, I know'd breakfast wouldn't be ready till eleven o'clock, for nobody wouldn't get up if they could help it—they wouldn't be such fools; so there was jail for six hours and a half. Well, I walked up and down the room, as easy as I could, not to waken folks; but three steps and a round turn makes you kinder dizzy, so I sits down again to chaw the cud of vexation. 'Aint this a handsum' fix?' sais I, 'but it sarves you right, what busniss had you here at all? you always was a fool, and always will be to the eend of the chapter.'—'What in natur are you a scoldin' for?' sais I: 'that won't mend the matter; how's time? They must soon be a stirrin' now, I guess.' Well, as I am a livin' sinner, it was only five o'clock; 'oh dear,' sais I, 'time is like woman and pigs, the more you want it to go, the more it won't. What on airth shall I do?—guess I'll strap my rasor.' Well, I strapped and strapped away, until it would cut a single hair pulled strait up on eend out

Digitized by Google

o' your head, without bendin' it—take it off slick. 'Now,' sais I, 'I'll mend my trowsers I tore, a goin' to see the ruin on the road yesterday; so I takes out Sister Sall's little needle-case, and sows away till I got them to look considerable jam again; 'and then,' sais I, 'here's a gallus button off, I'll jist fix that,' and when that was done, there was a hole to my yarn sock, so I turned too and darned that. 'Now,' sais I, 'how goes it? I'm considerable sharp set. It must be gettin' tolerable late now.' It wanted a quarter to six. 'My! sakes,' sais I, 'five hours and a quarter yet afore feedin' time; well if that don't pass. What shall I do next?' 'I'll tell you what to do,' sais I, 'smoke, that will take the edge of your appetite off, and if they don't like it they may lump it; what business have they to keep them horrid screetchin' infarnal, sleepless rooks to disturb people that way?' Well, I takes a lucifer, and lights a cigar, and I puts my head up the chimbly to let the smoke off, and it felt good, I promise *you*. I don't know as I ever enjoyed one half so much afore. It had a rael first chop flavour had that cigar. 'When that was done,' sais I, 'What do you say to another?' 'Well, I don't know,' sais I, 'I should like it, that's a fact; but holdin' of my head crooked up the chimbly that way, has a' most broke my neck; I've got the cramp in it like.' So I sot, and shook my head first a one side and then the other, and then turned it on its hinges as far as it would go, till it felt about right, and then I lights another, and puts my head in the flue again. Well, smokin' makes a feller feel kinder good-natured, and I began to think it warn't quite so bad arter all, when whop went my cigar right out of my mouth into my bosom, atween the shirt and the skin, and burnt me like a gally nipper. Both my eyes was fill'd at the same time, and I got a crack on the pate from some critter or another that clawed and scratched my head like any thing, and then seemed to empty a bushel of sut on me, and I looked like a chimbly sweep, and felt like old Scratch himself. My smoke had brought down a chimbly swaller, or a martin, or some such varmint, for it up and off agin' afore I could catch it to wring its infarnal neck off, that's a fact.'"

"Well, here was somethin' to do, and no mistake: here was to clean and groom up agin' till all was in its right shape; and a pretty job it was, I tell you. I thought I should never get the sut out of my hair, and then never get it out of my brush again, and my eyes smarted so, they did nothing but water, and wink, and make faces. But I did; I worked on and worked on, till all was sot right once more. 'Now,' sais I, 'how's time?' 'half-past seven,' sais I, 'and three hours and a half more yet to breakfast. Well,' sais I, 'I can't stand this—and what's more I won't: I begin to get my Ebenezer up, and feel wolfish. I'll ring up the handsum chamber-maid, and just fall to, and chaw her right up—I'm savagerous.' 'That's cowardly,' sais I, 'call the footman, pick a quarrel with him and kick him down stairs, speak but one word to him, and let that be strong enough to skin the coon arter it has killed him, the noise will wake up folks *I* know, and then we shall have sumthin' to eat.' I was ready to bile right over, when as luck would have it, the rain stopt all of a sudden, the sun broke out o' prison, and I thought I never seed anything look so green and so beautiful as the country did. 'Come,' sais I, 'now for a walk down the avenue, and a comfortable smoke, and if the man at the gate is up and stirrin', I will just pop in and breakfast with him and his wife. There is some natur there, but here it's all cussed rooks and chimbly swallers, and heavy men and fat women, and lazy helps, and Sunday every day in the week.' So I fills my cigar-case and outs into the passage. But here was a fix! One of the doors opened into the great staircase, and which was it? 'Ay,' sais I, 'which is it, do you know? 'Upon my soul, I don't know,' sais I; 'but try, it's no use to be caged up here like a painter, and out I will, that's a fact.' So I stops and studies, 'that's it,' sais I, and I opens a door: it was a bedroom—it was the likely chamber-maid's. 'Softly, Sir,' sais she, a puttin' of her finger on her lip, 'don't make no noise: Missus will hear you.' 'Yes,' sais I, 'I won't make no noise; and I outs and shuts the door too arter me gently. 'What next?' sais I; 'why you fool, you,' sais I, 'why didn't you ax the sarvant maid, which door it was?' 'Why I was so conflastrigated,' sais I, 'I didn't think of it. Try that door,' well I opened another, it belonged to one o' the horrid handsum stranger galls that dined at table yesterday. When she seed me, she gave a scream, popt her head onder the clothes, like a terrapin, and vanished—well I vanished too. 'Ain't this too bad?' sais I; 'I wish I could open a man's door, I'd lick him out of spite; I hope I may be shot if I don't, and I doubled up my fist, for I didn't like it a spec, and opened another door—it was the housekeeper's. 'Come,' sais I, 'I won't be balked no more.' She sot up and fixed her cap. A woman never forgets the becomins. 'Anything I can do for you, Sir?' sais she, and she raelly did look pretty; all good natur'd people, it appears to me, do look so. 'Will you be so good as to tell me, which door leads to the staircase, Marm?' sais I. 'Oh, is that all?' sais she, (I suppose she thort I wanted her to get up and get breakfast for me,) 'it's the first on the right, and she fixed her cap agin' and laid down, and I took the first on the right and off like a blowed out candle. There was the staircase. I walked down, took my hat, onbolted the outer door, and what a beautiful day was there."

At length breakfast was ready:—

"But the English don't do nothin' like other folks; I don't know whether it's affectation, or bein' wrong in the head—a little of both I guess. Now where do you suppose the solid part of breakfast is, Squire? Why, it's on the side-board—I hope I may be shot if it ain't—well, the tea and coffee are on the table, to make it as onconvenient as possible. Says I, to the lady of the house, as I got up to help myself, for I was hungry enough to make beef ache I know. 'Aunty,' sais I, 'you'll excuse me, but why don't you put the eatables on the table, or else put the tea on the sideboard? They're like man and wife, they don't ought to be separated, them two.' She looked at me, oh what a look of pity it was, as much as to say, 'Where have you been all your born days, not to know better nor that?' * * So I tried the old man; sais I, 'Uncle,' sais I, 'if you will divorce the eatables from the drinkables that way, why not let the servants come and tend? It's monstrous onconvenient and ridikilous to be a jumpin' up for everlastinly that way; you can't sit still one blessed minit.' 'We think it pleasant,' said he, 'sometimes to dispense with their attendance.' 'Exactly,' sais I, 'then dispense with sarvants at dinner, for when the wine is in, the wit is out,' (I said that to compliment him, for the critter had no wit in at no time,) 'and they hear all the talk. But at breakfast every one is only half awake, especially when you rise so airly as you do in this country,' sais I, (but the old critter couldn't see a joke, even if he felt it, and he didn't know I was a funnin'). 'Folks are considerably sharp set at breakfast,' sais I, 'and not very talkative. That's the right time to have sarvants to tend on you.' 'What an idea!' said he, and he puckered up his pictur, and the way he stared was a caution to an owl. Well, we sot and sot till I was tired, so thinks I, 'what's next?' for it's rainin' agin as hard as ever.' So I took a turn in the study to sarch for a book, but there was nothin' there, but a Guide to the Sessions, Burn's Justice, and a book of London club rules, and two or three novels. He said he got books from the sarkilatin' library. 'Lunch is ready.' 'What, eatin' agin? My goody!' thinks I, 'if you are so fond of it, why the plague don't you begin airly? If you'd a had it at five o'clock this morning, I'd a done justice to it; now I couldn't touch it if I was to die.' There it was, though. Help yourself, and no thanks, for there is no sarvants agin. The rule here is, no talk no sarvants—and when it's all talk, it's all sarvants."

Sam now resolved "to look arter the two pretty gals in the drawing-room," but found that "he warn't wanted there":—

"The moment I came in it was as dumb as a quaker's meetin'. They all hauled up at once, like a stagecoach to an inn-door, from a hand-gallop to a stock still stand. I seed men warn't wanted there, it warn't the custom so airly, so I polled out o' that creek, starn first. They don't like men in the mornin', in England, do the ladies; they think 'em in the way. 'What on airth, shall I do?' says I, 'it's nothin' but rain, rain, rain—here in this awful dismal country. Nobody smokes, nobody talks, nobody plays cards, nobody fires at a mark, and nobody trades; only let me get thro' this juicy day, and I am done: let me get out of this scrape, and if I am caught agin, I'll give you leave to tell me of it, in meetin'. It tante pretty, I do suppose to be a jawin' with the butler, but I'll make an excuse for a talk, for talk comes kinder nateral to me, like suction to a snipe."

The butler would not do, so he tried the stable helps:—

"'A smart little hoss that,' sais I, 'you are cleaning of: he looks like a first chop article that.' 'Y mae',' sais he. 'Hullo,' sais I, 'what in natur' is this? Is it him that can't speak English, or me that can't onderstand; for one on us is a fool, that's sartain. I'll try him agin.' So I sais to him, 'He looks,' sais I, 'as if he'd trot a considerable good stick, that horse,' sais I, 'I guess he is a goer.' 'Y' mae, ye un trotter da,' sais he. 'Creation!' sais I, if this don't beat gineral trainin.' * * 'It's no use to stand talkin' to this critter. Good-bye,' sais I. Now what do you think he said? Why, you would suppose he'd say good-bye, too, wouldn't you? Well, he didn't, nor nothin' like it, but he jist ups, and sais, 'Forwelloaugh,' he did, upon my soul. I never felt so stumpt afore in all my life. Sais I, 'Friend, here is half a dollar for you; it arn't often I'm brought to a dead stare, and when I am, I am willin' to pay for it.'"

Dinner was now announced—but as Sam writes—

"The rain has damped every body's spirits, and squenched 'em out; even champaign won't raise 'em again; feedin' is heavy, talk is heavy, time is heavy, tea is heavy, and there ain't no musick; the only thing that's light is a bed room candle—heavens and airth how glad I am this '*juicy day*' is over!"

The History of Etruria. Part I. By Mrs. H. Gray. Hatchard & Son.

"No one has ever lifted my veil," was the inscription on the statue of the Egyptian Neith; a similar covering seems to hide from us the cradle of Egyptian, Etruscan, and indeed almost all civilized antiquity, and the few glimmerings of distant objects discovered through the obscurity are so vague and uncertain that they seem as likely to mislead as to inform. Through this darkness etymology is at once the most commonly chosen, and the most uncertain of guides. A science in which proverbially "vowels count for nothing, and consonants for very little," may be accommodated to any theory devised by those who fancy that they have made a discovery when they have only hazarded a guess. It was not therefore without some misgiving that we encountered Mrs. Hamilton Gray in the field of conjectural history, but we rejoice to say that our fears have proved groundless; her theory is certainly the most plausible that has yet been propounded, on the subject of her researches; it is supported by analogies, few of which are forced; no part of her learning bears the mark of having been taken at second-hand; and the ingenuity of her deductions is equalled by the modesty with which they are propounded.

We do not agree to all Mrs. Gray's conclusions, but to enter into an examination of the points which we deem doubtful or unproved would lead to long discussions, of little general interest. We think it therefore better to give such an outline of Mrs. Gray's theory of ancient Etrurian history as may excite those who delight in such researches to examine her work for themselves, and we can assure them that whether the perusal terminates in belief or scepticism, it is certain to afford pleasure.

Mrs. Gray believes that a number of different nations in Western Asia, included by the Egyptians under the general name of Hyksos, or Shepherd kings, acquired a portion of the civilization to which the people of the Pharaohs had attained before the age of certain history. Amongst these were the Rasena, or inhabitants of Resen, described by Moses as "a great city," though he does not bestow such a name on Nineveh or Babylon. The disappearance of Resen from history, and the appearance sub-

Digitized by Google

sequently of a powerful people calling themselves Rasena, which was the name the Tuscans gave themselves, is certainly a remarkable coincidence; but the two are separated from each other by the distance between Assyria and Italy; it is therefore necessary to seek out links of connexion.

The type of the most ancient specimens of Etrurian art is obviously similar to the Egyptian, and many of their objects of religious veneration were the same as those worshipped in the valley of the Nile. We have abundant proof that the Egyptians were more than once invaded by the Assyrians and their allies, and there is a strong probability that the Hyksos and the Assyrians were cognate races, if not identical. When the native Pharaohs expelled the invaders and recovered their hereditary empire, it is probable that some portion of the intrusive race may have escaped by sea from the vengeance of the Egyptians, and established a colony in South-western Europe, where they would naturally carry out those principles of civilization which they had learned during their sojourn in the valley of the Nile. We may add a confirmation of this theory which has escaped the notice of Mrs. Gray; the prophet Isaiah speaks of "The Chaldæans whose cry (boast or exultation) is in their ships." We have no evidence that the Chaldæans of Babylon or Nineveh ever acquired maritime celebrity, and even if they had navies, their ships must have been chiefly in the sea of Oman, too remote from Judea to attract the notice of the prophet; he may therefore have referred to a different branch of the Chaldæan nation possessing naval establishments either on the Red Sea or the Mediterranean, or perhaps on both, for with no other seas were the Jews acquainted.

Herodotus, who has been followed by most Greek and Roman writers, asserts that the Etrurians were a colony from Lydia: this is in the highest degree improbable, if the Lydia in Asia Minor be intended; but we learn from the prophet Jeremiah that a people named Luddím dwelt somewhere in the vicinity of Egypt, for they are enumerated among the auxiliary forces which Pharaoh Necho led to the battle of Carchemish. There is nothing improbable in the supposition that Herodotus confounded the southern Luddím with the northern Lydians, for our translators of the Bible have fallen precisely into the same error; and the tradition which at first sight seems inconsistent with Mrs. Gray's theory may thus be regarded as one of its strongest confirmations.

The arguments from etymology and analogy, by which this theory is supported, are numerous and varied, but for reasons already stated we shall not enter on their examination, contenting ourselves with bearing testimony to the clearness with which they are stated, and the ability with which they are arranged.

Letters of Horace Walpole to Sir Horace Mann. Concluding Series. 2 vols. Bentley.

IF from the daintily decorated arbour, "hard by a fountain" in the Elysian Fields, where sitteth Horace Walpole, side by side with Madame de Sevigné, exchanging his gossip about the Guelphs and the Stuarts for hers of *Le grand Monarque*, the defunct master of Strawberry Hill be still cognizant of mundane affairs, his desire for fame must by this time be amply gratified; for that he *did* covet reputation, he must now be assured, though while living he "disdained the impeachment." The sting, too, of seeing all his treasures and toys scattered to the winds, by the tap of that modern Harlequin, the auctioneer, must be soothed by the admiration and sympathy for the collector which the dispersion of his fancies awakened. Horace is better appreciated now than in his own days. Then, indeed, Conway, and Chute, and Montagu, and Mann, and (for all his flouting) the "dear blind old woman" Du Deffand, might be aware of his warmth as well as his wit; might know that generosity to those he loved could at any time overcome his other passion—a love of gimcrackery; they might trust in the prophetic foresight of some of his conclusions, and appreciate the sterling worth of opinions filliped off his pen's point as carelessly as if they had been counsels about masquerade habits to the Cokes and Graftons. But the world at large did not know him. He passed with the many for a heartless man of pleasure—a superficial trifler in letters—a finical curiosity-monger. Time, who sets other fallacies right, has already amended this judgment. Sound heart, clear head, brilliant fancy, and substantial knowledge are awarded to him, without much dispute: and the volumes before us are sure of being greeted with respect by thinkers and social philosophers, where their predecessors were at first but welcomed as contributions to the idle man's unprofitable stores of amusement.

From our symphony, it may be gathered that we are in a humour for gossip, rather than for philosophy or politics. Alas! the latter presents at this moment so many menacing features, that we are glad to escape from it, consoling ourselves with the fact, that nothing could be more sombre than the forebodings of our Nostradamus eighty years ago. As for the analysts of opinion, as developed in social peculiarities, they would rather that we merely gathered *data* than interfered with their deduction of results. Hence we shall begin, continue, and complete our notices of these volumes by drawing thence anecdotes, traits, and characters minute and clear as the Petitots their writer so doted upon: some new—some acceptable as completing former revelations. Our first, for instance, winds up Walpole's familiar chronicle of the beauty and folly of the most famous of the Gunnings:—

"Poor Lady Coventry concluded her short race with the same attention to her looks. She lay constantly on a couch, with a pocket-glass in her hand; and when that told her how great the change was, she took to her bed the last fortnight, had no light in her room but the lamp of a tea-kettle, and at last took things in through the curtains of her bed, without suffering them to be undrawn. The mob, who never quitted curiosity about her, went, to the number of ten thousand, only to see her coffin. * * Poor thing! how far from ninety! she was not eight and twenty! Adieu."

Old operas and singers—Elisi and Paganina—have their records here, as in former letters; and here, too, of course, we assist in building and decking out Strawberry—now, like the Gunning, a neglected skeleton—taking a lively interest in certain *brocadella* hangings, to be bespoken by Sir Horace Mann; in the Eagle and the Vespasian, and other curiosities, of which more as they turn up. In the meantime, an ever-young antique presents herself, more noticeable than gem or model, and whom Horace loved to placard by sarcastic anecdotes:—

"Admiral Forbes told me yesterday, that in one of Lady Mary's jaunts to or from Genoa, she begged a passage of Commodore Barnard. A storm threatening, he prepared her for it, but assured her there was no danger. She said she was not afraid, and, going into a part of the gallery not much adapted to heroism, she wrote these lines on the side:—

Mistaken seaman, mark my dauntless mind,
Who, wreck'd on shore, am fearless of the wind.

On landing, this magnanimous dame desired the commander to accept a ring; he wore it as a fine emerald, but being over-persuaded to have it unset before his face, it proved a bit of glass."

Need we add the Montagu to "Lady Mary"? There is no risk of this courageous, witty, and parsimonious epigrammatist being mistaken for our author's divinity—Lady Mary Coke, whose passion for royalty seems to have worn out her best friends, as we find in the volumes before us. It was well our letter-writer was not a Frenchman; otherwise, a *lettre de cachet* might have delivered the Montagu, or the Pomfret, or the Chudleigh, from the assaults of his wit. How he revels in his free pen, when jotting down such an anecdote from Paris as the following!—

"Monsieur de Souvré, a man of wit, was at Madame Pompadour's, who is learning German. He said, 'Il me semble que depuis que Madame la Marquise apprenne l'Allemande, elle écorche le François.' As the company laughed violently at this, the King came in, and would know what diverted them so much. They were forced to tell him. He was very angry, and said, 'Monsieur de Souvré, est-il longtems que vous n'avez pas été à vos terres?' 'Oui, Sire,' replied he; 'mais je compte d'y partir ce soir.' The frank *hardiesse* of the answer saved him."

We are now at the wedding of George the Third; but though equally minute, Horace tells nothing here which he did not also write in some phrases word for word to George Montagu. The same remark applies to his description of the Coronation; except, perhaps the following note on the rise in the costliness of such pageants:—

"On this occasion one saw to how high-water-mark extravagance is risen in England. At the coronation of George II. my mother gave forty guineas for a dining-room, scaffold, and bed-chamber. An exactly parallel apartment, only with rather a worse view, was this time set at three hundred and fifty guineas—a tolerable rise in thirty-three years! The platform from St. Margaret's roundhouse to the church-door, which formerly let for forty pounds, went this time for two thousand four hundred pounds. Still more was given for the inside of the Abbey. The prebends would like a coronation every year. The King paid nine thousand pounds for the hire of jewels; indeed, last time it cost my father fourteen hundred to bejewel my Lady Orford. A single shop now sold six hundred pounds' sterling worth of nails; but nails are risen; so is everything, and everything adulterated. If we conquer Spain, as we have done France, I expect to be poisoned."

A scrap from a subsequent letter may be tacked on here:—

"You would be frightened at the dearness of everything; I build out of economy, for unless I do now, in two years I shall not be able to afford it. I expect that a pint of milk will not be sold under a diamond, and then nobody can keep a cow but my Lord Clive."

The account of Lady Mary, neat as imported, in her horseman's riding coat of dark green brocade, and her sprigged dimity petticoat, has also been given *verbatim* elsewhere. We do not remember having before met her at Bedford House, or when the fit of prudence was upon her:—

"Lady Mary Wortley, too, was there, dressed in yellow velvet and sables, with a decent-laced head and a black hood, almost like a veil, over her face. She is much more discreet than I expected, and meddles with nothing—but she is wofully tedious in her narrations."

The following are nothings, but sparkle so in the telling as not to be passed over. (*Quære*, did not George Selwyn supply the melted butter to the illustration of Anglomania?)—

"There is come forth a new state coach, which has cost 8,000*l*. It is a beautiful object, though crowded with improprieties. Its supporters are Tritons, not very well adapted to land-carriage; and formed of palm-trees, which are as little aquatic as Tritons are terrestrial. The crowd to see it, on the opening of the parliament, was greater than at the coronation, and much more mischief done. * * George Selwyn, of whom you have heard so much, but don't know, is returned from Paris, whither he went with the Duchess of Bedford. He says our passion for everything French

Digitized by Google

is nothing to theirs for everything English. There is a book published called the Anglomanie. How much worse they understand us even than we do them, you will see by this story. The old Marechale de Villars gave a vast dinner to the Duchess of Bedford. In the middle of the dessert, Madame de Villars called out, 'Oh, Lord! they have forgot! yet I bespoke them, and I am sure they are ready; you English love hot rolls—bring the rolls.' There arrived a huge dish of hot rolls, and a sauce-boat of melted butter! Adieu."

We need not point to the letters describing the death of Lord Waldegrave, and the terrible catastrophe which happened to Lady Molesworth, by way of vindicating our author's heart; what follows will as well serve to do it, and is newer:—

"I have told you of our French: we have got another curious one, La Condamine, *qui se donne pour philosophe*. He walks about the streets, with his trumpet and a map, his spectacles on, and hat under his arm. But to give you some idea of his philosophy, he was on the scaffold to see Damien executed. His deafness was very inconvenient to his curiosity; he pestered the confessor with questions to know what Damien said: 'Monsieur, il jure horriblement.' La Condamine replied, 'Ma foi, il n'a pas tort;' not approving it, but as sensible of what he suffered. Can one bear such want of feeling? Oh! but as a philosopher he studied the nature of man in torments—pray, for what? One who can so far divest himself of humanity as to be, uncalled, a spectator of agony, is not likely to employ much of his time in alleviating it. We have lately had an instance that would set his philosophy to work. A young highwayman was offered his life, after condemnation, if he would consent to have his leg cut off, that a new styptic might be tried. 'What!' replied he, 'and go limping to the devil at last? no, I'll be d——d first'—and was hanged!"

While in "the French and English" vein, we will give another example of civility and comprehension:—

"Other comical passages have happened to us at Paris. Their King, you know, is wondrous shy to strangers, awkward at a question, or too familiar. For instance, when the Duke of Richmond was presented to him, he said, 'Monsieur le Duc de Cumberland boude le Roi, n'est-ce pas?' The duke was confounded. The King persisted, 'Il le fait, n'est-il pas vrai?' The duke answered very properly, 'Ses ministres quelquefois, Sire, jamais sa Majesté.' This did not stop him: 'Et vous, milord, quand aurez-vous le cordon bleu?' George Selwyn, who stood behind the duke, said softly, 'Answer that if you can, my lord.' To Lord Holland, the King said, 'Vous avez fait bien du bruit dans votre pays, n'est-ce pas?' His answer was pretty too: 'Sire, je fais tout mon possible pour le faire cesser.' Lord Holland was better diverted with the Duchesse d'Aiguillon; she got him and Lady Holland tickets for one of the best boxes to see the fireworks on the peace, and carried them in her coach. When they arrived he had forgot the tickets; she flew into a rage, and, *sans marchander*, abused him so grossly that Lady Holland coloured, and would not speak to her. Not content with this, when her footman opened the door of the coach, the duchess, before all the mob, said aloud, 'C'est une des meilleures têtes de l'Angleterre, et voici la bêtise qu'il a fait!' and repeated it. He laughed, and the next day she recollected herself, and made an excuse."

We add a paragraph on the taste of *la grande nation*:—

"By all I see and hear, they seem to be sunk in every light; even in the trifles of which they boast themselves, they are gone backwards a century. They are as formal as we were in Queen Anne's days, and believe they make discoveries when they adopt what we have had these twenty years. For instance, they begin to see beauties in the antique—everything must be *à la Grecque*—accordingly, the lace on their waistcoats is copied from a frieze. Monsieur de Guerchy seeing a Doric fret on a fender at Woburn, which was common before I went abroad, said to the Duchess of Bedford, 'Comment! Madame, vous avez là du Grec, sans le savoir!'"

Our gallery would be incomplete without a sketch of "Wilkes and liberty":—

"Arlington Street, Nov. 17th, 1763.

"The campaign is opened, hostilities begun, and blood shed. Now you think, my dear sir, that all this is metaphor, and mere eloquence. You are mistaken: our diets, like that approaching in Poland, use other weapons than the tongue; ay, in good truth, and they who use the tongue too, and who perhaps you are under the common error of thinking would not fight, have signalized their prowess. But stay, I will tell you my story more methodically; perhaps you shall not know for these two pages what member of the British Senate, of that august divan whose wisdom influences the councils of all Europe, as its incorrupt virtue recalls to mind the purest ages of Rome, was shot in a duel yesterday in Hyde-park. The parliament met on Tuesday. We—for you know I have the honour of being a senator, sat till two in the morning; and had it not been that there is always more oratory, more good sense, more knowledge, and more sound reasoning in the House of Commons than in the rest of the universe put together, the House of Lords only excepted, I should have thought it as tedious, dull, and unentertaining a debate as ever I heard in my days. The business was a complaint made by one King George of a certain paper called the North Briton, No. 45, which the said King asserted was written by a much more famous man called Mr. Wilkes.—Well! and so you imagine that Mr. Wilkes and King George went from the House of Commons and fought out their quarrel in Hyde-park? and which do you guess was killed? Again you are mistaken. Mr. Wilkes, with all the impartiality in the world, and with the phlegm of an Areopagite, sat and heard the whole matter discussed, and now and then put in a word, as if the affair did not concern *him*. The House of Commons, who would be wisdom itself, if they could but all agree on which side of a question wisdom lies, and who are sometimes forced to divide in order to find this out, did divide twice on this affair. The first time, one hundred and eleven, of which I had the misfortune to be one, had more curiosity to hear Mr. Wilkes's story than King George's; but three hundred being of the contrary opinion, it was plain they were in the right, especially as they had no *private* motives to guide them. Again, the individual one hundred and eleven could not see that the North Briton tended to foment treasonable insurrections, though we had it argumentatively demonstrated to us for seven hours together: but the moment we heard two hundred and seventy-five gentlemen counted, it grew as plain to us as a pike-staff, for a syllogism carries less conviction than a superior number, though that number does not use the least force upon earth, but only walk peaceably out of the house and into it again. The next day we were to be in the same *numerical* way convinced that we ought to be but one hundred and ten, for that we ought to expel Mr. Wilkes out of the house; and the majority were to prove to us (for we are slow of comprehension, and imbibe instruction very deliberately) that in order to have all London acquainted with the person and features of Mr. Wilkes, it would be necessary to set him on a high place called the pillory, where everybody might see him at leisure. Some were even almost ready to think that, being a very ugly man, he would look better without his ears; and poor Sir William Stanhope, who endeavoured all day by the help of a trumpet to listen to these wise debates and found it to no purpose, said, 'if they want a pair of ears they may take mine, for I am sure they are of no use to me.' The regularity, however, of these systematic proceedings has been a little interrupted. One Mr. Martin, who has much the same quarrel with Mr. Wilkes as King George, and who chose to suspend his resentment like his Majesty till with proper dignity he could notify his wrath to Parliament, did express his indignation with rather less temper than the King had done, calling Mr. Wilkes to his face *cowardly scoundrel*, which you who represent monarchs, know, is not royal language. Mr. Wilkes, who, it seems, whatever may have been thought, had rather die compendiously than piecemeal, inquired of Mr. Martin by letter next morning, if he, Mr. Wilkes, was meant by him, Mr. Martin, under the periphrasis *cowardly scoundrel*. Mr. Martin replied in the affirmative, and accompanied his answer with a challenge. They immedintely went into Hyde-park; and, at the second fire, Mr. Wilkes received a bullet in his body. Don't be frightened, the wound was not mortal—at least it was not yesterday. Being corporally delirious to-day, as he has been mentally some time, I cannot tell what to say to it. However, the breed will not be lost, if he should die. You have still countrymen enough left: we need not despair of amusement."

We must refer the curious to the animated comments on the Russian Revolution, and on the strange affairs of the Chevalier d'Eon, which these letters contain. A peep at "Prussia" is not to be resisted:—

"Shall I send you an Italian story? Why, yes; one don't always know what is doing at next door. The Abbé Giustiniani, a noble Genoese, wrote last year a panegyric in verse on the Empress Queen. She paid him with a gold snuff-box set with diamonds, and a patent of Theologian. Finding the trade so lucrative, he wrote another on the King of Prussia, who sent him a horn box, telling him that he knew his vow of poverty would not let him touch gold; and that, having no theologians, he had sent him a patent to be captain of horse in those very troops that he had commended so much in his verses! I am persuaded that the saving the gold and brilliants was not the part which pleased his Majesty the least."

Nor can we but pause at some more personal recollections; though it seems to us that, like Lady Mary Wortley's unwashed hands, and Lord Effingham's coronation blunder, they have figured, in almost the same language, in former letters:—

"I have seen and remember so much, that my life already appears very long; nay, the first part seems to have been a former life, so entirely are the persons worn out who were on the stage when I came into the world. You must consider, as my father was minister then, that I almost came into the world at three years old. I was ten when I was presented to George I., two nights before he left England for the last time. This makes me appear very old to myself, and Methuselah to young persons, if I happen to mention it before them. If I see another reign, which is but too probable, what shall I seem then? I will tell you an odd circumstance. Nearly ten years ago I had already seen six generations in one family, that of Waldegrave. I have often seen, and once been in a room with, Mrs. Godfrey, mistress of James II. It is true she doted; then came her daughter, the old Lady Waldegrave; her son, the ambassador; his daughter, Lady Harriot; her daughter, the present Lady Powis; and she has children who may be married in five or six years; and yet I shall not be very old if I see two generations more! but if I do, I shall be superannuated, for I think I talk already like an old nurse. Adieu."

How much is conveyed in the following character! In such portraiture Horace Walpole's lively colours come out with a force which is almost startling:—

"Our comet is set, too! Charles Townshend is dead. All those parts and fire are extinguished; those volatile salts are evaporated; that first eloquence of the world is dumb; that duplicity is fixed; that cowardice terminated heroically. He joked on death as naturally as he used to do on the living, and not with the affectation of philosophers, who wind up their works with sayings which they hope to have remembered. With a robust person, he had always a menacing constitution. He had had a fever the whole summer, recovered, as it was thought, relapsed, was neglected, and it turned to an incurable putrid fever."

Other miniatures—some brilliants, others irreverently humorous:—

"Am not I an old fool? at my years to be a dupe to virtue and patriotism! I, who have seen all the virtue of England sold six times over! Here have I fallen in love with my father's enemies, and because they served my country, believed they were the most virtuous men upon earth. I adored Mr. Pitt, as if I was just come from school and reading Livy's lives of Brutus, and Camillus, and Fabius; and romance knows whom. Alack! alack! Mr. Pitt loves an estate as well as my Lord Bath! The Conqueror of

Digitized by Google

Canada, of Afric, of India, would, if he had been in the latter, have brought my Lady Esther as many diamonds as General Clive took."

"The puppet of the day is the King of Denmark; in truth, puppet enough; a very miniature of our late King, his grandfather. White, strutting, dignified, prominent eyes, gallant, and condescending enough to mark that it is condescension. He arrived the night before last, is lodged at St. James's, where he has levées, but goes and is to go everywhere, to Ranelagh, Vauxhall, Bath, the Lord knows whither, to France, to Italy; in short, is to live in a crowd for these two or three years, that he may learn mankind, by giving all mankind an opportunity of staring at him. Well! but he is not twenty, and is an absolute prince: sure subjects are happy when absolute twenty only runs away from them!"

"We sent you Sir William Stanhope, and my lady, a fond couple; you have returned them to us very different. When they came to Blackheath, he got out of the chaise to go to his brother Lord Chesterfield's, made her a low bow, and said, 'Madame, I hope I shall never see your face again.' She replied, 'Sir, I will take all the care I can that you never shall.' He lays no gallantry to her charge. We are sending you another couple, the famous Garrick, and his once famous wife. He will make you laugh as a mimic, and as he knows we are great friends, will affect great partiality to me; but be a little upon your guard, remember he is an *actor*. * * Have you got Mr. Garrick yet? If you have, you may keep him; there is come forth within these ten days a young actor, who has turned the heads of the whole town. The first night of his appearance the audience, not content with clapping, stood up and shouted. His name is Powell; he was clerk to Sir Robert Ladbroke, and so clever in business that his master would have taken him in as a partner, but he had an impulse for the stage, was a *Heaven-born hero*, as Mr. Pitt called my Lord Clive. His figure is fine and voice most sonorous, as they say, for I wait for the rebound of his fame, and till I can get in, for at present all the boxes are taken for a month. As the reputation of this prodigy could not have reached France, they were content with showering honours on Mr. Garrick; appointed a box for him, revived their best plays, and recalled their veteran actors. Their Helvetius, whose book has drawn such persecution on him, and the persecution such fame, is coming to settle here, and brings two Miss Helvetiuses, with fifty thousand pounds a-piece, to bestow on two immaculate members of our most august and incorruptible senate, if he can find two in this virtuous age who will condescend to accept his money. Well, we may be dupes to French follies, but they are ten times greater fools to be the dupes of our virtue."

We must close our anecdote-picking from the first volume with a mere good story:—

"Last Monday there was at court a sea-captain who had been made prisoner at Algiers. He was complaining how cruelly he had been used. They asked how? 'Why,' said he, 'you see I am not strong, and could do no hard-labour, and so they put me to hatch eggs;' but his greatest grievance was, that when he had hatched a brood, they took away his chickens. Did you ever hear of a more tender-hearted old hen? I laughed till I cried. Adieu."

These *facetiæ* may, perhaps, be less sprightly than those already before the world; nevertheless, they are from the one true Mint; and the purity of their metal cannot be better tested than by comparing them with the like coin, handed about by the correspondents of George Selwyn, whom we so recently met.

The Letters and Journals of Robert Baillie, 1637-1662. Edited from the Author's Manuscripts, by David Laing, Esq. Vol. III. Edinburgh, Ogle.

IN closing our review of the former volumes (*Athen.* No. 729), we expressed our hope that the third would supply important information relating to the King and the army. In this expectation we have been disappointed; for from the period of Baillie's return to his native land, his allusions to public events—except those connected with the affairs of the Scottish Church—are slight, and of rare occurrence. These few notices, however, are valuable; and the incidental information which we obtain respecting many imperfectly known public characters, renders the volume, on the whole, equal in historical value to the preceding volumes.

The letters commence with one from Baillie to "his dear cousine, Mr. William Spang," on his return from London: but the gratification which he expresses at "our errand in England being brought to a happy end," is greatly allayed by fears of coming troubles, from the unwillingness of the King, now in the hands of the Scots, to take the Covenant:—

"We stayed eight or nine dayes at Newcastle. The King took very weel with me. I might have had occasion to have said to him what I pleased; but knowing his fixed resolutions, I would not meddle at all neither to preach nor pray before him. His unhappie wilfulness does still continue; and to this day he getts some mischievous instruments to feed his madness. Sundrie made us believe the Queen was content he should do anything, finding her disappointment in France from all hands. There wes some whispering of the sectaries plotting with him; but this I scarce believe, for each of them does reallie labour the others overthrow; the French Ambassador, for all his fair protestations, hes been no good instrument. But that which hes undone him, hes been his hopes for Scotland, to gett them, by one means or other, to espouse his quarrel: much dealings, some think, hes been both with the Army and Parliament for that end. * * But remaining what he wes in all his maxims, a full Canterburian, both in matters of religion and state, he still inclined to a new warre; and for that end resolved to goe to Scotland. Some great men there pressed the equitie of Scotland's protecting of him on any tearmes. This untymous excess of friendship hes ruined that unhappie Prince; for the better partie, finding the conclusion of the King's comeing to Scotland, and thereby their own present ruin, and ruin of the whole cause, the makeing the Malignants masters of Church and State, the drawing the whole force of England upon Scotland for their perjurious violation of their Covenant, they resolved by all means to crosse that designe."

This letter is dated January, 1647: unfortunately there is a break in the correspondence of nearly six months, and thus the delivering of the King to the English—a point on which we had hoped Baillie might have thrown additional light—is not noticed. The next letter, dated July, exhibits his fears, on the news arriving of the army having seized the King:—

"These matters of England are so extremely desperate, that now twyse they have made me sick: except God arise, all is gone there. The imprudence and cowardice of the better part of the City and Parliament, which was triple or sextuple the greater, has permitted a company of silly rascalles, which calls themselves yet no more than fourteen thousand horse and foot, to make themselves masters of the King, and Parliament, and City, and by them of all England; so that now that disgraced Parliament is but a committee to act all at their pleasure, and the City is ready to fright the Parliament, at every first or second boast from the army. No humane hope remaines but in the King's unparalleled willfulness, and the Armie's unmeasurable pride."

The "silly rascalles," however, were yet to give a little trouble to Master Baillie and his party. Still, with the strong nationality that so amusingly displays itself in his former letters, he boasts that, "if the King would call, I doubt not the rising of the best armie ever we had, for the crushing of these serpents, enemies to God and man."

The escape of the King to the Isle of Wight, encouraged the Scots Commissioners, as the reader probably recollects, to renew their applications to him; and Baillie, in a subsequent letter, remarks, that "his majestie did live with them very lovingly; and upon great hopes on all hands, Traquair, Sir John Cheisly, and Callander, and all that came home before them, gave it out confidentially, in the general, that the King had given our Commissioners full satisfaction." These hopes were soon disappointed: the King still refused the Covenant, and the Assembly stood out many days on that negative expression, "The King not to be restored till he had sworn the Covenant." The Scottish Parliament soon after met, and offered strong opposition to the Assembly. The following extract is characteristic of the times, and of the high ground taken by the Scotch clergy, in "cases of discipline":—

"The first bikering was for our Declaration; when, contrare to their minds, we had past it, they were earnest it might not be published; but we had given order, as ever had been our custoume, to print it, even before we had communicate it to the Parliament. They had diverse purposes, either by perswasion or violence, to have keept it in; but we let it goe out on Monday, and ordained it to be read on Sunday thereafter in all the Kirks of Edinburgh, and about. That which hastened it out was our irritation by the Thesaurer's challenge of Argyle on the Monday morning; ane unhappie accident, that was ready to have kindled the fire amongst us all, had not the Lord prevented it. Argyle's enemies had of a long tyme burdened him, among many slanders, with that of cowardice and cullionrie. On the Fryday afternoon in Parliament, discoursing merrilie with the Thesaurer, he said, He heard of a meeting whereat the Thesaurer had been the other night. Speaking a little of this purpose, he apprehended that the Thesaurer had said, not only that the best men of the kingdome had been at that meeting, but also that himselfe was a better man than he. Upon this, Argyle goes out of the House in anger, and calls for Major Innes, who had sitten at both their feet, and heard their discourse, to know if he had heard the Thesaurer say, that himselfe was a better man than Argyle. Innes did not avow the words; but being sent to the Thesaurer from Argyle, to try if he had spoken so, he said, He would not make accompt to Argyle what he said; but whatever it was, he would make it good with his sword. Upon this Argyle desired him to appoint tyme and place; and on the Sunday, a public fast-day, the Thesaurer sent back word, after both sermons, that on Musleburgh Links, at seven o'clock to-morrow morning, he should meet him, and bring a nobleman for a second. Innes, albeit no great friend to Argyle, not only offered himselfe to Argyle for a second, but told him he would resent it as a wrong if he were not admitted; so Argyle with no flesh but Innes, the Thesaurer and Lanerick, his second, did meet. Incontinent all were missed, and many ran out to all quarters to search them: and, by God's providence, before they began their pley, some fell on them, and made them part without a stroke. The counsell that night, with much adoe, gott them to a professed coldryfe friendship. *We had resolved in the Commission of the Church to have made both before the congregation acknowledge their fault;* so much the more, as Sinclare and David Lesley, Eglintone and Glencarne, some dayes before; and some dayes after, Kenmure and Cranstone, had been on the like engagements; but other matters put that out of our heads."

The postscript to this letter, which is a very long one, and devoted to public affairs, shows how eagerly the polemic and politician turned to the more congenial pursuits of his early scholar life. Indeed, Baillie's allusions, from time to time, to the learned men of his day, and the enthusiasm with which he hails the appearance of a new work, or the expected reprint of some old one, are interesting traits of his character.

The result of the proceedings in the Scottish parliament was, to send a second army into England, but now on behalf of the King under Duke Hamilton. Baillie acknowledges the excesses of these troops, and laments "their free quarters being ane unlimited plundering of many very good and pious people." This army was defeated by Cromwell at Preston and Warrington, and then the "cursed army of sectaries" marched direct to Edinburgh. Another break

here occurs in Baillie's correspondence, which we very much regret, for it would have been important to learn from so bitter an enemy, but withal so honest a man, the conduct of Cromwell's troops while there. The next was written after the news of the King's death; and the eager expectations with which the Presbyterian party viewed the accession of his son, are vividly pourtrayed.

"To the great joy of all, in the midst of a very great and universall sorrow, we proclaimed, on Monday last, the Prince King of Brittaine, France and Ireland. We have sent the bearer (Sir J. Douglas), a worthy gentleman, to signifie so much to his Majestie at the Hague. We purpose speedily to send a honourable Commission from all estates. The dangers and difficulties wherewith both his Majestie and all his Kingdomes at this time are involved, are exceeding great and many. The first necessare and prime one (as all here without exception conceave) doth put his Majestie and his people both in a hopefull proceeding; and his Majestie's joyning with us in the Nationall Covenant, subscribed by his grandfather King James, and the Solemne League and Covenant, wherein all the well affected of the three Kingdomes are entered, and must live and die in, upon all hazards:—If his Majestie may be moved to joyne with us in this one point, he will have all Scotland readie to sacrifice their lives for his service:—If he refuse, or shift this duety, his best and most usefull friends, both here and elsewhere, will be cast into inextricable labyrinths, we fear, for the ruine of us all."

Two commissioners were appointed to represent the Church, Sir Joseph Douglas and Baillie. They proceeded to the Hague, and the following is the official account of their interview:—

"At night we came to the Hague, and spake with some friends, who were not many here. On the Tuesday, the second afternoon, we went to the Court, and had a favourable reception. My Lord Cassillis did speak to his Majestie in name of the Parliament and Kingdome, and Mr. Robert Baillie in name of the Church. So farr as we could learn, what was spoken was taken in good part by all who heard. We then delyvered our letters to his Majestie. The rest of that day, and the following, was spent in visiting the Queen of Boheme, the Princess Royall, the Prince of Orange, the Princess Dowager, and the Estates Generall. The Commissioners of Parliament found it necessary to give in, as previous to their desyres, a paper, for removeing of James Grahame from Court. His Majestie's answer, under his owne hand, was, 'That he desyred and expected all our propositions together, to which he hoped to give a satisfactorie answer.' With this we were not content, bot pressed againe our desyre, the Commissioners of Parliament by ane other paper; and we also by one, second theirs, a copie whereof we send yow herewith. The King's second answer was an abyding in the first. We had all of us some discourse with his Majestie about the equity and necessity of that our desire; bot James Grahame hath so many and so powerful friends in the English Councill, that as yet we cannot gett the King to discountenance him. On the Saturday morning we delyvered to his Majestie the Nationall Covenant, the Solemne League and Covenant, the Directory, the Confession of Faith, the Catechise, the Propositions of Government, bound together in a booke so handsome as we could gett them. We spoke something on the matter, and desyred of his Majestie more frequent and private conferences; who shew his willingnesse, and promised to send to us to advertise of his fittest opportunities."

The following extract is from his private letter:—

"As yet our fears are great of a sore storm to Scotland; yet yesternight I learned from a great person here, that our affaires, blessed be God, are not desperate. There is no Scotsman that is on the King's Councill: the five or six English that are, Cottington, Culpepper, Hyde, Long, and some more, are divided. The most are of Prince Rupert's faction, who caresses Montrose, and presse mightily to have the King to Ireland: Culpepper and some bedchalmer-men, as Wilmot, Byron, Gerard, and the master of the horse, Peircie, are of the Queen's faction, and these are for the King's joyning with us; bot all of them are much averse from the League and Covenant. The Prince of Orange, and by him all the nobles here, are for the last; and by their means we are somewhat hopefull yet to cary his Majestie to our Covenant and the most of our desyres for religion; bot I dare not promise so much: yet the greatest stick, I suspect, shall be our severe Acts of Parliament. It seems all here, even our best friends, will be peremptor for a greater mitigation than I fear shall be granted by yow here. It were verily a great pitty of the King: he is one of the most gentle, innocent, well-inclyned Princes, so far as yet appears, that lives in the world; a trimme person, and of manlie carriage; understands prettie well; speaks not much: would God he were amongst us."

In a following letter, Baillie gives an account of a private conference with the young king, with whom he had "a long and very favourable audience, from ten at night to near eleven." He again remarks upon the "meeke and equitable disposition" of the new monarch, and concludes, "if God would send him among us, without his present counsellors, I think he might make as good a king as Britain saw these hundred years." Some months however elapsed ere Charles ventured to enter Scotland.

The violent objections of the high presbyterian party to "James Graham," Marquess of Montrose, are about this time exhibited in almost every page of Baillie's letters; and they evidently viewed him as the chief obstacle to an amicable agreement with the king. Montrose was however soon after taken prisoner, and executed, to the great joy of that party; and Charles, willing, with the selfishness which always characterized him, to avail himself of the manifestation in his favour, at length agreed to sign the Covenant, and to enter the city where scarcely three months before, his devoted follower had been hanged. The march of Cromwell into Scotland, and the battle of Dunbar followed. Baillie's remarks on this decisive battle, as on the former victories of Cromwell, are amusing. The victory "ought to have been ours," he says; and it was through "our owen negligence" that Dunbar was won. He, however, comforts himself that "we have appointed to crown our king the first of January, at Scone." Meantime—

"While these things are a-doeing at Dumfreiss, Cromwell, with the whole body of his army and canon, comes peaceably by the way of Kilsith to Glasgow. The ministers and magistrates flee all away. I got to the Isle of Comray, with my Lady Montgomerie, bot left all my family and goods to Cromwell's courtesie, which indeed was great; for he took such a course with his sojours that they did lesse displeasure at Glasgow nor if they had been at London, *though Mr. Zacharie Boyd rallied on them all to their very face in the High Church.*"

Truly the patience of Cromwell's Ironsides must have equalled their valour. The King was, however, crowned; the following is Baillie's account:—

"This day we have done that what I earnestly desyred, and long expected, Crowned our noble King with all the solemnities at Scoone, so peaceablie and magnificentlie as if no enemy had been among us. This is of God; for it was Cromwell's purpose, which I thought easily he might have performed to have marred by armes that action, at least the solemnitie of it. The Remonstrants, with all their power, would have opposed it; others prolonged it so long as they were able: allwayes, blessed be God! it is this day celebrate with great joy and contentment to all honest-hearted men here. Mr. Douglass, from 2 Kings xi., Jonah's coronation, had a very pertinent, wise, and good sermon. The King sware the Covenant, the League and Covenant, the Coronation Oath: when Argyle put on the Crown, Mr. Robert Douglass prayed weel; when the Chancellour set him on the throne, he exhorted weel; when all were ended, he, with great earnestnes, pressed sinceritie and constancie in the Covenant on the King, delateing at length King James's breach of the Covenant, persewed yet against the family, from Nehemiah v. 13, God's casting the King out of his lap, and the 34th of Jeremiah, many plagues on him if he doe not sincerely keep the oathes now taken: he closed all with a prayer and the 20th Psalm."

Baillie's letters from this time chiefly relate to ecclesiastical affairs. Many of these, however, are interesting, for we therein see Lauderdale quoting Scripture like a very "ruling elder;" and expressing his hearty attachment to the Church of Scotland, as though he had never meditated treachery against her; and we see Baillie addressing Sharp, afterwards the Archbishop of St. Andrews, as his "dear friend and brother," sending him on a special mission to London, to "worthy Master Rous," and the other heads of the English Presbyterian party; rejoicing in his subsequent appointment to represent the affairs of his Church to the King on his restoration; and hoping, even against hope, that "dear James" would continue true to his word. Even at the very time when Sharpe had betrayed the cause he was especially appointed to uphold, Baillie wrote to him,—"Let others think and speak of yow as they please, and in their folly give yow matter of provocation, if yow were not wise, grave, and fearing God, yet yow shall deceave us notablie and doo us a very evident ill turn before I believe it." Baillie's letters to Sharpe prove how trustingly he depended on him, and the duplicity of Sharpe is strongly marked in the following extract from his answer:—

"The King at my first addresse in Breda, was pleased to ask me very kindly about yow; and at my taking leave at Whithall, commanded me to remember him to yow by name, with others; and I can assure yow, he hath a particular kindness for yow, and will give a demonstration of it. His Majestie hath been pleased to send by me a gracious Letter to the Presbytrie of Edinburgh to be communicated to all the Presbytries in Scotland, which I am confident will satisfie all who are satisfiable; it will be printed, and within a day or two, a copie transmitted to yow. However the affaires of the Church of England may be disposed, which I see are tending to Episcopacie there, the blame whereof ought not to be laid upon the King, yet we need fear no violation of our settlement here, if the Lord give us to prize our own mercie, and know our dutie. I have brought a letter from some citie ministers, bearing an account of their late procedure to an accommodation, for moderated Episcopacie, and the Church contests there are swallowed up by these who are for Prelacie in the former way, and these who are for a regulated Episcopacie. The King, by his declaration, which will be speedilie published, will endeavour a composeing of these differences until a Synod be called. Your noble friend (Lord Lauderdale) who hath sent yow the inclosed, (however he is represented by some with yow) is a fixed friend to the interests of the Church of Scotland, and to that cause we have owned: we have cause to blesse God that he is putt into such a station by his Majestie, wherein he is capacitated to doe good offices to our Church, and honest men in it, for which I am persuaded he will lay himself forth to the utmost."

"These calumnies" were, however, soon found to be sober truth. Indeed, we can scarcely be surprised at the execration in which Sharpe's memory has been held in Scotland. Violent and bigoted as most of the Presbyterian clergy were, they were free from all suspicion of duplicity—they spoke out plainly their opinions on all subjects, and we can easily imagine their feelings when they found their cause betrayed by the very man whom they had chosen to uphold it.

The following anecdote is curious:—

"My Lord Belhaven, without any example I ever heard of in Scotland, with his Ladie, a very wittie woman's advyce, did fayne death, and for seven yeares was taken by all for dead, yet now appears againe safe and sound in his own house. He was much ingadged for Duke Hamilton: fearing the creditors might fall on his person and estate, and

Digitized by Google

knowing if he were reputed dend, his wife, by conjunct-fie and otherwayes, would keep his estate, he went, with his brother and two servants, towards England. These returned, affirming, that in Solway Sands my Lord was caried downe by the river, and they could not rescue him. His horse and his hatt they gott, but when all search was made, his bodie could not be found. His Ladie and friends made great dool for him, and none controverts his death. In the mean time he goes beyond London and farmes a piece of ground, and lives very privatelie there."

An earnest letter of remonstrance to his old friend Lauderdale concludes,—"If you or Mr. Sharpe, whom we trusted as our own soules, have swerved toward Chancellor Hyde's principles, as we see many doo, yow have much to answer for." Meanwhile the restored government began its career of confiscations and attainders. The account of the trial and execution of Argyle contains nothing very novel. Baillie evidently thought that the head of the Campbells ought not to die on the scaffold without supernatural warning:—

"My goodson, Mr. R[obert] Watson, was with his Lady in Roseneth the night the King landed in England: he told me, all the dogs that day did take a strange yowling, and glowring up to my L[ord Argyle]'s chamber windows for some hours together. Mr. Alexander Colvin, justice-deput, an old servant of the house, told me, that my Lady Kenmure, a gracious lady, my Lord's sister, from some little skill of physiognomie, which Mr. Alexander had taught her, had told him some years agoe, her brother would die in blood."

The trouble which resulted from that restoration which Baillie had for so many years desired to see, and the defection of his oldest friends, seem to have well nigh broken the old man's heart. He died in August, 1662, respected even by those from whom he most differed; and leaving behind him a character of such unimpeachable integrity that it stamps the highest historical value on these journals.

Seven Lectures on Meteorology. By Luke Howard, Esq. F.R.S.

A welcome, wise, simple, shrewd, philosophical little book—the essence of a lifetime of observation and reflection. Every man who has a little leisure (and which of us cannot make a little?) should be a meteorologist; it is a philosophical study, of which the objects interest everybody, of which the subject is accessible to everybody, for which the instruments are simple, and to which, with very little study, every one may make himself competent; but more than this, it is a subject of inquiry, in which every man may make himself practically useful to society and to science at little cost of time and money, and with great interest to himself. To ladies, especially, the study recommends itself by its simplicity, the ease of observations, and its continual interest. Indeed, in this motley climate of ours, we can hardly conceive a better antidote to the annoyance of unpleasant weather, than its bringing with it subjects of interesting observation, discussion, illustration, experiment to the meteorologist. We have known ladies who became, by a very little practice, excellent observers. Do *you* wish to try? Get a *barometer* hung up in a convenient place in a good light, say in your dressing-room; buy a little ruled book, mark down the height of the mercury *every day* at such hours as you are most regularly in your dressing-room, say 9 in the morning, say 3 or 6 in the afternoon, say 9 at night, all of these or more, but regularly *every day*; date the book regularly; also get a thermometer, and hang it near the barometer, and another outside of the room in the shade, and put their indications beside the others, and you may also note the way the clouds fly. This is enough to begin with. Then buy Mr. Howard's book, and you will wish to do a little more. If you keep your observations regularly, and make them regularly, then you do what will, if continued, form a collection of data valuable to the philosopher, however little you may yourself be acquainted with philosophical research; for philosophers only want plenty of observations to know as much about the weather as they do about the moon or the tides.

This is a second edition of Mr. Howard's book, and it deserves to be so. He has a good apology for writing: he has something to say; something which he knows better than any body else, therefore his little unpretending book is doubly welcome; welcome in that it is good, and welcome in that it is little. His treatise on the climate of London, and his papers in the Philosophical Transactions, are valuable stores of careful observation; and the present book is a popular abstract of them.

The following phenomena, connected with observations of the barometer and the state of the weather, are sufficiently general to be interesting:—

"Near the level of the sea the mean height of the barometer near London, taken throughout the whole year, is very nearly 30 inches; for twenty years, ending with 1816, it was 29.96 inches. At Tottenham, from 1823 to 1831, it ran thus:—29.76, 29.88, 29.99, 30.03, 29.94, 29.81, 29.69, 29.67 inches, alternately increasing and decreasing. It was found that, on an average of ten years, the barometer stood lowest at the beginning of winter, rose in spring, continued rising through summer, and fell, during autumn, to the lowest point at the end of autumn,—one cause of the dreariness of November. The comparative unsteadiness of the barometer at London varies from month to month as follows:—It is steadiest in July, and most variable in December and January. Thus its variation or range in July was only one inch, in August 1.02, Sept. 1.5, Oct. 1.8, Nov. 2.1, Dec. 2.4, Jan. 2.4, Feb. 2, March 1.8, April 1.6, May 1.5, June 1.2 inches. All the great elevations of the barometer appear with northerly and dry winds, all the depressions with southerly and warm winds."

We conclude this notice, as our author does his preface:—"The fact now fully ascertained, of the existence of periodical variations in the temperature of the years and seasons of our climate, should excite us to a more constant observation and more diligent study of the phenomena, since we may thus become qualified to avail ourselves of a considerable degree of foreknowledge of these changes."

Hand-book for the City of Canterbury. By Felix Summerly. Canterbury, Ward.—*The Home Treasury: Traditional Nursery Songs of England, with Pictures by eminent Artists—Sir Hornbook, or Childe Launcelot's Expedition, a Grammatico-Allegorical Ballad.* Edited by Felix Summerly. London, Cundall.

A new book by Felix Summerly is always welcome, and here we have a handful, all cheerful and all pleasant. Amidst the dull matter-of-fact formalities which form the staple of our minor literature, these little volumes, graceful and tasteful in costume and illustration, came upon us like a burst of sunshine. The secret of Summerly's success is temperamental; all labours seem to him labours of love; his good spirits are positively infectious; he "babbles of green fields" till the "winged Fancy" has its foot on the cool sward, and feels the fresh breeze blowing on its cheek. We proposed only to turn over the leaves of the Canterbury Hand-book and look at the illustrations, and forthwith we had started on a pilgrimage; and, as Summerly says, there were the old friends ready to keep us company on the road, only differently apparelled,—sergeants at law "ware and wise," doctors of physic loving "gold in special," haberdashers, hosiers, carpenters, weavers, dyers—

> Eche of hem a fayre burgeis
> To sitten in a gild halle on the deis;
> Everich for the wisdom that he can
> Was shapelish for to ben an alderman.

Ask the Canterbury belles whether their venerable city be not even now occasionally visited by "worthy knights" and "clerks of Oxenford," and pilgrim squires, "lovers and lusty bachelors, with lockes crull as they were laid in presse"? But there neither are nor were, good Felix, merchants, who "speak their reasons solemnly, *showing* always the increase of their winning." Merchants know better, and so did old Geoffry: "*souning*" is the word:—

> His reason spake he ful solempnely,
> Souning always the encrease of his wiuning.

He did not *show* it; he did not let you into the mystery of his trade ventures, the why and the wherefore of his "winnings"; he did not make a display of them; it was a sort of unconscious undersong, as natural as the drone to the bagpipe. However, we will not cavil about trifles, which a second edition can amend. Enough, that Felix Summerly must have satisfied the people of Canterbury that their city is, or ought to be, famous for other works of art than the art of making brawn; an art, we admit, not to be despised. There is "Becket's Crown,"—a crowning glory anywhere,—and the unique Norman Staircase, and St. Augustine's, and fifty other monuments of interest and beauty, and, above all, the glorious Cathedral, a wilderness of beauties.

But what shall we say of 'The Home Treasury;' a "gallery" of Art in itself, if it had no other merit? Children have, of late years, been overdosed with what is called *useful* knowledge,—no scandal against Marcet or Markham,—and we rejoice that the beautiful and the fantastic (the nonsensical, if the reader please,) are now to have a turn. In our opinion, even the worldless jingle of the coral and bells ought not to be despised, so long as little eyes brighten and little lungs "crow" at it; and these Nursery Rhymes, with enlarged resources in the way of illustration, ought to be heartily welcomed. The Metals, and the Planets, and the Manufactures, may wait a year or two; there is time enough for the utilities; and for our parts, we would a thousand times rather have the Old Woman in her Basket, who visited the Moon, and the will of 'Betty Pringle's Piggy,' than the impossibly-good little boys and girls, and the perfect fathers and mothers, which have been of late exhibited to our children to wonder at, not to play with nor to believe in. Nay, we may as well own, that '*Dickery*, dickery, dock' (ours, not Mr. Summerly's, is the true and lawful version,) seems to us, as a lyric, far more wholesome than some of the so-called spiritual songs of late prepared for the infant ear, the superficial music of which has not deafened us to the uncharitableness murmuring through the strain in malicious under-current.

From what we have said, the reader will infer that we consider this 'Home Treasury' to be rich in profit as well as pleasure. Compare *these* gilt books with the old tomes published by Mr. Newbery, backed with a waste morsel of tarnished Dutch paper, and illustrated with woodcuts little better than the portraits of the Royalties on a pack of cards! The cover of Summerly's casket is splendid enough to have been stolen from an Alhambra alcove; the pictures accompanying the 'Nursery Rhymes' are capital. Look at the frontispiece, the King of the Song of Sixpence counting his money in the parlour, while the Queen (wherefore in the kitchen, Mr. Summerly? OUR Queen condescended for her "bread and honey" no lower than the pantry,) is stuffing herself right royally in the background,—why, it is as clever as if a Prize Cartoon Exhibitor had drawn it—suppose one Mr. Horsley. Again, 'Bye, O my baby,' has as much grace and pathos as a picture by Redgrave; while the 'Beggars coming to town,' with the accompaniment of barking dogs, recalls to us Cope himself; and if Mr. Webster be not guilty of Mother Hubbard, when, returning home, she is surprised by the accomplishments in reading of her dog, he need not have been ashamed of the design—that's all. The boy with the lost hare, too, is capital—a delicious mixture of fright and fun. Will any one assert, that in such an early introduction of our children to what is artistically good, there is no *use?* If such there be, he deserves to be sentenced to read nothing but Pinnock till his dying day.

We have not yet spoken of Felix Summerly as editor. His preface to the 'Nursery Rhymes' is cheerful and wise. As to the correctness of his text, that is a grave matter, every householder being, of course, prepared to maintain the purity of his own version. Our traditions, we are inclined to think, lend themselves better to the toss-up and round-about tunes of the nursery, than some of his. But we will not cavil about their purity. Let the members of the Camden or the Percy Society look to it. In the meantime we announce, with right good will, the opening of his Treasury. It will, of course, yield us faëry tales by the dozen, and to all we say "grace and welcome."

The Artist and Amateur's Magazine, edited by E. V. Rippingille. Nos. 1—4. Longman & Co.

THE criticism of Artists is by no means necessarily Artistic criticism. An exclusive admiration for some one school, or style, or merit, or principle, from its being congenial with their own productions or powers, too often possesses their minds, warps and distorts their judgments, even till their bias, perhaps, at first reasonable, assumes the morbid character of a monomania. Their anxious attention likewise, however just and needful, to self-interest, which over-rides their abstract devotion to the grand interest of Art, gives many among them narrow and short-sighted views concerning what would best promote the latter: some will adopt the prevalent taste, impure or ephemeral, if it promise them golden returns; others will echo the *vox populi* as a veritable *vox Dei*, if their names be but heard loud enough in the shout, though it cry up absurdities and false doctrines along with them. Let ultra-idealism come into vogue, they trumpet forth incessant praises of the exaggerated, the fantastic, and *Michaelangelo Deformato:* let ultra-naturalism become fashionable, they are all for servile adherence to reality, commonplace subjects, and the Dutch painters. When finish was the rage, they pronounced it indispensable —the sole test of perfect art; now that the rage is against it, they pronounce slovenliness fine freedom of pencil—touches made by a sponge flung at haphazard betray, forsooth, "the hand of a master!" We believe draughtsmanship itself might find grace with the profession, had that fickle lady, Public Opinion, first taken a whim to patronize the novelty! We may put a case still more in point: long as the tide of popular enthusiasm, the torrent rather, has run towards gaudy Colouring, have our artist-critics sought to correct or to confirm this meretricious taste? Where are their interdicts, their anathemas? —their bulls of indulgence follow, thick and fast, their feeble and few admonitions. Again: upon mechanical qualifications they set an extravagant value, not alone from these having cost themselves so much, but from the common partiality of all crafts to those manipulative powers which distinguish them—which, unacquired by the rest of the world, like masonic arcana, throw around each brotherhood the mysterious air of a Rosicrucian Lodge, and enable its members to sneer at the uninitiated. Lastly (though we cannot exhaust the discussion within our confined limits), it may be added, that artists, man for man, are as ignorant of literature, as lettered amateurs are of practical art; yet such equal ignorance produces very unequal results: the ignorance of mechanism can only lead to errors in technicalities and details, while ignorance of literature must lead to errors in poetic and philosophic attributes—in *principles*—in purified, elevated, and profound conceptions, which alone ennoble Art and raise it above the level of a mere handicraft. Hence we affirm that an unlettered artist, however dexterous at his tools, however "knowledge-crammed" with the knacks and secrets of his trade, is like Apelles' shoemaker but an oracle to the toe of his last—not a nail's breadth beyond it—and therefore must waive his pretensions to be a *lex loquens* in critical legislation, till he has studied something besides the 'Handmaid to the Arts' and Pilkington's 'Dictionary of Painters,' nay, even Reynolds's and Fuseli's Lectures superadded, forming as they do only the alphabet and primer of that science. There are many "gentlemen of the press," we grant, who carry a torch rather fuliginous than luminous into Art's obscure recesses, their flamb being indeed a shock of straw which makes one brief blaze, and volumes of smoke; yet we submit there are gentlemen of the *easel* likewise who contribute to darken the darkness, or at best create

A little glooming light, *much like a shade*,

wherever their literary lantern spreads its powerless chiaroscuro. Does Sir David Wilkie's Journal itself more resemble a glow-worm that illuminates the spot it creeps on, or an orb that illumines the world,—does it smell strongest of the attelier sconce, or the philosopher's taper? No! let artists talk as they may, a gallipot-lamp, fed with palette oil, and hung from the top of a mall-stick in some narrow creek or strait, cannot be justly considered "a light for all nations!" The Editor of 'The Artist and Amateur's Magazine' gives candid evidence upon this subject. "As to the utility of the writers of the public press, I am disposed to regard that as a matter of far greater importance than is generally assigned to it, and worthy of much consideration as a valuable adjunct in the cause of art." Several writers for the public press, and those not the worst, let us own with equal fairness, are painters, sculptors, &c., competent to aid periodical literature. Mr. E. V. Rippingille is a wielder of both these potent wands—the pen and the pencil, being an artist distinguished by his talent and peculiar taste, an author likewise well known by various creditable lucubrations. He may be said, therefore, to bring the double power, nothing less than which, we have shown, can efficiently fulfil the twofold function of Artistic Criticism. So far his claims challenge general attention and favour. Whether they will succeed in the appeal, remains much with himself. But we say again, last, what we said first, let the artist-critic beware above all things of what Bacon denominates *idola specus*.

OUR LIBRARY TABLE.

King Eric and the Outlaws; or the Throne, the Church, and the People in the Thirteenth Century, by Ingemann; translated by Jane Frances Chapman, 3 vols.—The literature of the Far North bids fair to become fashionable: thanks to the homely skill of Frederika Bremer. Who could have imagined that her brewings and bakings would have opened the door to the feats of courteous knights and blue-eyed ladies of olden time: that, in short, from the familiar, we should be led back to the romantic? The phenomenon is a curious one—if we may regard it as anything but an evidence of the enterprise of speculation. But the number of readers who, having begun the adventures of 'King Eric,' will fairly bring the same to an end, is questionable. The incidents move heavily; and there is a want of female interest; since the daughters of Marsk Stig are shut up in prison for the greater part of the romance. The plot turns upon the troubles caused by the collision of the Church and the Throne; and the best scene is that in which the factious and imperious Archbishop Grand, on being brought into the presence of King Eric, arrests the coercive measures of the latter, by anathematizing him. A certain rough humour, too, pervades the escape scenes, in which Cook Morten figures: nevertheless, 'King Eric' is tough reading.

Ben Bradshawe; the Man without a Head, 3 vols: —*Rose of Woodlee*, by Maria Bainbridge, 3 vols.— These works have remained unnoticed for some weeks, precisely because they belong to that class of literature (vide p. 586) to which 'Tales of the Colonies' do not. Nothing so heavy, sometimes, as *light* reading! 'Ben Bradshawe' is sprightly by courtesy, 'Rose of Woodlee' (who could doubt it?) sentimental: yet we have read articles in Encyclopædias less wearisome than the mirth and the sadness of this farce and tragedy. Lest we be thought too severe we will offer an extract from "Rose," and then call upon such of our readers as remember Hook's 'Gervase Skinner' to declare whether Mrs. Fuggleston's redoubtable song *colla campanella* exceeds in originality the following melting ditty:—

Frank.
I could not be happy alone—could you?
I could not be happy—and what should I do?
When left alone,
In a bitter tone
I should murmur and moan
O'er the joys that had gone;
For pleasure flies one man, but dwells with two!
Rose.
I could not be happy alone, not I!
I could not be happy, and wish not to try!
Heigh ho!
Sad and slow
Would the hours be, I know,
If you from me should go;
For I never should laugh, and should learn to sigh.
Both.
We could not be happy alone, not we;
Though to pomp, wealth, and power, our path were free.
1st. So I say again,
2nd. So I say again,
That in joy or in pain
We'll together remain.
No! the life that is lonely is not for me!

After this we are not apprehensive of being called to order for withholding a sketch of the leading incidents which chequered the fortunes of either 'Rose' or 'Benjamin.'

A Visit to the East, by the Rev. H. Formby.—Mr. Formby is by his own confession "one of those unhappy persons upon whom this monument and the other ruin, this famous spot or the other famous region, does not make those choice impressions to which the diaries of accomplished tourists seem to bear testimony." The truth of this is manifest enough to the reader; and, in addition to his natural incapacity, Mr. Formby travelled too hurriedly for observation. Thus, though his title-page professes to give an account of Germany and the Danube, we learn nothing about either except such extraordinary facts as that the English know less of their German brethren than of almost any other people less remote than the Japanese; and that German beggars are so proud of their country and ancestry, that many would "deem it a sacrifice of the honour due to them, were they to admit into their pockets so much as an Austrian kreutzer or a Prussian pfenning." So far as the East is concerned, the work consists of reflections and speculations on the evidence of prophecy, &c., which we have had often before, and done better, by others, and which Mr. Formby might have executed with equal advantage to himself and the public, "sitting at home at ease." A few stray passages connect him with the Tractarian school of Theology, though his views on this point are not developed beyond a gentle hint or two. A few uninteresting woodcuts, and a few rather hackneyed quotations, as specimens of the author's University learning, complete a volume of what is, we think, rather prematurely styled "The Englishman's Library."

Irwell, and other Poems, by A.—This is, we presume, the first introduction of the river Irwell into poetry; and its bearing, under such novel circumstances, is pretty much what might have been expected from it, by those who know that very prosaic and dirty-faced stream. We should, as a matter of speculation, certainly not have recommended the candidate for Parnassus to seek it by the pathway of the Irwell; and can now offer the example of the author before us, as an argument better than speculation, against an embarkation on this water, in search of fairy-land. To waste ink upon a river already so black as the Irwell, is worse than "weeping in the needless stream" —or, to speak more characteristically, "carrying coals to Newcastle":—and we much fear that all the "best Japan" poured out in that direction, can flow only towards that dark and sluggish gulf spoken of in the 'Dunciad.' Let us give our readers a single "sample" of the sort of imagination which grows in the air that is freshened by the Irwell—in the Cockaigne of Lancashire:—a starry sky is described by our author as a "*huge candelabrum*, with its thousand lights!" —Evening the same bard would, no doubt, personate as a "lamplighter"; and the clouds would, in the calenture of his poetic brain, be so many "extinguishers."

Faust: a Tragedy. Part II. Rendered from the German of Goethe, by A. Gurney.—This translation is free and fluent, and, as far as we have compared it with the original, tolerably accurate. It will, at all events, serve to present to the English public, in an agreeable form, the conclusion of Goethe's great puzzle, the Faust. We differ from Mr. Gurney in his opinion of the poet's intentions in this second part. He appears to us to have had little or no regard to the working out of his plan, as developed in the opening of Part I., but to have made this second portion a new vehicle for opinions on all subjects—in fact, for a satire upon human nature in general. We doubt if any man could have worked out the problem which Goethe proposed to himself in this dramatic poem. The conclusion to which he brings it is too lame and impotent to allow us, for a moment, to suppose that Goethe himself was satisfied with his solution. We will give the opening song, sung by Ariel, as a specimen of Mr. Gurney's version:—

When, o'er the landscape, charming spring
Weeps 'mid her smiles in gentle showers,
And fragrant op'ning blossoms fling
Their varied sweets from gay wild flowers,
The evil and the good have rights
On your protection,—then to man,
Afford, ye little elfin sprites,
Whatever friendly aid ye can!

While hov'ring yon poor mortal's head around,
Fulfil your duties as good fairies bound—
Assuage the furious conflict in his heart,
Heal the keen wounds of memory's fatal dart;
With cunning spells lull sorrow's wintry blast,
And teach him blest oblivion of the past.
Night hath divisions four; but let them be
Conjoined, for once, in mystic unity!

Digitized by Google

First, on the greensward give him calm repose,
Next, bathe him in the dew of Lethe's stream,
So that with limbs refresh'd like new-blown rose,
He may bud forth anew, with morning's gleam;
O'er him let Conscience' pangs have no control,
And with celestial fire illume his soul!

We shall leave our readers to form their own opinion on this poem, which they may well do from Mr. Gurney's translation, if they are not fortunate enough to be able to read it in the original, the harmony of the verse and diction of which no translation, however spirited, can hope to equal.

Polish Aristocracy and Titles, by Count H. Krasinski.—A strange, rambling production, giving an account of the union of Lithuania with Poland, with sketches and anecdotes of the great Polish families. The author, "being a political emigrant, and not being an Englishman, but in heart, throws himself on the indulgence of a generous and benevolent public," and as we have no wish to diminish his chances of favour, we shall not enter on any lengthened criticism of his work; but a single sentence from the preface may amuse the reader:—"When the mind contemplates the grumbling wind which dances the *Cossack* on the *Stepp*, the flocks of bustards (*drop*), and occasionally solitary eagles flying from the traveller, the distant howling wolves pursuing the wild horses, it is at once entranced with the mighty wildness of Ukraïna."

A Cyclopædia of Commerce, &c., by W. Waterston.—This Cyclopædia is intended to furnish in a brief form an exposition of the subjects comprehended under its title, viz. Commerce, Mercantile Law (by Mr. Burton), Finance, and Commercial Geography. It has been compiled with care, and gives the most recent and authentic information on the matters treated of. We have no doubt that it will prove a valuable addition to every mercantile library, and be found a useful book of reference in all commercial matters.

The Annual Biography for 1842, by C. R. Dodd, Esq.—A work of a like character was heretofore published, and struggled on for many years, but was never very successful. The present is much better compiled, and has therefore a better chance of success. Of the value of these contemporary memoirs we do not care to inquire.

The Emigrant's Handbook of Facts, by S. Buller.—So far as we are able to judge, this volume contains much useful information regarding Canada, New Zealand, Australia, Cape of Good Hope, &c. It enters minutely into most points on which it is desirable that the emigrant should possess information. It has also this advantage that it does not raise his expectations too high, and thus subject him to disappointment.

Ruth, by the author of 'A Visit to my Birthplace.'—Well meant, but tiresome, and a little absurd.

Annette Gervais, from the French of Madame Tourte Cherbuliez, is also a serious story, but of better quality.

The Rector's Note Book, by Mrs. Jane Stanford.—A tale wherein a pretty Jewess is converted by a clergyman and marries his son. *Moral*—that pretty Jewesses, before they become converts, should be quite sure that the Rector has a son.

The Phenomena of the Universe—Map of the Stars—by J. Wyld. These maps are clearly engraved, and, we doubt not, will prove useful to the astronomical student.

[ADVERTISEMENT.]—NOTICE TO BOOK-BUYERS.—M. A. NATTALI begs to announce to his Friends and the Public generally, that he has removed from Southampton Street to more commodious premises, 23, BEDFORD STREET, COVENT GARDEN. His Annual Catalogue of Books in all Classes of Literature may still be procured Gratis. The Post Circular of Books, just published, will be forwarded Gratis, to all parts of the Kingdom by applying Pre-Paid. Attention is respectfully solicited to his cheapest of important works in the *Athenæum* of this day, in the front page.

List of New Books.—Hydropathy; the Theory, Principles, and Practice of the Water Cure, by Edward Johnson, M.D., Author of 'Life, Health, and Disease,' 12mo. 5*s.* 6*d.* cl.; ditto, large paper, post 8vo. 7*s.* 6*d.* cl.—Piety and Intellect relatively estimated, by H. Edwards, Ph. D., 2nd edit. 12mo. 6*s.* 6*d.* cl.—A Practical Exposition of the Epistle to the Philippians, with Sermons on various subjects, by the late Robert Hall, M.A., 12mo. 4*s.* 6*d.* cl.—The Poetical Star, by M. C. Blasson, 12mo. 6*s.* cl.—The Medical Friend, or Advice for the Preservation of Health, by James Paxton, M.D., 18mo. 2*s.* 6*d.* cl.—Swiss Family Robinson, new edit. 12mo. 6*s.* cl.—Geography and History, by a Lady, continued to the present time, 12mo. 4*s.* 6*d.* bd.—Strickland's Lives of the Queens of England, Vol. VI., post 8vo. 10*s.* 6*d.* cl.—Strickland's Letters of Mary Queen of Scots, new edit. 2 vols. post 8vo. 21*s.* cl.—Endeavours after the Christian Life, a Volume of Discourses, by Rev. James Martineau, 12mo. 8*s.* 6*d.* cl.—Dodd's Church History, by Rev. M. A. Tierney, Vol. V., 8vo. 12*s.* cl.; ditto, royal 8vo. 21*s.* cl.—The Parallel Histories of Judah and Israel, by Rev. M. Geneste, 2 vols. imperial 8vo. 1*l.* 11*s.* 6*d.* cl.—The Hexaplar Psalter, the Book of Psalms in Hebrew, Greek, Latin, and English, 1 vol. 4to. 15*s.* cl.—The Book of Psalms, Hebrew and English, fc. 8vo. 5*s.* cl.—Rome as it was under Paganism, and as it became under the Popes, 2 vols. 8vo. 24*s.* cl.—Vinet's Essay on Religious Conviction, translated by T. C. Jones, royal 12mo. 9*s.* cl.—Best's Family Prayers, 12mo. 2*s.* cl.—Harington's (Rev. E. C.) Brief Notes on the Church of Scotland, from 1555 to 1842, 8vo. 4*s.* cl.—Halton's Exposition of the Church Catechism, fc. 8vo. 4*s.* cl.—Watson's (of Cheltenham) Catechism on the Common Prayer, 18mo. 2*s.* 6*d.* cl.—Nevin's Thoughts on Popery, revised by Isaac Taylor, 18mo. 2*s.* cl.—M'Knight on the Apostolic Epistles, new edit. imperial 8vo. 21*s.* cl.—Horæ Sacræ, Prayers and Meditations for Private Use, new edit. 32mo. 5*s.* morocco, 3*s.* 6*d.* roan.—Bloomfield's Greek Testament for Colleges and Schools, 3rd edit. 12mo. 10*s.* 6*d.* cl.—Arnold's Key to Rapier's Latin Verse Book, 18mo. 2*s.* 6*d.* cl.—Apel's German and English Grammar, new edit. post. 8vo. 5*s.* cl.—Del Mar's Spanish Grammar, 3rd edit. 12mo. 5*s.*—Philological Proofs of the Original Unity and Recent Origin of the Human Race, by A. J. Johnes, 8vo. 12*s.* 6*d.* cl.—Boyd's History of Literature, Vol. I. 8vo. 9*s.* cl.—The Poetical Works of Geoffrey Chaucer, royal 8vo. 20*s.* cl.—The Attaché, or Sam Slick in England, by the Author of 'The Clockmaker,' 2 vols. post 8vo. 21*s.* cl.—Meredith, by the Countess of Blessington, 3 vols. post 8vo. 31*s.* 6*d.* bds.—Peckston's Practical Treatise on Gas Lighting, 3rd edit. 8vo. 26*s.* cl.—Braid on Nervous Sleep in Relation with Animal Magnetism, 18mo. 5*s.* cl.—Dr. Rowe, on Nervous Diseases, 6th edit. 8vo. 5*s.* 6*d.* bds.—Change for the American Notes, in Letters from London to New York, post 8vo. 10*s.* 6*d.*—Cornish's Manual of Common Law, 2nd edit. 12mo. 10*s.*—Summerly's Hand-Book of the National Gallery, with illustrations, fc. 8vo. 3*s.* 6*d.* bds.—Summerly's Hand-Book for the City of Canterbury, with map and illustrations, fc. 8vo. 3*s.* 6*d.* bds.—Summerly's Hand-Book for Hampton Court, with additional maps, &c., 2nd edit. fc. 8vo. 5*s.* cl.—Eardley Wilmot's Tribute to Hydropathy, 32mo. 1*s.* cl. swd.

FOREIGN CORRESPONDENCE.

Franconia—The Maine—The Rhine—Germany and France.

THE newly established steam-boat on the Maine is an important addition to the facilities of communication with the continent. It lays open the charming district which is entitled to be called, in every sense of the word, the heart of Germany. Where shall we look for three such antique, stately, and truly individual cities, lying within a day's journey of each other, as Bamberg, Nürnberg, and Würzburg? Where for such smiling and bounteous plains as those around Bamberg? Where for a more beautiful little region of green valleys, and gushing brooks, and ruined fastnesses, than the triangle lying between the three noble cities?* Where for a more sturdy, manly, thriving, good-humoured peasantry than the Franconian? If any one were to say to me, I wish to see a bit of Germany; tell me where I can see the best and most characteristic specimen of the country,—I should always say Franconia and its three cities. I need not particularize the respective advantages and superiorities of other states or other cities. I could easily point out in what respect Franconia must yield—here to this, and there to the other—but, in this region, country, cities, and men, are the most purely and truly German. There is no Slavonian element as in Austria, Prussia, and Saxony—no trace of French habits or institutions, as on the Rhine.

Hitherto the beautiful Maine has been navigated only by barges and market-boats: the steam-boat began to run last summer from Würzburg to Frankfurt, but was soon interrupted by the drought, which stopped the navigation of all the secondary rivers in Germany: all but the two mighty streams, the Rhine and the Danube, were rendered useless. On the 1st of March this year the Maine steamer started again. On the 26th of May, after a fortnight of pretty abundant rain, we embarked at Würzburg at four in the morning, on board the little vessel. My expectations were tolerably raised by what I had formerly seen of this noble river from its banks, but I confess they were surpassed by the interest and charm of the voyage. The stream was deep, and full, and rapid, and when one thought of it as a tributary, one wondered no more at the incomparable grandeur of the Rhine. The water, which is never clear, was particularly turbid after the rains, and justified its name of the yellow Maine, but in other respects its course and character are singularly beautiful. Less grand and powerful than the Rhine, it is calmer and more soothing. If it has no spots so romantic as some on the Elbe, between Dresden and Prague—none comparable in striking beauty to Tetschen, for example—on the other hand, its general character is fresher and more cheerful. The hills are not, except near Würzburg, covered with vines or with scanty vegetation, like those of the Vienne, nor with the *Nadelholz*, the pines and firs, which are the principal clothing of those of the Elbe, but with rich forests, chiefly of deciduous trees. From Wertheim to Aschaffenburg you have the forest of Spessart, the haunt of ghosts and robbers, on your right, and the Odenwald on your left. At this season of the year the verdure is bright and fresh. The following day, on descending the Rhine, I was struck by the comparatively bare and brown appearance of the hills. The general character of the shores of the Maine is fertile, cheerful, tranquil, and primitive. The first town of any interest is Karlstadt, built, as the captain of the boat told us, by Kaiser 'Karl der Grosse': his name is a familiar word in the mouths of the people of Germany, and here, in his own Franken, his august and awful shade haunts every corner of the land. Here traditions, which are half fabulous elsewhere, assume the dignity of historic truth; and if the very walls and towers before us were not built by him, they probably owe their name to some earlier construction of his. Karlstadt is a small fortified town of the rudest architecture; the walls are standing and nearly entire, and are flanked by two square towers. The general aspect of the town reminded me of Oberwesel on the Rhine, only it is far ruder and more primitive. On the opposite shore is the ruined castle of Karlenburg. Somewhat lower, on the right bank, lies the pretty cheerful-looking little town of Lohn, through which the road to Aschaffenburg passes. On the same side is the ruined castle of Rothenfels. A new bridge of red sandstone crosses the river at Heidenfeld; it is not yet completed, but promises to be very beautiful. The castle of Triffenstein, the seat of Prince Löwenstein-Wertheim, is in the style of many German chateaux of the end of the seventeenth or beginning of the eighteenth century. I need hardly add, that it has no architectural beauty to recommend it. Its situation is most lovely; one sees that it must command a noble view of the course of this most winding river, and of the wooded hills, ruined castles, and pretty towns on its shores. The ruins of the castles of Homburg, Stadt-Prozelten, Kollenburg, and Freudenberg, which follow each other in quick succession, are all striking, and each has a different character. That of Homburg stands on an isolated rock, connected with the adjoining hills by bridges over the chasms. The grouping of the thickly wooded hills, in the midst of which Freudenberg is placed, is extremely beautiful. These castles have a character different from those on the Rhine, but are almost as numerous in proportion to the course of the river. The lordly castellans, no doubt, lived on the plunder of the citizens of Nürnberg and Frankfurt. The valley of the exquisite stream which runs through Franconian Switzerland, the Wiesent, is also full of magnificent vestiges of these noble depredators. The little town of Wertheim lies at the foot of a hill on which is an ancient castle apparently in tolerable preservation. Close to the river is a tall round tower, somewhat in the style of that at Andernach, but smaller and ruder, and on the opposite side of the river a wall and towers climb the height from the shore to the summit. The river makes a bend at this point, and the whole group is very fine. Still more picturesque and striking is Miltenberg. This antique, primitive-looking town reminded me of what some of the small Rhine towns were fifteen years ago, before they were defaced by hideous Victoria hotels, and denationalized by a hundred adaptations to the tastes, real or supposed, of travellers. Miltenberg is perhaps even more German, more original than they then were. If the presence of English residents could surprise one anywhere, I should certainly have been surprised to hear from the captain that two Englishmen were living in this antique and secluded place. I thought they might have business there; no, he said, they lived there "for their pleasure." If a charming country, tranquillity, cheapness, and easy access to two great cities, can make up a pleasant life, they have chosen well. Passing through the territory of the other branch of the house of Löwenstein, you come to Aschaffenburg, from which point the river runs nearly parallel to the high road to Hanau, and thence to Frankfurt. This is all *pays de connaissance* to every traveller. We reached Frankfurt a little after six, and left it by the last train for Mainz. The next day steamer and railroad brought us to Aix-la-Chapelle—two days' travelling, which, a century ago, would have appeared among the wildest *Mährchen* that ever unbridled fancy invented.

As I stepped on the carpeted floor and between the elegant draperies of my own room at the hotel at Mainz, the whole reality struck me—I had seen the last of Germany. From Frankfurt you are in Europe, if you will, but not in Germany—the Germany I have learned to know and to love, with its many defects and its rare and singular excellencies, its comparatively poor and imperfect material life (to use an affected Gallicism), and its rich intellectual existence, with a complex character which few foreigners understand or appreciate, and which for ever attaches the few who do—Germany lay behind me. Whole trains of thoughts and feelings with which I had grown familiar were to be laid aside with the language which has received from them its peculiar stamp, and a new moral and intellectual world, the world of France, to be entered upon.

Though I am little disposed to laugh at my dear Germans, now I have left them, I cannot help recording one feature of the voyage, which is completely national. On going down into the cabin I saw a large placard entitled *Algemeines Reglement den Personendienst der Maindampfschiffe betreffend*—General rules regarding the personal service of the Maine steamers; and a more delicious little morsel of administrative pedantry I have seldom seen. It is divided into four sections. Section 1 is headed 'Of the Packet Offices' (*Expeditions Comptoiren*), the paying for places and luggage, and the getting on board and on shore (*Ein-und-Auschiffungen*). This contains fourteen paragraphs, marked 1 §, 2 §, &c. Section 2, Of the duties of the people employed (*Beamten*) by the administration (*Verwaltung*), or, as we should say, company, towards the passengers—twelve paragraphs. Section 3, Of the obligations (*Obliegenheiten*) of passengers—twenty-six paragraphs. Section 4, General directions—four paragraphs. Section 3, it will be seen, is wonderfully prolific. The following are some of the prohibitions:—No passenger must bring anything dangerous, dirty, or stinking on board: bed-feathers, assafœtida, Limburg cheese, and old clothes are expressly forbidden. When the working of the vessel requires the passengers to leave the deck, they must do so at the request of the captain. No dealing allowed, nor showing *Kunststücke*, or *Schaustücke—Anglicè*, tricks or sights for money. In short, the directions are some so ludicrously superfluous, and some so strangely far-fetched, that it must have required no little ingenuity to invent all the possible acts of stupidity or extravagance that people could commit. I wondered that passengers were not forbidden to spit in each other's faces, break all the wine-glasses, or jump overboard, and had serious thoughts of adding an appendix to supply so crying an omission. Section 50 decrees that refractory passengers are to be admonished by the captain in a respectful manner (*auf bescheidene Weise*) to observe peace and order. Sanction.—If they continue restive he may put them and their effects into a boat, and land them on the nearest shore (*nächste Ufer*). This sounded wild and desperate, and gave one a fearful idea of the desolation and abandonment consequent on lawless conduct in a Maine steamer. However, I gathered back my frightened imagination from desert islands and inhospitable shores, and came down to the real amount of the evil, *i. e.* that the turbulent and expelled passenger does not get his fare back again. Section 51, But if such a case should occur, the captain must draw up a written statement of the whole affair, and get it signed by two credible passengers.

This document was concocted, it seems, by the company, or Direction, as it is called, and adopted by the Government. I am quite sure so much careful regulating has never been expended on the whole steam navy of Britain as on this little nutshell on the Maine. And, indeed, it would not be very prudent to attempt it; we should infallibly want to do all the naughty things so obligingly suggested. The good Germans are less recalcitrant, so that there is not so much danger of putting them up to mischief. But really it is not fair to them to exhibit regulations which seem to assume that they are incapable of guiding themselves with common sense or decency.

To return to the Rhine. You will think I have not escaped the infection of German sentimentality when I confess that my eyes filled with tears—tears at the sight of carpets and curtains!

It is impossible for any one who has been admitted into the inner life of Germany to quit it without affectionate regret, or to think of it without the deepest interest; and these feelings, like true love or friendship, make even peculiarities and defects dear. The moral and intellectual life of this great and varied land is the most fertile and interesting subject of contemplation—full of new combinations and original suggestions. In no country have thought and speculation so free and wide a field; in none is the vocation of science and art so understood and honoured; in none is Christian liberty so respected and Christian charity so practised. If there is more personal dignity, freedom, and self-respect, a larger, loftier and more generous way of dealing, and greater external refinement in English society, on the other hand the *intellectual* vulgarity of England, as compared with Germany, is incontestible and striking. Commonplace and slang seem to divide the popular press between them; ideas long ago discussed and dismissed, blunders long ago confuted, and prejudices long ago

* This is the district affectedly called Franconian Switzerland. The Germans seem as if they wished the naming of the beautiful spots of their country to justify the reproach of want of national pride. If they are remarkably beautiful, they are no longer Germany, but Switzerland. Saxon Switzerland, and Franconian Switzerland, are names adopted by foreigners but given by natives. A gentleman in Berlin told me, with a smile, that he was just returned from the *Märkische Schweiz*: what a Markish Switzerland can be like, I have never yet been able to conjecture.

Digitized by Google

overcome, are put forth with a solemn inanity strangely inconsistent with the bold, enterprising, and able character of the English people, who shrink from nothing but the free use of their own intellects. The contrast between the freedom of action, and the absence of it in speculation, in England, with the converse in Germany, is one of the most curious problems in the history of mankind. In short, I return to my old text, that gifts and graces are distributed with so equal a hand as to afford no nation much occasion for triumph.

On passing into France my first emotion was one of somewhat contemptuous wonder how a people contented with such barbarous means of communication could have the courage to fancy itself civilized. While tortured along leagues of rough pavement I still had pity to bestow on the poor people, who, finding the seas of mud at the sides impassable, were walking in the country as in one continuous street, and obliged to turn off for every carringe. The side roads exhibited the appearance of swamps, into which, said a companion, "one is invited to plunge." As I contemplated this total absence of all care for the humble foot-passenger, all the really paternal provisions of Germany recurred to me in full force; I recollected the Duke of Saxe Weimar's excellent footpaths, adorned at convenient intervals with solid and handsome stone benches, at the side of which stands a broad low post, of the same material, so formed and placed that the wayfaring man may most commodiously deposit his burthen—a beautiful monument which the kind-hearted sovereign leaves, to honour and endear his memory. I thought of the abundant and clear directions of every kind which cover the territory of Bavaria, the excellent roads and comfortable travelling in Prussia and Austria generally; and I smiled at the dream of superiority with which France amuses itself. But in the first town we stopped at, she justified her claim in her own way. There I found again the incomparable creatures I have so often admired—the women of the lower classes of France. Well dressed and well bred, yet more laborious and energetic than the coarsest and dowdiest of German peasants, they appeared to me as beings of another race, combining qualities generally thought incompatible. A woman not at all handsome, but neatly and trimly dressed, and with that general air which pleases and satisfies the eye, helped to unload the diligence, lifted burthens which a man would grumble at in Germany, and no woman would touch in England, took cognizance and charge of everything, gave directions about everything, and all with a quiet alacrity, a ready intelligence, and, above all, a good-will and obligingness, which one sees nowhere else. She replied to my entreaties that she would not lift what I thought too heavy a trunk, with that propriety and grace of manner arising from the nice balance between respect for others and for oneself, for which women of this class in France are so remarkable. Charming and useful creatures! they alone know how to do the most menial offices without injury to their independence and self-respect—the most laborious and rude without prejudice to the *agrémens* of their sex. In Carlsbad women habitually do what we call hod-work for the masons, and do it with unalterable cheerfulness. But what women! all the agreeable pride of sex, all idea of pleasing, is completely obliterated. They are coarse, uncouth drudges. I do not think the existence of such a class as the French women of business is suspected in Germany, where Franzosinn is another name for levity, extravagance, and profligacy; nor is it half understood in England. I must say, however, that I hold the Germans fully excused for any amount of antipathy to the French. A conquering nation must be content to pay this penalty for its mischievous and atrocious triumphs. It will require centuries to make the Prussians, for example, forget what they have themselves seen, heard, and endured. Of this they always remind you, and with reason. Every conquering army misrepresents and dishonours the nation to which it belongs. The French novel writers, too, have done the same good office for their countrymen and women as the English for theirs. It is difficult to persuade the readers of Balzac and Soulié, of Bulwer and Mrs. Gore, that domestic virtues and kindly affections are to be found in France or England. Those who have had such deplorable experience of society are perhaps right to describe it as they have seen or conceived it. May their pictures have the effect they, no doubt, desire, of correcting the vices they paint. A more pleasing, and perhaps not less useful task would be that of trying to open the eyes and the heart of each nation to the merits of its neighbours, and of showing how the same hand which has covered the surface of the globe with hill and plain, river and lake, field and forest, each of which has its inconvenience, and each its use and its charm—has scattered in like manner moral inequalities, out of which it depends on us to extract a preponderance of good or evil. If one goes about, not like Diogenes with a lantern, but with a pair of scales in one's hand, one will find that Providence is not so partial and unjust as men's self-love would make it.

And now for a weight in the scale of Germany. It is not too much to say that in all matters connected with Art, in the way of viewing Art, in all that is said, written, or done in that field, Germany is immeasurably before England and France. The return to these countries strikes one as a sudden plunge into the barbarism of the 17th and 18th centuries. From the renovation of a Cathedral, to the trumpet of the *retraite*, every thing that has met my eye and ear in France is not only not good, but positively offensive.

This does not apply so much to executive talent, of which there is enough in both countries, nor to the eminent exceptions to be found in London and Paris, but to the general æsthetical feeling, culture and tendencies. When I mentioned Bamberg, I intended to say that any body who contemplates the renovation of a church, is unpardonable if he does not go, or send a *peritus*, to Bamberg Cathedral. There he will see what can be done by men who thoroughly understand the genius of the great architects of the middle ages, and who work under the same influences which inspired those most religious and poetical structures. The restoration of Bamberg Cathedral appears to me, as nearly as may be, perfect. Within a week, with this picture fresh in my mind I entered the Cathedral of St. Omer. It is impossible to describe the contrast. A great deal has been done and is doing there, all in the very worst taste, all inspired by a feeling the reverse of that which preserved and carried out the austere and solemn beauty of Bamberg. One thing was quite new to me. There are statues placed in the upper part of arches, with a light thrown upon them from behind, or from above, so as to produce a sort of dioramic effect. I should not have believed it possible that the most audacious *décorateur* would venture to introduce any thing so thoroughly claptrap and theatrical into a Gothic cathedral. The statues are new and of a piece with this contrivance. The dissonance produced in one's feelings by such desecrations is painful in the extreme; the more so as no one who believes in the intimate connexion of religion and art, can help falling into reflections of no very satisfactory nature on the state of the one, where the condition of the other is so tawdry and impure.

Not less distressing are the noises made in French churches under the name of chanting (*entonner*) or singing. I think the nerves of the most devout German would be put into a state in which devotion is impossible. In the rudest and humblest German village church I never heard the horrible sounds I have heard in France put forth with some degree of pretension and self-complacency. And we all know the rivalry in bawling to be heard in English churches, and, still more, in meetings.

I must now take my leave of you and of Germany for the present. The slight and hasty sketches I have sent you are little worthy of a theme which would furnish volumes of the most important matter; they were, in fact, mere hasty attempts to arrest the evanescent impressions of the moment. I have not touched on the most interesting and amusing of all topics, society and manners; though the view I have enjoyed of them has been perhaps even wider and more varied than that of cities and lands. One must make one's election, whether one will stand on the outer verge of social and domestic life, as an observer and reporter, or be admitted (if one is so fortunate as to have the opportunity) into its inner and sacred circle as a member and sharer. To attempt to do both, is an abominable act of treachery, though by no means a rare one; luckily, it becomes more and more difficult, in proportion as persons of honour and delicacy have been dragged into notoriety by strangers. And Germany has homes and hearts, for a place in which it is well worth while to sacrifice all the glories of authorship, even for those who can command them. Unqualified admiration and praise have no value for people of sense and taste, and whatever is to be said in dispraise of the structure and forms of German society, should be said by a native, and not by a foreigner loaded with hospitality and kindness, and little disposed to remember any thing but the qualities which must inspire love, admiration and respect into every mind capable of appreciating them.

ANCIENT NINEVEH.

WE announced, a short time since (*ante*, p. 594), the interesting discoveries lately made, by M. Botta, at Nineveh. A letter has since been received by M. Mohl, which enters more into detail. Other letters may shortly be expected, which we hope to be enabled to lay before our readers. The drawings and descriptions referred to, will appear in the *Journal de la Société Asiatique*.

Mossul, April 5, 1843.

You are aware that I have for some time caused excavations to be made in the neighbourhood of Nineveh, in the hope of discovering there remains of monuments, or inscriptions, which, by multiplying our means of comparison, may enable us to decipher those cuneiform inscriptions, which, as yet, we are not able to read. We were at work a considerable time in the great mound opposite the site of the present village of Niniouah; but as I found nothing there but bricks, and insignificant fragments, I removed my workmen to the neighbouring village of Khorsabad, and they have already sent several bricks with cuneiform inscriptions. My workmen have, indeed, discovered there the remains of a monument, rendered remarkable by the number and character of its inscriptions. I send you, to-day, a summary description of all that I have been enabled, as yet, to disinter (for the whole is buried beneath the mound); and I add some hastily executed drawings, together with a copy of several inscriptions. As I was recalled to Mossul on business, I was only able to remain one day at Khorsabad, and several would have been required to copy all that my labourers had disinterred. I shall return when the works are sufficiently advanced to enable me better to understand the whole of the monument, and shall remain a sufficient time to write a complete description.

The village of Khorsabad, or Khortabad, or Khorstabad (for the name, which is certainly not Arabian, is pronounced in all these ways), is distant about five hours of caravan journey to the N.E. of Mossul, on the left bank of the little river called the Khanser. It is built on a mound stretching from west to east; the eastern extremity rises into a cone, which is said to be artificial and modern. This information, however, is doubtful, as my informant has a house at the top of it, and probably fears that my excavations may undermine its foundations. The eastern extremity is forked, and on the northern extremity of the bifurcation it is that my workmen have found the very mutilated remains of which I am about to speak.

Beginning at the top of this wall, my workmen immediately discovered the lower portion of two parallel walls, separated by a platform of six mètres in width: the extremity of the walls is level with the slope of the mound, which proves that the wall is incomplete on this side: the remains are about two and a half mètres long from west to east; they then turn at right angles, but close to each other, leaving between them a space of no more than two mètres twenty centimètres, a passage about three mètres long, at the extremity of which the walls again turn at right angles, one to the north, the other to the south. We have not continued the excavations northward; but southward we have found that the wall, after proceeding three mètres thirty-two centimètres in that direction, turns to the west, running in the direction from which it set out. This will be better illustrated by the plan.

As the mound rises towards the east, the wall acquires height in that direction, and I have been gratified by finding all the surface covered with bas-reliefs, curious inasmuch as they evidently illustrate some historical fact. In describing these, I shall commence with the wall on the north side of the platform, starting from the extremity. Where

Digitized by Google

the sculptures begin to be distinct, I can make out a warrior, with a coat of mail and a helmet, falling backwards pierced with a lance; behind him are two archers in the same dress, shooting in an opposite direction to that taken by the lance. When the wall returns at right angles towards the south, it is covered with a bas-relief, of which I send a drawing. At the corner is a fortress formed of two towers with battlements, on which are two persons very disproportioned, one raising his hands to heaven, the other hurling a dart. More towards the south are two archers, kneeling, with pointed helmets and coats of mail: the one shoots an arrow in the direction of the fortress; the other raises one arm, and in the other hand holds an instrument, of which I send an exact representation, but the use of which I cannot ascertain. Behind them are two archers standing upright, shooting towards the fortress. These figures are about three feet high, drawn oddly, but wanting neither in nature nor spirit: the whole scene is surmounted by a cuneiform inscription, so dilapidated that I despair of copying it. From what I assume to have been the probable height of the wall, much of the inscription must be wanting. I have copied all I could of the inscription, because a single historical name would explain the bas-reliefs. In the passage, the north wall presents a figure three feet in height, of which I send you a drawing. More eastward are the remains of a colossal figure, which must have been, at the least, eight feet high: the legs are well drawn, and appear to have been covered in front with defensive armour: after this figure the wall turns northward, beyond which we have not excavated.

The wall, south of the platform, presents five figures looking eastward; behind them a figure which has lost its head, but which appears to have had wings. The wall then turns northward, presenting a bas-relief which I have copied, representing a man with a sword in his belt, and holding in his hand a long stick, who appears to be pushing before him a woman holding a purse: in front of these is a woman, holding by the arm a naked child, preceded by a third woman, carrying a leather bottle or bag over her shoulders. It appears to me, that all this side represents prisoners made in the expedition pourtrayed on the other side. All these figures are three feet high, and surmounted by cuneiform inscriptions, also mutilated.

On the opposite side there are two figures, in different habiliments, one three feet high and complete, the other colossal but mutilated. Southward, on leaving the passage, the wall contains the lower part of four colossal figures, clothed in long robes with fringes delicately sculptured. On the outside of the solid enclosure there are four others more richly dressed.

The platform is paved with flagstones, and on each side is an oblong hollow, four inches deep, semicircular towards the east, square towards the west, of which I cannot divine the use. The passage is paved with one large stone, covered with a cuneiform inscription, of which I subjoin as exact a copy as the numerous fractures in the stone allow of. I shall try to keep all the fragments and join them solidly together. I ought to remark that the characters appear to have been encrusted with copper, if I may judge by some remains, still found. As the monument was evidently incomplete as far as I have described it, I caused a well to be sunk in the direction and a few paces in front of the north wall. I was right: for my workmen discovered at once a wall with two very remarkable colossal figures 8½ feet high, quite complete, saving some fractures. The first is a bearded figure marching eastward, and carrying, in his hand, a coffer or cage. Before him is a woman with her hair gathered up into a knot behind her head; her robe has straight sleeves ending at the elbow; it fits close to the figure, is largest towards the bottom, and beautifully plaited like the *saya* of the Spanish ladies. The wrists are adorned with bracelets clasped by two aspe' heads, which appear to be biting each other. In one hand she holds a large baton or sceptre, and (what is more remarkable) she wears, in her girdle, a long and large sword with a richly carved handle. These two figures are in good preservation, and I should have drawn them had not my excavation been as yet too narrow to allow of it. The figure of the woman has only three cracks, and as nothing is wanting but the ear, it will be desirable to preserve it. It is, as far as I know, unique. I should observe, that these figures, although they have been so long underground, still bear evident marks of colouring, both in their robes and hair. The female figure appears to bear the insignia of royalty. I fancied that this was the last figure in this direction, but immediately before her the wall turns at right angles, indicating perhaps the end of the monument, and there we can trace the feet and lower part of the robe of a woman dressed like the one preceding. The upper part is, unfortunately, wanting. The style of these sculptures and the species of vestments resemble those at Persepolis; it seems to me, however, that there is more spirit in the figures and more of anatomical knowledge in the drawing. The muscles of the arms and legs are very well marked, and, in fine, these bas-reliefs bear favourable testimony to the taste and skill of the sculptors.

My description is incomplete, but I shall soon be able to send a more detailed one. I am continuing my excavations, and with the more interest, as I think they are the first which have brought to light monuments of the times when ancient Nineveh was still in its glory. The mound is filled with fragments of sculpture and inscriptions, all of which I have carefully preserved, in the hope of joining them. In this way I have already united some fragments of a colossal statue of a woman richly clothed, with earrings and rings "*en kholkhal*" on her legs. I have found besides several fragments of sculpture of a black calcareous flintstone, delicately worked, but as yet nothing complete. A hundred paces from the village I have found a kind of altar (if altar it be) with triangular cippus, surmounted by a round platform. The angles are decorated with a lion's paws, well carved, and the whole has an air so Greek that I should have fancied it of Greek origin, did not the periphery of the platform bear a cuneiform inscription, which I have copied. There is no hollow on the top, and nothing to show that it was employed for fire. It may be the base of a column. I am informed that there is another near it, much injured, which I shall visit on my return, hoping that it will aid me to complete what is wanting in the inscription.

It is time that I should speak of the construction of the monument which I have described, which is not the least remarkable thing connected with it, and which is similar to nothing else that I am acquainted with. It is built on an area formed of one row of large bricks bearing inscriptions; below this layer is one of fine sand six inches thick, lying above another layer of bricks strongly cemented with bitumen. This sand is evidently placed there intentionally, for it has been brought from the Tigris, but I know not for what purpose. This is not all: the walls are formed of large, flat tiles of a marble-like gypsum, such as we find near Mossul; between these tiles there are layers of earth, and thus the whole exterior of the masonry is covered with sculptured tiles, while all its interior is filled with argillaceous earth. There is no appearance of this being the result of the decomposition of unbaked bricks, for of this we find no traces; but my workmen tell me that the earth has been mixed with lime, which hardens it, and that this method is still in use in Mossul; it appears, nevertheless, less durable, and contrasts strangely with all we know of these primitive monuments. The pressure of this earth, before the passages were filled, has broken the bas-reliefs in pieces, and as we excavate they would all fall did we not in a measure prop them. These stays, however, will only last while we are working, and the monument will inevitably perish if the French government do not furnish me the means of preserving the more interesting portions.

THE CARTOON EXHIBITION.

It was our pleasant duty last week to commend the manner in which the Commissioners had discharged their onerous duty towards the public and the Cartoon exhibitors. We have now to analyze the intrinsic merits of the collection: a less easy task. Good will and good conscience are alike interested in its fulfilment: yet so many act as if they believed that the two could not work in company, that all strictures and comparisons run a risk of being considered as out-pourings of "prejudice," in place of that friendly sincerity without which there is no true respect.

Under circumstances, many will consider the Exhibition, on the whole, as a subject of congratulation: and it is so, as developing talent hitherto unknown, or obscure and imperfectly known. The disposition courageously to grapple with compositions on a great scale is as manifest as we had anticipated; but greatness is not a question of scale alone, and we should have been startled by the general absence of intellectual power and originality had we not foreknown that in boudoir art and book illustration—hitherto the staple occupation of our artists—the higher faculties are but sparingly demanded. Imperfect draughtsmanship, with which most, even the best, of the designs, are chargeable, did not surprise us, remembering that the hopes, the aspirations, even the dreams, of young English artists, have always hitherto been of colour, and not form. One essential requisite, however, has been more generally overlooked than we had anticipated; there has been a strange forgetfulness among the competitors, that cartoons are designs for frescoes—a very general neglect of the architectonic principle on which they ought to have been composed. The artists seem to have forgotten that a picture to be hung anywhere, and a work of art forming a component part of a building, ought to be designed on principles as distinct as the poem and the lyric for music. Without, for the moment, considering any other qualities, we would observe, that in No. 94, the *Baptism of Ethelbert by the Monk Augustine*, this principle is recognized, and so much dignity thereby acquired, that we are half inclined to ask whether the designer had ever dabbled in architecture? his arches and columns also give costume to the design, another merit more rare here than it ought to have been. The drapery accessories, too, are often anomalous: witness the *Marriage of Henry the Seventh* (No. 127), where a direct authority was ready to the painter's hand in the engraving after Mabuse's picture, published by Walpole. Such inattention to research, we are ashamed to say, is generically English.

But these casual illustrations of essentials overlooked must not detain us longer from the prize cartoons. First, then, of Mr. Armitage's *Invasion of Britain by Cæsar* (No. 64). We will not, because the work is said to have been drawn in the *studio* of M. Delaroche, therefore consider the prize as a homage to continental art. But to illustrate the general absence of elevated conception, we must advert to the fact, that in its very subject we have a grave mistake. Its import is the degradation, not the exaltation of England. The conquest of England might furnish a noble inspiration to the French academician; but amounts to an objection when the destination of the work is considered. This objection disposed of, there is much to praise in the bold attitudes of the struggling soldiery—much to regret in the absence of those masses in grouping, so essential in battle-pieces for the avoidance of confusion. Indifference to this canon makes even Raffaelle's 'Battle of Constantine' an ineffective piece of embroilment, when compared with the 'Battle of the Standard,' where mere groups were taken. It is true we have Cæsar for a rallying point—a striking one, though too melo-dramatic; but the mêlée of men and horses at his feet, requires patience and ingenuity to disentangle: must we say, too, that we searched in vain for any traits of nobility of expression and countenance, any such individuality as alone can redeem a crowd from monotony? The artist, however, is understood to be very young: and has done too much for the credit of himself and his school, not to be credited with much excellence to come. One, and the most valuable result of such an exhibition must be self-correction.

Another of the 300*l.* prizes (No. 84), *Caractacus led in Triumph through the streets of Rome*, by Mr. Watts, is highly creditable to its exhibitor; but here again we must take exceptions against the subject. A British captive led in triumph to "make a Roman Holiday"!—Would the Delaroches and Delacroix' adorn their *Palais de Justice* with Napoleon dying under the eyes of English sentinels! Would Begass or Bendemann, for the decoration of their German palaces, select some incident from the bitter period of French domination? There was a moment in the history of the Ancient Briton which an artist (No. 88) has done well to select: we mean the chief's appearance before Claudius, when the captive, by his inborn greatness, towered alike superior to his adversary and to his own fate! Here (No. 84) he is but a chained savage,

Digitized by Google

led in humiliating procession by his victors. Standing before this design, we were struck by the number of claims laid on its several portions by the spectators: the main figure—a nobler breadth of brow admitted—will recall to many the 'Ugolino' of Sir Joshua; while the son of Caractacus, and the woman and child, on his right, have an amiable Raffaelesque grace, and the Trumpeter in the van, is borrowed from Annibal Carracci's 'Triumph of Bacchus' in the Farnese palace, and was probably borrowed for the occasion from A. Mantegna. But these reminiscences show taste and reading, and as such, bind us over to respect and "good construction."

We are now at Mr. Cope's *First Trial by Jury* (105), beyond question, in our estimation, the finest work in the collection. Here we have England fairly exalted: a just, and merciful, and free nation, foreshadowed without prejudice or offence; no foreign nation affronted, no sensitive conscience ruffled. It is with such representations that our chambers of Legislation should be decorated! Perhaps, however, the artist has hardly risen, in execution, to the height of his idea. Greater dignity and expansiveness might have been given to the developement of the theme. We feel ourselves, in some measure, in a corner, not in the presence of a whole nation; that we witness a chance proceeding, and not that we assist at the birth of civilization and enlightenment. This is in some measure chargeable on the figure of Alfred. We cannot recognize him as "Alfred the Great." He is not sufficiently exalted in intellectual nobility above the attentive twelve who take part in the ceremony, or the two who hold the half-dogged, half-terrified ruffian in close and masterful thrall. Strange that one so often portrayed should want a portrait still! But the composition is clever; simple, yet displaying sufficient art to denote care and reverence on the part of the designer. There is feeling, too, and contrast in the central group: the importunate eloquence of the boy-witness, with outspread arm, *telling* all the more forcibly, from his close neighbourhood to the cold and stark body of the victim. We have always had good hope of Mr. Cope, from his determined avoidance of mannerism, and his choosing a range of subject, varying from the most contemplative passage of Scripture to the homeliest incident of practical life. In this clever work he does much to justify expectation, by promising yet better things to come.

Taking the prizes according to the order in the Catalogue, Mr. J. C. Horsley's *St. Augustine preaching to Ethelbert and Bertha* (100) is next to be mentioned, and with admiration, were it only for the good effect of *chiaroscuro* it contains. But we find in it a greater inequality than in any other of the prize designs. Truth and delicacy of sentiment are counterbalanced by feeble or careless drawing. The countenances of the listening group—that of the Queen excepted, which wants animation,—bear testimony to the efficacy of the Holy Father's message; but strip the monarch of his purple, and we fear that but a distorted anatomy would be disclosed, while the two maidens, on his right hand, have a clumsiness of form too clownish for such a presence. The arms and hands of St. Augustine, too, want revision: his head is better, though the contours of the features verge upon a needless heaviness; and between the ensign bearer of "peace and goodwill" and the auditors, there is too large a space *to let*. So largely, however, do the merits preponderate in this composition, that we prefer it to the neighbouring *St. Augustine* (No. 98), which at a more Lenten show might have carried off the prize. From No. 100 it is but a short step to No. 103, *Alfred in the Danish Camp*. This, though not a prize picture, has merit: the monarch's figure, to be sure, is a failure; he torments his harp with as wrathful a scowl, as knotted an arm, and as spasmodically-contracted a hand, as if it were a weapon of vengeance and self-defence, and not an instrument of guile,—as if these staring evidences of emotion were not so many signs by which the disguised chief must have been revealed to his enemies. But the other parts are better; especially the group between the English prince and the Danish king. These have spirit and character superior to anything we find in the neighbouring cartoon,—*Alfred submitting his Code of Laws to the approval of the Witan* (104), by Mr. Bridges,—to which, nevertheless, a prize has been awarded.

We may here interrupt the thread of orderly narration to state, that there are one or two purely fanciful subjects, which are more satisfactory to us, than any of the foregoing works of imagination, Mr. Cope's excepted. Milton and Shakspeare and Spenser have been largely laid under contribution, and the former has given occasion to more illustrations of 'Comus,' Adam and Eve, Satan, and 'Samson Agonistes' than we care to particularize. One, *Lady in the Enchanted Chair* (60), however, must not be passed over, for its prettiness, not to say, grace; the Cupid peeping out from under the burly limbs of the prostrated bacchanal in the foreground, is a charming and *naïf* touch of poetry, though not Miltonic. Hard by, and still in the foreground, is a nymph-profile, so lovely, and so closely resembling some of Howard's heads in the 'Rape of Hylas,' as to make us attribute this design to his crayon, till warned that we might be mistaken by other portions of the drawing. In its sterner and coarser way, the neighbouring *Samson Agonistes* (61) has also merit. No. 51, the group of

> —— daughters three,
> That sing about the golden tree,

has also found its admirers: though not in us. These are Graces who were but an hour ago unlaced from the trappings of the milliner—conscious of their nakedness, and uneasily rejoicing in their deliverance: not the divine maidens hymned by the poet. Shakspeare has hardly fared so well as Milton. We looked long and wistfully at the *Death of King Lear* (26), when we were told it was the work of the clever young painter of the Plague-prophet in the Royal Academy. But the idea of that picture has clung to the artist, like the gift of Dejanira. The

> —— foolish, fond old man,
> Fourscore and upwards,

is worn by disease, rather than by "grief of heart." The corpse of Cordelia might have been flung down in answer to that ghastly cry, "*Bring out your dead;*" it is so emaciated that not even Dotage could conceive such a picture of mortality might haply live! Plague-stricken, too, is the youth at her side: but the kneeling girl's figure has a redeeming pathos, and the three shrouded mourners, who are departing, to the left of the picture, are good. There are other Lears, to say nothing of a Falstaff, of a Macbeth, &c. &c. whereof Civility forbid that we should speak.

But the happiest fancy-piece, and, indeed, possibly the most perfect Cartoon in the Exhibition, is Mr. Frost's vision from Spenser, *Una and Satyrs* (10), the first of the third-class prizes. Against this work we have but one word to object. Fear, we know, is unlovely: but still, with all the terror in her countenance, so well borne out by her shrinking attitude, the chaste and holy virgin should have been more loveable and beautiful, according to our wish. The designer has been more at home among the "salvage nation," to whose coarse gambols he has given a spirit and a force worthy of some better renowned mythological painter; the drawing too is on the whole good, and is severely tested by the foreshortenings and muscular developements of some of the prominent figures. But enough for one week; five of the prizes, and a host of other designs, good, bad, and indifferent, being reserved for another day.

OUR WEEKLY GOSSIP.

H.R.H. Prince Albert has consented to become the patron of the Artists' General Benevolent Institution, which Society already enjoys the patronage of Her Majesty.

Mr. Burford's New Panorama is a view of Coblentz—one of the best he has painted: like as life, and, of course, superlatively attractive. Where, indeed, could a scene more animated be found, than is made up by the picturesque town, and the entrance of the tributary Moselle; the Broad Stone of Honour, and the opening of the gorge towards Boppart? The picture, too, is excellently finished, and with a depth and brilliancy of tone hardly attained in former works.

Our attention has been directed to an announcement in the *Standard*, from which we learn that a step has at length been taken in the only effectual direction for the suppression of that one of the chivalric institutions which has haunted the field of modern society with most pertinacity and least argument;—a rude, barbaric figure, stripped by centuries of all the costumes and accessories which made it picturesque, or gracious, or valuable, and looking monstrous amid the lights and forms of advanced civilization. An Association has been got up for the extermination of Duelling—composed of members influential in the precise classes within which, and for whose benefit, the murderous nuisance was supposed more especially to act. It consists of 326 members, of whom 34 are noblemen and their sons, 15 are baronets, and 16 members of the Lower House. What is more important still, the Army and Navy, hitherto the head-quarters of the conventionalism, furnish a large contingent to this demonstration. In its ranks are 30 admirals and generals, 23 colonels and lieutenant-colonels, 44 captains and 24 lieutenants in the Navy; and of the Army, 17 majors and 26 captains. The Bar furnishes a detachment of 24: and the Association denounces the unmeaning modern "wager of battle" as sinful, irrational, and contrary to the laws of God and man; and pledges itself to discountenance the same by its example and all its influence. An institution, attacked by every other species of argument, and sustained against them all only by opinion, was to be successfully assailed by opinion alone; and this measure at once knocks away the sole stay which held up the ugly figure against the pressure of modern sense and modern arrangements.

The papers mention, that a sum of money has been received from India to defray the expenses of erecting a monument over the grave of Rajah Rammohun Roy, who died some years since at Bristol, and whose remains are now deposited in the cemetery near that city. It is to be in the Hindoo style of architecture.

The works of Alfieri have been recently prohibited by the censorship of Palermo; and the consent, which had been reluctantly given, for the printing of Thiers' History of the French Revolution, has been withdrawn.

The King of the French has presented to the city of Bruges casts from the finest marbles in the Museum of the Louvre, in acknowledgment of his Majesty's satisfaction at being allowed to take casts of the celebrated mantel-piece by Franc, and of the tombs of Charles the Bold and Mary of Burgundy, in that city.

A new specialty in periodical literature has been projected, in France, by M. Moreau Christophe, Inspector General of Prisons, under the title of the *Revue Pénitenciaire*, having as its objects of publication a critical exposition of doctrines, a digested analysis of facts, and the text of official documents relating to the science and discipline of prisons. It is the further intention of the projectors of this Review, to form themselves into a society, to be called "The Howard and Saint Vincent Association," for the purpose of collecting a fund to be appropriated to the composition or purchase of works proper for the reading of the prisoners and the poor. A volume is also announced by M. Capefigue, entitled *Les Diplomates Européens*, and containing notices of Metternich, Pozzo di Borgo, Talleyrand, Pasquier, Wellington, Richelieu, Hardenberg, Nesselrode and Castlereagh.

M. Etex has been commissioned, by the Minister of the Interior, to execute a marble monument to the memory of Vauban, for the Church of the Invalides, where it is to form a *pendant* to the tomb of Turenne.—An equestrian colossal statue has been erected at Casale, in honour of the present King of Sardinia. It was modelled by the sculptor Sangiorgio, and cast by Viscardi, of Milan.—The Grand Duke of Tuscany has also recently erected a remarkable monument, under the name of *The Tribune of Galileo*, in the Palace of the University of Florence. The following is an abridged description:—Four pilasters and two arcades divide this tribune into three parts. The entrance portion, or vestibule, and the middle one are square; the last is semi-circular, and contains the statue of the philosopher. The figure is clothed in a long robe, the folds of which are sustained in its left hand, while the right rests on a cippus, that supports a globe, and figures representing Natural Philosophy and Astronomy. Four busts are ranged on either hand, within the hemicycle—those of Galileo's bosom friend, the Benedictine Castelli, and his favourite disciples, Cavalieri, Torricelli, and Viviani. Right

Digitized by Google

and left, in glass cases, are the instruments and apparatus with which his discoveries were made:—and the principal of these—the Satellites of Jupiter, the Phases of Venus, Saturn's Ring, the Spots in the Sun, and the Mountains in the Moon,—are figured in gold, on a blue ground, in an arcade of the vault. Philosophy and Astronomy are painted in the second vault. The allegorical figures of Nature, Truth, Natural Philosophy, and Perseverance, are in the first. On the walls are seven fresco paintings, representing the principal points in the history of Galileo.

We must report, though but in a line, the dinner given to M. Spohr by his professional brethren on Tuesday, and the Purcell Commemoration held in Westminster Abbey on Thursday morning. The musical season is coming spiritedly to its close. The news from abroad is but unimportant; 'L'Italiana in Algieri,' by Rossini, is to be versionized for the Grand Opera of Paris—a foolish measure, brought about, we presume, by Madame Stolz, to find occupation for her *mezzo soprano* voice. A new tenor, M. Mengis, is also to be tried there in the autumn: and there is more than a chance of Mlle. Fanny Elsaler *dancing her peace* with the management. Much, indeed, is new attraction needed at that theatre. A festival is to be held, about this time, at Zurich, with three thousand voices; and Lady Bishop is shortly to try her fortune on the stage of San Carlo, at Naples.

ROYAL ACADEMY OF ARTS, TRAFALGAR SQUARE.
The EXHIBITION of the ROYAL ACADEMY is NOW OPEN. Admission (from 8 o'Clock till 7), 1*s*. Catalogue, 1*s*.
HENRY HOWARD, R.A., Sec.

BRITISH INSTITUTION, PALL MALL.
The Gallery is OPEN DAILY, from Ten in the Morning until Six in the Evening, with one Room containing the Works of Sir Joshua Reynolds, the next those of Ancient Masters, and the third with those of Deceased British Artists.—Admission, 1*s*.; Catalogue, 1*s*.
WILLIAM BARNARD, Keeper.

Will shortly Close.
The NEW SOCIETY of PAINTERS in WATER COLOURS.—The NINTH ANNUAL EXHIBITION of this Society is NOW OPEN, at their GALLERY, 53, PALL MALL, next the British Institution, from 9 till Dusk, daily. Admittance, 1*s*. Catalogue, 6*d*.
JAMES FAHEY, Secretary.

Will be Closed in a few Days.
EXHIBITION of Sir GEORGE HAYTER'S GREAT PICTURE of the HOUSE of COMMONS, painted on 170 square feet of canvas, and containing portraits of all the Members of Parliament, also a portrait of Her Majesty Queen Victoria, and various other works, forming a collection of more than 800 portraits of eminent personages of the present day. Open from 10 till dusk. At the Egyptian Hall, Piccadilly. Admission, 1*s*.

DIORAMA, REGENT'S PARK.
JUST OPENED, with a NEW EXHIBITION, representing the CATHEDRAL of NOTRE DAME at Paris, with effects of Sunset and Moonlight, painted by M. RENOUX, and the BASILICA of ST. PAUL, near Rome, before and after its destruction by Fire, painted by M. BOUTON. Open from Ten till Five.

AERIAL NAVIGATION.—ROYAL POLYTECHNIC INSTITUTION.—A LECTURE on this subject, illustrated by MODELS of several kinds, which elevate themselves by MECHANICAL FORCE alone, is delivered at Two o'Clock daily, and on Monday, Wednesday, and Friday Evenings, at Eight o'Clock, in addition to the POPULAR LECTURES usually delivered. The Exhibition of the COLOSSAL ELECTRICAL MACHINE, the DIVER, DIVING BELL, NEW DISSOLVING VIEWS, and the other varied and instructive Objects of the Institution, continues as usual. The original CRAYON DRAWINGS, from the CARTOONS at HAMPTON COURT, by the late Mr. Holloway, with numerous other WORKS of ART, have recently been placed in the Gallery. Admission, One Shilling. Schools, Half-price. Open Mornings and Evenings, except Saturday Evening.

SCIENTIFIC AND LITERARY

GEOLOGICAL SOCIETY.—*June* 7.—Mr. Warburton, President, in the chair.

1. 'On Ichthyopatolites, or Petrified Trackways of Ambulatory Fishes upon Sandstone of the Coal Formation,' by the Rev. Dr. Buckland.—In September, 1842, Dr. Buckland received from Miss Potts, of Chester, a sketch of impressions resembling a succession of scratches by long claws, copied from a flag-stone discovered by that lady near the shaft of a coal-pit, at Mostyn, in Flintshire. She afterwards forwarded the slab itself; from an examination of which, Dr. Buckland comes to the conclusion, that the impressions are not foot-marks of a reptile, but made by the ambulatory organs, or bony rays, of the fin of some unknown species of walking fish. They consist of curvilinear scratches, disposed symmetrically at regular intervals, on each side of a level space about two inches wide, which may represent the breadth of the body of the fish, to the pectoral fin-rays of which Dr. Buckland attributes the scratches. They follow one another in nearly equidistant rows of three scratches in a row, at intervals of about two inches from the point of each individual scratch to the points of those next succeeding and preceding it. They are all slightly convex outwards, three on each side of the supposed place of the fish's body. Each external scratch is about an inch and a half in length, the inner ones about half an inch, and the middle scratch about one inch long. These proportions are pretty nearly constant throughout a series of eight successive rows of triple impressions on the slab from the Mostyn coal-pit. The impressions of the right and left fin-rays are not quite symmetrically opposed to each other on a straight line of progression, but the path of the animal appears to have been curvilinear, or trending towards the right. Each impression, or scratch, is deepest in its supposed frontal side, and becomes more shallow gradually backwards. Dr. Buckland enumerates several instances of such a mode of progression among existing fishes, and points out the great analogy between these fossil impressions and those which the gurnard makes when walking on sand under water, as observed by Professor Deslongchamps.

2. A letter was read from Mr. W. C. Trevelyan, giving an account of polished and scratched surfaces of rocks observed by him in Greece, on the way from Megara to Corinth, and resembling the surfaces seen in the Jura, attributed to the action of glacial phenomena. In this case, however, he considers the fact observed as the effect of an earthquake. The appearance of moraines, which he saw in the gorge of Mount Parnassus, he refers to storms bringing down masses of rocks, rubbish, and trees.

3. 'Observations on certain Fossilliferous Beds in Southern India,' by Mr. C. T. Kaye.—The beds made known by Mr. Kaye, occupy positions at some distance from each other, and are found in three localities: first, near Pondicherry; secondly, near Trinconopoly; and, thirdly, near Verdachellum. Although the streets of Pondicherry are paved with limestone, the strata from which the material is derived have hitherto been unnoticed. The town itself is situated, like Madras, on a recent sandy formation, extending inland, in places ten miles, and containing shells of species now inhabiting the Indian Ocean in such abundance that they are dug up and used for lime. Immediately behind the town these sandy beds rest on low hills of red sandstone, in which no marine remains occur. In certain localities it contains fossil trees, often of vast size, even to the length of nearly 100 feet, all apparently *coniferæ*, and having their wood silicified, and presenting no traces of marine action. Beyond the hills of sandstone, is a bed of limestone, and beyond it the sandstone again, bounded, at a distance of about sixteen miles from the sea, by hills of black granite. The nature of the country affording no sections, the relation of the limestone to the sandstone is still a desideratum. The former occupies an area of not more than three or four miles, and abounds in most beautiful and interesting marine fossils, most of which appear to be new. *Baculites*, *Hamites*, *Nautili*, and *Ammonites*, are abundant in the finest preservation, and associated with numerous bivalves and univalves, including several species of *Voluta*, *Pyrula*, and a *Cypræa*. Wood is also found, but calcareous, and bored by the Teredo. About 30 miles from Trinconopoly, 100 from Pondicherry, and 60 from the sea, is another bed of fossilliferous limestone. Among the numerous fossils procured by the author from this bed, very few agreed with those from Pondicherry; some resembled tertiary fossils, and others green-sand species: only one fragment of an ammonite occurred. At Verdachellum, in Southern Arcot, about 40 miles from the coast and 50 from Pondicherry, a third bed of fossilliferous limestone occurs, to which the author's attention was directed by Lieutenant Newbold. It is situated amid a district of red sandstone, resembling that at Pondicherry. It contained no Baculites or Hamites, but several Ammonites, and numerous bivalves and univalves, several of which were identical with those from Trinconopoly, but none were of the species found at Pondicherry. Among them were some lower green-sand forms. The author concludes by pointing out the remarkable association in these beds of truly cretaceous forms with numerous species belonging to genera usually considered as characteristic of the tertiary era.

4. 'An Account of a Section of the Strata between the Chalk and the Weald Clay in the vicinity of Hythe,' by F. W. Simms.—In order to ascertain the relations and succession of the strata in the neighbourhood of Hythe, the author instituted a number of borings, the details of which were fully given in this paper. The better to investigate the beds of the lower green sand in this locality, he sunk a shaft in the quarry above and to the north of Hythe Church, of the dimensions of five feet by four, to the depth of seventy-three feet; so that the strata could be accurately examined and measured, and the fossils of the several beds collected. By this means he discovered beds which were not previously known to have existed in this locality, consisting principally of laminated clay, greasy to the feel, and having some of the properties of fuller's earth. The succession of beds in Mr. Simms's section, is the following, enumerating them in descending order, from the bottom of Evenden's quarry, where the shaft was sunk, there being forty-eight feet of calcareous rock above. Six feet of sand, containing few fossils, and in one bed some fossil wood, are succeeded by eight feet of calcareous rocks and interstratified sands, containing the same fossils with the calcareous rock above. Next we meet with twenty-five feet of grey sandy clay, with characteristic fossils, succeeded by variously-coloured beds, to a depth of fifty-three feet, resting on a greenish-brown bed, which is separated from the wealden by a layer of very fine white sand, one inch in thickness. The wealden occurs at a depth of sixty-three and a half feet. Mr. Simms's observations show that the upper green sand is wanting in the neighbourhood of Hythe, that the galt is 126 feet thick there, and the lower green sand 70 feet in its upper bed, 158½ in the middle, and 178½ in the lower. The dip of the strata in the line of section is due north 1° 19′. Among the fossils procured by Mr. Simms, during his investigation, was a remarkable resin, the properties of which were examined by Mr. Edward Solly, and an account of which accompanied the paper.

5. 'Comparative Remarks on the Lower Green Sand of Kent and of the Isle of Wight,' by Dr. Fitton. The author having examined the results of Mr. Simms's operations, described in the preceding paper, here compares the sections of the Lower Green Sand at Hythe, and on the S. W. of Maidstone, from information given to him by Mr. Benstead, of the latter place. In sinking a well at Barming Heath, in 1837, this gentleman found the whole thickness of the quarry stone (Kentish rag) and intermediate "Hassock," to be 130 feet:—beneath were 10 feet of dark green sand, containing marine fossils; and finally about 30 feet of clay, which was known to be different from that of the Wealds. Water having been obtained, at the depth last mentioned, the sinking was discontinued. The sections, therefore, at Hythe, and near Maidstone, agree in presenting a considerable thickness of marine clay beneath the Kentish rag:—and this resemblance is confirmed by the fact, that a bank of distinct blue clay crops out between the quarry stone and the weald clay, near Wateringbury, on the south of Maidstone.

The section at Atherfield, on the coast of the Isle of Wight, has the advantage of exhibiting an uninterrupted view of the whole series of strata between the chalk and the wealden, which are seen to be perfectly conformable throughout: and both the fossils and the mineral compositions of the beds sunk through in Mr. Simms's shaft, very closely resemble those of the lowest beds near Atherfield; the principal difference being the occurrence at the latter place of the bed of stone, about three feet thick, near the bottom, which abounds as remarkably in fossils. On the other hand, the calcareous strata of Kentish quarries, from Hythe to Maidstone, do not appear in Atherfield; where they are represented only by detached concretional masses—and the author calls attention to the sudden decrease of calcareous matter, in receding from what may be called the ventral region of this limestone—whether inland through Surrey and Hampshire, or westward by the coast of Sussex, to the Isle of Wight and Dorsetshire, which is the more deserving of notice, as the total thickness of the lower greensand in Kent (about 400 feet), cannot much exceed that of the Isle of Wight.

The author explains the stratigraphical principles of his division of the subcretaceous series proposed in 1824 and 1826, which, he thinks, Mr. Simms's results confirm: and the only remaining question is, whether the marine clay, discovered by Mr. Austen in Surrey,—that of Atherfield—and that now brought to light at Hythe—which seems to be continuous—is to be

Digitized by Google

regarded as an additional member of the lower green sand, or to be detached from the subdivisions of that deposit—a question which can be determined only by a full comparison of the fossils of the lower subcretaceous strata; the number of which has been very much increased by recent accessions in England.

ASIATIC SOCIETY.—*June* 24.—The Earl of Auckland in the chair.—A paper was read by Mr. Bland, containing a notice of the 'Atish Kedeh,' a biographical work on Persian poets, by Hajji Lutf Ali Beg, of Isfahan. After noticing the interest which attaches to the poetic literature of Persia, and the importance of works relating to the biography of their poets, Mr. Bland named a few of the most valuable of those which existed previously on that subject, enumerating the 'Baharistan' of Jami, the 'Tezkerrat al Shuará' of Dowlatshah of Samarcand, and the 'Tuhfah Sami' of Sam Mirza, a son of Shah Ismail the First. Over all these works he gives a decided preference to the 'Atish Kedeh,' as containing more copious details, a larger selection in its anthology, and a far greater number of lives, than the whole of those set forth in the other biographies. It has also the advantage of bringing the history of literature down to a very late date—the year 1770, thus including a period of 200 years subsequent to the biographical works which preceded it. It is divided into two parts, the ancient and the more modern poets. The first part is further subdivided into four books, of which the first contains such poets as have been emperors, kings, princes, &c., chiefly of foreign birth, and the other three parts comprise respectively the great geographical divisions of Iran, Turan, and Hind. A short chapter is devoted also to some ladies, who have distinguished themselves by their talent for poetry. The second division, containing those poets who were contemporary with the author, is of importance, and gives the lives of writers which would otherwise have been lost to posterity. The whole number of biographical notices amounts to 842; and the quotations from their poems, as specimens of their style, are abundant. The sketch the author gives of his own life, represents him to have been born at Isfahan, in the year 1134 of the Hijra (or Flight of Mohammed) A.D. 1721, and to have studied under various learned men, but in particular to have attached himself to poetry and the society of poets. He gives a large selection from his own works, including a whole poem on the story of Joseph and Zulaikha, the critical examination of which is reserved for a separate notice. In the analysis, which formed the subject of his memoir, Mr. Bland included many details which were omitted in reading, the object seeming to have been to call the attention of Orientalists to a work which has been hitherto very slightly noticed, but which may be considered as the most valuable and important which we possess on Persian literature. The manuscripts of the 'Atish Kedeh' appear to be confined to a very small number, two being in Mr. Bland's possession, two in the collection of Sir Gore Ouseley, two in the East India House Library, and one in the British Museum. The only copy known on the Continent is in St. Petersburgh.

The reading of the paper having been concluded, the Right Hon. President expressed the satisfaction with which he had accepted the office of President, and declared his desire and intention to afford all the assistance and support in his power to promote the utility and welfare of the Society.—Adjourned till November.

GEOGRAPHICAL SOCIETY.—*June* 26.—The Rev. G. C. Renouard in the chair.—Resumed and concluded the reading of Mr. Falconer's notes of his journey in Texas, &c. The traveller left Galveston for Houston on the 12th of March, 1841, in a steamer drawing three and a half feet water, and grounded on Red Fish Bar, owing to hard winds having blown the water out of the Bay. He arrived on the 14th at Houston, which town is described, and said to be much more healthy than formerly. From Houston Mr. Falconer proceeded by Richmond, and across the Colorado, to Victoria, thence to Gobiad, on the Rio San Antonio, and from Gobiad to San Antonio de Bexar. To the westward of Houston the soil is described as fertile, and in the prairies large herds of deer were seen. Richmond is a thriving little place; and Victoria may become an important place for trade when the raft which obstructs the navigation of the river shall be cleared away. Gobiad was utterly destroyed in 1836, and Victoria cannot be considered healthy. San Antonio de Bexar, which is a town laid out with some regularity, is minutely described in the paper. Between this place and the Rio Grande there are no settlements: the route between these two points passes over the Neuces River and its tributaries. On the west of Texas there is abundance of fine oaks, as also cotton, pecan, and sycamore trees, and fine pastures. Having returned from the Rio Grande to San Antonio, Mr. Falconer proceeded thence to Austin, crossing the Cibolo, the Guadaloupe, the San Marcos, and other streams. The country between the two places is what is termed prairie, only a small portion of it presenting that undulated form which gives rise to the name "rolling prairie." The finest land is between the Guadaloupe and the San Marcos, and between this and the Rio Blanco is a rich and heavily-timbered bottom. At Austin, which is next described, Mr. Falconer was invited to accompany an expedition, represented to be undertaken for mercantile objects, to Santa Fé; it was accompanied by a military force of about 270 men, for the protection of the merchandise—a common precaution in crossing a hostile Indian country. They left Austin on the 17th of July, and proceeded northward till the 27th. During the early part of the journey the herds of cattle met with were so great, that the traveller says their numbers could hardly be exaggerated. Having passed several streams, they came, on the 11th, in sight of the flat table mountain improperly called Comanche Peak. On the 13th the Brazos River was crossed. On the 21st they got into a thickly-wooded country, which they had difficulty in passing. On the 27th, in latitude 33° 35′, and longitude 97° 44′, they turned westward, and on the 4th of August came to a large river of very red-coloured water, and a pretty Indian village. On the 8th, 9th, and 10th, they had great difficulty in getting through gullies and ravines. Thinking themselves on the Red River, and nearer to Santa Fé than they really were, they got guides, and went more southward. On the 17th, 18th, and 19th, they were compelled to stop near a fine spring, bursting out of the ground, but the waters of which, shortly after exposure to the sun, became nauseous and bitter. Mr. Falconer was one of the very few whom this water did not affect; but sickness and diarrhœa were almost universal. On the 21st they were glad to move forward; the rations were reduced to half a pound of poor meat; salt, vinegar, sugar and coffee were exhausted, and they had no flour. Since July 27, they estimated they had travelled 270 miles. Their present position was in 34° 20′ latitude, and 101° 25′ longitude. Proceeding in a N.W. course, crossing several streams, and country of different aspects, generally either barren or prairie-like, they came on the 4th of September, to the Quintafue, a branch of the Palo Duro, a tributary of the Red River. After about seventy miles more, the party divided, and ninety men were sent on to make their way to San Miguel, and to send back guides and provisions to those halting, who were several times attacked by the Indians, and lost fourteen of their company. The guides having arrived, they resumed their march, seventy of the party being obliged to walk, in consequence of eighty-three horses having been stolen on a former day. On the 4th of October, being on the high land which separates the streams running to the Red River from those running into the Puerco, they were stopped by a body of Mexicans, and compelled to capitulate. On the morning of the 8th they reached the camp of General Armijo, on the Rio Galenas. They afterwards crossed the Puerco, and arrived at San Miguel, a town of about 2,000 inhabitants. Here they were joined by some of the party that had separated from them at the end of August. Mr. Kendal, who was of the number, had been made prisoner, and roughly treated. At San Miguel, three of the men who had left the main body on the 11th of August, were brought out into the public square and shot. On the 17th they left San Miguel, and proceeded westward to the Rio Grande, along the eastern bank of which they descended to Pres del Paso del Noste, whence they crossed over, and came down to Chihuahua.

ASTRONOMICAL SOCIETY.—*June* 9.—F. Baily, Esq., President, in the chair.—E. T. Carver, Esq., was elected a Fellow. The following communications were read:—

'On a Self-acting Circular Dividing Engine,' by W. Simms, Esq.—The engine, in general arrangement and construction, is similar to that made by Mr. E. Troughton, though there are several additions and peculiarities, which are pointed out. The circle or engine-plate is of gun-metal, forty-six inches in diameter, and was cast in one entire piece, teeth being ratched upon its edge. The centre of the engine-plate is so arranged that it can be entered by the axis of the instrument to be divided, and the work by this means brought down to bear upon the surface of the engine-plate, which arrangement prevents the necessity of separating the part intended to receive the divisions from its axis, &c.—a process both troublesome and dangerous. Upon the surface, and not far from the edge of the engine-plate, are two sets of divisions to spaces of five minutes, one set being in silver and the other strongly cut upon the gun-metal face. There are also as many teeth upon the edge as there are divisions upon the face of the engine-plate, namely, 4,320, and consequently one revolution of the endless screw moves through a space of five minutes. The silver ring was divided according to Troughton's method, with some slight variations. In this operation it seemed to the author the safer course to divide the circle completely, and then to use a single cutter for ratching the edge; and he believes that the teeth upon the edge have been cut as truly as the original divisions themselves. Another important arrangement is, that the engine is self-acting and requires no personal exertion or superintendence, nothing being necessary but the winding up of the machine, or rather the raising of a weight which, by its descent, communicates motion to the dividing engine. The machinery is so arranged that it can be used or dispensed with at pleasure, there being some cases in which a superintending hand is desirable. The author then proceeds with a description of the machinery, as represented in the drawings accompanying his paper, and draws attention to the contrivance by which the engine can discharge itself from action when it has completed its work. He concluded by observing that the machinery is simple, by no means expensive, can be made by an ordinary workman, is adapted to all the engines now in existence, which are moved by an endless screw, lessens the labour of the artist and increases the accuracy of the graduated instrument.

'Recomputation of Roy's Triangulation for connecting the Observatories of Greenwich and Paris,' by W. Galbraith, Esq.

Communications concerning the Great Comet of 1843:—Notes on its Appearance made during a Voyage from the Cape of Good Hope to England, by Commander Close.—A Letter from J. Belam, Esq., Master of H.M. Sloop Albatross.—Observations of the Comet by Mr. S. C. Walker and Professor Kendall, at the Observatory of the High School at Philadelphia.—Notes on the Comet, accompanied by a Pencil Sketch, by Capt. Hopkins, on a voyage from the Cape of Good Hope.—Extract of a Letter, dated St. Kitt's, 6th of March, from Lieut. Tyler, R.E.—Letter from J. T. Austin, Esq., dated Funchal, April 8, accompanying a sketch of the Comet.—Notes on the Comet as seen by M. Montojo, at San Fernando.—An Account of the Comet as seen on board the ship Childe Harold on her voyage from Bombay to London, by Lieut. Jacob, R.E.—Letter from T. Forster, Esq., dated Bruges, April 22.—An Account of the Comet as seen on board the ship Malabar on her passage from the Cape of Good Hope, by R. Pollock, Esq.—Letter from H. A. Cowper, Esq., H.M. Consul at Pernambuco in Brazil, dated 9th March.—Observations made at the Royal Observatory, Cape of Good Hope, by P. Smyth, Esq.—Abstract, by the Secretary, of Newspaper Accounts of the Comet which have been forwarded to the Society.—Observations of the Comet made at the Observatory of Trevandrum, accompanied by a Drawing, by J. Caldecott, Esq.—Letter from Prof. Kendall, containing Observations of the Comet made at Philadelphia.—Observations of Distance of the Comet from known stars, made at Demerara by Capt. Geale, Lieut. Glascott, R.N., and J. Donald, Esq.—Some Account of the Comet in a Letter from J. Gimblett, Esq.—Extract of a Letter from Lieut.-Col. Harvey, dated Poonah, March 13.

LINNEAN SOCIETY.—*June* 20.—E. Forster, Esq., in the chair.—R. Brown, Esq., E. Forster, Esq., Sir W. J. Hooker, and Dr. Horsfield, were nominated Vice-Presidents. A list of the names of Fellows was read over, whom the Council proposed should be expelled for non-payment of arrears. A paper was read from Mr. Sutter, of New South Wales, 'On the Forest Trees of Australia.' The author described most of the trees according to their colonial names, and gave some details of the economical and medical uses to which they were applied. The Eucalyptus Mammifera, is called Manna tree by the colonists, and yields a saccharine secretion, closely resembling manna. The colonists use this secretion for the same purposes as sugar, and it is said, also, to have the same medical properties as manna. An account was also given of various trees known by the name of stringy barks, and of the mahogany and cedar trees of the colonists. These trees belong to very different families from those known by the name of mahogany and cedar in Europe, but there is a resemblance in the character of their woods, and they are applied to the same purposes. Mr. Varley exhibited a new microscope with an improved stage phial-holder, and graphic eye-piece.

MEDICO-BOTANICAL SOCIETY.—*June* 22.—Earl Stanhope in the chair.—A paper 'On the *Dictamnus creticus*,' by Mr. Bennett, was read. A sketch of the botanical labours of Mutis, the botanist of New Granada, was read; as also a paper on Quinia, translated by Colonel Wright.

INSTITUTION OF CIVIL ENGINEERS.—*June* 27.—The President in the chair.—Mr. Jones was elected an Associate.—A model and drawing of a 'Lock-meter,' used in Lombardy for measuring the water used for irrigation, were presented and described by Mr. Albano.

Papers 'On the present state of the Streets of the Metropolis,' by C. Cochrane, and 'On the relative merits of Granite and Wood Pavements and Macadamized Roads,' by D. T. Hope, were read.

A paper by Professor Faraday described the inconveniences resulting from the want of ventilation in the lanterns of lighthouses, such as the water and carbonic acid produced by the combustion of the oil of the lamps: the former of which is condensed on the windows, rendering them dim, and obscuring the light; and the latter, by deteriorating the air, renders it nearly impossible for the light keepers to attend to their duties. The exposed situations in which lighthouses are placed, render the ordinary mode of ventilation, by a free admission and exit of the air, quite inapplicable. The attention of Professor Faraday was therefore directed, by the Trinity House, to the subject, and after many experiments he succeeded in making an arrangement, which was described, and which is now ordered to be applied to all their central lights, and first to the revolving lights of the Tynemouth lighthouse. The central lamp of a lighthouse has frequently a wick of 3¾ inches diameter; and as 1 lb. of oil, in burning, produces about 1.06 lb. of water, and 2.86 lb. of carbonic acid, the means of escape of these noxious products require to be very ample. A copper tube, or chimney, of 4 inches diameter, divided in its length into three or four parts, and having the lower end of each part opened in the form of a cone, of 5½ inches diameter, is placed over each lamp, so that the chimney enters about half an inch into the cone, leaving an air space all round; at each joining the same is repeated for all the tubes, and they are attached into each other by three pins; the upper end of the tube is then carried into the cowl, on the top of the lantern. With this arrangement, the action of the tube is to carry up all the products of combustion into the cowl, and so to the outside. None passes out at the cone apertures into the lantern, which is thus entirely ventilated. If, as frequently happens in storms, the wind gathers in the cowl, and finds its way down the tube, it escapes laterally by the cone apertures, and thus it is found, that the lights are never affected even by violent gusts of wind. The tube, in fact, forms a ventilating flue, which, as regards the lamp, can carry everything up, but nothing down. With revolving lights there was more difficulty, but it was overcome by an arrangement for bringing the branch tubes into one main conduit, which was attached to the revolving frame; tubes of ⅞ inch in diameter, are used for these smaller lamps, and their ends are inserted about ¼ an inch within the chimneys of the lamps; they are found sufficient for the purpose, and admit of an adjustment as to height, which prevents their acting prejudicially upon the lamps by causing the too rapid consumption of the oil, or the charring of the wicks.

A paper was read 'On the Density and Pressure of Steam,' by W. Pole.—After stating the method of application of the laws of Mariotte and Dalton, to determine the relation between the elasticity and volume of steam, and the difficulties which have given rise to the use of empirical formulæ, the paper proceeded to enumerate those of Navier and De Pambour, and to propose another rule applicable to a case not provided for by either, viz. for engines working with high pressure steam expansively. Tables were given, comparing the results of the new formula with the others. The Society then adjourned to the second Tuesday in January 1844.

MICROSCOPICAL SOCIETY.—*June* 21.—R. H. Solly, Esq., in the chair.—A paper from W. Addison, Esq., 'On the Colourless Corpuscles of the Blood, the Buffy Coat, and Inflammatory Diseases,' was read. The Society adjourned until the 18th of October.

MEETINGS FOR THE ENSUING WEEK.

MON. Institute of British Architects, 8, P.M.—An attempt to answer the question, "Are synchronism and uniformity of style essential to beauty and propriety in Architecture?" being the essay by Mr. Chamberlain, to which the medal of the Institute was awarded.
TUES. Zoological Society, 3.—Scientific Business.
WED. Horticultural Society.—Garden Exhibition.

MUSIC AND THE DRAMA

HER MAJESTY'S THEATRE.—"Fair play is a jewel," and a set frown the most suspicious aspect which can be worn by critic. Once having protested against Donnizetti, what were so easy as always to denounce him,—to reiterate complaints against his flimsiness, facility, &c., in reporting the success of his 'Don Pasquale'? But the justice of such a course is another matter. Taking a general view of the subject, it will be found, we suspect, that the nature of Italian opera is essentially ephemeral. How many, for instance, of Cimarosa's works are now to be heard? only 'Il Matrimonio' and (very rarely) 'Gli Orazi':—to these we may add the detached *scena*, 'Deh parlate.' How many of Paiesiello's operas? not one. Even Rossini, the most brilliant and nervous of Italian geniuses, has retired in disgust, and some four or five of his dramas (his French opera foremost) may be all that in another twenty years will be left to remind a fickle public of him who was once such an idol, that standing beside the greatest commander in Europe, he felt himself the more popular of the two:—and said as much! Rossini's successor, however, will fare little better. Already but *two* of Bellini's operas are to be universally heard, 'I Puritani' having never pleased in Italy, and 'Il Pirata,' 'La Straniera,' and 'Gli Montecchi' being at best on the threshold of "the tomb of the Capulets." So that those who are reproaching Donnizetti for fertility, inequality, and the lightness of his productions, would put their exceptions in a fairer form, were they to say "He is Italian," and to recollect that there is no building up a landmark which shall defy Time and Change, out of a handful of rose-twigs! It was our intention to have written a character of this prolific composer more at length, to have shown his merits as a nice and grammatical writer for the orchestra: and to have specified a melodic form or two, amounting to individuality, and originated by him. But the moment of laughter is the last for a steady adjustment of proportions and delineation of features; and we are still under the influence of *Don Pasquale*. Never was Lablache more whimsical than in this part—less refined perchance, than the real elderly *gentleman* of Ballinacrazy would have been, but more grotesque. Fancy him oppressed by the ambitions of dandyism, trying for a waist in a Melton coat which is apparently buttoned by some steam process, and achieving a wig, compared with which the hyacinthine juvenilities of —— himself are but dowager graces! Fancy him chuckling over the acquisition of a meek, humble, grateful partner, a very Agnes—who turns out, as might have been foreseen, a double-distilled Xantippe! The character is as old as the hills! but nothing is hackneyed past the power of our arch-actor to refresh, nor does an absurdity exist to which he cannot give a probable humanity. We were to speak of the composition: it is his fault that we have digressed into considering the execution. Well, then, 'Don Pasquale' has, of its kind, some pretty music. The overture is foolishly slight: so is the *entrata* of *Norina* (Grisi), but there is a certain sparkle in the duett between her and Mario which closes the first act: and in the second a quartett which displays the favourite unisonal effect of modern composers, not ungracefully. The third act runs too much *à la* Strauss: no less than three movements being written in that dancing triple time, to which Donnizetti has not power enough to give character. Compare, for instance, the *stretti* of the two duetts here, with Rossini's 'numero quindici,' and the winding-up of the concerted piece "Signor, una parola," in 'La Cenerentola.' Still the music is not devoid of animation: the *motivo* of Grisi's final rondo, too, is coquettish and elegant; while Mario's serenade behind the scenes we have already praised as a gem. On the whole, we are too glad of a revival of the merry days of *Opera Buffa* not heartily to welcome 'Don Pasquale.'

PHILHARMONIC CONCERTS.—The season was wound up with great spirit on Monday evening, by the appearance of M. Spohr as a conductor and performer. In the former capacity, he presided over his imaginative Symphony 'The Power of Sound,' and his Overture to 'Der Alchymist': he played, too, one of his Concertinos for the violin: an *andante*, followed by a *polacca*, the last a graceful and characteristic movement, but like all its master's compositions, so richly instrumented, as to make a neat and delicate performance of the whole unusually difficult. It might be partly this, to be felt in the lumbering inexactness of the orchestra—which hampered the *solo* player, and gave him even at certain moments the appearance of nervousness; still, after all due allowance, we are compelled to admit, that our guest is but a mortal; subject to Time, who revenges himself for adding to the artist's experience, by impairing his mechanical powers. For purity of taste, and exquisite measurement of time, M. Spohr's performance is still admirable, and should be long remembered by our rising violinists, if such there be:—we regret that he has not led any of his chamber-music in public. As a conductor, his command of his forces remains without a drawback, as all felt who remembered former Philharmonic essays at the Symphony in question. He absolutely brought the players to a *pianissimo*, hitherto as fabulous a thing among them as the Unicorn: thus imparting to the first *allegro* an exquisite and fanciful delicacy, without which one half of its import is lost. In the second movement of three subjects—to wit, cradle song, dance, and serenade—the orchestra had been drilled into such a certainty, as to go through its complicated task steadily, but without stiffness, and the effect was found so charming as to win an *encore*. The martial scene, too, was magnificently played: the episodical portion of it with such a sensitive developement of the composer's varieties of instrumentation, as in part (not wholly) to reconcile us to the excessive reiteration of one particular phrase. In short, the decided superiority of such a performance as Monday's should at once destroy the confidence of the Philharmonic band in its own unassisted powers, and stimulate our conductors to a strictness which many of them are too apt to regard as absurd. The singers were Miss Masson, Mr. Phillips, and Miss Birch: the last, we are sorry to say, reprehensible for the manner in which she screamed a *scena*, introduced by Rossini into the French edition of the '*Mosè*.' An extra Philharmonic Concert is announced for Monday next, at the instance of Her Majesty, who has commanded the performance of Beethoven's Choral Symphony.

BENEFIT CONCERTS.—An interpreter, no matter how great his accomplishments, cannot take rank with those who create the Paganinis and Liszts, who enlarge by their intentions the stores of executive power. *M. Charles Hallé*, however, must be placed amongst the foremost of interpreters; as one of the soundest, most expressive and most agreeable pianoforte players (not *wonders*) that have, for many years, visited England. He commands every style of music, and gave us yesterday week Thalberg's *fantasia* on "La Sonnambula" with a firmness and brilliancy, of which the composition is

Digitized by Google

hardly worthy. Beethoven's Kreutzer sonata, with the powerful aid of Signor Sivori, was rendered by him—by both—admirably. So often, of latter years, has this composition been heard, that nothing short of extreme finish will satisfy the public. Not a point was lost or exaggerated, not a passage *misread*: while the whole was performed with that admirable mixture of temperance and spirit which argues power of the highest order. Besides this, M. Hallé showed a like intimacy with peculiarities of a different kind, in Chopin's Scherzo in B minor; here he was fanciful, elegant, capricious, sentimental, without a trace of that sickliness to which the music would invite the half-cultivated. We hope to have frequent opportunities of profiting by M. Hallé's conscientious and various versions of the music of the great pianoforte composers. His concert was "starred" by M. Levassor, who drew tears of laughter from the audience as "Le Chanteur Choriste" and "Le Caissier."

The *matinée* of Charles Filtsch, held on Tuesday, was satisfactory, and established the boy with the public as a player of rare promise. There is an elegance in his reading of music which is far beyond his years: as much steadiness, too, as can be required, even when the work in hand is a *toccata* by Mendelssohn, or a *fugue* by Sebastian Bach. His tone is very good, and his execution brilliant and correct. Of its kind, we have had no pleasure greater than hearing him in Chopin's music. This, by the way, is fast advancing in popularity in London; a thing to be thankful for by all who have been surfeited with the thunder of the pianoforte, and long for its delicacies. The vocal part of M. Filtsch's concert was also noticeable. Three young ladies, and Mr. Giubilei, had been brought to Hanover Square to sing through the unsaleable music of a publisher's catalogue, and to show, by contrast, how ungracious are the compositions of "Young England." We pitied the audience, but were more sorry for the artists who had been induced to commit themselves to such folly.

MISCELLANEA

Paris Academy of Sciences, June 19.—A communication was received from M. Ackermann on the means of killing whales. M. Ackermann suggests that there should be introduced into the harpoon, by means of a hollow tube, a quantity of hydrocyanic (prussic) acid, which, being set free by the blow of the harpoon, would flow into the wound. It appears that a trial of his plan has been made in the bay of Valparaiso. The whale did not, indeed, die immediately, as was expected, but lived an hour. From the first, however, it was so weakened by the action of the poison, that the pursuit was not attended with danger.—A letter was read from M. Margotson, recommending the use of alkaline sulphuret of potass boiled in water, as a means of preserving wood. This substance, says M. Margotson, will kill any animalculæ already in the wood, or prevent their future presence.—Several papers connected with medicine were read, but they were of too technical a character to interest the general reader.

A new Anemometer.—A letter from Rochefort, in the *Débats*, says:—"We have lately had here a trial of a new instrument, intended to show the probable causes of the winds. It consists of a thin piece of wood three or four inches long, freely balanced, as the needle of a mariner's compass, on a steel pivot, by means of an agate, inserted in the wood. At one of the extremities, at about a third of the length, there is made a slit, in which are placed three or four magnets, about half an inch from each other. They are formed of bits of flattened watch-spring, from one to three inches in length. They are fixed perpendicularly to the horizon, and therefore free from all polarity. They all have their South-pole above the bit of wood, and their North-pole below it. These magnets act exactly as the directing finger of a weathercock, and show the direction of the wind. The instrument may furnish interesting instructions with respect to the connexion between magnetism and electricity, on the probability that the variations of the winds are due to electric currents. What renders it of great importance is the fact, that these indications take place a quarter of an hour, and sometimes even half an hour, before the changes which occur in the winds, as those of the barometer do in the variations of the weather."

Lotteries.—[From the Dublin Papers.]—The Painting of 'The Dying Comrade,' by M. Angelo Hayes, Esq., S.I.A., Military Painter in Ordinary to the Lord Lieutenant, will, at the request of many of the artist's friends, be disposed of on the principle of Art-Unions, in fifty shares of two guineas each; the drawing of the prize to take place on the — at the Royal Irish Institution. Tickets to be had, &c.

The Manifold Letter Writer of Messrs. Hyde & Co., which has been forwarded to us for notice, appears to answer well the purpose for which it is intended, is simple and convenient, and moderate in price.

Cambridge, 1843.

The Coinage.—Two able letters lately appeared in your valuable journal on the interesting subject of the proposed change in the coinage. Both writers approve of the plan suggested by the Commissioners; but although that plan has, in some respects, much to recommend it, this seems more than outweighed by certain heavy disadvantages. One objection is the *number of denominations* proposed in the new system, four, which is as many as exists at present. Now, it is plain that *two denominations* to reckon by would be far better. The Commissioners themselves seem aware of this, from their suggestion that calculations would, on the new plan, be probably made in pounds and cents. Now this supposes that all sums under $2\frac{2}{3}d.$ may be neglected, which can scarcely be allowed. This cent, $= 2\frac{2}{3}d.$, appears, indeed, to be the weak part of the system, for such a *denomination* would be of little use, either in keeping accounts or common buying and selling. It is *too large*. The agreement of most nations who have much trade proves this fact. The French sou, the American and Dutch cent, the Russian kopek, point out *this* as the right magnitude, for real use, of the inferior *denomination*. The English penny is the extreme limit of greatness for the purpose, and indeed this does not suffice without the halfpenny. There was a scheme proposed in the *Times* newspaper some time ago, which is free from these objections. It approximates to the other decimal systems now existing in America and Holland, and was this: that there should be only *two denominations* of money, crowns and cents, and that all *coins* be expressed as multiples, or submultiples of these. Thus, the half-sovereign would be a two crown-piece, the sovereign a four crown-piece. The cent, $= \frac{1}{100}$ crown, would $= \frac{1}{2}$ halfpenny of our present money. Between the crown and cent any coins might be inserted which might be convenient. Probably a 10 cent piece, 6*d.*, 20, $=$ 1*s.*, 50, $=$ 2*s.* 6*d.*, would be best. For the use of the poorer classes a half-cent, $= \frac{1}{2}$ farthing, might be made, and a quarter-cent if desirable. The names of all coins would be stamped on them. Does not this system appear, on the whole, more convenient, both for computation and actual use, consisting as it does of *only two denominations* of money, such that all sums, either large or small, may be reckoned by them? As regards the difficulty of changing from the present system, it is clearly more practicable to express small sums in terms of $1\frac{1}{2}$ halfpenny-pieces than $2\frac{2}{3}$ penny-pieces. It must be admitted, that to take the crown instead of the pound for the superior denomination, involves a difficulty, from which the plan of the Commissioners is free, but the operation of multiplying by four to reduce pounds to crowns is not very formidable. Moreover, the fact that the 2 crown, 4 crown, 10 cent, 20 cent, 50 cent, pieces, are only old coins with new names, would facilitate the change for common purposes. So that setting the convenience of the easier conversion of small sums into this scale against the turning pounds into crowns, the alteration would be scarcely more troublesome on this scheme than that of the Commissioners. At any rate, the thing sought is the *permanent* good of adopting the most convenient system, even if attended by some additional *temporary* trouble while the change is in progress. I remain, &c. G.

Isthmus of Panama.—In the French Chamber of Deputies, a short time since, M. Guizot, in answer to some observations throwing doubts upon the practicability of the proposed works for piercing the Isthmus of Panama, read the following letter from the Baron de Humboldt to one of the heads of the parties interested in the proposed operation:—"I learn, with regret, that you are not further advanced in your important enterprise than you were when I had last the pleasure of seeing you in Paris. For the last twenty-five years, the project of a communication between the two seas, either by the Isthmus of Panama, by Lake Nicaragua, or by the Isthmus of Capica, has been proposed, and topographically debated; and yet no beginning has been made. I should have thought that the British Embassy would have found a means of inspiring confidence in the proposal to send a scientific man (an engineer) for the purpose of examining the valley which separates the two seas, through which the canal might be dug to the western side of the Port of Chagres. Be assured that those persons who use the authority of my name in support of the opinion that the two seas have different levels, do so only to excuse themselves from engaging in the enterprise." The Minister also read an extract from a document addressed to the Academy of Sciences, by M. Warden, a distinguished American citizen, long consul for that country in Paris:—"The cutting necessary to unite the two seas, by means of the three rivers, Vino-Tinto, Bernardino, and Farren, is but twelve and a half miles in length. The fall will be regulated by four double locks of 45 mètres long. The canal will be altogether 49 miles in extent, 43 mètres 50 centimètres wide at the surface, 17 mètres 50 centimètres at the bottom, and having a depth of 6 mètres 50 centimètres. It will be navigable for vessels of from 1,000 to 1,400 tons burthen. The rivers, in those portions of them where they have from $2\frac{1}{2}$ to $4\frac{1}{4}$ mètres of water, will serve for the canal, by deepening to $6\frac{1}{4}$ mètres; and the water will be maintained at that height by two guard-locks. All the materials necessary for the construction of the canal are found on the soil which it has to traverse; and the total cost has been estimated at 2,778,615 dollars, including the price of four steamboats, and two iron bridges, 46 mètres long, and opening for the passage of ships."

The Temple Organ.—About the end of the reign of Charles II. the Societies determined on the erection of an organ; the two great builders of that time were Schmidt, or Father Smith (for—the correct appellation being too hard, we presume, for English ears—so he was called), and Harris. Of course they were rivals; and as each desired to have confided to him the erection of an organ which was to be supreme in its excellence, and as each was supported by numerous patrons and partisans, the Benchers were somewhat puzzled how to decide. Their solution of the problem was worthy of the acknowledged acumen of the profession. They proposed to the candidates that each should erect an organ in the church, and that they would then keep the best. The proposal was accepted, and in nine months two organs appeared in the Temple. Did any of our readers ever witness the *début* of two rival prima donnas at an opera—the crowded tiers upon tiers of faces, the eager anticipation, the excitement, the applause replying to applause? Some such scene, modified only by the peculiarity of the place, appears to have attended the *début* of the two organs. First, Blow and Purcell performed on appointed days on Father Smith's great work. The getting such coadjutors must have rather startled Harris; but there was still Mons. Lully, and he did full justice to his organ. Which was best? The Smithians unanimously agreed Smith's; the opposite party remained in opposition, and equally single-minded. Month after month the competition continued, for the space of a year, when Harris challenged Smith to make certain new reed stops within a fixed period, and then renew the trial. This was done, and to the delight of everybody. But a choice was more difficult than ever. Each was evidently the best organ in the world except the other. The matter began to grow serious. Violence and bad feeling broke out, and the consequences to the candidates became in many ways so injurious, that they are said to have been "just not ruined." Lord Chief Justice Jefferies was at last empowered to decide, and we have now before us the organ he favoured—Smith's!—*Knight's London.*

Calico Printing.—Great as have been the improvements in this branch of the cotton trade, there is every probability of still greater ones taking place, and which appear calculated to produce a complete revolution of the present system. There are two methods by which it is sought to be done. The first, which claims priority of notice from its great novelty, is that which is termed the galvanic process; and which those who profess to be in the secret are pleased to aver, is accomplished something after the following fashion:—Let it be supposed, then, that a piece of calico has to be printed by this process. This is done by machine and roller, in the ordinary way, but on which roller is placed or fixed (not engraven) a pattern composed of various metals, as iron, tin, brass, zinc, &c. This premised, the roller now passes through an acid (its composition a secret), and coming in contact with the cloth, imparts thereon the desired pattern, say black, blue, green, red, &c.; and on the piece passing through the machine, and being then quickly dried, the work is perfect without being subject to any other process. The other method, and which has been successfully tried, is that of laying on the colours (supposed mineral ones) in oil. This is also effected by machine and roller, but with an engraved pattern. The colours by either of the processes will, it is said, be fast ones—a most important desideratum.—*Manchester Herald.*

MEDICAL, INVALID, AND GENERAL LIFE OFFICE,
No. 25, Pall Mall, London.

NOTICE is hereby given, that the INTEREST falling due on the capital Stock of this Society, at the rate of 4½ per cent. per annum, will be in the course of PAYMENT to the respective shareholders on and after the 29th inst., between the hours of 11 and 2 o'clock, at this Office.
F. G. P. NEISON, Actuary.

NATIONAL LOAN FUND LIFE ASSURANCE, ANNUITY, and DEFERRED ANNUITY SOCIETY, 26, Cornhill, London.—Capital, 500,000*l.*—Empowered by Parliament.

Directors—T. LAMIE MURRAY, Esq. *Chairman.*

John Elliotson, M.D. F.R.S.	George Lungley, Esq.
John Griffith Frith, Esq.	John Rawson, Esq.
H. Gordon, Esq.	Clement Tabor, Esq.

Joseph Thompson, Esq.

Auditors—Prof. Wheatstone, F.R.S.; Prof. Graves, A.M. F.R.S.
Actuary—W. S. B. Woolhouse, Esq. F.R.A.S.

The superior advantages to those Assured with this Society will be best understood by a comparison of its principles and a reference to the last Annual Bonus declared on Policies of five years' standing, viz.:

Entry	Policy No.	Age	Sum	Annual Premium.	Bonus added.	Cash Bonus.	Premium reduced.
			£	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1837	39	39	1000	67 6 4	133 14 6	59 19 9	6 19 4
1838	114	56	3000	175 15 0	296 9 7	123 0 6	16 9 7

Policies now entered upon entitled to participation in next Annual Division. Two-thirds of all premiums paid can be borrowed by the assured without loss of Policy.
F. FERGUSON CAMROUX, Secretary.

ARGUS LIFE ASSURANCE COMPANY,
39, Throgmorton-street, Bank.
Empowered by special Act of Parliament, 5 & 6 Will. IV. c. 76.
Thomas Farncomb, Esq. Alderman, *Chairman.*
William Leaf, Esq. *Deputy-Chairman.*

William Banbury, Esq.	Rupert Ingleby, Esq.
Edward Bates, Esq.	Thomas Kelly, Esq. Ald.
Thomas Camplin, Esq.	Jeremiah Pilcher, Esq. Sheriff of London and Middlesex
James Clift, Esq.	Lewis Pocock, Esq.
Rt. Hon. J. Humphery, M.P. Lord Mayor of London	

Physician—Dr. Jeaffreson, 2, Finsbury-square.
Surgeon—W. Coulson, Esq. 2, Frederick's-place, Old Jewry.
Consulting Actuary—Professor Hall, of King's College.
Advantages of the Argus Life Assurance Company.
Low Rates of Premiums.
In addition to the subscribed Capital of 300,000*l.* the assured have the security of the Company's Income of nearly 60,000*l.* per annum, yearly increasing, and an accumulating Assurance Fund invested in Government and other available Securities, of considerably larger amount than the estimated liabilities of the Company.
The Rates of Premium are reduced to the lowest scale compatible with the safety of the Assured and the stability of the Company, thereby, in effect, giving to every policy-holder an immediate and certain bonus without risk, in lieu of the deferred and frequently delusive prospect of a periodical division of profits.
Annual Premium to Assure £100.

Age.	For One Year.	For Seven Years.	Whole Term.
20	£0 17 8	£0 19 1	£1 11 10
30	1 1 6	1 2 7	2 0 7
40	1 5 0	1 6 9	2 14 10
50	1 14 1	1 19 10	4 0 11
60	3 2 4	3 17 0	6 0 10

One-third of whole-term Premiums may remain unpaid at 5 per cent. comp. int. as a debt upon the Policy for life, or may be paid off at any time without notice.
In Assurances for advances of money, as security for debts, or as a provision for a family, when the least present outlay is desirable, the varied and comprehensive Tables of the Argus Office will be found to be particularly favourable to the assured.
A Board of Directors, with the Medical Officers, attend daily, at a quarter before 2 o'clock.
EDWARD BATES, Resident Director.
A Liberal Commission to Solicitors and Agents.

CORPORATION of the LONDON ASSURANCE. Established by Royal Charter, A.D. 1720.
FOR FIRE, LIFE, AND MARINE ASSURANCES.
Offices, 19, Birchin-lane, Cornhill, and 10, Regent-street.
John Clark Powell, Esq., *Governor.*
Abel Chapman, Esq., *Sub-Governor.*
Lestock Peach Wilson, Esq., *Deputy Governor.*
Directors.

Robert Allen, Esq.	Richard Drew, Esq.
John A. Arbuthnot, Esq.	John Furse, Esq.
George Barnes, Esq.	Edwin Gower, Esq.
Henry Blanshard, Esq.	Samuel Gregson, Esq.
John Watson Borradaile, Esq.	Edward Harnage, Esq.
Edward Burmester, Esq.	Robert King, Esq.
Henry Cayley, Esq.	William King, Esq.
Aaron Chapman, Esq. M.P.	John Ord, Esq.
Robert Cotesworth, Esq.	George Probyn, Esq.
Charles Crawley, Esq.	John Rees, Esq.
John Deffell, Esq.	Daniel Stephenson, Esq.
James Dowie, Esq.	Thomas Weeding, Esq.

Persons effecting Life Assurances with this Corporation have the choice of two plans:
The one entitling them to an annual abatement of premium after five years' payment;
The other at a lower fixed rate without abatement.
The leading features which distinguish the first of these plans from those of other Life Assurance offices are—
The guarantee of the Corporation for the full payment of the sums assured:
Annual abatements of premium, commencing after five full years' payments:
Total absence of partnership of any kind whatever:
Absolute exemption from the possibility of being called upon to contribute towards making good any losses:
And freedom from all charges of management.
The abatement of premium for the year 1843 on policies of five years' standing, under the first of the above plans, was 31*l.* 10*s.* 2*d.* per cent.
It may be here sufficient to state, as an example, that under the above system a person having effected a policy on or before the 1st of January, 1838, at an annual premium of 100*l.*, had, on the 1st of January, 1843, only the sum of 68*l.* 9*s.* 10*d.* to pay as that year's premium.
The future annual abatement must vary according to the success of this branch of the Corporation's business.
In the Fire Department assurances are effected at the lowest rates.
Attendance daily, from Ten till Four, at both Offices, where prospectuses and every information may be obtained.
ABEL PEYTON PHELPS, Esq.,
Superintendent of the Office in Regent-street.
JOHN LAURENCE, secretary.
The Corporation having determined to increase the number of their agents, are desirous of receiving applications for appointments from parties of respectability and influence residing in the several towns and districts of England and Wales.

ECONOMIC LIFE ASSURANCE SOCIETY,
No. 24, Bridge-street, Blackfriars, London; established 1823.
Empowered by Act of Parliament, 3 William IV.
Lower Rates of Premium than those of any other office that entitle the assured to participate in the profits.
The bonus declared in 1834 amounted upon an average to 16*l.* per cent. on the premiums then paid; and in 1839 a second bonus was awarded, amounting on the average to 31*l.* per cent. on the premiums paid during the preceding five years.
Prospectuses and other particulars may be obtained at the Office, between the hours of ten and four, or will be forwarded to persons resident in the country, on application.
CAMPBELL JAMES DOWNER, Sec.

NATIONAL PROVIDENT INSTITUTION,
48, Gracechurch-street, London, (established at 13, Nicholas-lane, King William-street, December, 1835,) for Mutual Assurance on Lives, Endowments, Deferred Sums, Immediate and Deferred Annuities, enrolled under the Acts of Parliament relating to Friendly Societies.
Directors.

C. P. Bousfield, Esq.	Robert Ingham, Esq.
John Bradbury, Esq.	Joseph Janson, Esq.
William Cash, Esq.	S. Harhurst Lucas, Esq.
Thomas Castle, Esq.	C. Lushington, Esq.
James Crofts, Esq.	John St. Barbe, Esq.
John Feltham, Esq.	Richard Shortridge, Esq.
Joseph Hargrave, Esq.	Samuel Smith, Esq.
Thomas Hodgkin, M.D.	

Medical Directors.
J. T. Conquest, M.D. F.L.S. | Thomas Bevan, M.D. F.L.S.
Solicitors—Messrs. Hardwick & Davidson.
THIS INSTITUTION completed the Seventh Year of its establishment on the 15th of December, 1842, and, in accordance with a Rule made at its commencement, a careful valuation of its liabilities and assets has been made by an eminent Actuary (Charles Ansell, Esq.), for the purpose of making the first division of profits amongst its members, the gratifying result of which is exemplified in the following instances, showing the profit assigned to policies which have existed from one to seven years:

Policies in Existence.	Age at commencement.	Sum Assured.	Amount of Bonus.	Original Premium.	Reduction in Premium in lieu of Bonus.	Equal to a Reduction per Cent. on the Original Premium of
7	50	1,000	163 11 0	63 0 0	27 17 3	44
6	52	2,000	227 19 0	97 11 8	34 5 10	35
5	51	1,000	91 3 0	47 2 6	13 6 4	28
4	42	500	28 19 0	17 12 1	3 13 3	20
3	46	500	37 8 0	31 18 9	4 18 10	15½
2	63	3,000	140 15 0	224 15 0	23 11 7	10½
1	42	2,000	26 14 0	70 8 4	3 3 9	4½

The Directors refer with great confidence to the above statement, as exhibiting the most satisfactory proof of the superiority of the principle on which this Institution is founded, namely, that of MUTUAL LIFE ASSURANCE, carried out under the protection and advantages afforded by the acts of Parliament relating to FRIENDLY SOCIETIES, and fully warranting them in thus directing the public attention to the peculiar privileges secured to all assurers.
Members, whose renewal premiums became due on the 1st instant, are reminded that the same must be paid within 30 days from that time.
The Report of the Directors to the Annual Meeting of the Members, held on the 15th of December last, Prospectuses, and every other information, may be had on application at the Office, or to the Country Agents.
The next Division of Profits will take place in December, 1847.
London, July 6, 1843. JOSEPH MARSH, Secretary.

IMPORTANT PATENT IMPROVEMENTS in CHRONOMETERS, WATCHES, and CLOCKS.—E. J. DENT, sole patentee, has OPENED his West-end PREMISES, 33, Cockspur-street, Charing-cross, in addition to 82, Strand, with an entirely new stock of Watches and Clocks, Ladies' Gold Watches, 8 guineas each; Gentlemen's ditto, 10 guineas; and Silver Levers at 6 guineas each.—A new edition of Dent's Lectures, price 1*s.*, but to customers gratis.

METCALFE'S NEW PATTERN TOOTH-BRUSH and SMYRNA SPONGES.—The Tooth-Brush has the important advantage of searching thoroughly into the divisions of the teeth, and cleaning them in the most effectual and extraordinary manner, and is famous for the hairs not coming loose—1*s.* An improved Clothes-Brush, that cleans in a third part of the usual time, and incapable of injuring the finest nap. Penetrating Hair-Brushes, with the durable unbleached Russian Bristles, which do not soften like common hair. Flesh-Brushes of improved graduated and powerful friction. Velvet-Brushes, which act in the most surprising and successful manner. The Genuine Smyrna Sponge, with its preserved valuable properties of absorption, vitality, and durability, by means of direct importations, dispensing with all intermediate parties' profits and destructive bleaching, and securing the luxury of a genuine Smyrna Sponge. Only at METCALFE'S Sole Establishment, Oxford street, two doors from Holles-street.
CAUTION—Beware of the words "From Metcalfe's" adopted by some houses.

WATCHES by WEBSTER & SON, Chronometer Makers to the Lords of the Admiralty (Established 123 years), 3, BIRCHIN-LANE. The largest assortment of fine Second-hand Watches of any house in London, by the most eminent makers—many nearly equal to new, and at little above half their original cost, all of which W. & Son warrant. They consist of fine Repeaters, Duplex, Lever, and Horizontal Escapements, all of superior manufacture. New Watches of the most elegant patterns upon the principle of their Chronometers, to which the Government awarded the prizes three years in succession, with compensation balances to counteract the variations of temperature. Also a large assortment of Lever and elegant Horizontal Watches, for Ladies and Gentlemen, at considerably reduced prices. Old Watches taken in exchange. The most experienced workmen are employed on the premises in the repairing department.
Webster & Son, 3, Birchin-lane, Cornhill.

MOULD CANDLES to BURN WITHOUT SNUFFING.—KEMPTON'S PATENT.—These candles do not require snuffing; they burn longer and are cheaper than any other candle; the flame is steady and brilliant. No metallic or deleterious matter is used in the manufacture. Price 8*d.* per lb. Sold by G. K. Parish, agent for exportation, 71½, Bread-street, City, and by Slodden & Stocking, 42, High-street, Marylebone; W. Gethem, Broadley-terrace, Blandford-square; W. Evans, Italian warehouse, Greenwich; John Hawkins, grocer, High-street, Whitechapel; George Hawley, grocer, Pitfield-street, Hoxton; S. Game, Fish-street-hill; J. Pain, grocer, Bethnal-green-road; G. H. Hudson, 229, Blackfriars-road; C. H. Nicholas, 19, Bolingbroke-row, Walworth; and at the manufactory, Old Bargehouse, Christchurch, Surrey.

STONE-COLOURED CEMENT.
FELIX AUSTIN, of the New Road, Regent's Park, begs to inform Architects, Builders, Plasterers, &c. that during the process of manufacturing a very superior composition which has greatly improved his well-known Artificial Stone Ornaments, he has succeeded in making an excellent STONE-COLOURED CEMENT, adapted to building, more especially for facing brick walls and repairing decayed stone work, which he can supply at 2*s.* 6*d.* per bushel, at his Manufactory, near the Thames Tunnel, Rotherhithe.

MESSRS. BARRY & SON, Stationers and Engravers, beg to inform the Nobility and Gentry that they are now enabled to PRINT ARMS, CRESTS, &c., for book plates, in their proper heraldic colours, and at very moderate prices. Crests engraved on visiting cards in the first-rate style, 8*s.*; without the crest, 2*s.* 6*d.*; and 100 cards, 2*s.* 6*d.*: also every description of elegant engraving. Specimens of the above may be selected from a large and fashionable assortment, at their warehouses, Egyptian Hall, Piccadilly, and 122, Bishopsgate-street Within, or sent on application any distance free of expense. Superfine letter papers, 27*s.*, 23*s.*, 20*s.*, 18*s.*, 17*s.*, 14*s.*, 12*s.* and 8*s.* per ream; Note ditto, 18*s.*, 16*s.*, 12*s.*, 8*s.*, 6*s.* and 4*s.* per ream. An additional charge is made for stamping either of the above with arms, crest, coronet, or initials. Their miscellaneous stock, which is very large and particularly adapted for presents, consists of dressing cases, writing desks, inkstands, envelope cases, albums, blotting-books, bibles and prayers, gold and silver pencil cases, pen-holders, toilet and smelling bottles, souvenirs, ladies' companions, sachets, card and glove cases, pocket-books, papeterie, and envelopes suitable for invitations, complimentary notes, weddings, &c. Either of the above articles may be had plain, or of the most costly description, with every description of useful stationery. Postage stamps and envelopes at Government prices. Messrs. Barry & Son are also the West-end Agents for Mr. Robert Best Ede's Perfumery.

LEA & PERRIN'S 'WORCESTERSHIRE SAUCE.' Prepared from the Recipe of a Nobleman in the County.—The above celebrated Sauce has, from the time of its introduction, been steadily progressing in public favour. Its peculiar piquancy, combined with exquisite flavour, establish it of a character unequalled in sauces. Noblemen and others, of acknowledged gout, pronounce it to be 'the only good sauce;' and for enriching gravies, or as a zest for fish, curries, steaks, game, cold meat, &c., especially unrivalled. As a rapidly-increasing inquiry is now made for it in all parts of the kingdom, the Proprietors beg to state that druggists, grocers, and others may be supplied by their agents—Messrs. Barclay & Sons, Farringdon-street; Mr. J. Harding, 59, King-street, Stepney; Messrs. Metcalfe & Co. 16, Southampton-row; and by the Wholesale Oil and Italian Warehousemen in London, upon the same terms as at their Warehouse at Worcester.—Sold retail, in half-pint bottles, at 1*s.* 6*d.*; pints, 2*s.* 6*d.*; and quarts, 5*s.* each, with the Proprietors' stamp over the cork of every bottle.

COMPOSITION FOR WRITING WITH STEEL PENS.
STEPHENS' WRITING FLUID.
THESE COMPOSITIONS, which have so remarkably extended the use of the STEEL PEN, are brought to very great perfection, being more easy to write with, more durable, and in every respect preferable to the ordinary Ink. In warm climates they have become essential. They consist of—An INSTANTANEOUS BLACK INK—A BLUE FLUID, changing to an intense Black colour—PATENT UNCHANGEABLE BLUE FLUIDS remaining a deep Blue colour—A SUPERIOR BLACK INK, of the common character, but more fluid—A SUPERIOR CARMINE RED for Contrast Writing—A CARBONACEOUS RECORD INK, unchangeable by any Chemical Agent—Also, a new kind of MARKING INK for Linen; and Inkholders adapted for preserving Ink from Evaporation and Dust. Bottles at 3*d.* each, convenient for writing from, are prepared, which will enable those who may wish to try either of these articles to do so at a small expense. Prepared by HENRY STEPHENS, the Inventor, 54, Stamford-street, Blackfriars-road, London; and sold by Stationers and Booksellers.—N.B These unchangeable Blue Fluids are Patent Articles; the public are therefore cautioned against imitations, which are infringements; to sell or use which is illegal.
STEPHENS' SELECT STEEL PENS.—The utmost possible care having been bestowed upon the manufacture of these articles so as to procure the highest finish, they can be confidently recommended both for flexibility and durability.

FOR BEAUTIFYING THE SKIN.—GODFREY'S EXTRACT of ELDER FLOWERS, a most fragrant perfume, and delightful cosmetic. It speedily and completely removes tan, redness, &c., and by its cooling, balsamic, and healing qualities, renders the skin soft, pliable, and free from dryness, scurf, &c., and clears it from every humour, pimple, or eruption. By its use the skin becomes, and continues, delicately clear and soft, and the complexion fair and beautiful. In shaving, it is invaluable, rendering the skin smooth and firm, and protects it from the effects of sun and dust. It is beyond all praise as a general family lotion. Sold in bottles, price 2*s.* 9*d.*, by all respectable Medicine Venders and Perfumers.

DELICACY OF COMPLEXION.—The use of GOWLAND'S LOTION is speedily followed by the disappearance of every species of cutaneous defect and discolouration, and the establishment of a pure surface of the skin, accompanied by the brilliant circulation which constitutes the tint of beauty; whilst as a refresher it preserves the most susceptible complexion from the effects of heat, freckle, and sallowness, and sustains in all cases to a protracted period the softness of texture and vivacity peculiar to earlier years.—'Robt. Shaw, London,' is in white letters on the Government stamp, without which it is not genuine.—Prices, 2*s.* 9*d.*, 5*s.* 6*d.*; quarts, 8*s.* 6*d.* Sold by all Perfumers and Medicine Venders.

FOR GOUT, RHEUMATISM, AND RHEUMATIC GOUT.
SIMCO'S GOUT and RHEUMATIC PILLS are a certain and safe remedy; they restore tranquillity to the nerves, give tone to the stomach and strength to the whole system. No other medicine can be compared to these excellent pills, as they prevent the disorder from attacking the Stomach or Head, and have restored thousands from pain and misery, to health and comfort. Sold by A. Willoughby & Co., 150, G. Windus, 61, Bishopsgate Without, and nearly all Medicine Venders, at 1*s.* 1½*d.* or 2*s.* 9*d.* per box.

Exposé of the folly of ascribing Nervousness to Stomach, Liver, and Bowel Complaints.—Just published, 3rd edition, by Dr. Moseley, price 5*s.* ("This is the best book on nervousness we have."—*Prof. S——, Surgeon.*)

ELEVEN CHAPTERS on NERVOUS or MENTAL COMPLAINTS. Simpkin & Marshall, and all Booksellers. A clergyman of Cambridge University, having cured himself of a nervous complaint of fourteen years' duration, and in eight years, out of 9,000 patients, knows not 20 uncured, offers, from benevolence rather than gain, to cure others. Low spirits, sleeplessness, mental debility, exhaustion, determination of blood to the head, vertigo, groundless fear, failure of memory, incapacity for study and business, restlessness, irresolution, wretchedness, indecision, delusion, melancholy, thoughts of self-destruction, insanity, &c., are curable by this discovery. Most recover in six weeks. Means of cure sent to all parts at the cost or half the cost prices, and no fee for advice demanded. Apply to, or address, post paid, Rev. Dr. Willis Moseley, 9, Charlotte-street, Bloomsbury. At home from 11 till 3.

THE NEGROLAND of the ARABS EXAMINED and EXPLAINED; or, an Inquiry into the EARLY HISTORY and GEOGRAPHY of CENTRAL AFRICA.
By WILLIAM DESBOROUGH COOLEY.
"A truly classical work... This work, well considered, is historical rather than geographical and ethnographical; it is unquestionably the only truly critical work hitherto undertaken and completed on the subject."—Count Gräberg da Hemsö, in the *Rivista Europea*, May, 1843.
"The additions thus made to historical, as contradistinguished from conjectural geography, can be at once seen and appreciated....The gain for geography as subordinate to historical inquiry, which results from Mr. Cooley's essay, is equally great. ....The book is characterized throughout by acuteness and sound judgment."—*Royal Geogr. Society's Journ.* Vol. XII.
"Un travail consciencieux, et qui demandait de grandes connaissances acquises."—*Bulletin de Soc. Geogr.*
London: J. Arrowsmith, 10, Soho-square; and all Booksellers.

[JAMES HOLMES, TOOK'S COURT, CHANCERY LANE.]

BRITISH ASSOCIATION for the ADVANCEMENT of SCIENCE.

The THIRTEENTH MEETING of the BRITISH ASSOCIATION for the ADVANCEMENT of SCIENCE, will commence in CORK on THURSDAY Morning, the 17th of AUGUST, 1843.

JOHN TAYLOR, F.R.S., General Treasurer.

2, Duke-street, Adelphi.

PUBLIC MEETING.—BRITISH and FOREIGN INSTITUTE.—A PUBLIC MEETING of the FRIENDS of the BRITISH and FOREIGN INSTITUTE will be holden at the Hanover-square Rooms, on the Morning of Thursday, July 20.—Prospectuses of this new literary association may be had of Messrs. Smith, Elder & Co. 65, Cornhill; Colnaghi & Co. 23, Cockspur-street; and at the Hanover-square Rooms, where platform tickets for members only, and visitors' tickets for ladies and gentlemen, may be had between the hours of Twelve and Four; but none will be issued after the morning of the 19th. The Chair will be taken by the EARL of DEVON at Two o'clock precisely.

COMMERCIAL SCHOOL, GOTHIC HALL, ENFIELD, MIDDLESEX, by T. WEARE, Son and Successor to the Rev. W. WEARE.—T. WEARE respectfully informs his friends and those parents who are desirous of combining domestic comfort and liberal treatment, with a sound and useful education, that he continues to receive Pupils on his usual moderate terms. Referees, Rev. J. J. Davies, Tottenham; Rev. T. Bourne, A.B., near Hinckley; D. M'Niel, Esq. Stock Exchange; and the Parents of the Pupils. No day scholars are admitted. Accommodation for Parlour Boarders. The present Vacation terminated on the 14th inst.

A VERY superior BOARDING SCHOOL, within eight miles of London. Terms 20 to 23 guineas per annum. The Principal, who is a clergyman, and of extensive experience in the scholastic profession, ventures to affirm that there is no establishment of superior advantage for salubrity, elegance, and convenience of premises, pleasure-grounds, baths, &c., together with domestic indulgences, which are under the superintendence of the proprietor's wife, who is the affectionate mother of a large family, and plans of education which cannot fail to ensure the greatest anxiety to improve without corporal punishment. Such confidence is entertained of satisfaction being afforded, that gentlemen are permitted to be withdrawn in case of dissatisfaction merely by paying to the time of their removal.—A Prospectus will be sent in answer to letters to A. J., Post-office, Lower Tooting, Surrey.

LEICESTER COLLEGIATE SCHOOL RE-OPENS on MONDAY, July 31st.

The course of instruction pursued comprises a sound Classical and Mathematical training, by means of which the Pupils are enabled immediately to pass to either of the Universities.

The fundamental principles of a good English and Commercial Education are either combined with sound Classical Instruction, or are taught separately, according to the wish of parents.

TERMS OF THE SCHOOL.

Entrance Fee, 1l.

Classical Department { Upper Forms, 12l. per annum. Lower Forms, 10l. per annum.

Commercial Department, 8l. per annum.

TERMS FOR BOARDERS, EXCLUSIVE OF THE SCHOOL FEES.

With the Head Master, the Rev. A. Hill.

Above 10 years, 35 guineas per annum.
Under 10 — 30

With the Under Master, Mr. Wilkinson.

Above 10 years, 25 guineas per annum.
Under 10 — 20

No extras but for washing.

BRUCE CASTLE SCHOOL, TOTTENHAM.—Bruce Castle is rather more than five miles from London, and is about a quarter of a mile west of the high road to Hertford. It stands in a park containing nearly twenty acres of land, and the surrounding country is open and salubrious.

A description of Bruce Castle will be found in the 'Beauties of England and Wales,' and in Lysons' 'Environs of London.'

In addition to the Conductor, there are Six resident Teachers, one of whom is a native of France. The course of study is such as to enable a young man, immediately on leaving school, to enter one of the Universities, to engage in commerce or agriculture, or to adopt the military or naval profession. Much general knowledge is communicated by means of a course of private reading, in which the Pupils are induced to engage. Lectures too are delivered on various branches of Natural Philosophy.

In his plans of government and instruction, the Conductor addresses himself as far as possible to the religious principles, reasoning powers, and good feelings of his Pupils. The grounds of the School regulations, and of the formulæ employed in the studies of the Pupils, are explained, and at all times the Pupils are encouraged to apply for information respecting everything which is not perfectly clear to their minds. Acting on the principle referred to, and others connected with it, the Conductor has succeeded in rendering the acquisition of knowledge, to a certain degree, what with unlimited means and under perfect arrangements it would be entirely—namely, a source of continual pleasure to the scholar.

In developing the same principles, also, he has been enabled to dispense, to a very great extent, with artificial rewards and punishments, and to associate the boys themselves in the business of school government. Corporal punishments he entirely discards, and with rare exceptions he has found that, by treating a boy as a reasonable being, possessed of good natural feeling, it is quite practicable to induce upright conduct, a gentlemanly demeanour, a desire to oblige, and an anxiety to avoid the infliction of pain, either moral or physical. To the early formation of habits of industry, punctuality, and obedience, the cultivation of a love of knowledge, the elevation of the moral feelings, and the development of the mental and physical powers, the Conductor directs his most strenuous efforts, being convinced by long experience that, beside the direct benefits conferred upon his Pupils, it is by such means alone that he can hope to lay a sure foundation for solid acquisition.

A concise view of the plans in use is given in a small pamphlet, entitled 'Sketch of the System of Education at Bruce Castle, Tottenham' (Charles Knight, London, 1837).

Information respecting the charges and other matters of detail may be obtained by application at Bruce Castle.

There is also a Preparatory School for Boys between the age of Four and Nine, the Pupils of which are under Female Superintendence, the plans of instruction being, with some modification, those generally adopted in Infant Schools.

The Vacation will terminate with Wednesday, July 26.

FRESCOS BY PAUL VERONESE.—FOR SALE, by Private Contract, THREE SPLENDID FRESCOS by this celebrated Master, now on view at 50, Pall Mall.

TO ARTISTS.—ART-UNION OF LONDON.—SIXTY POUNDS will be given for the best consecutive Series of not less than TEN DESIGNS IN OUTLINE, size 12 inches by 8. The subject is left at the option of the Artist, but must either be illustrative of Sacred or British History, or be taken from the work of some English Author. Simplicity of composition and expression, severe beauty of form, and pure, correct drawing, are the qualities which the Committee are anxious to realize in this Series. If it should be deemed expedient to engrave the Compositions selected, the Artist will receive a further remuneration to superintend the publication. The Drawings, accompanied by a sealed letter, containing the name and address of the Artist, must be forwarded to the Honorary Secretaries, on or before Lady Day, 1844.

4, Trafalgar-square, GEO. GODWIN, } Honorary
20th June, 1843. LEWIS POCOCK, } Secretaries.

*** The Series by Mr. H. C. Selous, illustrative of 'The Pilgrim's Progress,' are being engraved by Mr. H. Moses for the Subscribers of the current year.

Sales by Auction.

Apply to Mr. Bull, English and Foreign Public Library, 19, Holles-street, four doors from Cavendish-square.

TO READING and BOOK SOCIETIES, CLERGYMEN and FAMILIES, throughout ENGLAND, SCOTLAND, and IRELAND.

New Plan for obtaining all the NEW PUBLICATIONS and STANDARD WORKS for Perusal without Purchase.

Now ready, *Gratis* and Post-free,

HINTS for the FORMATION of READING SOCIETIES.—The plan advocated in this little pamphlet will effect two important objects—that of adding to the supply of the current literature the choice of all the most valuable works in the various languages, and that of extending the choice of New Books to the entire productions of the press. It is especially adapted to provincial readers, as, by a small annual subscription, the perusal of all the New Works as they appear may be obtained.

Saunders & Otley, Publishers, Conduit-street.

SUPERB NOVELTIES in PAPIER MACHÉ at MECHI'S, No. 4, Leadenhall-street, London.—A visit to his establishment will prove that there is not in London another such stock of elegancies. They consist of ladies' tables, envelope cases, netting boxes, companions, cabinets, jewel cases, workboxes, dressing cases, tea caddies, hand and pole screens, card racks, table inkstands, regency writing desks, portfolios, playing card and visiting card cases, cigar and bottle cases, note and cake baskets; also an assortment of needle cases, in pearl and tortoiseshell, silver and gold pencil cases, pen holders, and other articles suitable for presents. Inventor of the patent castellated tooth brush.

DERBY.—OPTICAL AND PHILOSOPHICAL INSTRUMENT REPOSITORY.

JOHN DAVIS, OPTICIAN, Derby (late Cheltenham), has the honour to inform his Patrons that he has centralized his extensive connexion in Derby, where, in future, he will be happy to receive orders. He begs to call attention to his celebrated Pocket Telescopes, measuring but 3¼ inches when closed, and are capable of defining clearly Jupiter's moons. Oberhäuser's Objectives supplied to the trade. Several second-hand Telescopes, by Dollond, on sale.—No connexion with any house in London.

PERFECTLY NEW AND UNIQUE PATENT BEDSTEADS.

H. PRATT respectfully solicits the particular attention of the Nobility and Gentry furnishing, and Officers joining their regiments, to the PATENTED PAPER METALLIC DOVETAIL JOINTED BEDSTEADS, which he has made arrangements with the Patentees to introduce to their notice. It is long since so necessary and useful an improvement has been invented, and one more especially deserving their notice. The facility with which they are fixed up and taken down in a few minutes, without the use of tools—the elegant and light appearance—the firmness of construction, and the utter impossibility of annoyance from insects,—all join to render them paramount to any other ever invented. The PATENT ELASTIC SPRING BEDS, &c. and complete Fittings, supplied in plain and decorative appointments. Now on view at H. Pratt's Trunk and Military Outfit Warehouse, 123, New Bond-street.

Just published, by Hering & Remington,

EDUCATIONAL WORKS.

Mr. Graham's New Work.

HELPS to ENGLISH GRAMMAR; or, Easy Exercises for Young Children. By G. F. GRAHAM. 12mo. Illustrated by Engravings on Wood. [*On Tuesday next.*

*** The object of this book is to give the young scholar distinct ideas upon subjects of Grammar; and the work is intended to be put into his hands before any regular course of the study is entered upon.

By the same Author, 12mo. 7*s.* cloth,

ENGLISH; or, the Art of Composition explained.

AN ELEMENTARY GRAMMAR of the GREEK LANGUAGE. By Dr. RAPHAEL KUHNER, Co-Rector of the Lyceum of Hanover. Translated by J. H. MILLARD, St. John's College, Cambridge; late Second Classical Master at Mill Hill Grammar School. 8vo. [*Nearly ready.*

*** This work contains all that is most important in the Author's celebrated 'Ausführliche Grammatik.'

AN ENGLISH-GREEK LEXICON for the use of Colleges and Schools. By the Rev. J. A. GILES, LL.D., late Fellow of C. C. C. Oxon. 8vo. 7*s.* 6*d.* cloth.

Also, Second Edition, 8vo. 21*s.* cloth,

DR. GILES'S GREEK-ENGLISH and ENGLISH-GREEK LEXICON.

"A worthy companion to Riddle's Latin Dictionary."—*Athenæum.*

A TREATISE on the GREEK VERB, with reference to the Evolution of it from Primary Elements, the Causes of its Amplification, and the proper Power of its various Forms. By LUCIUS JUNIUS. 8vo. 9*s.* cloth.

HERODOTUS. The History of the Persian Wars, from Herodotus. With English Notes, Examination Questions, and Indices. By the Rev. C. W. STOCKER, D.D., formerly Fellow of St. John's College; and late Professor of Moral Philosophy in the University of Oxford. 2nd Edition, revised and considerably improved, 2 vols. post 8vo. 18*s.* cloth.

DR. BLOOMFIELD'S COLLEGE and SCHOOL GREEK TESTAMENT; with English Notes, and an Index of Greek Words and Phrases explained in them. Third Edition, enlarged and improved. 12mo. with Map, 10*s.* 6*d.*

A COMPLETE ENGLISH-LATIN and LATIN-ENGLISH DICTIONARY. By the Rev. J. E. RIDDLE. 8vo. 31*s.* 6*d.* cloth.

Separately, English-Latin, 10*s.* 6*d.*; Latin-English, 21*s.*

THE YOUNG SCHOLAR'S ENGLISH-LATIN and LATIN-ENGLISH DICTIONARY. Being the Author's Abridgments of the above. Second Edition, square 12mo. 12*s.* bound. Separately, English-Latin, 5*s.* 6*d.*; Latin-English, 7*s.* bound.

"Riddle's Dictionary is the best of its kind in our language."
Athenæum.

Also, by Mr. Riddle,

A DIAMOND LATIN-ENGLISH DICTIONARY; designed chiefly as a Guide to the Meaning, Quality, and right Accentuation of Latin Words. Royal 32mo. 4*s.* bound.

AN INTRODUCTION to the COMPOSITION of LATIN VERSE; containing Rules and Exercises intended to illustrate the Manners, Customs, and Opinions, mentioned by the Roman Poets, and to render familiar the principal Idioms of the Latin Language. By the late CHRISTOPHER RAPIER, A.B. Second Edition, carefully revised by THOMAS KERCHEVER ARNOLD, M.A. 12mo. 3*s.* 6*d.* cloth.

KEY to the Second Edition. 16mo. 2*s.* 6*d.* sewed in cloth.

HORATIUS RESTITUTUS; or, the Books of Horace arranged in Chronological Order, according to the Scheme of Dr. Bentley, from the Text of Gesner, corrected and improved: with a Preliminary Dissertation, very much enlarged, on the Chronology of the Works, on the Localities, and on the Life and Character of that Poet. By JAMES TATE, M.A. 2nd Edition, to which is now added, an Original Treatise on the Metres of Horace. 8vo. 12*s.* cloth.

AN ATLAS of MODERN GEOGRAPHY; consisting of 23 coloured Maps, with Index of nearly Ten Thousand Places. By SAMUEL BUTLER, D.D., late Lord Bishop of Lichfield, and formerly Head Master of Shrewsbury School. Edited by the Author's Son. New Edition, re-engraved, with corrections from the Government Surveys, and the most recent sources of information, 8vo. 12*s.* half-bound.

By the same Author,

A SKETCH of MODERN and ANTIENT GEOGRAPHY, for the use of Schools. A New Edition, revised by his Son. 8vo. 9*s.* boards; 10*s.* 6*d.* bound.

AN ABRIDGMENT of the above, in the form of Question and Answer, for the use of Beginners. By MARY CUNNINGHAM. Third Edition, 18mo. 2*s.* sewed.

AN ATLAS of ANTIENT GEOGRAPHY; consisting of 22 Maps, with Index of about 4000 Names. 8vo. half-bound, 12*s.*

THE ANTIENT and MODERN ATLAS. 4to. half-bound, 24*s.*

OUTLINE MODERN and ANTIENT GEOGRAPHICAL COPY BOOKS. 4to. 4*s.* each, sewed.

London: Longman, Brown, Green, and Longmans.

New Publications.

I.

PRIZE CARTOONS.

WESTMINSTER HALL.

MESSRS. LONGMAN & Co. have the honour to announce that, under the sanction and patronage of Her Majesty's Commissioners on the Fine Arts, they have made arrangements for the publication of the Eleven PRIZE CARTOONS, which have been selected from the Hundred and Forty Designs exhibited in Westminster Hall.

The account of the proceedings of the Royal Commissioners, which resulted in the production of these Cartoons, will accompany the Engravings; and the utmost pains will be taken to render the whole Work as perfect as possible in all its details, and creditable to the state of British Art.

The size of the Work will be large folio. The price of the Eleven Engravings will be Five Guineas, in a neat portfolio; Proofs before Letters, Eight Guineas.

Subscribers' Names will be received by the Publishers, and by all Booksellers and Printsellers in the United Kingdom.

☞ *A book for Subscribers' Names is open in Westminster Hall; and at 39, Paternoster-row.*

II.

PERSONAL OBSERVATIONS ON SINDH:

The Manners and Customs of its Inhabitants, and its Productive Capabilities; with a Narrative of the Recent Events.

By CAPTAIN POSTANS,

Bombay Army, late Assistant to the Political Agent, Sindh.

8vo. with Map, coloured Frontispiece, and Illustrations on Wood. 18*s.* cloth.

III.

THE CORRESPONDENCE OF

JOHN, FOURTH DUKE OF BEDFORD.

Vol. II., with an Introduction by LORD JOHN RUSSELL. 8vo. [*Next week.*

*** This Volume will be of unusual interest at the present moment, as it contains the letters which passed when the Duke of Bedford was Lord Lieutenant of Ireland, and a detail of the trouble he met with from the Irish Parliament.

IV.

MEREDITH.

By the COUNTESS OF BLESSINGTON.

3 vols. post 8vo. 31*s.* 6*d.* boards.

"As an acute and brilliant delineator of the traits and foibles of fashionable life, Lady Blessington is unequalled. She draws with a steady yet delicate hand the denizens of *le beau monde*, justly discriminating the various shades of character she has to deal with; and presents, at last, a lively picture, replete with striking contrast, yet exquisitely natural, of which we admire the execution whilst we acknowledge the truth."—*Court Journal.*

V.

THE EDINBURGH REVIEW,

No. CLVII. [*On TUESDAY next.*

CONTENTS.

I. FREE TRADE and RETALIATION.
II. THE LIFE of a TRAVELLING PHYSICIAN.
III. CAPT. BEECHEY'S VOYAGES towards the NORTH POLE.
IV. SCROPE'S DAYS and NIGHTS of SALMON FISHING.
V. PARISIAN MORALS and MANNERS.
VI. TRAVELS IN MEXICO and the GREAT WESTERN PRAIRIES.
VII. LIFE and WRITINGS of ADDISON.

VI.

THE EMPIRE OF THE CZAR.

By the MARQUIS DE CUSTINE.

Translated from the French. 3 vols. post 8vo. [*Nearly ready.*

VII.

LETTERS FROM HOFWYL

On the EDUCATIONAL INSTITUTIONS of DE FELLENBERG. By A PARENT. With an Appendix, containing Woodbridge's Sketches of Hofwyl, from the 'Annals of Education.' Post 8vo. 9*s.* cloth.

London: Longman, Brown, Green, and Longmans.

BOOKS FOR SCHOOLS AND FAMILIES,

PUBLISHED UNDER THE DIRECTION OF THE COMMITTEE OF GENERAL LITERATURE AND EDUCATION,

Appointed by the Society for Promoting Christian Knowledge.

ENGLISH GRAMMAR. By the Rev. Dr. RUSSELL, late Head Master of the Charterhouse. 1*s.* 6*d.*

THE BIBLE WORD BOOK; or, the Rudiments of the English Grammar taught by the Words of the Old and New Testament. 1*s.* bound.

OUTLINES of GEOGRAPHY. By GEORGE HOGARTH. With Maps and Woodcuts, 10*d.*

OUTLINES of the HISTORY of ENGLAND. By G. HOGARTH. With numerous Woodcuts, 1*s.* 3*d.*

OUTLINES of ROMAN HISTORY. By GEORGE HOGARTH. With numerous Woodcuts, 10*d.*

OUTLINES of GRECIAN HISTORY. By the Rev. B. BOUCHIER. With Maps and Views, 1*s.*

ARITHMETIC TAUGHT by QUESTIONS. 1*s.* 6*d.*

A FIRST BOOK on ALGEBRA. 1*s.* 6*d.*

A FIRST BOOK on GEOMETRY; with an Introduction to Trigonometry. 1*s.* 6*d.*

EASY LESSONS in MECHANICS. With Woodcuts, 3*s.*

OUTLINES of ASTRONOMY. By the Rev. Professor HALL. With numerous Woodcuts, 10*d.*

OUTLINES of SACRED HISTORY. With numerous Woodcuts, 3*s.* 6*d.*

MANNERS and CUSTOMS mentioned in HOLY SCRIPTURE, illustrated by Extracts from the Works of Travellers. With numerous Woodcuts, 4*s.*

THE ELEMENTS of BOTANY. With many Engravings, 2*s.*

EASY LESSONS on MONEY MATTERS, for the Use of Young People. With Woodcuts, 1*s.*

THE INSTRUCTOR; or, Progressive Lessons in General Knowledge. With Questions for Examination upon each Lesson.

Vol. I. EXERCISES and CONVERSATIONS, with easy Lessons from History.—Vol. II. LESSONS on HOUSES, FURNITURE, FOOD, and CLOTHING.—Vol. III. LESSONS on the UNIVERSE; the Animal, Vegetable, and Mineral Kingdoms; and the Human Form.—Vol. IV. The BOOK of the CALENDAR, the MONTHS, and the SEASONS.—Vol. V. DESCRIPTIVE GEOGRAPHY, with Popular Statistics of the various Countries and Divisions of the Globe.—Vol. VI. ELEMENTS of ANCIENT HISTORY.—Vol. VII. ELEMENTS of MODERN HISTORY.

In Seven Volumes, each being complete in itself, and illustrated by numerous Woodcuts, price 2*s.*

SCHOOL HISTORY of ENGLAND, with a copious Chronology, Tables of Contemporary Sovereigns, and Questions for Examination; Abridged from the FAMILY HISTORY of ENGLAND. By the Rev. G. R. GLEIG, M.A. Strongly bound, 6*s.*

THE CLASS READING BOOK; designed to furnish Youth with Information on a variety of subjects. By G. LUDLOW, of Christ's Hospital, Hertford. 3*s.* bd.

THE CHURCH SCHOLAR'S READING BOOK, consisting of Selections from the *Saturday Magazine*, classed and arranged under different subjects. To each Volume is added a copious Explanatory Index, Historical, Biographical, Literary, and Scientific. 3 vols., 3*s.* each, together or separately.

READINGS in POETRY; a Selection from the best English Poets, from Spenser to the present Times; with Specimens of the American Poets; Biographical Sketches, and Notes. 4*s.* 6*d.*

READINGS in ENGLISH PROSE LITERATURE; choice Specimens of the best English Writers, from Lord Bacon to the present Time. With Biographical Sketches and ESSAYS on ENGLISH LITERATURE. 4*s.* 6*d.*

READINGS in BIOGRAPHY; a Selection of the Lives of Eminent Men of all Nations. 4*s.* 6*d.*

READINGS in SCIENCE; familiar EXPLANATIONS of Appearances and Principles in NATURAL PHILOSOPHY. With many Woodcuts, 5*s.*

HISTORY of the CHRISTIAN CHURCH, from the Ascension of Jesus Christ to the Conversion of Constantine. By Prof. BURTON, Oxford. 6*s.* 6*d.*

London: JOHN W. PARKER, West Strand.

REVIEWS

An Apology for the Revival of Christian Architecture in England. By A. Welby Pugin, Professor of Ecclesiastical Antiquities at St. Marie's College, Oscott. 4to. Weale.

THIS 'Apology' of Mr. Pugin's stands greatly in need of an apology, so arrogantly does the writer set himself up as supreme judge over the whole profession, nay, almost assume to himself the respective functions of judge, advocate, and jury. For advocate he is well qualified, being a dexterous special pleader, and by no means deficient in the art of brow-beating; not so, however, for judge, inasmuch as he is partial and prejudiced,—unless indeed his unqualified reprobation of all modern buildings can be received in proof of impartiality. We must, however, give Mr. Pugin credit for nerve and fearlessness, though not for independence and disinterestedness. Undeniably Mr. Pugin is neither flatterer nor time-server, as regards professional men and their employers: on the contrary, he is at no pains to conceal his contempt for the abilities of the former, and for the judgment of the latter: he is obviously willing, and even eager, to provoke hostility in those quarters,—what then? he attacks those from whom he can expect little, and with whom he has already broken all bonds of amity, when by so doing he strongly ingratiates himself with another class who have ample patronage to bestow, and who are in a manner bound to support him, on account not only of his architectural ability, but of his religious zeal and championship.

His staunch Roman Catholicism, however, interferes not a little with "catholicity" of feeling for art; since he would fain proscribe every other style of architecture but that which he designates "Christian"—though by so doing he anathematizes—at least, must in consistency be supposed to do so—nearly all the modern Christian or Roman Catholic architecture of Roman Catholic countries. That, of course, is a point which he takes care to keep out of sight as much as possible; nor has he the candour to acknowledge that for what has been done towards the "Revival of Christian Architecture," the world is mainly indebted, not to Roman Catholics, but to Protestants,—to Protestant England, Protestant antiquaries and architects. But for them and their labours, no "Revival" would have been heard of at all. Mr. Pugin allows the *animus* of his writings to discover itself too palpably; because not only does he carefully gloss over the "paganism" mixed up with Christian architecture in Roman Catholic countries, but as carefully suppresses whatever would tend to show that his favourite style is understood and appreciated among us Protestants. Surely it would not have been foreign to the purpose of his work had he taken a comprehensive view of what had, up to the present time, been done in this country towards that "Revival" which he preaches up, and shown what progress had been made by us since our first essays in a style of which a few years since we were all but ignorant. Marked and progressive improvement there has been; yet from Mr. Pugin's work no one would suspect such to be the case; consequently, he lays himself open to the charge of disingenuousness, and withal, adopts a singular mode of encouraging us to persevere in the course we have entered upon. According to him—not indeed that he asserts as much in direct terms, but he certainly leaves it to be inferred—we now know very little more of the Pointed style, of its principles and genius, than we did when we first began to resume it;—now, if such be really the case, it becomes a question whether we should not act more wisely in abandoning it altogether. Both in this and other respects Mr. Pugin overshoots his mark: so very anxious is he to convict us of having constructed nothing but monstrosities and absurdities, and to reproach us with decided failures—things universally admitted to be such, and some of them no less obscure than they are contemptible—that he takes no note of anything else. Fain would he make it appear that we have hitherto invariably failed,—that we have not once succeeded in producing what can be fairly set off on the credit side of the account; which is of course no less candid and impartial than it is flattering and encouraging. Mr. Pugin may be a giant in his art, but then he is too much of the Polyphemus species: he has but one eye, and with that he keeps such strict watch for blunders and errors, as to be quite blind to merits, and to the comparatively great progress made of late years. Yet policy no less than fairness might have dictated a different course, for, according to Mr. Pugin, it is somewhat premature for us to think of re-establishing the Pointed style, especially to the extent he proposes, there being at present scarcely an architect among us capable of entering into its spirit, or who has produced a satisfactory specimen of it.

An exception, indeed, is made in favour of Mr. Barry's Houses of Parliament, a structure to which the author of the 'Apology' could not very well avoid referring, since to have passed over that example in utter silence would have been somewhat too glaring an omission: yet that need not have been the only one, nor would it have been beside his purpose had he pointed out one or two instances where the Gothic has been employed, with more or less success, for modern buildings on a moderate scale. Hardly can such a vast and magnificent pile as the Houses of Parliament, where all possible appliances of art will be made use of, be taken as proof of the applicability of the style to general purposes; on the contrary, there is every reason to suppose that were it to be employed on all occasions indiscriminately, as Mr. Pugin recommends, we should have still more wretched specimens—viler attempts, if possible, in it, than any yet produced. There are besides many classes of buildings for which the Pointed style would be quite out of character; consequently to deck them out in Gothic would be merely putting them into masquerade costume. There is a wide difference between adopting the style where it can be applied with propriety and be adequately treated, and attempting to revive it as a national one to the exclusion of every other. However much we may regret that Gothic architecture did not continue in use when it was our national style, and not a mere fashion, it by no means follows that it is expedient, or even practicable, to bring it into use again. The labour would be a double one: there would be quite as much to undo as to do,—to get rid of, clear away and unlearn, as to learn and carry on. Could it be shown that society had stood still,—that the England of the nineteenth century is precisely what it was in the fourteenth or fifteenth,—then indeed there might be some force in the argument that we ought still to adhere to the architecture of our forefathers. But without any disrespect to our forefathers, and the "good old times," it would be idle in us to think of re-adopting the usages and practices of the one, or of reviving the other. Even in these days of invention and discovery, no one has yet found out the art of making nations grow young again. Society is not to be pushed backwards at pleasure like the hands on the face of a clock; be it for good or for evil, its course is invariably onwards: the onwards has sometimes been downwards, but of a backward movement to place itself in a happy *statu quo*, history affords us not a single instance. Granting that it were possible to bring Gothic architecture into universal use again, it would be a mere fashion, and as such it would again pass away.

From what we have said, let it not be supposed that we are insensible to the beauties of "Pointed" architecture, or would fain see that style discouraged among us; on the contrary, we yield not even to Mr. Pugin himself in our admiration of it; and on that very account do we deprecate the indiscriminate use of it. We should be sorry to see it vulgarized among us more than it actually is. Rather let it be reserved for worthy occasions, and then let it be worthily treated. Of its applicability to modern dwelling-houses in towns, and for street architecture generally, Mr. Pugin is so far from convincing us, that the designs intended to illustrate the 'Consistent Principles of Old Domestick Architecture applied to Modern Street Buildings,' make evident its unfitness for the purpose, and point out the difficulties attending the adoption of it: the style looks impoverished and formalized—too much spruced up,—so much so, in fact, that at first we almost mistook them for samples of that modern "Gothicizing" which Mr. Pugin is so severe upon. Some of the details are certainly "queer stuff;" at least appear to be so, owing to the loose, rugged, harsh, and scratchy mode of drawing affected by Mr. Pugin, under pretence, it would seem, of its being more free and spirited, and therefore more artistical. No doubt, freedom and spirit are very desirable qualities, but in architectural drawing intelligibility and correctness of form are a *sine quâ non*. It is all the more extraordinary that Mr. Pugin should now affect such exceedingly vague and coarse drawing and etching, because the 'Gothic Examples,' and other publications of his father, are remarkable for scrupulous accuracy, and at the same time tastefulness of delineation. In fact, it was on that very account that they obtained their high reputation, and have so greatly contributed to advance the study and practice of "Pointed" architecture. Rough, inaccurate representations, which give us only general forms and features, and even in regard to these leave very much to be guessed at, however spiritedly executed, can convey but an imperfect, perhaps an erroneous, idea of buildings, in a style where expression depends so much on the details. How slovenliness of drawing can be esteemed a merit we do not understand: it certainly is not calculated to train the eye to attentive observation of actual buildings and all their nicer lineaments, but rather to encourage similar carelessness and coarseness in execution, and to render us satisfied with obtaining merely the *attitude* of a Gothic building, and its *silhouette*. In Mr. Welby Pugin's own case, there is no danger of his falling into such error; yet the affectation here objected to, may be a dangerous example to others, and, at all events, deprives us of the instruction and gratification we might otherwise derive from his pencil. In his professedly caricature etchings, such drawing may be allowable; but even there Mr. Pugin is apt to exaggerate far more than the occasion justifies—assuredly so, if all he himself says be correct. Plate 4, for instance, gives us one of those architectural jokes in which Mr. Pugin delights—an "Entrance Gateway for a New Cemetery for all Denominations," in a style so *outré* and fantastically absurd, that it makes the greatest monstrosities of the kind appear correct and tasteful in comparison. As a mere joke, it may be funny enough, though somewhat of the

Digitized by Google

coarsest; but it becomes almost a libel when put forth *ex cathedrâ* by the "Professor at St. Marie's, Oscott," as conveying an idea of the architectural taste and intelligence prevailing among us; and it leaves us, besides, disagreeably perplexed to understand whether the "Professor" is in jest or in earnest, and with what latitude of interpretation we are to receive his strictures upon buildings and personal reflections on individuals. Mr. Pugin's buffoonery—for so we must term it—is rather indiscreet, because it shows that he has been obliged to resort to it, in order to justify the contempt in which he professes to hold almost everything that has been erected of late years. Are we to understand him literally, and as speaking deliberately, when he says, "Within my own recollection [have been erected] three (?) royal palaces, half the metropolis, churches without number, vast restorations, entire colleges in both universities, galleries, civic buildings, bridges, hospitals, houses, public monuments in every possible variety, and with the exception of the New Houses of Parliament, we have not one edifice of the whole number that it is not painful to contemplate as a monument of national art." Admitting such picture of the state of architecture among us to be at all just, it tells quite as much against Mr. Pugin's views as it reflects upon the profession; because, according to his own words, all that has been done in the "Pointed" style—and it has not been a little—has proved just as poor and unsatisfactory as the rest; and yet, with equal modesty and consistency, we are asked to discard henceforth all other styles, and stick to that alone! As to the very sweeping and summary condemnation passed by Mr. Pugin on the architectural doings of the last twenty or thirty years, it amounts to no more than unqualified and indiscriminate abuse.

Had Mr. Pugin not dealt so largely in general invective, some of that directed against individuals would have been more severely felt; whereas, now, the "lecturing" which the Professor at St. Marie's bestows on the Professor at the Royal Academy, may be taken by the latter as a matter of course, and no more than as an educated architect he might reasonably have expected from a presumptuous man with one idea, and a head capable of containing only one idea: but we may leave Mr. Cockerell to defend his own views, should he conceive himself called on to vindicate himself from the aspersions thrown upon him. Even were we to admit that Mr. Cockerell expressed himself somewhat unguardedly on the subject of Gothic Architecture, we should by no means agree with Mr. Pugin, who would confine us to that style, pouring out the vials of his vituperation on every other, as being utterly unfit for us moderns. As, however, we have already hinted, he has failed to show, nor has he attempted to explain, how the "Pointed" style can now be accommodated to public and private buildings of all kinds; yet a little particularity on that head would have been neither superfluous in itself, nor irrelevant from the main object—or what professes to be the main object.

The truth is, Mr. Pugin treats his subject very superficially, and his book is a flimsy one. There is a good deal of flashy frothy declamation, with no little of arrant clap-trap, and that sort of rhodomontade flourishing which passes for argument and eloquence among half-educated people; but though his language flows glibly enough on many topics which he had better have let alone altogether, he seems to be at an ebb both for words and ideas in his professedly architectural remarks—criticism we can hardly call it. Far more to the purpose would it have been, had he spared us his lengthy politico-theological reflections, and made evident to us, that though it was the growth of Ante-Protestant times, the "Pointed" style recommends itself in preference to every other, no less for buildings adapted for Protestant worship, than for such as are intended for the more pompous ceremonials of the Roman Catholic Church. Instead of which, he seeks to recommend that style by assuring us, that it is calculated to revive Catholic feelings in this country. This is surely letting us see *le dessous des cartes* a little too plainly. The revival of Christian Architecture is considered, it would seem, by Mr. Pugin, as a mere step to an ulterior and more important object—the revival of the Roman Catholic religion, which, notwithstanding the noisy babble on the subject, is not likely to happen in this nineteenth century, and we leave the twentieth to answer for itself.

Mr. Pugin's religious zeal is somewhat too obtrusive and indiscreet—so over-acted, in some respects, as to excite suspicion; for he descants with such unction on the externals of Catholic worship, on its church etiquette, and church furniture, that they seem to be uppermost in his thoughts. How far, if at all, his ultra-Catholic zeal is prompted by worldly interests, we do not take upon ourselves to say; but Mr. Pugin has reason to be convinced that Catholicism is decidedly better than Protestantism, since he seems to be church builder in ordinary to all the Catholics throughout the kingdom. His frontispiece exhibits a group of no fewer than twenty-five churches—a perfect conglomeration of towers and spires; and though it looks rather too much like an advertising card of patterns, we must do him the justice to say, that he has not at all flattered his own handiworks; for unless very many degrees better than here represented, some of them must be very strange things indeed—no better than the toy-shop Gothic of chimney-piece ornaments in cardboard. They are, besides, so strangely huddled together, that the plate is apt to provoke some rather irreverent remarks, since it looks very much like a view of the inside of a church-and-spire manufactory. It is well, perhaps, for Mr. Pugin that his professional brethren are a degree less lively and satirical, less addicted to quizzing and caricature, than himself, otherwise they might easily retaliate in kind, and show up both him and his publications after his own fashion, and thus take some of the conceit out of him. That he has a high opinion of himself is evident from the following rhapsodical burst:—"God grant me the means, and I would soon place architectural studies on such a footing, that the glory of these latter days should be even greater than that of the former!" Well, it is some consolation to know, that though all the rest of the profession are arrant blockheads, we have at least one luminary among us, in the Professor at St. Marie's, Oscott; and most comfortable is it to be assured of this on the very best authority—his own.

The Diary of Dr. Thomas Cartwright, Bishop of Chester, commencing August, 1686, and terminating October, 1687. Printed for the Camden Society.

Dr. Thomas Cartwright, promoted by James II. to the episcopal bench, for the zeal with which he preached the courtly doctrines of Passive Obedience and Non-resistance, steadfastly adhered to the fallen fortunes of his master—shared the early exile of James in France, and the campaign in Ireland, where he died, and was buried in Christ-church, Dublin. Cartwright preserved his religion as well as his loyalty; for during his exile he read the English Liturgy in his lodgings to such Protestants as chose to attend; and on his death-bed, in Dublin, he showed an invincible repugnance to the Church of Rome. His fidelity to James has exposed his memory to harsh censure from the advocates of the Revolution; they stigmatize him as a traitor to the Church in which he was a prelate, and a renegade to the principles he was bound to support: the only proof advanced is, that he lived in free communication with the Roman Catholics of his time, particularly those who were about the court; and that he consulted with them on all matters of Church and State with great freedom. The Rev. Editor of the Diary deems such conduct unseemly in a Protestant bishop; but there is no evidence that his consultations had any tendency to injure the English Church, though he probably differed from most of his brethren in the view he took of its true interests. His Diary possesses but little interest, consisting chiefly of hurried memoranda; but we shall select a few of the more remarkable records. The bishop lived in friendly intercourse with the old Catholic families of Cheshire, and, at the instigation of Mr. Massey, who belonged to that religion, interfered to reconcile Sir Thomas Grosvenor and his lady, whose domestic happiness was disturbed by a difference of creed, the lady being as zealous a Catholic as her husband was a Protestant.

"Sir Thomas Grosvenor, Mr. Wilkinson and his friend, and Mr. Kent, dined with me; and in the afternoon Sir Thomas Grosvenor and my Lady discoursed all those matters and causes of difference, and agreed upon these terms, that Mr. M. should come to his house at any time when he was in the country, and be entertained as others; and that if any servants carried any tales between them on either side, they should be turned away; and that no public discourse of religion should be suffered in this house, but my lady be permitted to enjoy hers in private, she not writing to Mr. M. but what, upon request, she should shew to Sir Thomas, and what return he made her; and so Sir Thomas and my lady and Mrs. Rooksby, who, with my wife and daughter Sarah, were auditors of the whole matter, supped together with great satisfaction to all parties."

It was through this lady that the Grosvenor family inherited the large property which they now possess in the city of Westminster; and they have reason to be grateful to Cartwright for preventing the lady from entering a monastery, as she had threatened to do. In the diocese of Chester there still remained some sparks of the old puritanical spirit, which seems to have given the bishop no little trouble: we hear of the congregation of Hulme chapel shutting the doors on the anniversary of the king's accession, and of an uncourtly sermon on "the duty of governors," preached by Mr. Peake, before Lord Clarendon, on his return from Ireland. The bishop's record of his rebuke to Peake is characteristic:—

"Mr. Hancock preached an excellent practical sermon; and he and his wife dined with me and Sir James Poole and much other company, Mr. Davis of Frodsham. At night the Governor and Colonel Daniel brought Mr. Peake to me, who made many frivolous excuses for his indiscretion, of which I gave him a severe admonition, and exhorted him to humility, and told him that I believed my counsel was in vain to a man of such pride of spirit and petulancy as I had found him before to be of, and that I would not have thrown it away upon him but at the persuasion of Mr. Thomas Cholmondeley, who requested me to try him once more, and that if he did amend 'twas beyond my hopes, and that I had withdrawn his license of preaching but for Mr. Cholmondeley's intercession, but upon his amendment he need not despair of my favour."

An instance of puritanical feeling at Northampton, and the amends offered by the mayor, are amusing:—

"I preached and administered the sacrament at Allhallows in Northampton, where they all came up upon my invitation to the altar, who had never done it before, except Mr. Cockeram and Mr. Clarke, the former of which spoke more than became him, and

Digitized by Google

refused to come up to take satisfaction to his scruple, clapped on his hat and went out:* God forgive him, and bring him into the way of truth. After evening sermon we were treated at Mr. Lovell's, and returned to supper, where we met Mr. King the curate and other friends. After dinner Mr. Mayor and his brethren brought me up a dozen bottles of wine, and returned me thanks for my sermon, and condemned the rudeness and factiousness of Cockeram and Clarke, and desired it might not be imputed to the prejudice of the corporation, who were and always would be ready to conform to all to which the Doctor should invite them."

On his return to London, Cartwright found the Church almost unanimously opposed to the edict of toleration which James had resolved to issue. From the way in which he records his communication with Father Petre, it would seem that he acted as a kind of spy for the court at this crisis:—

"I heard Dr. Stillingfleet at 7 in the morning in the King's chapel, and Dr. Tillotson at 10, upon Moses by faith refusing to be called the son of Pharaoh's daughter, and choosing rather to endure affliction with the people of God, than to enjoy the pleasures of sin for a season; who in the close magnified those who in this hour of temptation stick so close to the Church of England as to choose rather to be God's favourites than the King's, &c. I was at the levee. I dined at the Bishop of Durham's and my son with the Bishops of Rochester and Peterborough, to whom I gave an account of the Sacrament which I delivered at Northampton the Sunday before, and received his thanks for bringing them up to the altar. I went to Sir Edmund Wiseman, returned and found him at my lodgings, who went with my wife and daughter into Hyde Park; and I sought Bishop Labourne; found him not at home, but met the Irish archbishop, with whom I had a long discourse. Saw Mr. Elstob and cousin Fletcher. I discoursed with F. Petre."

In the following extract we have a curious bit of secret history respecting James's "Declaration for Liberty of Conscience." It will be seen that the Bishop of Chester drew up an address of thanks to the King, and that he reported to Bishop Labourne and Father Petre all the difficulties he encountered with his episcopal brethren:—

"I met my Lord President and the Bishops of Durham, Rochester, Peterborough, and Oxon, at my Lord Chancellor's, where he and my Lord President, before dinner, acquainted us that his Majesty expected thanks from us for the care he had of us, and the gracious promises he hath made to protect us in his late gracious declaration; of which I penned the form, and with the Bishop of Oxon subscribed it before dinner, and carried it down to my Lord Chancellor, who after dinner asked the other three to do it, two of which, Rochester and Peterborough, refused till the form of it were something altered, which being done, Durham, Rochester, and I subscribed it; Peterborough desired to deliberate till to-morrow; and we were ordered to meet there again at 4 in the afternoon for that purpose. Rochester and Peterborough said, they could not but remember how vehemently the King had declared against toleration, and said he would never by any counsel be tempted to suffer it. My Lord President replied: though they could not choose but remember it, yet they might choose whether they might repeat it or not, for other men as well as the King had altered their minds upon new motives. They both extolled the Bishop of London, even to the condemnation of the King. The Bishop of St. David's, Mrs. Elstob, and Sir Thomas Grosvenor came to me at night. My Lord of Durham and I visited Bishop Labourne. —I gave F. P. and the Lord Peterborough an account of yesterday's debate; attended the King at his levee, returned and discoursed [with] Mr. Gatford, dined with the Bishop of St. David's, my wife, son, and daughter at Mr. Rowland's. Went to my Lord Chancellor's, where my Lord President told us the King liked well of our subscriptions, but the Bishop of Peterborough utterly refused to join with us."

Another entry respecting the means employed to obtain the consent of the bishops to the Declaration for Liberty of Conscience, requires a brief remark:—

"Went to the Bishop of Oxon, where I received the Bishop of Lincoln's letter concerning his approbation and promoting the address to the King; which I showed after to his Majesty in his closet, together with another letter from Mr. Massey, both which he highly approved of, and declared that such men as myself, who had always stuck to him, should never want his favour; and that he would take an effectual course to make others weary of their obstinacy. And I advised him to begin with his own household, which he promised to do."

The Bishop of Lincoln, who thus gave in his adhesion to the King's measures, was Dr. Thos. Barlow, who, nevertheless, made no scruple in adhering subsequently to the cause of King William. No one had affected greater anxiety to gratify James; and we find that the Bishop of Chester strongly urged the example of Barlow on the refractory prelates. It appears that he approved of the conduct pursued towards the Fellows of Magdalene College, though he did not, like Cartwright, take any active part as Commissioner. The proceedings of the Commissioners are recorded at some length in the Diary; but nothing is added to the information already before the public.

Change for the American Notes: in Letters from London to New York. By an American Lady. Wiley & Putnam.

THERE is such a challenging tone in the title of this volume, that we took it up with considerable reluctance; but if the work be the production of an American lady, she lacks either the gall or the penetration to repay her European opponents in kind, and does not say half the evil of Englishmen which they say of themselves every day of their public and printing lives. When we question the truthfulness of the title-page, we may perhaps be hypercritical; but we are influenced by the internal evidence of the work itself. Of the facts of the case we know nothing; but most persons, we imagine, on laying down the volume, would agree with us in thinking that it wants the ordinary characteristics of American authorship, and is far too much at home in the forms and fashions of cockney vulgarity, to have been written by a female. In fact, it is as like magazine writing as style and mannerism can make it; and it is pervaded and penetrated in every page with scraps of plays and theatrical allusions, not in the closest keeping with the assumed sex and position of the author.

The letters, accordingly, present a lively surface view of England, as it is seen in the streets and public resorts of the capital, interspersed at intervals with references to acknowledged English absurdities, political seemings, and social hypocrisies, by way of a Roland for Mr. Dickens's Oliver (not Oliver Twist). These hits are truthful in the main, and good to be repeated, so long as one honest man amongst us remains the dupe of the things exposed; but they are wholly insufficient, either in matter or manner, to fill up the canvas, and to make out the effect of the position the writer has assumed.

Another circumstance that adds to the mystification of the reader, is the undetermined position of the author herself. On this point little or nothing is directly said; but we gather that the lady has a friend and countrywoman who goes to court, and (what is more to the purpose) she addresses a correspondent at home who is represented as refined and accomplished. Yet at every page she betrays an acquaintance with situations and circumstances so little in harmony with these pretensions, as, even in her own estimation, to need apology or explanation. Thus she affords us a picture of the interior of a gin palace, prefaced by the statement that she was momentarily its inmate to escape the attacks of an overdriven ox. Notwithstanding her alarm, however, she made the most of her time, as the following extract will show:—

"The places next in splendour to the drapers, are the gin stores. Although spirituous liquors are so much cheaper with us, I believe the places where they are sold are as numerous in London;—over the door is generally a huge lamp; a sign to the customers, and the slaves of the lamp are very, very many in London. The gas is in a wreath, or disposed in some fanciful way or other; they are called gin palaces; the casks containing the spirits are painted, and labelled 'Old Tom,' 'The Rose of Life,' 'Butter Gin,' 'Cream o' the Valley,' 'Mountain Dew,' etc. etc. Cockneys so dearly love the rural, that they must thus libel roses and dews; they must drink pastorally! * * Methinks I see you, O very arch Julia, open your eyes and then your mouth—your eyes with wonder, that I describe these things with the familiarity of an eye-witness, and your mouth with laughter, that my curiosity (how often have you twitted me with it, mischievous that you are) had carried me such extraordinary lengths—that it had carried me into a retail bar! But my introduction to the internal worship of this great spirit—this too powerful spirit of strong drink—was accidental. * * Three poor women of the working class entered this gin palace whilst we waited. 'Please miss,' said one to the smartly ringed and ringleted barmaid, 'a quarten of the right sort, and a three-out.' The spirit was supplied and gulped approvingly. 'Money never was so dull,' said the paymistress of the trio; 'I can get none, and have been forced to put my bed up my uncle's flue.' The hearers were expressing their commiseration of this state of finances, when a drunken butcher rushed into the place, and we thought it better to face the furious brute than the imbruted man, and so left. I requested Mr. Wilderton to translate me the poor woman's speech into English. 'It is English,' laughed he. 'Translate it into American, then.' 'The three-out glass,' he explained, 'is one that contains a third of the measure purchased, so that the quarter of a pint fills *out* three glasses; the uncle's flue, which you seem to think is some chimney in which the untidy woman had concealed her bed, is the pawnbroker's warehouse—the poor call the pawnbroker their uncle.' God pity them, thought I, if they have no better kinsman. British travellers are ingenious in detecting and collecting Americanisms; they are, in nineteen cases out of twenty, 'genuine as imported,' and they are imported from the old country. I suppose we have 'my uncle' and his 'flue' in America by this time."

Accident, indeed, like poverty, may lead even to such strange companionship as this; but no casual study of life could, we imagine, have produced so finished a proficient in London slang as the writer shows herself,—for slang is the great staple of the fun which flavours the whole book. Thus in the midst of some very just though not very novel remarks on English executions, it is said that—

"The body hangs a certain time, and women say 'how shocking,' and men 'how queer' he looks; and boys shout out, 'Did you ever?'—'What a Guy!'—'Does his mother know he's out?' and casts are taken from his skull, and his carcass is buried within the prison walls, and his deeds recorded in cheap pamphlets, for the edification of ingenuous youth."

Again, in illustration of the boys of London (one of the not unfrequent passages in the volume which call up our recollections of *Punch*) we find the following anecdote:—

"A New England gentleman, miraculously thin, though as huge a feeder as Launcelot Gobbo, used to be annoyed incessantly by these puerile pests; the consequences, he said, at one time threatened to be serious, affecting his appetite. 'No go at the butcher's!' said one boy. 'Chops is riz—chops is!' screamed another. A third came close to him, and

"* The custom of taking the sacrament kneeling was not generally insisted upon in towns where, like Northampton, there was a strong infusion of Puritan feeling. This was a part of the ritual of the Church of England to which the Puritans had a strong aversion."

Digitized by Google

said softly, and as if in sympathy, 'I say, sir, there's werry cheap oysters down that 'ere court!"

The coincidences between our humorous friend's sallies and the remarks of the American lady are sometimes direct enough. Thus in the number of *Punch* published last week, there is a pleasant hoax on the picture gallery at the Pantheon Bazaar, which is designated as contrived "for promoting the sale of unsold pictures." Of this place the American lady says (nearly *totidem verbis*):—

"From Soho Square you may walk into long, and straight, and diversely paved Oxford Street—we called at a place called the Pantheon, once a theatre, now a bazaar; but much inferior to the one in Soho Square. There were a great many people sauntering about, and many pictures were hung up for sale, and continued to hang, being seldom sold."

Another characteristic, as we have said, of this volume is its theatrical quotations, precisely those never out of the mouths of farce-writers, or of danglers behind the scenes; and, somehow or other, the theatre is for ever brought forward in illustration or allusion. We are told, for instance, of a "minor-theatre-looking personage," and of Covent Garden and Drury Lane being familiarly termed "the garden" and "the lane"—phrases narrowly confined to theatrical dependants, and the frequenters of cider-cellars, Garrick's Heads, and the public-houses in the vicinity of the theatres.

In dwelling on this view of the work before us, we probably favour its sale, such peculiarities being decidedly popular at present; and we are content to do so: for it would be disgracious on our parts to dispraise the book for not being the thing we deprecate and detest. Had it accorded with its title, and been a really disparaging and insulting view of England, written in revenge of the many unjust and unnecessary attacks made on America by English travellers, it would have been decidedly mischievous. As it is, if we consider it as a genuine American work, it must be regarded as good-tempered and forbearing in its reproaches; and if we take it as of home manufacture, it plays its part according to its conditions, and it will not be without its use, should it meet with one reader who will pause to ask himself what truth there is in its allegations. There is nothing in the work to prevent this inquiry—none of that irritatingly patronizing or objurgating tone with which travellers in America have too frequently blown the coals of national ill-will; and assuredly, should we ever be plunged into a fratricidal war with our own flesh and blood across the water, the British press will share much of the responsibility. Truth there may have been, enough, in some things that have been said; but nations are not monsters, and man, wherever he is found, re-acts upon the circumstances in which he is placed, according to a common law. America has her vices, and England has hers; but in both cases it is the same human infirmity, the same reflections of ignorance and prejudice, upon circumstances ill understood, and therefore insurmountable. Of the prevalent error of attributing all evil things American to democracy, we spoke in our observations on the work of De Tocqueville. The truth is cleverly illustrated in the work before us.

"Mr. Alison has added another name to the distinguished historians to whom Scotland has given birth. What would he *now* think of a French historian, who, writing in 1736, thus spoke of the Porteus execution?—'In the *kingdom* of Scotland the terrible spectacle has been frequently exhibited of late years of persons obnoxious to the majority being publicly hanged from dyers' poles by the people.' * * A philosophic historian, intrenched in his own views of democracy, hesitates not to quote such paragraphs as sufficient authority for a long series of dogmatic dissertations on the evils of republican institutions!

Oh shame! where is thy blush!

* * Could not any one (you, dear Julia, with all your timidity, if you choose to try) do into history such premises and conclusions as these—History made Easy, thus—or, to speak after the fashion of the day, 'History for the Million,' thus:—'The evils and insecurity of monarchy are palpably evident, and the disloyalty and disaffection of the people of England cannot be doubted. Witness the frequently recurring attempts on the life of the Queen; further comment is needless.' Or thus:—'The appalling progress of crime and violence in this kingdom is but too apparent. We need scarcely allude to the names of Greenacre, Courvoisier, and Good, to show that no one can rest secure from midnight murder and disgusting mutilation.' *Are* the English disloyal? No. *Are* they a nation of murderers? *is* life so unsafe there, that every individual, ere he or she retires to repose, must—

> See that the polish'd arms be primed with care,
> And drop the night-bolt; ruffians are abroad!

Is this so? Any American child would lisp—no; yet these inferences and conclusions are just as natural and right as those of Mr. Alison."

This is in the best spirit.

Interspersed with the light and desultory matter, may be found occasional remarks of a more reflective character. The truth of the following, perhaps, struck us the more, because the same idea recently occurred to ourselves under the same circumstances:—

"There are a good many monuments in Kensal Green, and the ground is intersected with nice gravel walks, and many well-dressed parties were strolling about (principally ladies) and chatting gaily as they watched the trains rush rapidly along the Great Western Railway—what a distance one hears their clatter! It has been said, 'In the midst of life we are in death;' but here the reverse seemed inculcated, for there were steam-carriages and cheerful idlers, and man's trim and careful hand everywhere, as who should say, 'In the midst of death we are in life.'"

What follows is more acrimonious, but still fair irony:—

"Greatly to my surprise, no fee was exacted as we entered; perhaps, if these death-gardens become fashionable promenades, the proprietors may charge for admittance; there is plenty of precedents—why should *their* monuments be viewed gratuitously? Why should they not sell their fresh air as well as their flowery ground? I think I never told you before, that in all, I suppose in *all*, places like these, as well as in the Zoological Gardens, Regent's Park, etc. etc., are placed a number of painted boards containing respectful requests that the visitors will refrain from plucking the flowers, etc. How is this? Why, in so very civilized—I beg their pardon, so very polished a community, are these constant prohibitions necessary? Recollect, flower-loving but never flower-stealing Julia, the rabble—the mere vulgar, are no frequenters of these scenes."

But we should never finish, were we to point out all our agreements and disagreements with the author. We have said that the work is lively, and (without pausing to identify the colours under which it marches) that in its matter there are some things to be seriously thought about:—as books go, now-a-days, this is praise—and with that we must take our leave.

Letters of Horace Walpole, &c. to Sir Horace Mann. 2 vols.

[Second Notice.]

THE second volume brightens up, and extracts present themselves so copiously, as to make us grudge one unnecessary word. We have passing glimpses of his Majesty of Denmark and the Czarina—we have in reserve a *Petitot*-picture of her Familiar. In the meantime, the reader must put up with a notice of one who was more and less than a Queen, the fair and frail Du Barri:—

"We are in constant expectation of hearing of the Duc de Choiseul's fall. The Comtesse du Barri maintains her ground, and they say will be presented to the Mesdames as soon as the Queen's mourning is over. This decency is delightful! While his wife lived, the King kept his mistresses only; now a new one is not to be declared, while the court still wears black and white silks for the Queen!"

Subsequently he observes,—

"The *grands habits* are made, and nothing wanting for her presentation but—what do you think? some woman of quality to present her. In that servile Court and country, the nobility have had spirit enough to decline paying their court, though the King has stooped *à des bassesses* to obtain it. The Duc de Choiseul will be the victim; and they pretend to say that he has declared he will resign *à l'Anglaise*, rather than be *chassé* by such a creature. His indiscretion is astonishing: he has said at his own table, and she has been told so, 'Madame du Barri est très mal informée; on ne parle pas des catins chez moi.' Catin diverts herself and King Solomon the wise with tossing oranges into the air after supper, and crying, '*Saute, Choiseul! saute, Praslin!*' and then Solomon laughs heartily. Sometimes she flings powder in his sage face, and calls him *Jean Farine!* Well! we are not the foolishest nation in Europe yet!"

The next page gives us a *pendant* in the narrative of Œlia Lœlia Chudleigh's *quasi* marriage with the Duke of Kingston. On the whole, this volume makes us doubt the supremacy of "the good old times," either in politeness or morals. At all events, our St.-Aulaires and Esterhazys do not treat the town with scenes like the following:—

"Choiseul triumphs over us and Madame du Barri—her star seems to have lost its influence. I do not know what another lady will say to Choiseul on the late behaviour of his friend, the Ambassador, here. As the adventure will make a chapter in the new edition of Wiquefort, and, consequently, will strike *you*, I will give you the detail. At the ball on the King's birthday, Count Czernichew was sitting in the box of the Foreign Ministers next to the Count Seilern, the Imperial Ambassador. The latter, who is as fierce as the spread Eagle itself, and as stiff as the chin of all the Ferdinands, was, according to his custom, as near to Jupiter as was possible. Monsieur du Chatelet and the Prince de Masserano came in. Chatelet sidled up to the two former, spoke to them and passed behind them, but on a sudden lifted up his leg and thrust himself in between the two Imperials. The Russian, astonished and provoked, endeavoured to push him away, and a jostle began that discomposed the faces and curls of both; and the Russian even dropped the word *impertinent*. Czernichew, however, quitted the spot of battle, and the Prince de Masserano, in support of the family-compact, hobbled into the place below Chatelet."

A notice or two of Paoli will be acceptable:—

"Paoli is much approved here. The Court have artfully adopted him, and at least crushed one egg on which faction and her brood-hen, Mrs. Macaulay, would have been very glad to have sat. He prefers being well with the government that protects him."

Here we have the portrait of the Corsican. Who can tell how far the northern nature of his physiognomy may have had the attraction of kith and kin to Boswell?—

"Before I receive your answer about him, I must tell you that I have seen your friend Paoli. I found him last week at Court, and could not believe it when I was told who he was. I had stood close by him for some minutes, taking him for an English, or at least, for a Scotch officer. Nobody sure ever had an air so little foreign! He was dressed in scarlet and gold, and the simplicity of his whole appearance had not given me the slightest suspicion of anything remarkable in him. Afterwards, in the circle, as he again stood by me, he asked me some indifferent question, without knowing me. I told him, without naming myself, that you were my particular friend. He said he had written many letters to you, but believed they had all been intercepted. I replied, I would do him justice and tell you so. The King and Queen both took great notice of him. He has just made a tour to Bath, Oxford, &c., and was everywhere received with much distinction; so Mrs. Macaulay, it seems, has not laid him under an interdict."

We do not remember to have had heretofore Walpole's judgment upon "Junius;" his Jere-

Digitized by Google

miade may be turned to the comfort of those who are fond, at the present day, of descanting on the profligacy of the press:—

"The licentiousness of abuse surpasses all example. The most savage massacre of private characters passes for sport; but we have lately had an attack made on the King himself, exceeding the North Briton. Such a paper has been printed by the famous Junius, whoever he is, that it would scarce have been written before Charles I. was in Carisbrook Castle. The Dukes of Gloucester and Cumberland are as little spared; the former for having taken a wife for himself—so says the North Briton; observe, *I* do not say so—and the latter for having taken another man's; for opposite actions are equally criminal in the spectacles of Opposition, the two glasses of which are always made, the one to see black as white, the other white as black, and also both to see that white and black are both black. To be sure, the younger Highness has had the mishap of being surprised, at least *once*, with my Lady Grosvenor, who is actually discarded by her lord. * * Well, we are not singular. Another Junius has appeared in Portugal. There it seems they write satires with a club—the first instance, I suppose, of thrashing a king. His Majesty received two blows on his shoulder and his arm, intended *à la Junienne*, at his head. The Queen instantly called for a gun, to shoot the bruiser herself. 'No,' said the King, 'arrest him.' They tell a melancholy story for the assassin; that, having lost a commission, he gave a memorial to the King, who bade him give it to the Secretary at War, which the poor creature did not think a likely method of redress. He was then prosecuted for not paying his tax out of nothing. Despair carried him to the fountain head; yet I doubt M. d'Œyras will discover a plot, and lop some more noble heads. I have often said, and oftener think, *that this world is a comedy to those who think, a tragedy to those who feel*—a solution of why Democritus laughed and Heraclitus wept. The only gainer is history, which has constant opportunities of showing the various ways in which men can contrive to be fools and knaves."

In the fulness of our optimism, too, we will put the following choice paragraph in testimony against certain recent bankruptcy trials, to show how little the morals of our aristocracy have deteriorated:—

"The gaming at Almack's, which has taken the *pas* of White's, is worthy the decline of our Empire, or Commonwealth, which you please. The young men of the age lose five, ten, fifteen thousand pounds in an evening there. Lord Stavordale, not one-and-twenty, lost eleven thousand there, last Tuesday, but recovered it by one great hand at hazard: he swore a great oath,—'Now, if I had been playing *deep*, I might have won millions.' His cousin, Charles Fox, shines equally there and in the House of Commons. He was twenty-one yesterday se'nnight; and is already one of our best speakers. Yesterday he was made a Lord of the Admiralty. We are not a great age, but surely we are tending to some great revolution."

A word or two on the question of economy:—

"What do you think of a winter-Ranelagh erecting in Oxford Road, at the expense of sixty thousand pounds? The new bank, including the value of the ground, and of the houses demolished to make room for it, will cost three hundred thousand; and erected, as my Lady Townley says, *by sober citizens too!* I have touched before to you on the incredible profusion of our young men of fashion. I know a younger brother who literally gives a flower-woman half a guinea every morning for a bunch of roses for the nosegay in his button-hole. There has lately been an auction of stuffed birds; and, as natural history is in fashion, there are physicians and others who paid forty and fifty guineas for a single Chinese pheasant: you may buy a live one for five. After this, it is not extraordinary that pictures should be dear. We have at present three exhibitions. One West, who paints history in the taste of Poussin, gets three hundred pounds for a piece not too large to hang over a chimney. He has merit, but is hard and heavy, and far unworthy of such prices. The rage to see these exhibitions is so great, that sometimes one cannot pass through the streets where they are. But it is incredible what sums are raised by mere exhibitions of anything; a new fashion, and to enter at which you pay a shilling or half-a-crown. Another rage, is for prints of English portraits: I have been collecting them above thirty years, and originally never gave for a mezzotinto above one or two shillings. The lowest are now a crown; most, from half a guinea to a guinea. Lately, I assisted a clergyman in compiling a catalogue of them; since the publication, scarce heads in books, not worth threepence, will sell for five guineas. Then we have Etruscan vases, made of earthenware, in Staffordshire, from two to five guineas; and *or moulu*, never made here before, which succeeds so well, that a tea-kettle, which the inventor offered for one hundred guineas, sold by auction for one hundred and thirty. In short, we are at the height of extravagance and improvements, for we do improve rapidly in taste as well as in the former. I cannot say so much for our genius. Poetry is gone to bed, or into our prose; we are like the Romans in that too. If we have the arts of the Antonines,—we have the fustian also."

By way of illustration to the above, we may give the account of a masquerade, to which Walpole dragged himself, of course "for the sake of the children":—

"It is very lucky, seeing how much of the tiger enters into the human composition, that there should be a good dose of the monkey too. * * Our civil war has been lulled asleep by a subscription-masquerade, for which the House of Commons literally adjourned yesterday. Instead of Fairfaxes and Cromwells, we have had a crowd of Henry the Eighths, Wolseys, Vandykes, and Harlequins; and because Wilkes was not mask enough, we had a man dressed like him, with a visor, in imitation of his squint, and a Cap of Liberty on a pole. In short, sixteen or eighteen young lords have given the town a masquerade; and politics, for the last fortnight were forced to give way to habit-makers. The ball was last night at Soho; and, if possible, was more magnificent than the King of Denmark's. The bishops opposed: he of London formally remonstrated to the King, who did not approve it but could not help him. The consequence was, that four divine vessels belonging to the holy fathers, alias their wives, were at this masquerade. Monkey again! A fair widow, who once bore my whole name, and now bears half of it, was there, with one of those whom the newspapers call *great personages*—he dressed like Edward the Fourth, she like Elizabeth Woodville, in grey and pearls, with a black veil. Methinks it was not very difficult to find out the meaning of those masks. As one of my ancient passions, formerly, was masquerade, I had a large trunk of dresses by me. I dressed out a thousand young Conways and Cholmondeleys, and went with more pleasure to see them pleased than when I formerly delighted in that diversion myself. It has cost me a great headache, and I shall probably never go to another. A symptom appeared of the change that has happened in the people. The mob was beyond all belief: they held flambeaux to the windows of every coach, and demanded to have the masks pulled off and put on at their pleasure, but with extreme good-humour and civility. I was with my Lady Hertford and two of her daughters, in their coach: the mob took me for Lord Hertford, and huzzaed and blessed me! One fellow cried out, 'Are you for Wilkes?' another said, 'D—n you, you fool, what has Wilkes to do with a masquerade?' * * There was a stroke of the monkey last night that will sound ill in the ears of your neighbour the Pope. The heir-apparent of the House of Norfolk, a drunken old mad fellow, was, though a Catholic, dressed like a cardinal: I hope he was scandalized at the wives of our bishops."

We promised our readers a peep at the Czarina's coadjutor. Here then is her portrait: no *Liotard*, but a bright characteristic *Sir Joshua*—as all who remember Miss Wilmot's amusing memoirs will attest:—

"Who do you think is arrived? The famous Princess Daschkaw, the Czarina's favourite and accomplice, now in disgrace—and yet alive! Nay, both she and the Empress are alive! She has put her son to Westminster school. The devil is in it, if the son of a conspiratress, with an English education, does not turn out a notable politician. I am impatient to get well, or at least hope she may stay till I am, that I may see her. Cooled as my curiosity is about most things, I own I am eager to see this amazon, who had so great a share in a revolution, when she was not above nineteen. I have a print of the Czarina, with Russian verses under it, written by this virago. I do not understand them, but I conclude their value depends more on the authoress than the poetry. One is pretty sure what they do not contain—truth. Adieu. * * Well, I have seen the Princess Daschkaw, and she is well worth seeing—not for her person, though, for an absolute Tartar, she is not ugly: her smile is pleasing, but her eyes have a very Catiline fierceness. Her behaviour is extraordinarily frank and easy. She talks on all subjects, and not ill, nor with striking pedantry, and is quick and very animated. She puts herself above all attention to dress, and everything feminine, and yet sings tenderly and agreeably, with a pretty voice. She, and a Russian lady who accompanies her, sung two songs of the people, who are all musical; one was grave, the other lively, but with very tender turns, and both resembling extremely the Venetian barquerolles. She speaks English a little, understands it easily: French is very familiar to her, and she knows Latin. When the news of the naval victory over the Turks arrived at Petersburgh, the Czarina made the archbishop mount the tomb of Peter the Great, and ascribe the victory to him as the founder of the Marine. It was a bold *coup de théâtre*, and Pagan enough. The discourse, which is said to be very elegant, the princess has translated into French, and Dr. Hinchcliffe, Bishop of Peterborough, is to publish it in English. But, as an instance of her quickness and parts, I must tell you that she went to a Quaker's meeting. As she came away, one of the women came up to her, and told her she saw she was a foreigner, that she wished her much prosperity, and should be very glad if anything she had seen amongst them that day should contribute to her salvation. The Princess thanked her very civilly, and said, 'Madame, je ne sçais, si la voye de silence n'est point la meilleure façon d'adorer l'Etre Supreme.' In short, she is a very singular personage, and I am extremely pleased that I have seen her. Adieu."

We must end—at least, for the present. These letters are like the Sibylline leaves, precious as being the last. Have we no Walpoles among us, taking notes for the comfort and enrichment of generations yet unborn?

The War of the Sicilian Vespers; or, an Epoch in Sicilian History during the Thirteenth Century—[*La Guerra, &c.*] By M. Amari. 2nd edit. 2 vols. Paris, Baudry.

SHUT out from the field of political discussion, and closely cribbed and cabined within the *cordon sanitaire* of the Catholic Church, the young Italians have thrown themselves upon general literature, as a channel for venting their free thoughts; and have sought, in the past more especially, an indirect way of communicating impressions, of which the present was the occasion and the end. This is the key to the histories and romances which have, of late, appeared from beyond the Alps, all more or less calculated to awaken the slumbering intellects of the particular readers to whom they are addressed, and to redeem them from the thraldom of a curtailed system of public education. How far the present work is entitled to the praise or blame of this *arrière pensée* we shall not inquire; but, if the foreign journals are to be trusted, its author narrowly escaped the penalties incurred by all who presume to think and to speak out their thoughts under a despotic government. According to those authorities, it appears that Signor Amari's work having, by some accident, failed to attract any preliminary notice from the Neapolitan government, had, on the publication of the first edition at Palermo, acquired such a reputation for successful historical research, as to lead some enthusiastic person, having official access, to propose the author as a fit subject for encouragement and reward. Attention having been thus excited, the government examined into the matter, and

Digitized by Google

the result was, that the patron was desired to recall home his young friend (then out of the kingdom). Amari, it is stated, obeyed the call, and was actually on his way to the steam-boat, when a friendly and timely admonition informed him that punishment, and not reward, awaited his arrival within the Neapolitan jurisdiction.

The sum of offence which drew down the anger of the Neapolitan court (if the story be true), is, perhaps, contained in the choice of subject. The epoch selected for illustration by Sig. Amari is the revolution which redeemed Sicily from a foreign yoke, heavy in proportion to the unbridled passions and barbarous contempt of laws then universal in Europe. It will not readily be perceived what interest an Italian government can feel in concealing transactions nearly six hundred years past, nor in hiding from its citizens the crimes and the horrors of a foreign invasion. The most jealous censors, it might be thought, could have afforded to pass by an exposure of these things. But the revolution was a popular revolution, and may have been deemed bad as an example to the modern Sicilians. The work treats also of the intrigues and *mondanités* of Popes; but above all, in narrating facts, backed by documental evidence, the author has not spared those moral reflections, without which history is dry, barren, and profitless. Judged by the canons of criticism which prevail in England or in France, there is nothing in the volumes which should give offence—nothing that transcends the honest frankness of a writer, with whom morality is not a jest, or human happiness beneath regard. But this is a point with which (Heaven be praised) an English critic has nothing to do. It is enough for us to notice the appearance of a work of no common merit, on a theme which, though somewhat remote from English historical associations, is not without considerable interest. The revolution, of which the Sicilian Vespers was the incident that best maintains its recollection among ordinary readers, is in truth a remarkable episode in the story of the European struggle between the people and their feudal oppressors, and a striking illustration of the energies latent in the most depressed and degraded populations,—energies that are, perhaps, never more likely to burst forth, than when they are most disregarded and despised. The distinctive circumstance in this narrative is, that it sets on one side much of the romance of the story of John of Procida; and attributes the revolution less to foreign intrigues, than to the force of events acting upon a despairing and prepared people.

In favour of this opinion there is much general probability; and if the author takes a higher view of the Sicilian character in those days, than accords with ordinary belief, the reader should recollect that Sicily took an early lead in the restoration of literature and the arts; and by its vicinity to the East, was favourably placed for receiving the lights reflected from Constantinople and from the Arabian Moslem.

The work, as first published, was comprised in a single volume; but the author, on visiting Paris, discovered, among the MSS. of the Royal Library, a number of documents throwing light on the incidents of his narrative: with these and other aids he has corrected and enlarged the whole; and it has been thought worthy to take rank among the present publisher's "Collection of the best Italian Authors."

The Attaché; or Sam Slick in England. By the Author of 'The Clockmaker.'

[Second Notice.]

WE last week published a pleasant letter from our friend the Clockmaker—we beg pardon, from "the Honourable Mr. Slick, Attaché of the American Legation to the Court of Saint Jimses' Victoria"—and we had hoped on this occasion to have introduced him formally to our readers. But he is not in a humour to admit of these small ceremonials. Dickens, it appears, has put his dander up, and he has taken Cooper's hint, and comes in 'a billigerent' humour. In proof, we will refer to a scene on board the packet, just before landing, where a hint was given him by Mr. Poker that he was not exactly in the right temper to visit England:—

"'What is the temper,' he replied, with much warmth, that they visit us in? Look at Dickens; was there ever a man made so much of, except La Fayette? And who was Dickens? Not a Frenchman that is a friend to us, not a native that has a claim on us; not a colonist, who, though English by name is still an American by birth, six of one and half a dozen of t'other, and therefore a kind of half-breed brother. No! he was a cussed Britisher; and what is wus, a British author; and yet, because he was a man of genius, because genius has the 'tarnal globe for its theme, and the world for its home, and mankind for its readers, and bean't a citizen of this state or that state, but a native of the universe, why we welcomed him, and feasted him, and leveed him, and escorted him, and cheered him, and honoured him, did he honour us? What did he say of us when he returned? Read his book. No, don't read his book, for it tante worth readin'. Has he said one word of all that reception in his book? that book that will be read, translated, and read agin all over Europe—has he said one word of that reception? Answer me that, will you? Darned the word, his me ory was bad; he lost it over the tafrail when he was sea-sick. But his note-book was safe under lock and key, and the pigs in New York, and thé chap the rats eat in jail, and the rough man from Kentucky, and the entire raft of galls emprisoned in one night, and the spittin' boxes and all that stuff, warn't trusted to memory, it was noted down, and printed. But it tante no matter. Let any man give me any sarce in England, about my country, or not give me the right *po*-sition in society, as Attaché to our Legation, and, as Cooper says, I'll become belligerent, too, I will, I snore. I can snuff a candle with a pistol as fast as you can light it; hang up an orange, and I'll first peel it with ball and then quarter it. Heavens! I'll let daylight dawn through some o' their jackets, I know. 'Jube, you infarnal black scoundrel, you odoriferous nigger you, what's that you've got there?' 'An apple, massa.' 'Take off your cap and put that apple on your head, then stand sideways by that port-hole, and hold steady, or you might stand a smart chance to have your wool carded, that's all.' Then taking a pistol out of the side-pocket of his mackintosh, he deliberately walked over to the other side of the deck, and examined his priming. 'Good heavens, Mr. Slick!' said I in great alarm, 'what are you about?' 'I am goin',' he said with the greatest coolness, but at the same time with equal sternness, 'to bore a hole through that apple, Sir.' 'For shame! Sir,' I said. 'How can you think of such a thing? Suppose you were to miss your shot, and kill that unfortunate boy?' 'I won't suppose no such thing, Sir, I can't miss it. I couldn't miss it if I was to try. Hold your head steady, Jube—and if I did, it's no great matter. The onsarcumcised Amalikite ain't worth over three hundred dollars at the furthest, that's a fact; and the way he'd pyson a shark ain't no matter. Are you ready, Jube?' 'Yes, massa.' 'You shall do no such thing, Sir,' I said, seizing his arm with both my hands. 'If you attempt to shoot at that apple, I shall hold no further intercourse with you. You ought to be ashamed of yourself, Sir.' 'Ky! massa,' said Jube, 'let him fire, Sar; he no hurt Jube; he no foozle de hair. I isn't one mossel afeerd. He often do it, jist to keep him hand in, Sar. Massa most a grand shot, Sar. He take off de ear ob de squirrel so slick, he neber miss it, till he go scratchin' his head. Let him appel hab it, massa.' 'Oh, yes,' said Mr. Slick, 'he is a Christian is Jube, he is as good as a white Britisher: same flesh, only a leetle, jist a leetle darker; same blood, only not quite so old, ain't quite so much tarter on the bottle as a lord's has; oh him and a Britisher is all one brother—oh by all means—

Him fader's hope—him mudder's joy,
Him darlin little nigger boy.

You'd better cry over him, hadn't you. Buss him, call him brother, hug him, give him the 'Abolition' kiss, write an article on slavery, like Dickens; marry him to a white gall to England, get him a saint's darter with a good fortin, and we'll soon see whether her father was a talkin' cant or no, about niggers. Cuss 'em, let any o' these Britishers give me slack, and I'll give 'em cranberry for their goose, I know. I'd jump right down their throat with spurs on, and gallop their sarce out.'"

After this the reader will not be surprised at the following character of Englishmen, which, if not true, is a gem in its way:—

"'Hallo! what's that? why if it ain't land ahead, as I'm alive!' said Mr. Slick. 'Well, come this is pleasant too, we have made amost an everlastin' short voyage of it, ante we; and I must say I like land quite as well as sea, in a giniral way, arter all; but, Squire, here is the first Britisher. That critter that's a clawin' up the side of the vessel like a cat, is the pilot: now do for goodness gracious sake, jist look at him, and hear him.' 'What port?' 'Liverpool.' 'Keep her up a point.' 'Do you hear that, Squire? that's English, or what we used to call to singing school short metre. The critter don't say a word, even as much as "by your leave"; but jist goes and takes his post, and don't ask the name of the vessel, or pass the time o' day with the Captin. That ain't in the bill, it tante paid for that; if it was, he'd off cap, touch the deck three times with his forehead, and "*Slam*" like a Turk to his Honour the Skipper. There's plenty of civility here to England if you pay for it: you can buy as much in five minits, as will make you sick for a week; but if you don't pay for it, you not only won't get it, but you get sarce instead of it, that is if you are fool enough to stand and have it rubbed in. They are as cold as Presbyterian charity, and mean enough to put the sun in eclipse, are the English. They hante set up the brazen image here to worship, but they've got a gold one, and that they do adore and no mistake; it's all pay, pay, pay; parquisite, parquisite, parquisite; extortion, extortion, extortion. There is a whole pack of yelpin' devils to your heels here, for everlastinly a cringin', fawnin' and coaxin', or snarlin', grumblin' or bullyin' you out of your money. There's the boatman, and tide-waiter, and porter, and custom-er, and truck man as soon as you land; and the sarvant-man, and chamber-gall, and boots, and porter again to the inn. And then on the road, there is trunk-lifter, and coachman, and guard, and beggar-man, and a critter that opens the coach door, that they calls a waterman, cause he is infarnal dirty, and never sees water. They are jist like a snarl o' snakes, their name is legion and there ain't no eend to 'em.'"

We have not often stumbled on a more pithy description of Tories, Whigs, and Radicals, than Mr. Slick has recorded from the lips of "an old critter to Halifax":—

"He said he could tell a man's politicks by his shirt. 'A Tory, Sir,' said he, for he was a pompious old boy was old Blue-Nose; 'a Tory, Sir,' said he, 'is a gentleman every inch of him, stock, lock, and barrel; and he puts a clean frill shirt on every day. A Whig, Sir,' says he, 'is a gentleman every other inch of him, and he puts an onfrilled one on every other day. A Radical, Sir, ain't no gentleman at all, and he only puts one on of a Sunday. But a Chartist, Sir, is a loafer; he never puts one on till the old one won't hold together no longer, and drops off in pieces.'"

The Attaché, on his arrival, of course paid a visit to Abednego Layman, the American Minister—"the Socdolager," as he calls him. Perhaps our readers may desire to know what is a Socdolager:—

"The Socdolager is the President of the lakes—he is the whale of the intarnal seas—the Indgians worshipped him once on a time, as the king of fishes. He lives in great state in the deep waters, docs the old boy, and he don't often show himself. I never see'd him myself, nor any one that ever had sot eyes on him; but the old Indgians have see'd him and know him well. He won't take no bait, will the Socdolager; he can't be caught, no how you can fix, he is so 'tarnal knowin', and he can't be speared nother, for the moment he sees aim taken, he ryles the water and is out of sight in no time. *He* can take in whole

Digitized by Google

shoals of others hisself tho' at a mouthful. He's a whapper, that's a fact. I call our Minister here 'the Socdolager,' for our *di*plomaters were never known to be hooked once yet, and actilly beat all natur' for knowin' the soundins, smellin' the bait, givin' the dodge, or rylin' the water; so no soul can see thro' it but themselves. Yes, he is 'a Socdolager,' or a whale among *di*plomaters."

The account of the visit will remind the reader of recent events at Oxford :—

"'Sam Slick,' sais he, 'as I'm alive. Well, how do you do, Mr. Slick? I am 'nation glad to see you, I affection you as a member of our legation. I feel kinder proud to have the first literary man of our great nation as my Attaché.' 'Your knowledge of human natur ('added to your'n of soft sawder,' sais I,) 'will raise our great nation, I guess, in the scale o' European estimation.' He is as sensitive as a skinned eel, is Layman, and he winced at that poke at his soft sawder like any thing, and puckered a little about the mouth, but he didn't say nothin', he only bowed. He was a Unitarian preacher once, was Abednego, but he swapt preachin' for politics, and a good trade he made of it too; that's a fact. 'A great change,' sais I, 'Abednego, since you was preachin' to Connecticut and I was a vendin' of clocks to Nova Scotia, ain't it? Who'd a thought then, you'd a been "a Socdolager," and me your "pilot fish," eh!' It was a raw spot, that, and I always touched him on it for fun. 'Sam,' said he, and his face fell like an empty puss, when it gets a few cents put into each cend on it, the weight makes it grow twice as long in a minute. 'Sam,' said he, 'don't call me that are, except when we are alone here, that's a good soul; not that I am proud, for I am a true Republican;' and he put his hand on his heart, bowed and smiled handsum, 'but these people will make a nickname of it, and we shall never hear the last of it; that's a fact. We must respect ourselves, afore others will respect us. You onderstand don't you?' 'Oh, don't I,' sais I, 'that's all? It's only here I talks this way, because we are at home now; but I can't help a thinkin' how strange things do turn up sometimes. Do you recollect, when I heard you a-preachin' about Hope a-pitchin' of her tent on a hill? By gosh, it struck me then, you'd pitch your tent high some day; you did it beautiful.' * * 'Hope,' sais he, 'is the attribute of a Christian, Slick, for he hopes beyond this world; but I changed on principle.' 'Well,' sais I, 'I changed on interest; now if our great nation is backed by principal and interest here, I guess its credit is kinder well built.'"

Mr. Slick found time hang heavily on his hands. He complains bitterly of our late hours and nothing to do :—

"You can't get out a bed afore twelve, in winter, the days is so short, and the fires ain't made, or the room dusted, or the breakfast can't be got, or sumthin' or another. And if you did, what's the use? There is no one to talk to, and books only weaken your understandin', as water does brandy. They make you let others guess for you, instead of guessin' for yourself. Sarvants spile your habits here, and books spile your mind. I wouldn't swap ideas with any man. I make my own opinions, as I used to do my own clocks; and I find they are truer than other men's. The Turks are so cussed heavy, they have people to dance for 'em; the English are wus, for they hire people to think for 'em. Never read a book, Squire, always think for yourself. Well, arter breakfast, it's on hat and coat, ombrella in hand, (don't never forget that, for the rumatiz, like the perlice, is always on the look out here, to grab hold of a feller,) and go somewhere where there is somebody or another, and smoke, and then wash it down with a sherry-cobbler; (the drinks ain't good here; they hante no variety in them nother; no white-nose, apple-jack, stone-wall, chain-lightning, rail-road, hail-storm-ginsling-talabogus, switchel-flip, gum-ticklers, phlem-cutters, juleps, skate-iron, cast-steel, cock-tail, or nothin', but that heavy stupid black fat porter.)"

That magic word "dinner" introduces us to a *lively* description of a dinner-party :—

"Folks are up to the notch here when dinner is in question, that's a fact, fat, gouty, broken-winded, and foundered as they be. It's rap, rap, rap, for twenty minutes at the door, and in they come, one arter the other, as fast as the sarvants can carry up their names. Cuss them sarvants! it takes seven or eight of 'em to carry a man's name up stairs, they are so awful lazy, and so shocking full of porter."

Mr. Slick found that it was not always pleasant to be a "lion" :—

"When I first came I was nation proud of that title, 'the Attaché;' now I am happified it's nothin' but 'only an Attaché,' and I'll tell you why. The great guns, and big bugs, have to take in each other's ladies, so these old ones have to herd together. Well, the nobodies go together too, and sit together, and I've observed these nobodies are the pleasantest people at table, and they have the pleasantest places, because they sit down with each other and are jist like yourself, plaguy glad to get some one to talk to. Somebody can only visit somebody, but nobody can go anywhere, and therefore nobody sees and knows twice as much as somebody does. Somebodies must be axed, if they are as stupid as a pump; but nobodies needn't, and never are, unless they are spicy sort o' folks, so you are sure of them, and they have all the fun and wit of the table at their eend, and no mistake. I wouldn't take a title if they would give it to me, for if I had one, I should have a fat old par-blind dowager detailed on to me to take in to dinner; and what the plague is her jewels and laces, and silks and sattins, and wigs to me? As it is, I have a chance to have a gall to take in that's a jewel herself—one that don't want no settin' off, and carries her diamonds in her eyes, and so on."

The Attaché's first dinner-party commenced somewhat unfortunately :—

"Lord, the first time I went to one o' these grand let offs I felt kinder skerry, and as nobody was allocated to me to take in, I goes in alone, not knowin' where I was to settle down as a squatter, and kinder lagged behind; when the buttler comes and rams a napkin in my hand, and gives me a shove, and sais he, 'Go and stand behind your master, sir,' sais he. Oh Solomon! how that waked me up. How I curled inwardly when he did that. 'You've mistaken the child,' sais I mildly, and I held out the napkin, and jist as he went to take it, I gave him a sly poke in the bread-basket, that made him bend forward and say 'eugh.' 'Wake Snakes and walk your chalks,' sais I, 'will you?' and down I pops on the first empty chair. Lord, how white he looked about the gills arterwards; I thought I should a split when I looked at him. Guess he'll know an Attaché when he sees him next time. Well, there is dinner. One sarvice of plate is like another sarvice of plate, any one dozen of sarvants are like another dozen of sarvants, hock is hock, and champaigne is champaigne—and one dinner is like another dinner. The only difference is in the thing itself that's cooked. Veal, to be good, must look like anything else but veal; you mustn't know it when you see it, or it's vulgar; mutton must be incog. too; beef must have a mask on; any thin' that looks solid, take a spoon to; any thin' that looks light, cut with a knife; if a thing looks like fish, you may take your oath it is flesh; and if it seems mel flesh, it's only disguised, for it's sure to be fish; nothin' must be nateral, natur is out of fashion here. This is a manufacturin' country, every thing is done by machinery, and that that ain't must be made to look like it; and I must say, the dinner machinery is parfect. Sarvants keep goin' round and round in a ring, slow, but sartain, and for ever, like the arms of a great big windmill, shovin' dish after dish, in dum show, afore your nose, for you to see how you like the flavour; when your glass is empty it's filled; when your eyes is off your plate, it's off too, afore you can say Nick Biddle. Folks speak low here; steam is valuable, and noise onpolite. They call it a '*subdued tone*.' Poor tame things, they are subdued, that's a fact; slaves to an arbitrary tyrannical fashion that don't leave 'em no free will at all."

It is difficult to say which is best, Sam's sense or nonsense. The following is a hint to a Colonial Secretary at Downing Street :—

"'Your long acquaintance with the provinces, and familiar intercourse with the people,' sais he, 'must have made you quite at home on all colonial topics.' 'I thought so once,' sais I; 'but I don't think so now no more, Sir.' 'Why how is that?' sais he. 'Why, Sir,' sais I, 'you can hold a book so near your eyes as not to be able to read a word of it; hold it off further, and get the right focus, and you can read beautiful. Now the right distance to see a colony, and know all about it, is England. Three thousand miles is the right focus for a political spy-glass. A man livin' here, and who never was out of England, knows twice as much about the provinces as I do.' 'Oh, you are joking,' sais he. 'Not a bit,' sais I. 'I find folks here that not only know everything about them countries, but have no doubts upon any matter, and ask no questions; in fact, they not only know more than me, but more than the people themselves do, what they want. It's curious, but it's a fact.'"

A truce for a moment to jest, even when it carries with it a wholesome moral, and let us hear what Mr. Hopewell, "the minister," has to say on this subject :—

"England, besides other outlets, has a never-failing one in the colonies, but the colonies have no outlet. Cromwell and Hampden were actually embarked on board of a vessel in the Thames, for Boston, when they were prevented from sailing by an Order in Council. What was the consequence? The sovereign was dethroned. Instead of leading a small sect of fanatical puritans, and being the first men of a village in Massachussets, they aspired to be the first men in an empire, and succeeded. So in the old colonies. Had Washington been sent abroad in command of a regiment, Adams to govern a colony, Franklin to make experiments in an observatory like that at Greenwich, and a more extended field been opened to colonial talent, the United States would still have continued to be dependencies of Great Britain. There is no room for men of talent in British America; and by not affording them an opportunity of distinguishing themselves, or rewarding them when they do, they are always ready to make one, by opposition. In comparing their situation with that of the inhabitants of the British Isles, they feel that they labour under disabilities; these disabilities they feel as a degradation; and as those who impose that degradation live three thousand miles off, it becomes a question whether it is better to suffer or resist."

Here is Sam's opinion on the same subject, in an imaginary conversation with Lord Stanley :—

"Says you, 'My Lord—don't forget his title—every man likes the sound of that, it's music to his ears, it's like our splendid national air, Yankee Doodle, you never get tired of it. 'My Lord,' sais you, 'what do you suppose is the reason the French keep Algiers?' Well, he'll up and say, its an outlet for the fiery spirits of France, it gives them employment and an opportunity to distinguish themselves, and what the climate and the inimy spare, become valuable officers. It makes good soldiers out of bad subjects. 'Do you call that good policy?' sais you. Well, he's a trump, is Mr. Stanley, at least folks say so; and he'll say right off the reel 'onquestionably it is—excellent policy.' When he says that, you have him bagged, he may flounder and spring like a salmon jist caught; but he can't out of the landin' net. You've got him, and no mistake. Sais you 'what outlet have you for the colonies?' Well, he'll scratch his head and stare at that, for a space. He'll hum and haw a little to get breath, for he never thought of that afore, since he grow'd up; but he's no fool, I can tell you, and he'll out with his mould, run an answer and be ready for you in no time. He'll say, 'They don't require none, Sir. They have no redundant population. They are an outlet themselves.' Sais you, 'I wasn't talking of an outlet for population, for France or the provinces nother. I was talking of an outlet for the clever men, for the onquiet ones, for the fiery spirits.' 'For that, Sir,' he will say, 'they have the local patronage.' 'Oh!' sais you, 'I warn't aware, I beg pardon, I have been absent some time, as long as twenty days or perhaps twenty-five, there must have been great changes, since I left.' 'The garrison,' sais you. 'Is English,' sais he. 'The armed ships in the harbour?' 'English.' 'The governor and his secretary?' 'English.' 'The principal officer of customs and principal part of his deputies?' 'English.' 'The commissariat and the staff?' 'English to a man.' 'The dockyard people?' 'English.' 'The postmaster giniral?' 'English.' 'What, English?' sais you, and look all surprise, as if you didn't know. 'I thought he was a colonist, seein' the province pays so much for the mails.'

Digitized by Google

'No,' he'll say, 'not now; we have jist sent an English one over, for we find its a good thing that.' 'One word more,' sais you, 'and I have done. If your army officers out there, get leave of absence, do you stop their pay?' 'No.' 'Do you sarve native colonists the same way?' 'No, we stop half their salaries.' 'Exactly,' sais you, 'make them feel the difference. Always make a nigger feel he is a nigger, or he'll get sassy, you may depend.'"

We are accustomed, and we think not unreasonably, to admire our country life; not so the Attaché:—

"'Here,' said Mr. Slick, 'is an invitation for you and me, and minister to go and visit Sir Littleeared Bighead, down to Yorkshire. You can go if you like, and for once, p'raps it's worth goin' to see how these chaps first kill time, and then how time kills them in turn. Eatin', drinkin', sleepin', growlin', fowlin', and huntin' kills time; and gout, apoplexy, dispepsy, and blue devils kills them.'"

A "*swoi-ree*" is a picture to the life:—

"I wish to goodness you'd go to a Swoi-ree oncet, Squire, jist oncet—a grand let off, one that's upper crust and rael jam. It's worth seein' oncet jist as a show, I tell *you*, for you have no more notion of it than a child. All Halifax, if it was swept up clean and shook out into a room, wouldn't make one swoi-ree. I have been to three to-night, and all on 'em was mobs—regular mobs. * * My first party to-night was a conversation one; that is for them that *could* talk; as for me I couldn't talk a bit, and all I could think was, 'how infarnal hot it is!' * * 'Very good, Mr. Slick. Let me introduce you to ——,' they are whipt off in the current, and I don't see 'em again no more. 'A beautiful show of flowers, Madam, at the garden: they are all in full blow now. The rhododendron—— had a tooth pulled when she was asleep.' 'Please to let me pass, Sir.' 'With all my heart, Miss, if I could; but I can't move; if I could I would down on the carpet, and you should walk over me. Take care of your feet, Miss, I am off of mine. Lord bless me! what's this? why as I am a livin' sinner, it's half her frock hitched on to my coat button. Now I know what that scream meant.' 'How do you do Mr. Slick? When did you come?' 'Why I came—' he is turned round, and shoved out o' hearin.' 'Xanthian marbles at the British Museum are quite wonderful; got into his throat, the doctor turned him upside down, stood him on his head, and out it came—his own tunnel was too small.' 'Oh, Sir, you are cuttin' me.' 'Me, Miss! Where had I the pleasure of seein' you before, I never cut a lady in my life, couldn't do so rude a thing. Haven't the honour to recollect you.' 'Oh, Sir, take it away, it cuts me.' Poor thing, she is distracted, I don't wonder. She's drove crazy, though I think she must have been mad to come here at all. 'Your hat, Sir.' 'Oh that cussed French hat is it? Well, the rim is as stiff and as sharp as a cleaver, that's a fact, I don't wonder it cut you.' 'Eddis's pictur—capital painting, fell out of the barge, and was drowned.' 'Having been beat on the shillin' duty; they will attach him on the fourpence, and thimble rigg him out of that.' 'They say Sugden is in town—hung in a bad light at the Temple Church.'——'Who is that?' 'Lady Fobus; paired off for the Session; Brodie operated.'—— Lady Frances; got the Life Guards; there will be a division to night.'——'That's Sam Slick; I'll introduce you; made a capital speech in the House of Lords, in answer to Brougham—Lobelia—voted for the bill—The Duchess is very fond of —— Irish Arms—'"

Here is a portrait of an American Elder—a reminiscence of Mr. Slick's:—

"As I was a joggin' on along the road, who should I overtake but Elder Stephen Grab, of Beechmeadows, a mounted on a considerable of a clever-lookin' black mare. The Elder was a pious man; at least he looked like one, and spoke like one too. His face was as long as the moral law, and p'rhaps an inch longer, and as smooth as a hone; and his voice was so soft and sweet, and his tongue moved so ily on its hinges, you'd a thought you might a trusted him with ontold gold, if you didn't care whether you ever got it agin or no. He had a bran new hat on, with a brim that was none of the smallest, to keep the sun from makin' his inner man wink, and his go-to-meetin' clothes on, and a pair of silver mounted spurs, and a beautiful white cravat, tied behind, so as to have no bows to it, and look meek. If there was a good man on airth, you'd a said it was him. And he seemed to feel it, and know it too, for there was a kind of look o' triumph about him, as if he had conquered the Evil One, and was considerable well satisfied with himself."

But we must come to a close, and cannot do so better than with one of Sam's short but pertinent reflections:—

"It don't do to say you don't know, it lowers you in the eyes of other folks. If you don't know what another man knows he is shocked at your ignorance. But if he don't know what you do, he can find an excuse in a minute. Never say you don't know."

Perhaps, in conclusion, we ought to offer a few words of general criticism; but, in truth, it matters not what may be the opinion of the critics—Sam is a favourite, and deservedly so: whether we pronounce the work to be good, bad, or indifferent, everybody will read it, and they ought. Sam is always amusing, and often instructive; but there was an easy familiarity about the Clockmaker—a bold daring, too, which is not quite so apparent in the Attaché. The author has seen much of England, and noted much that he has seen; yet the book is, after all, more to be admired for manner than matter. It penetrates but little below the surface, and leaves much unnoticed. He seemingly writes under a restraint of which there is no trace in his former works—which has withheld him from raising a laugh at many time-honoured absurdities, simply because they are time-honoured. We, however, are in no humour to be critical, and though we could wish that so much had not been left undone, we will very heartily return thanks for what has been done, in jest and in earnest, by the Attaché.

Meredith. By the Countess of Blessington. 3 vols. Longman & Co.

The novelists have of late shown strange signs of deserting their posts—octavos or otherwise, as may be. Sir Edward Bulwer has fairly turned his back upon us, in 'The Last of the Barons.' The glories of Windsor Castle seem to have exhausted Mr. Ainsworth. Captain Marryat's yarns are apparently all spun out. Mrs. Gore has not displayed her usual sprightly and saucy skill for an unheard-of time, six months or thereabouts:—while Mrs. Trollope, since her diamond robbery in 'Hargrave,' has, we presume, absconded; for her 'Barnabys in America' is no longer to be heard of in the *New Monthly;* and as for her 'Jessie Phillips,' we have come to the conclusion that it is a pleasant fiction of the advertisers, since we have never encountered the damsel in library, private or circulating, or even seen her portrait tempting us from shop window. Only Mr. James works on with undiminished industry and success. Under such prospects of destitution, all who still love vicissitude, or speculation, or scene-painting, in three volumes, will thank Lady Blessington. Her hand has lost none of its cunning by the rest with which it has been recently indulged—her new tale has at least as many requisites for popularity as its predecessors.

The form is autobiographical, Lady Blessington's favourite manner of narration, because it enables her to lay bare the secret thoughts of her heroes and heroines in a manner unattainable in dialogue, where only half the truth is spoken and the rest intimated. But there is more of incident, and less of speculation than usual. We begin with the sequel to a love-marriage: a home made melancholy by an indifferent and faithless husband, and a suffering and uncomplaining wife. The calamities occasioned by the infidelity of the former speedily bring this scene to a close, and the curtain rises upon a new group, the principal figure of which is Meredith's guardian, a selfish Epicurean, who fancies he lives by his physician's mandate, while he is really governed by his appetite and his valet. Lord Lymington, however, has not a long lease in Meredith's history, for his own rod whips him to death; and then we see the harpies, chuckling over his remains and their own ill-gotten wealth! So much for the life which is familiar to us; the rest of the tale is more romantic. Meredith goes to Italy with his tutor, and rescues from the hands of evil-doers at La Cava as fair a heroine "as one could hope to see on a summer's day." As a foil to her, we have one of those good-hearted, ridiculous French governesses, with whom Lady Blessington delights to divert herself with the *savoir vivre* and sentiment of our neighbours past Calais. Many and dark are the mysteries which are interposed betwixt the fair girl and the hero; not the least important actor in these being a pragmatical Sicilian wine-merchant, who forgets every one's name, and everything save his own interest, and whom the reader should have seen, not heard of, were space more plentiful. Towards the close of the romance, old shapes and personages are brought forward with dramatic cleverness. Lady Blessington is too kind-hearted to send the reader weeping to her bed:—having satisfied, in the 'Victims of Society,' that necessity for tragic composition, which some have said must with every author be assuaged; she here betakes herself, like a good fairy, to smooth away obstacles, to untie knots, to bring in the right persons at the right juncture, not forgetting a charming and noble pair who claim Selina, the heroine, as their child, and to shower every blessing of fortune and affection on those she has protected. Would that the real solution of human suspense were as perfect to a wish as this *dénouement!* But gentle readers will like the novel none the less for the gorgeous prosperity which surrounds its *dramatis personæ* as they vanish from sight.

OUR LIBRARY TABLE.

Cyclopædia of Biblical Literature, by John Kitto, Parts I. II.—There has been, since the days of Calmet, so much investigation and research in the field of Biblical Literature, that his valuable work is much behind the present state of our knowledge. This Cyclopædia is intended to supply the deficiency, and is, we think, likely, in a great measure, to do so. The articles, many of them contributed, it is understood, by distinguished Biblical critics—as, for instance, Drs. Neander, Pye Smith, Tholuck, Professor Royle, and others—are clearly and carefully written, explaining almost too minutely every point that can at all be said to bear on Biblical Literature. Its plan extends to Biblical criticism and interpretation, history, geography, archæology, and physical science. It is illustrated with wood-cuts, and being printed in the same size and manner as the Dictionary of Classical Antiquities, will form a sort of companion volume. The work is only just commenced, but we have little doubt, from the specimen before us, that it will be a valuable acquisition to the student. When his Hebrew and Greek Lexicons fail him, it will supply the deficiency, by entering into questions on the meaning of words in particular passages, which would not fall within the province of ordinary lexicons. Although much of the information is necessarily drawn from German critics, the work does not appear at all tainted with neologian views, and would not, we think, offend the most orthodox or exclusive.

A Tract upon Tombstones, with Illustrations, by F. E. Paget, M.A.—A pamphlet of suggestions for improving our tombstone monuments both in beauty and orthodoxy. We can sympathize with Mr. Paget in his disgust at the nonsense and the monumental uglinesses which disgrace our churches and churchyards. His suggestions are mostly good, and many of them might be adopted with advantage.

Letters from the Virgin Islands: illustrating Life and Manners in the West Indies.—There must be something peculiar in the air of the West Indies provocative of facetious affectation in authorship; at least we remember half-a-dozen Sketches, Rambles and Reminiscences, in which the above peculiarity of style mars the pleasantness and the *vraisemblance* of description. Nor is the volume before us an exception; quotations, sentimental rhapsodies, personal allusions to anonymous correspondents, are to be found in every page, till we sigh for a plain paragraph. This is the more to be regretted, as the writer is not altogether barren, nor is his book a chronicle wholly without interest; but his folly so constantly perks itself into notice, that we cannot prevail upon ourselves to introduce him to our readers.

Legendary Rhymes, and other Poems, by M. A. E. Charnock.—The gentle dealing of the critic is bespoken for this little volume, on a plea which is not to be resisted. It contains the literary remains of a deceased wife—offered by her husband "rather as memorials of the departed" than as having any very high intellectual pretensions. The love that somewhat overrates, even while disclaiming, is a feeling too sacred for criticism to cavil at, and sheds a poetry over the volume from itself: and, while we hold the opinion that such "memorials" are not properly for the public, we can believe with the editor, that they "will be read with affectionate interest," in the "circle of friends."

The Foil: an Historical Poem, in Three Cantos, by R. Hughman.—A very ominous name for an author to give to his own poem:—and may have arisen, in this case, from an instinct of appreciation which we feel no disposition to gainsay.

Gathered Leaves, by James A. Page.—To this "Undergraduate of Trinity College, Dublin," we can promise no degree in the Colleges of the Muses. Our advice to him would be, to "take his name off the *books*." The *Foil* system, suggested by Mr. Hughman's volume, might, however, be successfully practised by this author, in the circulation of the volume, by "an Undergraduate of Oxford," which is entitled *Charles XII.: an Incapacitated Poem, on One of the Newdigate Prize Subjects: with (expletively) Sundry Metrical Puerilities.*—The first of these poems, the author says, "was *incapacitated* by a rule which renders ineligible the essays of candidates who have exceeded a certain term of residence at the University:" we can assure him, that it has some very excellent incapacities of its own, which make it quite independent of any such rule. As for the remaining titles, the *puerilities* are fully established, but the author has failed to make them *metrical*.

The Homilies of Ælfric, with an English Translation, by B. Thorpe.—This work is published under the auspices of the Ælfric Society,—a society instituted for the publication of literary remains illustrative of Anglo-Saxon and early English History and Philology. The Society has commenced with the homilies of the Anglo-Saxon church, of which a considerable number are ascribed to the Prelate by whose name the Society is distinguished. These homilies, for the correct translation of which Mr. Thorpe's name is sufficient guarantee, are interesting to all, from their simplicity, and not unworthy the attention of the clergy.

The Order of Daily Service—the Litany: and Order of the Administration of the Holy Communion, with Plain Tune, according to the use of the United Church of England and Ireland.—This edition of the Prayer-book will throw the Low Church party into paroxysms. A more papistical-looking volume never issued from a Protestant press. There are crosses on the title-page, red letters interspersed among the Gothic type to an alarming amount, plain song printed with the text as plentifully as though the book were a choir-book for Treves or Freyburg minster. The result is a splendid volume. With regard to the nature and extent of its influences upon the devotional spirit of the Church of England, we are thankful to leave the matter to the controversialists.

Report of the Geology of the County of Londonderry, and of parts of Tyrone and Fermanagh, by J. E. Portlock.—This Report, although occupying a very large volume, is but a small part of what was at first undertaken in connexion with the Ordnance survey of Ireland. It was proposed by Col. Colby to Sir H. Hardinge "that the Topographical survey should be considered a foundation for Statistical, Antiquarian, and Geological surveys." In the Geological branch alone do these inquiries appear at first to have been prosecuted, and even in this but imperfectly. "Geology," as Mr. Portlock says in his preface, "had been in fact permitted, not commanded." About the year 1832, however, all the branches were in some measure resumed, and Mr. Portlock succeeded Captain Pringle in the superintendence of the work; and in 1834 contributed to the Memoir of Londonderry (see No. 410) the sections on Geology, Natural History and Productive Economy. In 1837 the author turned his attention more exclusively to the Geological department, and for this purpose established at Belfast a Geological and Statistical office, a museum for Geological specimens, and a laboratory for the examination of soils. In 1840, however, the design of continuing the Londonderry survey was abandoned, and the office at Belfast broken up; and the author directed to prepare for publication such geological data as had been collected. Finding, however, "that geological researches could not be confined within territorial boundaries," he was obliged to extend them into the neighbouring counties of Tyrone and Fermanagh. The result is now before us; and a very able and comprehensive work it is, of great value to geological science, and the concluding portion on *economic geology* not without interest, even to the general reader.

The Guide to Hayling.—We collect from this little work, that Hayling is an island situated on the coast of Sussex, between Chichester and Portsmouth: that it is "a sweet place," "extremely beautiful," "a little Paradise," "very similar to the Bay of Naples," and so flat, that "it is free from all damp;" even "fogs and mists" will not rest on it, which "is to be accounted for from its low position!" Hayling possesses "few antiquities, and those comparatively of modern date;" we have, however, a view of an "old barn," and an account of "a rookery," and are informed, that "almost in the immediate neighbourhood" (certainly not more than six or eight and twenty miles distant) are the Roman remains at Bignor—"the Tomb at Avisford Hill" (within five-and-twenty)—Chichester Cathedral, Porchester Castle, and Lord Halifax's "Folly"—we beg pardon, "Monument,"—(not more than from twelve to eighteen), and there is a coach which runs every day through Havant, which brings Portsmouth within sixteen miles. It is "regretted, that Hayling is so little known to the medical profession," for "the climate is so mild," that "greenhouse plants grow in the open air," and "the sea-poppy upon the bare shingle," and so healthy that the only "medical man" has been heard to say, that even invalids do not require his attendance. "The watering-place at Hayling is rather a quiet retreat, than a scene of life and bustle;" so quiet, indeed, that "children may there run wild on Nature's carpet, free from all interruption and danger, with little or no care to those who have charge of them." For "the studious," there is "the library," which is described as a chaste building; and for the invalid, "the bath house," "in front of which are machines for those who prefer the embraces of Father Neptune," and "for all, there is the instructive amusement of a cosmorama." If, after this, men will not live in "Paradise," and live for ever, it must be their own fault; there is Hayling soliciting them, and Mr. Furner of the "Royal Hotel and Family Boarding House" ready to receive them.

Pictoral History of England.—The character of this work has been considered, at length, in former numbers of this journal; so that we have now only to announce that the third volume is complete, and brings down the history to 1801.

List of New Books.—Cæsar, with Vocabulary, Notes and Map, by W. M'Dowall, 12mo. 3*s.* roan.—The Edinburgh Sessional School Collection, 11th edit. 2*s.* 6*d.* bd.—L'Abbé Fleury's Ecclesiastical History, Vol. II., from A.D. 400 to A.D. 429, 8vo. 10*s.* 6*d.* cl.—Newman's (Rev. J. H.) Essay on the Miracles, 8vo. 5*s.* swd.—Luther, or the Spirit of the Reformation, a Poem, by Rev. R. Montgomery, 3rd edit. 12mo. 5*s.* cl.—The Second Coming, the Judgment, and the Kingdom of Christ, being Lectures delivered during Lent, 1843, by Twelve Clergymen of the Church of England, 12mo. 7*s.* cl.—Shiloh's Sceptre, or the Signs of the Times, in Connexion with the Pre-Millennial Reign of Christ, by Rev. Thomas Watson, M.A., fc. 8vo. 3*s.* 6*d.* cl.—Bradley's Sacramental Sermons, 2nd edit. 8vo. 10*s.* 6*d.* cl.—Calvin on Reforming the Church, 18mo. 3*s.* cl.—Morris's (Rev. J. B.) Prize Essay on Conversion of Learned and Philosophical Hindus, 8vo. 12*s.* cl.—The Thirty-Nine Articles explained, by Rev. J. F. L. Hopper, 18mo. 2*s.* cl.—Manzoni, I Promessi Sposi, new edit. 2 vols. royal 18mo. 7*s.* swd.—Wordsworth's Guide to the Lakes, 2nd edit., by J. Hudson, 12mo. 5*s.* cl.—Scudamore (Sir C.) on the Water-Cure, 8vo. 4*s.* cl.

THE LAST FRIENDS.

One of the United Irishmen, who lately returned to his country, after many years of exile, being asked what had induced him to revisit Ireland when all his friends were gone, answered, "I came back to see the mountains."

I come to my country, but not with the hope
That brightened my youth like the cloud-lighting bow,
For the vigour of soul that seemed mighty to cope
With Time and with Fortune, hath fled from me now;
And Love, that illumined my wanderings of yore,
Hath perished, and left but a weary regret
For the star that can rise on my midnight no more—
But the hills of my country they welcome me yet!

The hue of their verdure was fresh with me still,
When my path was afar by the Tanais' lone track;
From the wide-spreading deserts and ruins, that fill
The lands of old story, they summoned me back;
They rose on my dreams through the shades of the West,
They breathed upon sands which the dew never wet,
For the echoes were hushed in the home I loved best—
But I knew that the mountains would welcome me yet!

The dust of my kindred is scattered afar,
They lie in the desert, the wild, and the wave,
For serving the strangers through wandering and war,
The isle of their memory could grant them no grave.
And I, I return with the memory of years,
Whose hope rose so high though in sorrow it set;
They have left on my soul but the trace of their tears—
But our mountains remember their promises yet!

Oh, where are the brave hearts that bounded of old,
And where are the faces my childhood hath seen?
For fair brows are furrowed, and hearts have grown cold,
But our streams are still bright and our hills are still green;
Aye, green as they rose to the eyes of my youth,
When brothers in heart in their shadows we met;
And the hills have no memory of sorrow or death
For their summits are sacred to liberty yet!

Like ocean retiring, the morning mists now
Roll back from the mountains that girdle our land;
And sunlight encircles each heath-covered brow
For which Time hath no furrow and tyrants no brand:
Oh, thus let it be with the hearts of the isle,
Efface the dark seal that oppression hath set;
Give back the lost glory again to the soil,
For the hills of my country remember it yet!

FRANCES BROWN.

THE CARTOON EXHIBITION.

WE resume our notice of the Cartoons at the prize design of *Joseph of Arimathea converting the Britons* (70), by Mr. Parris. Here is a work which will surprise all who only know the artist by his contributions to 'Books of Beauty,' and such gossamer publications. Mr. Parris, however, could not at once, and for the occasion, invigorate his style; and accordingly we have here displayed, on a large scale, his arabesque prettiness, making the work resemble the design for a rich carpet rather than the decoration of an august building. The treatment is facile, but the effect feeble. The Saint is too compassionate; the "gentle hermit" of a melodrama, rather than the awful messenger of divine truth; the Britons are too meek, one only excepted,—we mean the discomfited Priest of the Druids, who looks on with a grin of mockery. The best of the figures is the kneeling, fair-haired convert, in which we encounter our artist on his own ground.

The *Boadicea* of Mr. Selous (78)—another prize cartoon—is theatrical and meretricious, but displays a bold hand and a fluent fancy. In the midst stands the warrior Queen, (her outraged daughters languishing at her feet,) in countenance, form, and attitude, reminding us so closely of Schröder-Devrient, as to suggest the idea of unconscious reminiscence on the part of the artist. Her appeal is kindling, as though it were a quick flame, the indignation of the hundreds heaped around her; to the left a phalanx of arms is thrown up in eager response, which recalls the great choral effect in the Drury Lane pictures from 'Acis and Galatea,' while the knot of interclasped figures, behind the crouching Eve-like female, is as curiously intricate as the coil of serpents round an antique vase or the fruit-garlands on a frieze. The style may be bad, and the drawing open to objections, but the handling is clever, and there are many parts worthy of attentive examination. Another *Boadicea* (74) has also some merit.

Nothing can be more opposite in spirit from the above than Mr. Townsend's *Fight for the Beacon* (128). This composition is cleverly built up, the story at once vigorously told, and a central point of interest asserted. Some bold foreshortening compensates (if we may thus strike a balance) for some defective anatomy: for the sake of the figure precipitated over the parapet in the foreground, we will forgive the preternaturally short arms of the buccaneer, the central figure of the human pyramid. We must, however, object to the dead or wounded man, on the right of the drawing, precipitated from the beacon height,—a confused mass of limbs and clothes hard to comprehend. Unfortunately, the attempt here made at extreme and perilous attitudes, recalled to us that miracle of audacity, the 'St. Marc' of Tintoretto, in the Academia at Venice. But to test Mr. Townsend's force and originality more fairly, we ought, perhaps, to compare his cartoon with such a monstrosity as *Drake on the Quarter-deck* (130), a Pandemonium of diabolical lay figures broken loose, exciting, nevertheless, more diversion than terror.

Queen Eleanor saving the Life of her Husband (111) is by Mr. Severn, and not equal, we think, to some former designs by the same artist,—his 'Dragon of the Apocalypse,' 'The Ancient Mariner,' or the 'Crusaders.' It has, however, suffered great injury from the charcoal lines being, in several parts, almost effaced, the central stooping figure, which is the key of the *chiaroscuro*, being thus rendered vexatiously feeble. Still, all due allowance being made for this accident, the chief interest and beauty of the design reside in the subordinate figures. The attendant women, on both sides, are most graceful; and the faces of some among the rugged mailed men so strongly touched by pity and anxiety, that we returned to them again and again from the central group.

Only one more prize cartoon remains to be noticed —Mr. Bell's *Cardinal Bourchier and the Dowager Queen of Edward the Fourth* (124). Here, care and propriety of composition are, in degree, neutralized by meanness of character and expression. The Cardinal's countenance is scarcely more marked than that of the Queen; while she looks as if only moved by some small sorrow of the moment, instead of the combined griefs of a royal personage and a mother. The Duke of York is better; and the procession of monks to the left is well managed.

With this we must take our leave, expressing once again regret that our artists should not have been more generally aware of the difference between a design for a fresco, to adorn a great national building, and an illustration for a new pictorial history of England, or an edition of the British Poets. Mortifying, indeed, are some of the flagrancies which have been committed: such as *Edward the Black Prince and John of France* (118)—two Kings of Brentford!—*entering London through Southwark*;—such as the *Execution of Lady Jane Grey* (129),—and the *Parting of Charles the First with the Duke of Hamilton* (139), a misnomer, it seems to us, for the parting of the Duke and Don Quixote; but these, again, are solid compositions, if measured against an Adam and Eve to which we could refer,—a Britannia Victrix, a "Bark of the prosperous," (which will not lead its designer on to Fortune), and a George by the side of a dead dragon, with a tail longer than O'Connell's. It has been reported within the last few days, that one or two additional prizes will be awarded,—"twenty" should be our cry, could we persuade ourselves that we were thereby purchasing time for our young artists to read, to think, to draw. But the greatest prize they can hold—self-knowledge —cometh not so much from government patronage, as from a spirit as humble as it is aspiring.

OUR WEEKLY GOSSIP.

WE understand that the Commissioners on the Fine Arts have selected ten additional Cartoons as worthy each of a reward (prize, we presume, it cannot be called) of 100*l.*, and that the artists are Messrs. Pickersgill, Corbould, Howard, R.A., W. C. Thomas, Stephanoff, Claxton, F. Howard, Rippingille, J. C. Waller, and Sir W. Ross, R.A.

We have of late heard somewhat about some talk about some idea about some *Monument to Mrs. Siddons*, which some well-intentioned people are about promising themselves the approaching pleasure of seeing shortly put into a course of being at no very distant epoch erected; and shall report progress, if their hopes should not turn out, as we fear, oversanguine and premature. The intended statue, or bas-relief, or tablet, will perhaps remain for ever a part of that extensive mosaic pavement said to decorate a certain place rather less sacro-sanct, and much more accessible, than Westminster Abbey. Meantime, we may advert to a slight memorial of the above-mentioned remarkable woman, now set up at the National Gallery—her portrait, by Sir Thomas Lawrence. Upon the score of art, it has little or no claim—not even what its companion-portrait, 'Kemble as Hamlet,' may assert. Its execution is the work of an artist whose pencil could then just manage to commit graceful slips all over the canvas, and to make its errors wear a look of wanderings after rectitude. Yet we like it better than its ambitious pendant, which attains the very acmé of *Della-Cruscan* poetic painting—attitude, expression, spirit, and whole conception, have a "lamp and orange-peel" savour quite repulsive: the taste it evinces is, indeed, still worse than theatrical—it is melo-dramatical. Far from giving the actor the air of a Danish Prince, it gives the Danish Prince the air of an actor, and should be called, not 'John Philip Kemble in the Character of Hamlet,' but Hamlet in the Character of John Philip Kemble! We grant the task most difficult to paint a histrionic portrait—because two characters must be depicted at once, that of the personator and that of the personated—because neither the individuality of the former, nor the ideality of the latter, must be sacrificed—because the theatrical profession must suggest itself, yet without theatrical stilt or extravagance. Reynolds, perhaps, failed least in this perilous walk of portraiture: his 'Siddons as the Tragic Muse' combines many grand beauties proper to both characters, but the figurative attendants are too much what Hamlet would call "damnable face-makers," the costume and other accessories preposterous. We have enlarged on this subject, for the purpose, if possible, of exploding false doctrines about it, which Lawrence's Kemble has contributed to propagate. His Siddons represents only the original herself, or only as one who *could* be a great actress: her eye is lustrous with intelligence, her complexion glows with it, she stands like a human and modern Minerva, her masculine features made beautiful by her noble thoughtfulness. Shakespeare's mighty volume reposes beside her, Otway's dramas lie near —both are unopened—but she places her finger on the page of 'Paradise Lost!' We suspect that the Empress Queen of histrionic land had a mind essentially *epic*—a taste more didactic than dramatic.

The Sculpture and Picture Galleries of the Louvre are again open to the public, after being closed for five months, by that thrifty arrangement which, during a portion of every year, compels the dead masters to give up their pedestals to living aspirants. The *Salle du Globe* has a new acquisition in three gilt statues, recently imported from China, and said to be remarkable specimens of the workmanship of the Celestial Empire.

Thorwaldsen has received a commission from the King of Denmark to execute three pediments for the castle at Copenhagen, and one for the Town Hall. He is also to prepare several statues, of which four, for the façade of the castle, are to be in bronze, representing Nemesis, Minerva, Esculapius, and Hercules. The sculptor's great work, 'The Procession to Golgotha,' is said to be far advanced.—M. Marochetti, the sculptor, to whom has been intrusted the Glasgow Wellington Memorial, has just terminated the group destined for the grand altar of the Madeleine. It is in white marble, and represents the apotheosis of Mary Magdalen.—M. Horace Vernet is charged, it is said, with the execution of a picture representing the capture of Abdel Kader's Smalah by the Duke d'Aumale, to be placed in the Algerian Gallery, at Versailles.—A Viennese painter, Josephine Götzel-Sepolina, has received the large gold medal for her picture in this year's Paris exhibition. The King of the French has also bought her portrait of Prince Milosch Obrenowitsch, to place in the hall "de mes contemporains" in Versailles.—A monument is about to be erected at Thorn to the memory of Copernicus, for which subscriptions have been raised all over the Continent.

The prospectus of a Handel Society is now before us; which sets forth that the publication of the complete works of the master is contemplated—that the number of members is to be limited to one thousand—that the subscription is to be one guinea annually,—that the loan of scores and MSS. is requested, and that the Council for the coming twelvemonth consists of Mr. Addison, *Treasurer*; Mr. W. S. Bennett, Sir H. R. Bishop, Dr. Crotch, Mr. Davison, Mr. Hopkins, Mr. Macfarren, Mr. Moscheles, Mr. Mudie, Mr. Rimbault, Sir George Smart, and Mr. H. Smart. The heterogeneousness of this list invites comment; but one or two omissions in the prospectus have greater interest for the general public. They would like to have some idea of the time which the issue of Handel's works may be expected to embrace; to know, in short, how much the year's guinea will produce. *We*, too, feel that the promises of careful editorship are vaguely worded. Are the oratorios, operas, &c. to be superintended by the Council in mass, or is each Professor to take his own work and be responsible for no more, as in *The Musical Antiquarian Society*? Some twelve months ago, when adverting to the former agitation of this project, we alluded to the fact, well known in the musical profession, that Dr. Mendelssohn Bartholdy had long been contemplating—we believe it may be added, preparing—such an edition; and we then threw out the suggestion, whether it might not be advisable for *The Handel Society* to enter into communication with this distinguished musician, thus assuring its members the certainty of skilful and uniform of superintendence.

The revival of Sacchini's 'Œdipe,' at the *Académie Royale* of Paris, seems to have shared the fate of all revivals—to have been received, that is, with a show of respect, but little enthusiasm. For this, public caprice or indisposition to believe in the musical "wisdom of its forefathers," is not wholly to blame. As was remarked on the occasion of the last performance of 'Gli Orazi' at our own Italian Opera, managers act on these occasions as if they wished to repel, rather than invite, the public (the Shakspearian revivals of Mr. Macready making honourable exception). Second-rate actors, shabby accessories, inefficient rehearsal—disadvantages to which no new work would be exposed—are laid upon the drama, to be borne in addition to its antiquity. Thus, in place of principal tenor, who, to give the work a fair chance, ought to have been M. Duprez, M. Massol, who has been for some eighteen years singing barytone parts, was thrust into the part of *Polynice!* We have not a very ar-

Digitized by Google

dent love for much that was once renowned as Opera: but by measures like this, the music of past times and fashions is denied even a chance of resuscitation. They manage matters better in Germany: *vide* the Berlin performances of Gluck's operas. There, too, M. Meyerbeer has been exercising his new functions as musical director, by superintending the revival of Dr. Spohr's 'Faust,' which has been admirably performed, though but coldly received. The *libretto* of this fine opera is so absurd, that it is a pity it should not be re-constructed in the composer's lifetime: the music will else be lost.

We have been, for the last five years, much amused with Rubini's farewells to the stage. His last, however, is the oddest, being none other than the establishment of an Italian Opera company at St. Petersburg, of which he is to be *primo tenore assoluto!* He had better, we think, have given the benefit of his presence and encouragement to his own land, where some stimulus seems much needed. A new opera, by Coppola, 'Il Folletto,' recently produced at Rome, and Donizetti's last, 'Maria di Rohan,' written for Vienna, are all that we have to announce; we are listening more anxiously still, for singers, not voices, of promise; but hitherto in vain.

The daily papers mention that the governors of the Welsh School, and the members of the Royal Cambrian Institution, have presented the valuable MSS. and printed books belonging to the two societies to the British Museum, for preservation and public advantage. One book is said to contain the musical notation of the Britons in the eleventh century.

Dr. Hahnemann, the founder of homœopathy, died in Paris on Sunday, the 2nd inst., aged 88. The *Commerce* says:—"Dr. Hahnemann was born in 1755, at Meissen, of poor parents, and owed his education to the great aptitude for learning he gave evidence of at the little school where he was first placed. He was received doctor in physic at Heidelberg in 1781, and discovered, in 1790, the new system, which he afterwards designated homœopathy. He continued until 1826 his experiments and researches on his new system, and then published the result of his labours, under the title of 'Matière Medicale Pure.' In 1829 he published his 'Theory of Chronic Diseases, and their Remedies,' of which he gave a second edition in 1840. To those works must be added his 'Organon de l'Art de Guérir,' which ran through five editions. He also published nearly 200 dissertations on different medical subjects.

The same papers record the death of one of the remarkable personages of the generation which has now all but passed away—remarkable for the evidence which she has furnished of the amount of superstition which has contrived to maintain itself amid the strong lights of the nineteenth century—and still more remarkable for the real influence which she may have had in calling up and directing many of the phantoms of an empire that arose and vanished before the eyes of a single age, like a thing made of shadows itself. The fame of Mdlle. Lenormand seems to have been fully established by her prediction of sovereignty to Napoleon; and since that oracle was given, all the great actors, male and female, of the swarming scenes which followed—and which it seems so like a dream to look back upon—and, after the Restoration, far more of our own country women than would choose openly to record the fact, are said to have passed through the temple of the French Pythoness. Mdlle. Lenormand has left, it is stated, a fortune of 500,000 francs, and has died at the age of seventy-two; having lingered, as it should seem, to wind up all the straggling portions of the great vision to which she more properly belonged. When the philosophical history of the French revolutions that have marked and moulded the first half of the nineteenth century shall come to be properly written, the name of Mdlle. Lenormand must have a place there.

It is mentioned, in letters from Athens, that the restoration of the Acropolis, under the direction of the Archæological Society, is daily bringing to light important remains of that venerable building; among the rest, two pieces belonging to the frieze of the north side of the temple, representing part of a festive procession.

The dismissal of the Göttingen professors has lately found a pendant—very appropriately—in Russia. The rector of the University of Dörpat has lately been dismissed, in consequence of which four or five professors of the same university have sent in their resignation. One of these, now at Berlin, has just published a circumstantial account of this affair in the *Allgemeine Zeitung*. He demonstrates the injustice and arbitrariness of the proceeding, and openly declares that the dismissal in question was a mere act of vengeance on the part of the Minister of Public Instruction. The Russians, who are not in the habit of seeing the acts of their administration cited before the tribunal of public opinion in Germany, will undoubtedly present diplomatic notes on the excesses of the press in that country. This is the more certain, since the *Gazette* of Posen has lately published an article, which had passed the Censorship, on the pretensions of Russia respecting the policy of Germany, and on the necessity of repelling them with vigour.

ROYAL ACADEMY OF ARTS, TRAFALGAR SQUARE.
The EXHIBITION of the ROYAL ACADEMY is NOW OPEN. Admission (from 8 o'Clock till 7), 1s. Catalogue, 1s.
HENRY HOWARD, R.A., Sec.

BRITISH INSTITUTION, PALL MALL.
The Gallery is OPEN DAILY, from Ten in the Morning until Six in the Evening, with one Room containing the Works of Sir Joshua Reynolds, the next those of Ancient Masters, and the third with those of Deceased British Artists.—Admission, 1s.; Catalogue, 1s.
WILLIAM BARNARD, Keeper.

Will shortly Close.
The NEW SOCIETY of PAINTERS in WATER COLOURS.—The NINTH ANNUAL EXHIBITION of this Society is NOW OPEN, at their GALLERY, 53, PALL MALL, next the British Institution, from 9 till Dusk, daily. Admittance, 1s. Catalogue, 6d.
JAMES FAHEY, Secretary.

DIORAMA, REGENT'S PARK.
JUST OPENED, with a NEW EXHIBITION, representing the CATHEDRAL of NOTRE DAME at Paris, with effects of Sunset and Moonlight, painted by M. RENOUX, and the BASILICA of ST. PAUL, near Rome, before and after its destruction by Fire, painted by M. BOUTON. Open from Ten till Six.—N.B. A GRAND MACHINE ORGAN has been constructed expressly for this Exhibition, by Messrs. Gray and Davison, of the New-road, and will perform the Gloria, from Haydn's Service, No. 1, during the midnight effect of the Cathedral of Notre Dame.

THE CHINESE COLLECTION, Hyde Park-corner.—This UNIQUE COLLECTION consists of objects *exclusively Chinese*, and surpasses in extent and grandeur any similar display in the known world. The SPACIOUS SALOON is 225 feet in length, and is crowded with rare and interesting specimens of virth. The Collection embraces upwards of SIXTY FIGURES AS LARGE AS LIFE, portraits from nature, appropriately attired in their native costume, from the MANDARIN of the highest rank to the wandering Mendicant; also MANY THOUSAND SPECIMENS in Natural History and Miscellaneous Curiosities, the whole illustrating the appearance, manners, customs, and social life of more than THREE HUNDRED MILLION CHINESE.—Open from 10 till 10.—Admittance 2s. 6d. Children under 12 years, 1s.

SCIENTIFIC AND LITERARY

HORTICULTURAL SOCIETY.—*July* 4.—R. W. Barchard, Esq., in the chair. Capt. Du Cane, R.N., T. T. Hodges, Esq., and M. Salvin, Esq., were elected Fellows. There were exhibited from D. D. Alves, Esq., two specimens of sugar canes, showing the effect of the application of farm-yard manure and crushed bones to the land in which they were growing. It is now being found out by planters that some kind of manure is necessary to the sugar cane, and experiments are being made on the relative benefits of the different sorts in use. From Messrs. Elkington there were some specimens of leaves, covered with copper by the electrotype process, showing that the natural leaves of plants may now be plated over with silver or other metals for personal ornament, or for house decoration. C. R. Warner, Esq. sent a basket made of strong iron wire, and coated over with copper by the same process. It is considered preferable, in point of appearance, to that covered with zinc, in a similar manner, which was presented at the last meeting. The exhibition of plants was not extensive, most of the suburban growers probably reserving their specimens for the Chiswick *fête*.

ENTOMOLOGICAL SOCIETY.—Since our former report the following papers have been read:—On the *Geotrupidæ* and *Trogidæ*, by the Secretary. Monograph on the Dipterous genus *Ceria*, by Mr. Saunders. Observations on the habits of some Indian species of *Mutillæ*, by Capt. Boys. Description of the portable nests formed by the larvæ of the Brazilian genus *Chlamys*, by Mr. Westwood. On the genera *Trigonophorus* and *Rhomborhina*, by Mr. Westwood.

MUSIC AND THE DRAMA

SACRED HARMONIC SOCIETY, EXETER HALL.
On FRIDAY EVENING, July 21, 1843, will be performed Spohr's Oratorio, THE FALL of BABYLON; to be conducted by the Composer. Principal Vocal Performers, Miss Birch, Miss Rainforth, Miss Dolby, Mr. Young, Mr. Hobbs, Mr. Shoubridge, Mr. Giubilei, J. A. Novello, and Herr Staudigl. The Band and Chorus will consist of above Five Hundred Performers. Tickets, 3s. each; Reserved seats, 5s., may be had of the principal Music-sellers, of Mr. Mitchell, 39, Charing-Cross, and of Mr. Ries, 102, Strand, opposite Exeter Hall, and at 19½ Exeter Hall.
T. BREWER, Hon. Sec.

HANOVER SQUARE ROOMS.
The first, and the only Public Performance (in England) of HERR ERNST, the celebrated Violinist. A GRAND MORNING CONCERT, under the immediate patronage of HIS MAJESTY the KING of HANOVER, in aid of the funds of the GERMAN HOSPITAL, now establishing in this Metropolis, will take place at the above rooms on TUESDAY NEXT, July 18th, at 2 o'clock. Herr Ernst, Concert Master to his Majesty the King of Hanover, did not intend paying a professional visit to this country in the present season, but in consideration of the benevolent object, he has kindly consented to appear in public on this particular occasion. The following Eminent Artists have also most willingly offered their gratuitous assistance: Miss Clara Novello, Miss Sabilla Novello, Madame Dulcken, Madame Balfe, Miss Birch, and Miss Dolby; Mr. Moscheles, Mr. Benedict, Herr Staudigl, Sig. Puzzi, Mr. Bosen, M. Levassor (from Paris), Mr. Balfe, Mr. T. Parry, Sig. Brizzi, and M. Tolbecque. Tickets, 10s. 6d.; Reserved Seats 15s.; to be had at all Music-sellers, and at the doors on the day of the Concert.

On MONDAY, July 17, M. Sivori, Herr Staudigl, Mrs. Alfred Shaw, Mesdiles Clara Novello, S. Novello, Rainforth, and Birch, Messrs. Manvers, Stretton, Guibilei, Harley, and Cooper, will perform at Mr. BENEDICT'S CONCERT, THEATRE ROYAL COVENT GARDEN; when will be presented a scene from Meyerbeer's Opera, ROBERT LE DIABLE, in which Miss Clara Novello and Herr Staudigl will appear. CINDERELLA, compressed into one act; the part of *Cinderella* by Mrs. Alfred Shaw; *Dandini*, Mr. Stretton; *Pompolino*, Mr. Giubilei. NORMA in one act; *Norma*, by Miss Clara Novello; *Adalgisa*, Miss Rainforth; *Pollio*, Mr. Manvers; *Oroveso*, Herr Staudigl. The Farce, DEAF AS A POST; *Tristram Sappy*, Mr. Harley; *Capt. Templeton*, Mr. Cooper; *Sally Maggs*, Mrs. C. Jones, &c. &c. A CONCERT, in which M. Sivori will perform his Grand Concerto, and also a Duett for Pianoforte and Violin, with Mr. Benedict. Principal Vocalists in the Concert, Miss Novello, Miss Birch, Miss Sabilla Novello, and Miss Rainforth; Mr. Stretton and Herr Staudigl. Applications for Boxes and Tickets to be made to Mr. Whitlow, at the Box-Office, Hart-street, the principal Music-sellers, and Royal Libraries. Doors open Quarter past Six, Performance commences Quarter to Seven.

DR. SPOHR'S CONCERT.—*The Fall of Babylon.*—The artists of London deserve credit for gratuitously co-operating to produce the great work of a great composer. We are sorry that the sympathy of the general public must be rated lower, to judge by the "beggarly account of empty" benches witnessed yesterday week. By every rule of legitimate attraction 'The Fall of Babylon' (hitherto unheard in London) should have commanded a crowded and respectful audience. But the work is, in merit, as in date, the *third* of Dr. Spohr's oratorios. Six years ago (*Athen.* No. 492) we ventured to rate 'The Crucifixion' as inferior to 'The Last Judgment,' and our estimate has since been ratified by the musicians of Europe, who have allowed that oratorio to be quietly laid aside. The present work is not equal to its predecessor. It is throughout disappointing. The subject is one of dramatic effect, rather than of spiritual elevation. Nevertheless, that sacred description need not degenerate into scene-painting, we have abundant examples. The display of the miraculous judgments by Handel in his 'Israel' and 'Joshua,' is as highly-toned as the mystical sorrow of his 'Messiah.' Miriam's hymn of thanksgiving and deliverance is as lofty in its jubilation as the calmer 'I know that my Redeemer liveth;' David's lament for Jonathan as devoid of meretricious excitement as that deepest breathing of woe and reverence ever uttered in music, 'He was despised.' The dignity essential to sacred composition has been lost sight of by Dr. Spohr. His Persians move in measures which recall the tinsel symbols of a stage pageant; his daughters of Zion suggest the timbrels and the dances of the Pagan *ballet*, in every note of their upspringing hope and cheerfulness. The stupendous vision of the handwriting on the wall has elicited nothing beyond such *blue-fire* music as befits the cloister scene in 'Robert le Diable,' but which is painfully startling when employed in illustration of holy writ. In short, for German music the work is more secular than (for Italian) the graver parts of Rossini's '*Mosè*,' or the most mundane passages of his 'Stabat,' against which the idolaters of Spohr have railed by the hour. Let us specify a little more precisely—beginning with the Overture. Here, after a few impressive bars of introduction, the band breaks out into a regular march: not one of those pompous marches, such as Handel designed; *vide* 'Saul' and the overture to 'Alcides,' to seek no further; still less in grandeur comparable to the marches of Gluck,—but a downright fife-and-drum procession tune. And this seems a favourite *motivo* with the composer, since it is repeated again and again in different forms. The chorus of Persian soldiers is little graver than a *Liedertafel* tune, and far less hearty. It follows a melodious duett between a Jewish man and woman: but this is not distinguishable, by one extra breath of seriousness, from the 𝄋 movement in the duett from 'Zemira and Azor,' 'O lovely maiden, stay!' The chorus of Jews,

Lord, before thy footstool bending,

is less operatic, and is beautifully sweet; graceful, too, is the subsequent *terzetto*, as far as the deficiency on the part of tenor and the incapacity of the bass

Digitized by Google

employed, permitted us to make out the vocal design. On the *striking up* of the song of the Israelitish woman immediately succeeding this *terzetto*, a friend was startled into the exclamation, "The *Tyrolienne* of *Guillaume Tell*:" the phrase *is* there, and the peculiar rhythm not to be mistaken, though "rhymed and twirled" a little. We will go no further, having cited specimens enough for illustration. Far more agreeable is it to point, as a fine and spirited movement, to the chorus 'The lion roused'; as a pleasant cradle tune, to the Jewish mother's song over her babe, 'Dear child of bondage'; and to the rich and ample chorus in the second act, 'Lord, thine arm hath been uplifted,' where Dr. Spohr's felicity in eliciting a noble and melodious body of tone from the full orchestra, is excellently developed. Generally speaking, too, the work seems to us more easily written, the songs, as a whole, less buried in a surfeiting richness of accompaniment, the primal phrases less pertinaciously clung to than others by the same hand. And it must not be forgotten, that the oratorio was heard under the disadvantage of very insufficient rehearsal. In Germany, the master would not have committed himself to a new work on such a slight preparation. All who took part were attentive in no common degree; but though correctness may be thus strained out, how different is this from the ripe and solid execution of those who are too familiar to be at a loss, too well practised to fail!

BENEFIT CONCERTS.—We must be content simply to announce, as having taken place, the concerts of *Mrs. Aveling Smith and Mr. J. Haigh*, *Signor Emiliani*, *Miss Dinah Farmer*, and of *Herr Bosen*, a young and promising violinist. A line, too, will sufficiently record the extra Philharmonic Concert, given on Monday evening in presence of Her Majesty and H.R.H. Prince Albert; since it contained no novelty calling for mention, save a violin concerto by Dr. Spohr, who conducted the entire concert, with the exception of an overture and chorus of Mendelssohn intrusted to Mr. Lucas. But we must give "ampler room" to the third concert of *Signor Camillo Sivori*, held on Wednesday evening, which excited the audience to an enthusiasm as lively as if it had been the first, not the last, of the season. At this he performed a Concerto of his own;—Paganini's *Preghiera* from Mosè on the fourth string—and 'Nel cor più' with variations, and De Beriot's 'Andante et Rondo Russe,'—the last one of the most fascinating concert pieces in the violinist's repertory. To hear Signor Sivori in the compositions of Paganini, is curiously like calling up the Arch-Sorcerer himself. If our visitor have not that utmost command, and certainty, and fancy, which only belong to an originator, he is assuredly less affected than his prototype. Never was a performer better calculated to win his way by simplicity of demeanour. He plays, too, the music of De Beriot charmingly: perhaps not with the rich lustre of tone and the piquant and steady measurement of time, which distinguish that most perfect of executive artists—but with an ease, an expressiveness, and a feeling for beauty and contrast, which amount to an Italian reading of French music, and which are as interesting as they are admirable. We are, indeed, inclined to believe that Signor Sivori has no peer among contemporary violinists—but this opinion must remain in abeyance till we have heard Signor Ernst, who will give us an opportunity, and but one, of drawing a comparison, by performing gratuitously at a charitable concert, to be held on Tuesday, for the benefit of the German Hospital in London. We may further add, that the *programme* promises well—containing the names of Miss Novello, Herr Staudigl, M. Levassor, Mr. John Parry, Mr. Moscheles, Madame Dulcken, and others. Being thus led involuntarily into gossip, we may as well here advert to the *Matinée* to be given this morning for the benefit of M. le Comte D'Orsay's French charity:—and call the attention of the indifferent public to the fact that Dr. Spohr's 'Fall of Babylon' will be performed by the *Sacred Harmonic Society* on Friday evening next, under the direction of the composer.

MISCELLANEA

Paris Academy of Sciences.—June 26.—A paper was read on the anatomy and physiology of the date tree, by M. Gaudichand.—M. Arago communicated a paper by M. Poggiale, on the solubility of salts in water. He then read a second letter from M. Leymerie, on his researches as to the existence of Quicksilver mines in the Aveyron. M. Leymerie draws from the geological facts which he states inferences favourable to the opinion which he has expressed on this subject.—A communication was received from MM. Choiselat and Ratel, on the means of improving the Daguerréotype process. They are of opinion that the impressions would be more perfect, but for an excess of free iodine on the plates, and recommend that, in order to prevent this, the iodine should be laid on in a place sufficiently luminous for the purpose.—M. Arago read a letter from M. Melloni, on an improvement of the lenses of lighthouses. He states that by his system, on the Neapolitan coast, he has given, with a third of the former expense, from 16 to 25 times the former amount of light.—*July* 3.—M. Becquerel read a paper on the application, by means of electricity, of the oxides of metals upon metals. By his process he obtains oxides which had never before been formed by the ordinary process of chemistry, and all oxidable metals may be covered with a coating of oxide, such as the peroxides of iron or lead, which have great adhesiveness, and form as it were one body with the metals to which they are applied. Hitherto metals have been laid upon other metals to preserve them from oxidation, and the influence of external agents. By the process of M. Becquerel, he applies the excessively cohesive particles of the oxide, which renders the metals unchangeable on their surface, to which they impart a beautiful colour, in many cases preferable to that of the metals themselves. The process is one of great simplicity, for all that is necessary is to plunge the metal in an alkaline solution of an oxide, in giving to it the positive pole of an electrical pair with a permanent current.—M. Bory de Saint-Vincent made a report of the researches of a scientific commission in Algeria, and gave a most attractive account of the natural wealth of the soil.—Dr. Auzoux, whose anatomical models have deservedly attracted so much notice, presented to the Academy some new models in comparative anatomy, of extraordinary perfection. Amongst them is the model of a cockchafer, which, although only twelve times larger than nature, consists of six hundred parts, each marked with its number, and so contrived as to be connected or separated with great facility.—A paper by M. Munck, on a discovery made in the Royal Library of Paris, was next read. It will be remembered by our astronomical readers that, a few years ago, M. Sedillot published a passage from a work of Aboul-Vefa, to show that the discovery of the third lunar inequality, called the *variation*, was not due to Tycho-Brahe. The learned in astronomy, whose belief was attacked by this discovery, contested the authenticity of the authority, which they declared was an ulterior interpolation. M. Munck has just found, in a work on astronomy, written in Hebrew, in 1310, by a Jew of Toledo, named Isaac Israëli, a passage in which the third lunar inequality is mentioned, and the discovery of it attributed to Ptolemy. This communication led to some observations by M. Sedillot, who showed that, whilst M. Munck's discovery proves the authenticity of the passage of Aboul-Vefa, it does not deprive this Arabian author of the honour of having measured the *variation*, the existence of which had been merely ascertained by Ptolemy.

Progress of Lotteries.—"*Stuffed Birds of Paradise, a Beautiful Living Poncy* [warranted sound], *three Lap Dogs, two Speaking Parrots, and Cockatoo*, a rare living Monkey, a beautiful Glass Cage, with a foreign bird, &c. Tickets only 2*s.* 6*d.*, or nine for 1*l.* To be drawn upon the plan of the Royal Irish Art-Union."

Royal Polytechnic Art-Union (*the Polypicnic*).—We learn from a paragraph in the daily papers, that the grand distribution of prizes took place on Saturday last. It appears that "the subscriptions amounted to 1,160*l.* 6*s.* 9*d.*, and the expenditure to 1,150*l.* 3*s.*," which included 250*l.* distributed at that meeting in prizes! So much for this "Royal" project for the encouragement of "artists, men of science and ingenuity." As to the promises of the prospectus, prizes "from 10*l.* to 200*l.*, and *upwards*," we leave the reader to his own conclusions, seeing that 250*l.* was the whole amount distributed in prizes.

TO CORRESPONDENTS.—R. M.—Two "Constant Readers"—J. D. T.—D.—An Admirer of Art—received.—We will attend to Messrs. Orr's letter next week.

In 8vo. price 4*s.*

AN ACCOUNT of some REMARKABLE APPLICATIONS of the ELECTRIC FLUID to the USEFUL ARTS, by Mr. ALEXANDER BAIN; with a Vindication of his claim to be the First Inventor of the Electro-Magnetic Printing Telegraph, and also of the Electro-Magnetic Clock. By JOHN FINLAISON, Esq., Actuary of the National Debt Office, and Government Calculator.
Chapman & Hall, 186, Strand.

TIERNEY'S DODD.

Just published, price 12*s.*, Volume the Fifth of

THE CHURCH HISTORY of ENGLAND; from the Year 1500 to 1688, chiefly with regard to Catholics. By CHARLES DODD, with Notes, and a Continuation to the beginning of the present Century, by the Rev. M. A. TIERNEY, F.R.S. F.S.A.

This volume, which is original, and principally supplementary to the Reign of James the First, embraces the History of the two Arch-priests, Birkhead and Harrison, the negotiations which led to the appointment of the Bishop of Chalcedon, and the struggles and remonstrances by which the independence of Douay College was finally established.

George Bell, 186, Fleet-street.

PELICAN LIFE ASSURANCE OFFICES, 70, Lombard-street, and 57, Charing-cross.—Established 1797.

Directors.

Matthias Attwood, Esq. M.P.	Sir W. Heygate, Bart.
W. Stanley Clarke, Esq. F.R.S.	Kirkman D. Hodgson, Esq.
John Coope, Esq.	R. Henshaw Lawrence, Esq.
William Cotton, Esq. F.R.S.	J. Petty Muspratt, Esq.
Sir William Curtis, Bart.	George Shum Storey, Esq.
William Davis, Esq.	C. Hampden Turner, Esq.
J. A. Gordon, Esq. M.D. F.R.S.	Matthew Whiting, Esq.

The Plan of this Office will be found to comprise all the Solid Advantages of Life Assurance.

Persons have the option of insuring upon the Return or Non-Return Systems; and the Tables, which include Ascending and Descending Scales of Premium, have been framed to suit the convenience of all parties.

The Rates have recently been reduced agreeably to the most approved calculations; they are also verified by the experience of the Office during Forty Years, and are as low as consistent with safety; those adapted to the RETURN SYSTEM entitle its assured to an equitable participation in the surplus premium, according to the plan detailed in the Company's prospectus.

The Assured under both Systems will possess the guarantee of a large PAID-UP Capital, and the further security of a responsible body of Proprietors, without being exposed to the liabilities of partnership.

Policies are purchased on liberal terms when the object of an assurance is effected;—or, loans will be granted thereon to the extent of five-sixths of such purchase-money.

Prospectuses and every information obtained on application at the Offices as above, or to the Agents of the Company appointed in every City and principal Town in the Kingdom.

R. TUCKER, Secretary.

FAMILY ENDOWMENT SOCIETY, LIFE ASSURANCE and ANNUITY OFFICE, 12, Chatham-place, Blackfriars, London.

Directors—William Butterworth Bayley, Esq. *Chairman.*
John Fuller, Esq. *Deputy Chairman.*

Henry Bowden, Esq.	Elliot Macnaghten, Esq.
Robert Bruce Chichester, Esq.	William Prinsep, Esq.
Alexander Colvin, Esq.	Joshua Walker, Esq.
Edward Lee, Esq.	Major Willock, K.L.S.

CAPITAL 500,000*l.*

The objects of Life Assurance may be accomplished at this Office on terms as low as is consistent with security.

Examples of Life Assurance for 100*l.*

Age.	30	40	50	60
Annual Premium..	£. s. d. 2 4 7	£. s. d. 3 0 3	£. s. d. 4 4 9	£. s. d. 6 2 5

Endowments for future and existing children, and Annuities of all kinds are granted by this Society.

The usual commission allowed to Solicitors and others, and 5*l.* per cent. extra on the first premium.

JOHN CAZENOVE, Secretary.

UNITED KINGDOM LIFE ASSURANCE COMPANY, 8, Waterloo-place, Pall Mall, London.
Division of Profits among the Assured.

Honorary Presidents.

Earl of Errol	Earl Somers
Earl of Courtown	Lord Viscount Falkland
Earl Leven and Melville	Lord Elphinstone
Earl of Norbury	Lord Belhaven and Stenton.
Earl of Stair	

Directors—Jas. Stuart, Esq. *Chairman.*
Hananel De Castro, Esq. *Deputy Chairman.*

Samuel Anderson, Esq.	Charles Graham, Esq.
Hamilton Blair Avarne, Esq.	F. Charles Maitland, Esq.
Edw. Boyd, Esq. *Resident*	William Railton, Esq.
E. Lennox Boyd, Esq. *Assist. Resident*	John Ritchie, Esq.
Charles Downes, Esq.	F. H. Thomson, Esq.

Secretary—Patrick Macintyre, Esq.

This Company, established by Act of Parliament, affords the most perfect security in an ample paid-up Capital, and in the great success which has attended it since its commencement in 1834. In 1841, the Company declared an addition to the Shareholders of one-half of their Stock, and also added 2*l.* per cent. per annum, from the date of the policies to those parties who had insured with profits. The premiums, nevertheless, are on the most moderate scale, and only a moiety need be paid for the first five years, where the Insurance is for life.

The amount of bonus added to policies since the commencement of the Company in March, 1834, to the 31st Dec. 1840, is as follows:

Sum Assured.	Time Assured.	Sum added to Policy.
£1000	6 Years 10 Months	£136 13 4
1000	4 Years	80 0 0
1000	3 Years	60 0 0
1000	1 Year	20 0 0

Every information will be afforded on application to the Resident Directors, Edward Boyd, Esq. and E. Lennox Boyd, Esq., of No. 8, Waterloo-place, Pall Mall, London.

Frederick Hale Thomson, Esq. *Surgeon*, 48, Berners-street, attends at the Office daily, about half-past 2.

CORPORATION of the LONDON ASSURANCE. Established by Royal Charter, A.D. 1720, FOR FIRE, LIFE, AND MARINE ASSURANCES.
Offices, 19, Birchin-lane, Cornhill, and 10, Regent-street.
John Clark Powell, Esq., *Governor.*
Abel Chapman, Esq., *Sub-Governor.*
Lestock Peach Wilson, Esq., *Deputy Governor.*

Directors—

Robert Allen, Esq.	Richard Drew, Esq.
John A. Arbuthnot, Esq.	John Furse, Esq.
George Barnes, Esq.	Edwin Gower, Esq.
Henry Blanshard, Esq.	Samuel Gregson, Esq.
John Watson Borradaile, Esq.	Edward Harnage, Esq.
Edward Burmester, Esq.	Robert King, Esq.
Henry Cayley, Esq.	William King, Esq.
Aaron Chapman, Esq. M.P.	John Ord, Esq.
Robert Cotesworth, Esq.	George Prohyn, Esq.
Charles Crawley, Esq.	John Rees, Esq.
John Deffell, Esq.	Daniel Stephenson, Esq.
James Dowie, Esq.	Thomas Weeding, Esq.

Persons effecting Life Assurances with this Corporation have the choice of two plans:

The one entitling them to an annual abatement of premium after five years' payment;

The other at a lower fixed rate without abatement.

The leading features which distinguish the first of these plans from those of other Life Assurance offices are—

The guarantee of the Corporation for the full payment of the sums assured:

Annual abatements of premium, commencing after five full years' payments:

Total absence of partnership of any kind whatever:

Absolute exemption from the possibility of being called upon to contribute towards making good any losses:

And freedom from all charges of management.

The abatement of premium for the year 1843 on policies of five years' standing, under the first of the above plans, was 31*l.* 10*s.* 2*d.* per cent.

It may be here sufficient to state, as an example, that under the above system a person having effected a policy on or before the 1st of January, 1838, at an annual premium of 100*l.*, had, on the 1st of January, 1843, only the sum of 6*l.* 9*s.* 10*d.* to pay as that year's premium.

The future annual abatement must vary according to the success of this branch of the Corporation's business.

In the Fire Department assurances are effected at the lowest rates.

Attendance daily, from Ten till Four, at both Offices, where prospectuses and every information may be obtained.

ABEL PEYTON PHELPS, Esq.,
Superintendent of the Office in Regent-street.
JOHN LAURENCE, Secretary.

The Corporation having determined to increase the number of their agents, are desirous of receiving applications for appointments from parties of respectability and influence residing in the several towns and districts of England and Wales.

BRITANNIA LIFE ASSURANCE COMPANY, 1, Princes-street, Bank, London.

This Institution is empowered by *Special Act of Parliament*, (4 Vict. cap. 9), and is so constituted as to afford the benefits of Life Assurance in their fullest extent to Policy-Holders, and to present greater facilities and accommodation than are usually offered by other Companies. The decided superiority of its plan, and its claim to public preference and support, have been proved incontestibly, by its extraordinary and unprecedented success.

Assurances may either be effected by Parties on their own Lives, or by Parties interested therein on the Lives of others.

The effect of an Assurance on a person's own life is to create at once a property in reversion, which can by no other means be realized. Take, for instance, the case of a person at the age of thirty, who by the payment of 3*l.* 3*s.* 4*d.* to the Britannia Life Assurance Company, can become at once possessed of a bequeathable property, amounting to 1000*l.*, subject only to the condition of his continuing the same payment quarterly during the remainder of his life,—a condition which may be fulfilled by the mere saving of EIGHT SHILLINGS weekly in his expenditure. Thus, by the exertion of a very slight degree of economy—such, indeed, as can scarcely be felt as an inconvenience, he may at once realize a capital of 1000*l.*, which he can bequeath or dispose of in any way he may think proper.

Detailed Prospectuses, and every requisite information as to the mode of effecting Assurances, may be obtained at the Office.

PETER MORRISON, Resident Director.

A Board of Directors attend daily at 2 o'clock, for the dispatch of business.

WARM WEATHER.—Ease and Comfort for the Feet.—HALL & CO. Wellington-street, Strand, London, sole Patentees of the PANNUS CORIUM, or Leather Cloth Boots and Shoes. These articles have borne the test and received the approbation of all who have worn them. Such as are troubled with corns, bunions, gout, or tenderness of feet from any other cause, will find them the softest and most comfortable ever invented; they never draw the feet or get hard, and for warm climates they are found easier and more durable than any other kind of shoes; they resemble the finest leather, and are cleaned with common blacking. Their Elastic Spring Boots are worthy attention; they supersede lacing and buttoning, and effectually support the ankle. The material sold by the yard in any quantity. Any respectable boot and shoe maker may be appointed agent.—The much-improved PATENT INDIAN-RUBBER GOLOSHES are light, durable, and perfectly waterproof.—HALL & CO.'S PORTABLE WATERPROOF DRESSES claim the attention of all who are exposed to the wet. Ladies' Cardinal Cloaks, with hoods, from 18*s.* Gentlemen's Dresses, comprising Cape, Overalls, and Hood, 21*s.* The whole can be carried with convenience in the pocket.

METCALFE'S NEW PATTERN TOOTH-BRUSH and SMYRNA SPONGES.—The Tooth-Brush has the important advantage of searching thoroughly into the divisions of the teeth, and cleaning them in the most effectual and extraordinary manner, and is famous for the hairs not coming loose—1*s.* An improved Clothes-Brush, that cleans in a third part of the usual time, and incapable of injuring the finest nap. Penetrating Hair-Brushes, with the durable unbleached Russian Bristles, which do not soften like common hair. Flesh-Brushes of improved graduated and powerful friction. Velvet-Brushes, which act in the most surprising and successful manner. The Genuine Smyrna Sponge, with its preserved valuable properties of absorption, vitality, and durability, by means of direct importations, dispensing with all intermediate parties' profits and destructive bleaching, and securing the luxury of a genuine Smyrna Sponge. Only at METCALFE'S Sole Establishment, Oxford-street, two doors from Holles-street.

CAUTION—Beware of the words "From Metcalfe's" adopted by some houses.

WATCHES by WEBSTER & SON, Chronometer Makers to the Lords of the Admiralty (Established 132 years), 3, BIRCHIN-LANE. The largest assortment of fine Second-hand Watches of any house in London, by the most eminent makers—many nearly equal to new, and at little above half their original cost, all of which W. & Son warrant. They consist of fine Repeaters, Duplex, Lever, and Horizontal Escapements, all of superior manufacture. New Watches of the most elegant patterns upon the principle of their Chronometers, to which the Government awarded the prizes three years in succession, with compensation balances to counteract the variations of temperature. Also a large assortment of Lever and Elegant Horizontal Watches, for Ladies and Gentlemen, at considerably reduced prices. Old Watches taken in exchange. The most experienced workmen are employed on the premises in the repairing department.

Webster & Son, 3, Birchin-lane, Cornhill.

MOULD CANDLES to BURN WITHOUT SNUFFING.—KEMPTON'S PATENT.—These candles do not require snuffing; they burn longer and are cheaper than any other candle; the flame is steady and brilliant. No metallic or deleterious matter is used in the manufacture. Price 8*d.* per lb. Sold by G. E. Parish, agent for exportation, 21½, Bread-street, City, and by Slodden & Stocking, 42, High-street, Marylebone; W. Gethem, Broadley-terrace, Blandford-square; W. Evans, Italian warehouse, Greenwich; John Hawkins, grocer, High-street, Whitechapel; George Hawley, grocer, Pitfield-street, Hoxton; S. Garne, Fish-street-hill; J. Pain, grocer, Bethnal-green-road; G. H. Hudson, 229, Blackfriars-road; C. H. Nicholas, 19, Bolingbroke-row, Walworth; and at the manufactory, Old Bargehouse, Christchurch, Surrey.

MESSRS. BARRY & SON, Stationers and Engravers, beg to inform the Nobility and Gentry that they are now enabled to PRINT ARMS, CRESTS, &c., for book plates, in their proper heraldic colours, and at very moderate prices. Crests engraved on visiting cards in the first-rate style, 5*s.*; without the crest, 2*s.* 6*d.*; and 100 cards, 2*s.* 6*d.*: also every description of elegant engraving. Specimens of the above may be viewed from a large and fashionable assortment, at their warehouses, Egyptian Hall, Piccadilly, and 132, Bishopsgate-street Within, or sent on application any distance free of expense. Superfine letter papers, 27*s.*, 23*s.*, 20*s.*, 18*s.*, 17*s.*, 14*s.*, 12*s.* and 8*s.* per ream; Note ditto, 18*s.*, 16*s.*, 12*s.*, 8*s.*, 6*s.* and 4*s.* per ream. An additional charge is made for stamping either of the above with arms, crest, coronet, or initials. Their miscellaneous stock, which is very large and particularly adapted for presents, consists of dressing cases, writing desks, inkstands, envelope cases, albums, blotting-books, bibles and prayers, gold and silver pencil cases, pencil-holders, toilet and smelling bottles, souvenirs, ladies' companions, sachets, card and glove cases, pocket-books, papeterie, and envelopes, suitable for invitations, complimentary notes, weddings, &c. Either of the above articles may be had plain, or of the most costly description, with every description of useful stationery. Postage stamps and envelopes at Government prices. Messrs. Barry & Son are also the West-end Agents for Mr. Robert Best Ede's Perfumery.

NORTON'S CAMOMILE PILLS are confidently recommended as a simple, but certain remedy, to all who suffer from Indigestion, Sick Headach, Billous and Liver Complaints; they act as a powerful tonic and gentle aperient, imparting strength to the stomach, and composure to the nervous system. Sold in bottles, at 1*s.* 1½*d.* or 2*s.* 9*d.* each, by A. Willoughby & Co., late B. G. Windus, 61, Bishopsgate Without; and nearly all Medicine Venders.

I.
The Natural Principles and Analogy of the Harmony of Form. In 1 vol. royal 4to. with 18 Engravings. 15*s.*

II.
The Laws of Harmonious Colouring adapted to Interior Decorations, &c. With 8 coloured Diagrams. The 4th edition. 7*s.*
William Blackwood & Sons, Edinburgh, and 22, Pall Mall, London.

On the 3rd of August, with 130 Engravings,

A WEEK AT KILLARNEY.
By Mr. and Mrs. S. C. HALL.
This volume, so richly illustrated with subjects, picturing the scenery, manners, and customs of the district surrounding the lakes, will be comprised in about 200 pages, of a size not inconvenient for the traveller.
Much beautiful scenery will be for the first time described, as the authors have been recently engaged in an especial visit for the purpose.
The approaching visit of the British Association to Cork will, it is expected, lead a considerable number of the members to Killarney.
By the aid of steam the magnificent scenery of these beautiful lakes is brought within two days' journey from London.
The volume will contain concise directions as to the various routes and modes of transit from London, with their cost.
London: published by Jeremiah How, 132, Fleet-street; and sold by John Cumming, Dublin; and may be had at the Victoria and Roche's Hotels, at Killarney, and of all the Booksellers in Cork.

8, New Burlington-street. July 15. 1843.

To other Countries, the postage in addition.

[JAMES HOLMES, TOOK'S COURT, CHANCERY LANE.]

BRITISH ASSOCIATION for the ADVANCEMENT of SCIENCE.

The THIRTEENTH MEETING of the BRITISH ASSOCIATION for the ADVANCEMENT of SCIENCE, will commence in CORK on THURSDAY MORNING, the 17th of AUGUST, 1843.

JOHN TAYLOR, F.R.S., General Treasurer.

2, Duke-street, Adelphi.

EXETER HALL.

Under the Sanction of the Committee of Council on Education.

DRAWING FROM MODELS, under the Direction of Mr. BUTLER WILLIAMS.

ELEMENTARY CLASSES.—(FIRST COURSE).

CLASS No. 16, FOR FEMALES,

will commence on THURSDAY NEXT, July 27, at a quarter before Six o'clock, and will meet on Monday and Thursday Evenings.

CLASS No. 17, FOR MALES,

will commence on FRIDAY NEXT, July 28, at Eight o'clock, and will meet on Wednesday and Friday Evenings.

TERMS: 40s. for the Course of Forty Lessons, of two hours each, or 10s. per Month, to be paid in advance. Teachers, Workmen, &c. will be admitted on payment of 20s. for the Course, or 5s. per Month.

All Monthly Subscribers are required to make Two Payments in advance.

Tickets may be obtained at Exeter Hall any Evening except Saturday, between the hours of Five and Nine.

ACADEMICAL DEGREES.—Gentlemen of LITERARY or SCIENTIFIC PURSUITS, MINISTERS, or Others properly qualified, desirous of GRADUATING, may RECEIVE EFFICIENT ASSISTANCE from the Advertiser.—Address (pre-paid), stating qualifications, to M. D., 15, Tottenham-court New-road.

EDUCATION IN FRANCE.—Mr. LIBOREL & SON'S SCHOOL for YOUNG GENTLEMEN, at GUINES, near Calais. Established in 1820.—This School can claim a superiority above most other schools in France, not only as regards the personal attendance of the Principals, but also the great care in the choice of Professors. It has also a Protestant chapel, built expressly for the scholars, who are thoroughly educated, so as to qualify them either for commerce or any profession, which can be testified by many respectable gentlemen in London, who have been educated there. Terms moderate. No vacation. Mr. Liborel & Son are in town, and may be seen from 11 till 3, at 6, Norfolk-street, Strand, where Prospectuses and respectable references may be had. Letters pre-paid.

EDUCATIONAL ESTABLISHMENT, TWICKENHAM.—The object of this Establishment is to put in practice the best mode of moral, intellectual, and physical developement, based upon the educational experience of our age. In many instances, Education is confined to a limited intellectual developement; in others, the training of the moral faculties is but imperfectly attended to: in almost all, the physical developement is overlooked. Again—the views of some modern Educationists would restrict the study of the ancient languages, so as to reduce them to comparative inefficiency as a means of intellectual training. Amongst all these partial schemes and views, there is perhaps an eclectic course in which the greatest amount of success would be found. Such is the course followed in this Institution.

The Conductor of the Establishment, Mr. RAYMOND DE VERDUCH, was several years Classical Master in an English School of distinction—and subsequently, officially employed in investigating the Systems of Education in practice in many parts of Europe; he has thus been enabled to study the best mode of Education: he resided during two years, at the same time, as Professor and on a mission, in the Institutions of Mr. De Fellenberg, at Hofwyl, near Berne. He is assisted by members of the University of Cambridge. References of the first order. Prospectus sent on application. The School RE-OPENS on the 28th instant.

LEICESTER COLLEGIATE SCHOOL RE-OPENS on MONDAY, July 31st.

The course of instruction pursued comprises a sound Classical and Mathematical training, by means of which the Pupils are enabled immediately to pass to either of the Universities.

The fundamental principles of a good English and Commercial Education are either combined with sound Classical Instruction, or are taught separately, according to the wish of parents.

TERMS OF THE SCHOOL.

Entrance Fee, 1l.

Classical Department { Upper Forms, 12l. per annum. Lower Forms, 10l. per annum.

Commercial Department, 8l. per annum.

TERMS FOR BOARDERS, EXCLUSIVE OF THE SCHOOL FEES.

With the Head Master, the Rev. A. Hill.

Above 10 years, 35 guineas per annum.
Under 10 — 30

With the Under Master, Mr. Wilkins-n.

Above 10 years, 25 guineas per annum.
Under 10 — 20

No extras but for washing.

BOLTON HOUSE SCHOOL, TURNHAM GREEN, for a limited number of Pupils, five miles west of London, adjacent to the Chiswick Horticultural Gardens.—This Establishment unites the advantages of the Continent, in reference to modern languages, with the comforts of an English home, and the inculcation of knowledge, carefully based on Christian principles. The Principal, Mr. J. G. DYNE, has spent many years in several of the capitals of Europe, for the purpose of investigating the most approved methods of Education. Every endeavour is made to promote the moral and intellectual welfare, as well as the personal comforts of the Pupils: the Principal and the Assistant Masters regulate and encourage the recreations of the play-ground. The course of instruction, without extras, comprehends the Greek and Latin Classics, on the Eton principle, French and German, which are much spoken in the Establishment; the Mathematics, Natural Philosophy, Drawing, Music, the Elements of Chemistry, &c. &c., with all the branches of a liberal education. Each young gentleman has a separate bed. References to Pupils' Parents and Clergymen, to Professional and Commercial Gentlemen of the highest respectability, will be found in the Prospectus, which may be obtained, post-free, from Mr. J. G. Dyne: or, by personal application, at Brewett's Library, 63, Regent Quadrant; or at Suter's, Stationer, 19, Cheapside.—School re-opens this day.—There are Five Vacancies.

Bolton House, 20th July, 1843.

RESIDENT GOVERNESS.—A LADY, who has resided some years in Paris, speaks the French language fluently, teaches it grammatically, and undertakes also Music, the rudiments of Italian, with the usual routine of English Education, wishes to RE-ENGAGE in a Family where the children would be under 13 years of age. She has had considerable experience in the management of children: her connexions are good, and her references are unexceptionable.—Address, Mr. Rolandi, Foreign Bookseller, Berners-street, Oxford-street.

TO SCHOOLS, PRIVATE FAMILIES, &c., DRAWING FROM MODELS.

MR. GANDEE, Professor of Perspective, Drawing, &c., GIVES LESSONS in the new and successful method of DRAWING FROM MODELS, on the simultaneous plan as practised by the classes at Exeter Hall, &c.—Terms, which are very moderate, may be obtained of Mr. Gandee, at No. 4, Lower Belgrave Place, Pimlico.

STEAM NAVIGATION CLASS.

THE Third Course of LECTURES, this season, by Dr. JOHN RYAN, on the Economy and Uses of Steam, especially in reference to STEAM NAVIGATION, will commence at 11 A.M., on MONDAY, 31st July, 1843, in the Class Room of the Royal Polytechnic Institution.

In these Lectures, which are principally designed for NAVAL OFFICERS, Dr. Ryan is assisted by an experienced PRACTICAL ENGINEER; and by the kindness of the DIRECTORS of the BLACKWALL STEAM-BOAT COMPANY the Pupils are enabled to receive PRACTICAL INSTRUCTION in the management of Marine Engines.

Pupils who pass a satisfactory examination at the termination of the Course receive certificates of the same.

The next Class for RAILWAY DRIVERS will commence on TUESDAY, 1st August, 1843, at 8 P.M. In these Lectures Dr. Ryan is assisted by a PRACTICAL DRIVER, who, by the permission of the DIRECTORS of the CROYDON RAILWAY, is enabled to give the Pupils PRACTICAL INSTRUCTION in Driving. Certificates after a careful examination.

The Summer Course of LECTURES on CHEMISTRY, by Dr. Ryan, commences on MONDAY, July 31st, 1843, at 3 P.M. The Laboratory of the Royal Polytechnic Institution is constantly open for instruction in Chemical Manipulation and general Analysis.

The Courses on EXPERIMENTAL PHILOSOPHY, under the direction of Professor G. H. Bachhoffner, commence on MONDAY, July 31st, 1843, at 1 P.M.

The Pupils entering any of the above Classes have free admission to all the public lectures in the Institution.

THE FRIENDS' RETREAT, YORK.—In consequence of recent alterations in this Establishment, there are at present several VACANCIES FOR PATIENTS of the higher class, without limitation to the Society of Friends, at from two to five guineas a week.—Applications may be addressed to the Superintendent of the Retreat, York.

OFFICE for PATENTS of INVENTIONS and REGISTRATION of DESIGNS, No. 14, Lincoln's Inn-fields, where all business relating to the Securing and Disposing of BRITISH and FOREIGN PATENTS, Preparation of Specifications, Drawings of Inventions, is expeditiously and economically effected.

Also REGISTRATIONS under the New Consolidated Copyright of Designs Act, 5 & 6 Vict. cap. 100.

A Prospectus, containing much useful information, may be obtained, and references to an Alphabetical List of Patents and Registrations made, on application to Mr. Alexander Prince, 14, Lincoln's Inn-fields.

ROYAL FREE HOSPITAL for the DESTITUTE SICK and DISEASED, Gray's-inn-road (late Greville-street).—At a PUBLIC MEETING, held at Willis's Rooms, on the 18th March, 1843, for devising the best means of raising a Fund to defray the purchase and furnishing of the new Hospital.

The following Noblemen, Clergymen, and Gentlemen were appointed a Committee to receive Subscriptions:—

Lord ROBERT GROSVENOR, Chairman.

The Duke of Beaufort, K.G.	Hon. R. Bootle Wilbraham, M.P.
The Marquess of Lansdowne, K.G.	Hon. G. D. Ryder, M.P.
The Earl of Arundel and Surrey, M.P.	David Barclay, Esq. M.P.
The Earl of Egmont	W. H. Bodkin, Esq. M.P.
The Earl of Stamford and Warrington	T. S. Duncombe, Esq. M.P.
The Earl of Zetland	Wynn Ellis, Esq. M.P.
Viscount Ebrington, M.P.	W. Ewart, Esq. M.P.
Viscount Lake	John Hardy, Esq. M.P.
Viscount Sandon, M.P.	W. James, Esq. M.P.
Lord Althorpe	Henry Kemble, Esq. M.P.
Lord Kinnaird	W. A. Mackinnon, Esq. M.P.
Lord Sherborne	J. Wilson Patten, Esq. M.P.
Lord Sondes	W. Rashleigh, Esq. M.P.
Lord Claude Hamilton, M.P.	Thomas Sheppard, Esq. M.P.
Rt. Hon. Col. G. D. Damer, M.P.	P. M. Stewart, Esq. M.P.
Hon. E. G. D. Pennant, M.P.	Rev. E. Rice, D.D.
Hon. C. Ponsonby, M.P.	Rev. J. Bowles, D.D.
	James M. Venning, Esq.
	F. P. Walesby, Esq.
	H. S. Westmacott, Esq.

At a PUBLIC MEETING, held at the Hall of Commerce, on the 28th of June, 1843, the following Gentlemen were appointed a Committee to receive subscriptions:—

SAMUEL GURNEY, Esq. Chairman.

Thomas Baring, Esq.	Henry Kingscote, Esq.
T. B. Batard, Esq.	Samuel Jones Loyd, Esq.
William Beckford, Esq.	James Pattison, Esq.
Rev. Thos. Dale, M.A.	Mr. Sheriff Pilcher
Peter Ewart, Esq.	Rev. Dr. Rice
George Forbes, Esq.	A. G. Robarts, Esq.
Samuel Gurney, jun. Esq.	David Salomons, Esq.
J. Hambro, Esq.	John Abel Smith, Esq. M.P.
John G. Hubbard, Esq.	D. W. Wire, Esq.
R. A. Husey, Esq.	Rev. Dr. Worthington.

Subscriptions are also received by Messrs. Coutts & Co.; Messrs. Drummond & Co.; Messrs. Herries & Co.; Messrs. Smith, Payne & Smiths; Messrs. Glyn & Co.; Messrs. Jones, Loyd & Co.; Messrs. Barclay, Bevan & Co.; Messrs. Denison & Co.; Messrs. Williams, Deacon & Co.; Messrs. Prescott, Grote & Co.; Messrs. Ransom & Co.; Messrs. Nisbet & Co. Berners-street; and at the Secretary's Office.

By order, Rev. R. C. PACKMAN, Sec.

N.B. The amounts received will be duly advertised in the public journals.

The building will contain upwards of 500 beds; there are at present 130.

GOVERNORSHIP OF PARKHURST PRISON.

THE Committee of Visitors, being directed by the Secretary of State to examine the TESTIMONIALS OF CANDIDATES for the OFFICE OF GOVERNOR of the Prison for Juvenile Offenders at Parkhurst, in the Isle of Wight, request that applications for this Office, accompanied by Testimonials, stating the age of the applicant, and whether married or single, may be addressed to "THE COMMITTEE OF VISITORS OF PARKHURST PRISON," care of Major Jebb, No. 45, Parliament-street. Applications will be received until Twelve o'clock on the 5th of August. The Governor will be required to reside within the walls of the Prison. His Salary will be 400l. per annum, and he will be provided with a House, and Coals, and Candles. The Visitors are instructed that a Gentleman who has had experience in the discipline of the Army or Navy, and who would be prepared by his character and habits to combine that discipline with the measures adopted by the Chaplain for the instruction and moral reformation of the prisoners, would probably be preferred. A Circular, containing further information respecting the duties, may be obtained on application at 45, Parliament-street, after Tuesday, the 25th instant.

DERBY.—OPTICAL AND PHILOSOPHICAL INSTRUMENT REPOSITORY.

JOHN DAVIS, OPTICIAN, Derby (late Cheltenham), has the honour to inform his Patrons that he has centralized his extensive connexion in Derby, where, in future, he will be happy to receive orders. He begs to call attention to his celebrated Pocket Telescopes, measuring but 3¼ inches when closed, and are capable of defining clearly Jupiter's Moons. Oberhäuser's Objectives supplied to the trade. Several second-hand Telescopes, by Dollond, on sale.—No connexion with any house in London.

SOUTHGATE'S ROOMS.

By HENRY SOUTHGATE & Co., at their Rooms, 22, Fleet-street, on TUESDAY, July 25, and four following days,

THE BUSY BODY; a Novel.

Richard Bentley, New Burlington-street,
(*Publisher in Ordinary to Her Majesty.*)

FELIX SUMMERLY'S
RECREATION HAND-BOOK GUIDES,
Corrected for the Season of 1843.

"Recreation is a second creation, when weariness hath almost annihilated one's spirits. It is the breathing of the soul, which otherwise would be stifled with continual business.... As for those that will not take lawful pleasure, I am afraid they will take unlawful pleasure, and by lacing themselves too hard grow awry on one side."
FULLER'S HOLY AND PROFANE STATE.

"All work and no play makes Jack a dull boy."
OLD ENGLISH PROVERB.

Now ready, price 2s. 6d.
In an Ornamental Cover of the 16th Century,
HAND-BOOK FOR THE NATIONAL GALLERY,
WITH FIFTY REMINISCENCES OF THE MOST CELEBRATED PICTURES, DRAWN EXPRESSLY FROM THE ORIGINALS, BY MESSRS. JOHN JAMES AND WILLIAM LINNELL.

(Open daily, from Ten to Four, except Friday and Saturday.)
Other Editions, price 6d., 3d., and 1d. Also,
Catalogue des Tableaux qui se trouvent dans la GALERIE NATIONALE, suivi par la Chronologie des Peintres.' Prix 6d.

HAMPTON COURT PALACE.
(OPEN DAILY, EXCEPT FRIDAYS.)
Being a Guide to the Architecture, Tapestries, Paintings, Gardens and Grounds of Hampton Court: with numerous Embellishments on Wood, engraved by Ladies; and Plans of the Palace and Grounds from Official Surveys. The Illuminated Cover is taken from a design for a book-cover produced by Hans Holbein for Cardinal Wolsey. Second edition, price 2s. in cloth, and Holbein's cover in gold, with Maps and Plans; and 2s. 6d. not gilt, and with plan only.

"Decidedly the best popular guide to the picturesque beauties of Hampton Court of any extant."—*Spectator.*
"A charming specimen of a Hand-book, literally crammed with information."—*Atlas.*

FREE PICTURE GALLERIES;
Being a GUIDE to all the PICTURES in the NATIONAL GALLERY, the DULWICH GALLERY, the SOANE MUSEUM, the SOCIETY of ARTS, and the BRITISH MUSEUM. Price 1s. 6d.

"These Catalogues are more raisonnés and correct than the correspondent official ones; are more portable, and to their limits every way commodious, whilst they cost together much less than several of the latter cost separate."—*Athenæum.*

HOLIDAYS; or, a Guide to London Sights.
Giving details of the Locality—Means of Access—Nature of Admission—Time when Open—Principal Objects, and Descriptive Catalogues of all the Permanent Sights. Notes for Days' Excursions out of the Metropolis. Price 6d.

WESTMINSTER ABBEY.
(The Abbey opens at 9 A.M., and closes, in the Summer, at 6 P.M. The Tombs are shown until half-an-hour before, and about an hour after, Divine Service, which commences at 10 A.M. and 3 P.M. Entrance to Poets' Corner, free; to the Nave, alone, 3d.; with the Chapels, 6d.)
A Guide to the Architecture, Sculptures, Tombs, and Decorations, with 56 Embellishments on Wood, engraved by Ladies, 4 Etchings, a Specimen of Encaustic Tiles in the Chapter House, and an Illumination. Price 7s. Cheaper Editions, 3s., 1s. 6d.

"Its pages are not disfigured by the usual Guide-book sentimentality, rambling on without method, and mixing inaccurate if not false information with indiscriminate and nauseating praise, but it gives a well arranged and correct description, neither too popular nor too pedantic, of the Sacred Edifice."—*Ecclesiologist*, published by the Cambridge Camden Society.
"A volume got up in excellent taste, and written in a right spirit; critical so far as criticism could be allowed, but always suggestive, and testing opinions by reference to principles. As if to perfect the interest of the work, its fifty-six illustrative engravings have all been executed by women; and some amateurs, Lady Callcott and Lady Palgrave, amongst others, have gracefully contributed drawings, and thus associated their names with their sister artists."—*Athenæum.*

Also, for Foreigners, GUIDE A L'ABBAYE DE WESTMINSTER. Par Félix Summerly. Prix 1sh.

TEMPLE CHURCH.
With Eight Illustrations. Printed in three colours, in novel combinations of lithography and type, with Ornamental Cover of the pattern of the Encaustic Tiles. Second Edition. Price 1s.

A HAND-BOOK for CANTERBURY; with 26 Illustrations, 3s. 6d.; cloth extra, 5s. 6d.

Will be ready in a few days,

AN INTRODUCTION to ENGLISH COMPOSITION, consisting of Six Courses of Exercises, progressively arranged, and adapted both to Classical and English Schools. By RICHARD HILEY, Author of a 'Latin Grammar,' 'English Grammar,' &c. Third Edition, improved.

Works by the same Author,

1. A Treatise on English Grammar, Style, Rhetoric, and Poetry; to which are added, Preparatory Logic, and Advice to the Student, on the Improvement of the Understanding. Third Edition, considerably improved, 3s. 6d.

2. An Abridgment of Hiley's English Grammar; together with appropriate Questions and Exercises. Fourth Edition, much enlarged, price 1s. 6d.

3. Questions and Exercises, adapted to Hiley's English Grammar, progressively arranged. Third Edition, considerably improved, price 2s.

London: Longman & Co.; Simpkin & Co.; and T. Harrison, 153, Briggate, Leeds.

JOHNSTON'S COLLEGE AND SCHOOL MAPS of

THE WORLD.	AMERICA.
E. HEMISPHERE.	ENGLAND.
W. HEMISPHERE.	SCOTLAND.
EUROPE.	IRELAND.
ASIA.	FRANCE.
AFRICA.	CANAAN AND PALESTINE.

Size of each, four feet by three feet six inches.

Rollers, varnished, 12s. per Map; unvarnished, 10s. Selections of Ten Maps in Case, for hanging on a wall, or suspension from roof, 6l. 6s. The same fitted up on a moveable STAND, 7l. 7s.; or with black board, 7l. 17s. 6d. The above Maps have been introduced into the most respectable Seminaries both in this Country and America. From the boldness and accuracy of delineation, they are peculiarly calculated to facilitate the progress of the pupil, as well as to abridge the labour of the teacher. The whole are constantly subjected to revision, and contain, at all times, the most recent geographical intelligence.

London: A. Groombridge, and W. Smith; Edinburgh, John Johnstone, and W. & A. K. Johnston; Glasgow, J. Lumsden & Son, and R. Weir.

ELEMENTARY WORKS
FOR SCHOOLS OR YOUNG PERSONS.

I.

MRS. MARKHAM'S HISTORY of ENGLAND, from the First Invasion by the Romans, to the end of the Reign of William the Fourth, with Conversations at the end of each Chapter. 10th edition, with numerous Woodcuts. 2 vols. 12mo. 12s.

II.

MRS. MARKHAM'S HISTORY of FRANCE, from the Conquest of Gaul by Julius Cæsar, to the Reign of Louis Philippe, with Conversations at the end of each Chapter. 5th edition, with numerous Woodcuts. 2 vols. 12mo. 12s.

III.

BERTHA'S JOURNAL during a VISIT to her UNCLE in ENGLAND; with a Variety of Interesting and Instructive Information. 5th edition, 12mo. 7s. 6d.

IV.

LITTLE ARTHUR'S HISTORY of ENGLAND. By LADY CALLCOTT. 5th edition, 18mo. 3s.

V.

NATURAL HISTORY for YOUNG PERSONS, arranged according to the Months of the Year. By Mrs. LOUDON. With 40 Woodcuts, 18mo. 4s.

VI.

SKETCHES of HISTORY, LITERATURE, and ART; being Letters from Italy to a Younger Sister. By CATHERINE TAYLOR. 2nd edition, 2 vols. 12mo. 17s.

John Murray, Albemarle-street.

MONS. LE PAGE'S FRENCH SCHOOL.

Just published, new and improved edition, with woodcuts.

PART I.—L'ECHO de PARIS; being a Selection of Phrases a person would hear daily, if living in France. With a Vocabulary of the Words and Idioms. Sixth Edition. Price 4s. neatly bound.

By M. LE PAGE, Professor of French in London.

Also, lately published, by the same Author,

Part II.—Gift of Fluency in French Conversation. A set of Exercises for the Learner of the French Language, calculated to enable him, by means of practice, to express himself fluently on the ordinary topics of life. Second edition, with notes, 3s. 6d.

Part III.—The Last Step to French; or the Principles of French Grammar displayed in a series of Short Lessons, each of which is followed by Questions and Exercises, with the Versification. 3s. 6d.

"In 'The Last Step to French' we have a grammar superior, in our opinion, to any that has preceded it; whilst the three works of M. Lepage furnish a complete library for the student in French, and at the same time a manual of conversation, enabling him at once to learn and to speak the language."—*Parthenon.*

French School Complete, the Three Parts bound in 1 vol. price 10s.

Also,

The French Master for the Nursery; or, First Lessons in French, for the Use of Junior Pupils. By M. Le Page. 3s. 6d. neatly bound.

"To schools and private teachers these volumes must be invaluable."—*Monthly Review.*

London: Effingham Wilson, 10, Bishopsgate-within; and sold by all Booksellers.

CLASSICAL WORKS

By the Rev. THOMAS KERCHEVER ARNOLD, M.A. Rector of Lyndon, and late Fellow of Trin. Coll. Cambridge.

I.

A PRACTICAL INTRODUCTION to GREEK ACCIDENCE. With easy Exercises and Vocabulary. Second Edition, 5s. 6d.

II.

A PRACTICAL INTRODUCTION to GREEK PROSE COMPOSITION. Fifth Edition, 5s. 6d. This Work, which is nearly on Ollendorff's Plan, consists of a Greek Syntax founded on Buttmann's, and easy Sentences to be translated into Greek, after given Examples, and with given Words.

III.

A PRACTICAL INTRODUCTION to LATIN PROSE COMPOSITION. Fifth Edition, 6s. 6d. This Work, like the foregoing, is founded on the principles of imitation and frequent repetition. It is at once a Syntax, a Vocabulary, and an Exercise Book; and considerable attention has been paid to the subject of Synonymes. This and the preceding Work are now used at all, or nearly all, the public Schools.

IV.

A SECOND PART of the above Work, containing the DOCTRINE of the LATIN PARTICLES. With Vocabulary and an Antibarbarus. 8vo. 8s.

V.

HENRY'S FIRST LATIN BOOK. Fourth Edition, 3s. The object of this Work (which is founded on the principles of imitation and frequent repetition) is to enable the pupil to do exercises from the first day of his beginning his Accidence. It is recommended by the *Oxford Diocesan Board of Education*, as a useful work for Middle or Commercial Schools; and adopted at the *National Society's Training College* at Chelsea.

VI.

A SECOND LATIN BOOK and PRACTICAL GRAMMAR. Intended as a SEQUEL to 'Henry's First Latin Book.' Second Edition, in 12mo. 4s.

VII.

A FIRST VERSE BOOK. Intended as an Easy Introduction to the Latin Hexameter and Pentameter. In 12mo. 2s.

VIII.

A PRACTICAL INTRODUCTION to LATIN VERSE COMPOSITION. *Contents:*—1. "Ideas" for Hexameter and Elegiac Verses. 2. Alcaics. 3. Sapphics. 4. The other Horatian Metres. 5. Appendix of Poetical Phraseology, and Hints on Versification. In 8vo. 5s. 6d.

IX.

ECLOGÆ OVIDIANÆ; with ENGLISH NOTES, &c. Fifth Edition, 2s. 6d. This Work is from the Fifth Part of the 'Lateinisches Elementarbuch' of Professors Jacobs and Döring, which has an immense circulation on the Continent and in America.

X.

ECLOGÆ HORATIANÆ. Pars I. Carmina prope Omnia continens. Addita est FAMILIARIS INTERPRETATIO ex Adnotationibus Mitscherlichii, Doeringii, Orellii, aliorum excerpta. Price 5s. (The SECOND PART is in the Press.)

XI.

HISTORIÆ ANTIQUÆ EPITOME, from Cornelius Nepos, Justin, &c. With English Notes, Rules for Construing, Questions, Geographical Lists, &c. Second Edition, price 4s.

XII.

MATERIALS for TRANSLATING into LATIN. From the German of Grotefend, with Notes and Excursuses. In 8vo. 7s. 6d.

XIII.

The ETON SYNTAX (in English and Latin), with additional Rules, and Copious Examples from Bröder and others. Second Edition, 3s. 6d.

XIV.

DOEDERLEIN'S HAND-BOOK of LATIN SYNONYMES. Translated by the Rev. H. H. ARNOLD, B.A. In 8vo. 7s. 6d.

XV.

An ENGLISH GRAMMAR for CLASSICAL SCHOOLS; being a PRACTICAL INTRODUCTION to ENGLISH PROSE COMPOSITION. Second Edition, much enlarged, with the addition of a Syntax and Exercises. 4s. 6d.

RIVINGTONS, St. Paul's Churchyard, and Waterloo-place.

This day is published, in 2 vols. 8vo. price 3l., a new edition of

MR. YARRELL'S HISTORY of BRITISH FISHES. This second edition contains Thirty-seven new species not included in the first edition, the whole number being now Two Hundred and Sixty-three. Twenty-seven Fishes have been newly engraved, and Thirty-four new Vignettes have been added. The Work now contains nearly Five Hundred Woodcuts.

John Van Voorst, 1, Paternoster-row.

In small 8vo. price 6s. 6d., the Sixth Edition of

PATRIARCHAL TIMES; or, the Land of Canaan: in Seven Books. Comprising interesting Events, Incidents, and Characters, founded on the Holy Scriptures.

By Miss O'KEEFFE.

Rivingtons, St. Paul's Churchyard, and Waterloo-place.

In small 8vo. price 7s. 6d., the Second Edition of

ECCLESIASTES ANGLICANUS; a Treatise on PREACHING. In a Series of Letters to a Young Clergyman.

By the Rev. WILLIAM GRESLEY, M.A.
Late Student of Christ Church, Oxon.
Rivingtons, St. Paul's Churchyard, and Waterloo-place.

Also, by the same Author,

The Portrait of an English Churchman. Sixth Edition, 4s.

HEWITSON'S BRITISH BIRDS' EGGS.

On the 1st of July was published, price 2s. 6d. Part I. of

COLOURED ILLUSTRATIONS of the EGGS of BRITISH BIRDS. Accompanied with descriptions of the Eggs, Nests, &c.

By WILLIAM C. HEWITSON.

John Van Voorst, 1, Paternoster-row.

TALES FOR CHILDREN.

STORIES of OLD DANIEL, for the Amusement of Young Persons. The Twelfth Edition. 12mo. 4s. 6d. cloth lettered, with Frontispiece and Vignette.

London: Simpkin, Marshall & Co.; Whittaker & Co; and Houlston & Stoneman.

In imp. 8vo. beautifully printed, double columns, price 21s. bound in cloth,

A NEW LITERAL TRANSLATION from the original Greek of all the Apostolical Epistles; with a Commentary and Notes, Philological, Critical, Explanatory, and Practical; to which is added, A History of the Life of the Apostle Paul, by JAMES MACKNIGHT, D.D. A new edition, carefully revised, to which is prefixed an account of the Life of the Author.

London: printed for Thomas Tegg, 73, Cheapside, where may be had TEGG'S MAGAZINE for JULY, price only 8d.

MR. WALTER DENDY'S WORKS.

In large 8vo. 12s. cloth,

THE PHILOSOPHY of MYSTERY—Dreams, Spectres, Clairvoyance, Prophecy, Mesmerism, &c.

"The elegant and laborious work of Mr. Dendy."—*Times.*

In 8vo. 6s. bound,

Practical Remarks on the Diseases of the Skin, &c.

"Much useful information conveyed in very few words."—*Lancet.*

In 12mo. cloth,

The Book of the Nursery, the Management of Infants, &c.

Longman & Co.

CHEAPER EDITION, NOW READY.

In 2 vols. (comprising upwards of 1,100 close pages,) price 12s. each, bound, either of which may be had separately,

THE SPAS OF ENGLAND, and Principal SEA-BATHING PLACES.

By DR. GRANVILLE.

THE NORTHERN SPAS, in 1 vol. with 27 Illustrations, a Map, and Table of the Chemical Analyses of the various Springs.

THE MIDLAND and SOUTHERN SPAS, in 1 vol. with 24 Illustrations, and Table of the Chemical Analyses of the various Springs.

"For the invalid or tourist in search of health, these volumes form perfect treasures."—*Sun.*

Henry Colburn, Publisher, 13, Great Marlborough-street.

FOURTH EDITION, 3 vols. post 8vo. 27s.

THE BIBLE in SPAIN; or, the Journeys, Adventures, and Imprisonments of an Englishman in an Attempt to circulate the Scriptures in the Peninsula.

By GEORGE BORROW,
Author of 'The Gypsies of Spain.'

Sir Robert Peel in the House of Commons, April 11, 1843.

"Difficulties! were they to be deterred from proceeding on that account? Let them look at Mr. Borrow: why if he had suffered himself to be prevented from circulating the Bible in Spain by the difficulties he met with, he could never have spread such enlightenment and information through that country."

John Murray, Albemarle-street.

This day is published, price 5s. with upwards of 150 beautiful Illustrations, the FIRST PART of

ANIMAL PHYSIOLOGY; including a General Survey of the Animal Kingdom; with special reference to the Physiology of the Human Body; being the Fifth Part of the POPULAR CYCLOPÆDIA of NATURAL SCIENCE.

By W. B. CARPENTER, M.D.

The Four Parts already published are:—

1. VEGETABLE PHYSIOLOGY. Price 4s.
2. BOTANY. Price 4s.
3. MECHANICAL PHILOSOPHY. Price 4s.
4. HOROLOGY and ASTRONOMY. Price 4s. 6d.

The Illustrations mentioned above are those prepared by M. Milne Edwards for his 'Cours Elémentaire d'Histoire Naturelle,' used in the various French Colleges.

London: Wm. S. Orr & Co., Paternoster-row; and W. & R. Chambers, Edinburgh.

This day, in a handsome volume imperial 8vo. illustrated by a large Map of the *Mer de Glace* of Chamouni, lithographed Views and Plans, and Engravings on Wood, price 28s., or with the large Map in a Case, 31s. 6d.

TRAVELS THROUGH the ALPS of SAVOY and other Parts of the PENNINE CHAIN, with Observations on the Phenomena of GLACIERS.

By JAMES D. FORBES, F.R.S., Sec. R.S.E.
Corresponding Member of the Royal Institute of France, and Professor of Natural Philosophy in the University of Edinburgh.

Adam & Charles Black, Edinburgh; Longman & Co. London.

VALUABLE SCHOOL BOOKS,

PUBLISHED BY

CRADOCK & Co., 48, Paternoster-row.

GEOGRAPHY.

GUY'S SCHOOL GEOGRAPHY, with Seven Maps. 16th edition, enlarged and corrected, to the Peace with China. By JOSEPH GUY, formerly Professor of Geography at the Military College, Great Marlow. A Key to the Problems, 1s. 6d.

GUY'S FIRST GEOGRAPHY, 6 Maps. 9d. sewed; 1s. bound.

GUY'S SCHOOL ATLAS, 16 handsome 4to. Maps, coloured. 5s. half-bound.

RUSSELL'S ATLAS of MODERN GEOGRAPHY, 25 royal 4to. Maps, and Consulting Index, coloured, 12s.; plain, 10s. half-bound.

RUSSELL'S ATLAS of CLASSICAL GEOGRAPHY, 22 royal 4to. Maps, and Consulting Index, coloured, 12s.; plain, 10s. half-bound.

OSTELL'S NEW GENERAL ATLAS, imp. 4to., 27 Modern, and 3 Ancient Maps, with Consulting Index, coloured, 18s.; stained, 21s.; plain, 14s. half-bound.

*** The great accuracy of the above geographical works, and their superior adaptation for school business, are duly estimated by teachers. Every New Edition is carefully revised.

ASTRONOMY.

GUY'S ELEMENTS of ASTRONOMY, familiarly explaining the general Phænomena of the Heavenly Bodies, and the Theory of the Tides. Illustrated with 18 fine Plates. To which is subjoined, a COMPLETE SET of QUESTIONS for EXAMINATION. The whole adapted as well to the use of Private Students as Public Seminaries. The 6th edition, corrected, improved, and enlarged, in royal 18mo. price 5s. bound in purple and lettered.

HISTORY.

GUY'S ELEMENTS of ANCIENT, MODERN, and BRITISH HISTORY. With Tutor's Questions. New and enlarged editions, 12mo. price only 3s. 6d. each, roan lettered.

*** These valuable School Histories have undergone a thorough revision, and they are much enlarged; in the British History the Contemporary Sovereigns are now added at the beginning of each reign. They are unquestionably the cheapest works published. In three 3s. 6d. volumes are Histories of Greece, Rome, England, Scotland, Ireland, France, Spain, Portugal, Germany, Russia, Prussia, Denmark, Sweden, America, &c., sufficiently ample for School use.

GUY'S CHART of UNIVERSAL HISTORY and BIOGRAPHY; from the Creation to the Present Time. A new and enlarged edition. On a large Sheet. Coloured, price 7s.; or done up as a Book, and neatly bound and lettered, price 10s. 6d.; or on Canvas and Roller, 10s. 6d.

*** This Chart is equally useful for the study of History, as Maps are for Geography.

ARITHMETIC.

GUY'S SCHOOL ARITHMETIC. 15th edit. 12mo. 2s. bound.

GUY'S FIRST ARITHMETIC, in Script type, royal 8vo., useful as a Cyphering Book and an Arithmetic, 1s. 3d. half-bd. —A KEY, 3d.

GUY'S COMPLETE TREATISE of BOOK-KEEPING, for Ladies' and Gentlemen's Schools. Royal 18mo. 1s. half-bd.

GUY'S SCHOOL CYPHERING BOOK. 9th edition, on fine large Post Writing Paper, 4to. 3s. 6d. half-bound.

FIRST SPELLING and READING BOOKS.

GUY'S NEW BRITISH EXPOSITOR; or, Child's First Dictionary. Containing an Alphabetical Collection of the most Useful, Usual, and Proper Words in the English Language; Divided, Accented, and the Meaning given according to the purest Definitions, &c. 10th edition, enlarged, 12mo. price 1s. 6d. bound.

*** This Expositor answers nearly every purpose of a Dictionary until the thirteenth year.

GUY'S NEW BRITISH SPELLING BOOK, with New Cuts after Harvey's drawings. 66th edition, 12mo. 1s. 6d. bound.

*** The popularity of this Spelling Book is quite unprecedented.

GUY'S NEW BRITISH PRIMER. 22nd edition, 6d.

GUY'S NEW BRITISH READER. 10th edition, 12mo. 3s. 6d. roan.

*** This work contains the greatest body of easy reading to be found in any school book in the English language.

GUY'S FIRST ENGLISH GRAMMAR, 9d. sewed; 1s. bound.

GUY'S FIRST ENGLISH EXERCISES in PARSING, ORTHOGRAPHY, SYNTAX, and PUNCTUATION, 9d. sewed; 1s. bound.

SCHOOL CLASS BOOKS.

BENTLEY'S BRITISH CLASS BOOK; or, Exercises in Reading and Elocution, selected almost entirely from the Works of Modern Authors, in Prose and Verse, and designed for the Use of Schools and Families. By the Rev. HUGH BENTLEY. 12mo. price 4s. 6d. bound.

"Mr. Bentley has made the selections with an excellent discrimination and fine taste; and we have no doubt the book will take a station in the first class of works designed for tuition."—*Britannia*, August 1, 1841.

GUY'S SCHOOL QUESTION BOOK on ANCIENT and MODERN HISTORY, BIOGRAPHY, GEOGRAPHY, ASTRONOMY, and Miscellaneous Subjects. With a Frontispiece Chart of History. 7th edition, 12mo. price 4s. 6d. roan.

New Works.

Just ready for Publication.

REVIEWS

Narrative of a Journey from Heraut to Khiva, Moscow, and St. Petersburgh. By Captain James Abbott. 2. vols. Allen & Co.

We cannot assent to Capt. Abbott's proposition, that travellers, taking advantage of the ignorance of Europe in respect of Central Asia, have written concerning Khiva nothing but romance. We are not acquainted with any description of that part of the world which is not perfectly sober and authentic. On this head there is no need of new books to disprove the old. Jenkinson, Thompson, and Hogg, and more recently Mouraview, have all given us plain and trustworthy accounts of Khiva; while the more brilliant pictures presented by Arab writers cannot mislead those who have any acquaintance with oriental habits of thought and speech. It is true that recent events—our occupation of Cabul, and the advance of the Russians towards Khiva—heightened the interest which was naturally attached to Chorasmia or Khawarism, and awakened the desire to obtain still more copious and accurate information respecting the principality which now flourishes in that fertile region, its commercial capabilities and military resources. Without pretending to a profound ignorance in regard to Khawarism, we were nevertheless disposed to welcome heartily a full and perspicuous account of it. We rejoiced therefore on learning that a British officer had been dispatched from Herat to Khiva, to mediate between the Khan of the menaced state and the Russians. When told too, that the same envoy had proceeded from Khiva to the Russian frontier, we were delighted at the prospect of a complete exploration by a British officer of the immense battle-field which extends between the Russian empire and the Indian Caucasus. We were delighted, we say, at the prospect—but, alas! we have been mortified at the result. Capt. Abbott has produced a work more like a novel or romance than an authentic narrative, and has given us in two deadly volumes, less solid information than might have been contained in a dozen well written pages. This may appear a severe sentence, but we find it corroborated, nevertheless, by our author's own admission. He says in his preface,—

"I feel sensible that some apology is necessary for the incompleteness of the materials, and defectiveness of the execution; but still more for instances of egotism, of which I was not aware until I saw the work in print." [Now here follows the apology.] "I departed for Khiva, ignorant of every particular, whether of fact or curiosity, connected with Toorkestaun; had to learn the Persian tongue (itself a foreign language in Khaurism) on my hurried march thither, and was closely guarded whilst there from intercourse with the natives. * * The difficulties in the way of the author's research in Toorkestaun, were again encountered in Russia: ignorance of the language, restricted leisure, and a mind utterly unprepared by previous reading for the subject before it."

These statements may possibly suffice to show why our author could not write a good narrative of his mission; but certainly they do not avail as an apology for his publishing a bad one. From India to England, he was almost wholly unacquainted with the languages of the countries travelled through; his Persian for the court of Khiva he picked up on the road; in Russia he spoke French for the first time in his life. He kept no notes of his journey after leaving Khiva; in his course over Europe he was engaged in a continual round of revels and spectacles; in England, he says, he was more harassed than in Russia; and it was not till his return to India, that he could set about the composition of his work, for the materials of which he was obliged to draw chiefly, as will be understood from what precedes, on his memory and imagination. He says—

"I conceived that the personal narrative of a traveller through the steppes of Tartary could only be interesting, by drawing largely on his sensations and emotions; I noted roughly every thought and fancy that could yet be recovered, intending to select carefully from the mass, such as were suitable for publication. The selection has, I feel, been injudicious. The habit of addressing the public by the lips of imaginary personages, has beguiled me too often," &c.

Here there is not a word on facts; but emotions, fancies, and *imaginary* personages, seem to be relied on by our author as the means of extending a wretchedly meagre and confused narration. Nor is this all; Capt. Abbott's mission was of a political character; he ought therefore to have carefully controlled his egotism, and to have concealed the infirmities of the envoy and negotiator. The imperfection of our school of diplomacy is a state secret, which ought not to be divulged. It is bad enough to make diplomatic blunders; but why publish them to the world? Capt. Abbott will probably reply—

> 'Tis pleasant still to see one's name in print;
> A book's a book, although there's nothing in't.

Well then, the volumes being before us, we have no alternative but to give our readers some idea of their contents, and to explain the nature of the recent British intercourse with the Khan of Khiva. As soon as the rumour of the Russian invasion of Central Asia reached Major Todd, the British envoy at Herat, he dispatched Moolla Hussun, a respectable native, with letters of friendship to the Khan of Khiva. That person was accompanied, on his return to Herat, by an Uzbeg lord, the ambassador of the Khan to the Indian government. The Uzbeg reported that the invading force of the Russians amounted to 100,000 men, and he made certain demands (doubtless of arms and troops) which Major Todd had no power to concede. In answer to this mission our author was deputed to the court of Khiva. He had however no credentials from the Indian government; he was only Major Todd's messenger; and the proper, especial object of his mission was, we have no doubt, to supply the resident at Herat with intelligence respecting the advance of the Russians. He set forward on the 24th December, 1839, and had hardly lost sight of Major Todd when he began to experience those fancies and emotions which, as he conceives, give interest to his volumes:—

"We separate (he says) under circumstances sufficiently gloomy. I leave him in the very stronghold of robbers. I go myself, as agent of the British Government to a Court, of the language and manners of which I am utterly ignorant, and to accomplish that of which the most sanguine have no hope. It is simply a matter of duty, and as such, entered upon cheerfully, and with full determination to carry my efforts to the uttermost."

It will be seen in the sequel how little ground there was for gloomy forebodings or despair. From Herat to Khiva the distance is nearly 600 miles, on a route inclining to the west of north. The first part of the journey lies down the valley of the Moorghaub, which, after irrigating the gardens of Merv, is lost in the desert. Thence a tract of bare sand extends, for 300 miles, to the well-watered fields of Khawarism. In Merv our author made the acquaintance of a Jew, of some importance as a merchant, and told him, we dare say in good faith, that "in England we grant the Jews all the rights of free citizens, including a share in offices of state and legislation." The chief source of his trouble was his suspicion of all around him. "I confess," he says, "I cannot so easily get rid of my uneasiness to find myself so surrounded with spies and other miscreants of the governor." The governor of Herat, here alluded to, is generally styled by our author the arch-fiend and villain. Had the envoy not been wholly dependent on interpreters and servants, he would never have been tormented with these suspicions. His journey over the desert is related in a pleasanter vein.

"It may be interesting to sketch a single day's trip, with all its pleasures and inconveniences. I rise then at midnight, and sit at a blazing fire, sipping tea without milk, until the camels are laden and have started. I then mount and follow them, and as camels walk something less than three miles an hour, soon overtake them. As the cold is intense, and our feet are by this time fully numbed, I alight and spread my carpet, and a large fire is soon made, around which we all sit half an hour. Wood is very abundant, and so dry that when the hoar frost or snow is shaken from it, it kindles instantly. It is likewise so deficient in solidity, that a stem, the thickness of a man's body, is torn up by the roots without difficulty. We now mount again, and proceed in silence, for the path admits not of two abreast, and the freezing of the vapour of the breath, upon one's beard and mustachios, renders the motion of the jaw singularly unpleasant. Indeed, in raising the handkerchief to one's face, it is tangled in a disagreeable manner with the crystals, and the chin has become so brittle, that a very slight titillation is painful. Jupiter is now far above the horizon, and Venus is shining gloriously upon the desolate wild. And by degrees we perceive the day itself slightly winking in the east, and again we pull up, to light a fire, and to thaw our frozen extremities. * * Ere the sun breaks from the horizon, we are once more mounted and away. The profusion of hoar frost upon the leafless jungle sheds a glory over the desolate scene. It is a sight unwitnessed by me for seventeen years, and brings back many pleasant remembrances tinged with sadness. Now we are close upon the traces of the camels. The slave caravans keep them company. The hardy Toorcumuns as they trudge along in their clouted, laced boots, and legs wound around with woollen cloths, and their white sheepskin caps heavy with hoar frost, have no cause to envy us, whose knees are cramped with the saddle, and whose feet are again freezing in the morning air. How frosty their cheeks and sharp noses appear, peeping above the cataract of ice which clings to their scanty beards, and below the snowy mass which overhangs their brows. The captive ladies are wisely invisible. They have tucked themselves below the felts of their Kujawurs, and yet I fear, in spite of all their management, have but a chilly berth."

On halting in the forenoon, the people "made tea and a stew swimming in the fat of rams' tails." By this we are probably to understand the famous brick tea, which is dressed in melted mutton fat. All the nomade nations of central and northern Asia consider mutton fat as a sovereign remedy for every disease; and, in truth, such oleaginous food alone can enable them to resist the intense cold of their winters. "We preserved our noses," says our author, "by constant manipulation. A case of felt on the outside of the boot is the only thing that will effectually protect the feet. No provision inside the boot will avail if the leather be exposed to the air." Yet it often happens that a drunken Ostiak or Yakút sleeps in the open air, with slight clothing, and suffers little from a severity of cold which would inevitably destroy the native of another climate. Here we have a picture of the desert south of Khawarism:—

"The aspect of the desert, or rather wilderness from Merv to Khiva, is that of a sandy plain, broken into the most irregular surface by deep pits and high mounds, the whole thinly sprinkled with bushes of three several kinds, between which grow wormwood and the camel thorn. On approaching Khiva, the surface is often ploughed into ravines and ridges, whose course is north and south, giving some idea of abandoned water courses, and traditionally reported to be old channels of the Oxus. It is more possible, that they may have served such purpose to the Moorghaub, when, previous to the monopoly of its

Digitized by Google

waters at Merv, it flowed into the Oxus: but my observation was too limited to enable me to decide the question. The ridges are gravelly, but there is no want of sand. Wells on this route are found at long intervals, in one case of 160 miles. The water is generally brackish, but there are exceptions; on approaching Khiva, there appeared a very thin sprinkling of grass, which our horses eagerly devoured."

Our author does not acquaint us with the date of his arrival in Khiva, but we suppose it was about the 20th of January, 1840. His first care was to endeavour to persuade the court to receive him with a pomp corresponding with his assumed importance. "I hoped his Majesty would at least send me the highest officer ever employed in such ceremonial, my government being the greatest and most powerful in the world." The prudence of exhibiting solicitude of this kind to an ignorant but subtle people, is extremely questionable. Our author's reception was such as left him no just ground of complaint. Yet his suspicions and mistrust of all around him appear to have kept him in a state of constant alarm; and his anxiety to figure as the envoy of the greatest country in the world placed him, at times, in an odd position. "Russia," says the prime-minister of the Khaun to him one day, "is larger than England." "No," replied the sensitive envoy, "you are mistaken;" and not content with maintaining, that England is larger than Russia, he added that the sea, which exceeds the land in extent, all belongs to the former country.

His formal entry into the town must be related in his own words:—

"I dressed accordingly, and was scarcely ready when the master of ceremonies arrived, with his Oozbeg and Toorcumun horse. He was a fine man, tall and stout, with squarish face, a ruddy complexion, long half-closed eyes, good features, and, merit of merits, a decent beard. He is an Oozbeg, and a good specimen of his race. After an interchange of civilities, we mounted and proceeded toward the city. I had exchanged my Afghaun dress for my only full-dress suit,—an embroidered surtout with golden epaulettes. The master of ceremonies rode beside me, and the horsemen followed in close column, some of them from time to time dashing from the ranks, discharging their fire-arms, and wheeling their horses at speed; my impression of their horsemanship was not favourable. Many of the bridles were richly decorated with gold, silver, and precious stones, which gave them a splendid effect; there were also some very handsome matchlock and firelock rifles, the fabric of Heraut and Persia. The horses greatly exceed in size those of Hindoostaun. But some were disproportionately small, and I observed none that I should have valued very highly. The Oozbegs and a few of the Toorcumuns wore the high cylindric Oozbeg cap of black lambskin. I call it cylindric, but it is generally rather larger above than below, so as to be the frustrum of a cone inverted. The larger the cap the more dignified is it considered. The Toorcumuns, however, generally wear their own black lambskin cap, which is smaller, sits close to the head, and ends above, not like the Persian in a point, but slightly rounded. It is a far more convenient head dress than the Oozbeg, but not so graceful as the Persian cap. The horsemen rode in a dense mass, which would have had a more military effect, had there been any uniformity in their arms. But some bore spears, others sabres alone, and a few rifles. After riding a couple of miles the town of Khiva appeared on our right, and we entered a country, laid out in gardens and dwellings of the gentry. The houses have all one character, being an enclosure of very lofty clay walls, flanked by ornamental towers at the angles, which give them the appearance of castles. This name (Gullah) they bear at Khiva. The exterior has but one visible opening, which is the entrance, lying generally between two towers, and being a spacious gateway, flat above, and roofed throughout, to its termination in the court behind the house, or rather within the enclosure. On one side of this a door admits to the men's apartments, and on the other side, the women's quarters are constructed. The walls, built with great regularity of rammed clay, are generally fluted, an effect given them perhaps by the hurdles of straight branches, between which the clay is supported whilst soft, and during the process of ramming. The gardens are surrounded by very low walls of similar construction, allowing the eye to command many estates from a single point of view. The trees are a species of elm, wide, and very shadowy; the poplar, and the plane tree. The appearance of the country is pleasing, but it is too flat for beauty, and I observed that neither grass, weed, nor wild flower will grow upon the banks, although canals from the river plentifully irrigate the whole valley."

These remarks on the "shadowy elms" of Khiva, and the curious fact, that "neither grass, weed, nor wild flower will grow upon the banks," compel us to remind the reader, that Capt. Abbott visited that country in mid-winter, when the ground was covered with snow or ice, when vegetable life was for a time extinct, and the earth barred from production with a rigour unknown in our maritime climate. He himself thus describes the severity of the cold:—

"The air was searchingly cold. In England nothing is known approaching to the chill of the Khiva winter. My towel, hung up to dry in the small room warmed with a large fire of charcoal, instantly became a mass of ice. If the door was left open, the passage of the wind was detected, as it blew over any liquid, by its sudden conversion to a solid form, and there was no thaw excepting in spots where the sunbeams accumulated. In the shade, the snow always lay feathery and granulated, incompressible into masses, so that snow-balls could not be formed. But the sun now shone cheerily through the cutting air, lighting in its passage myriads of minute particles of mist, (small as the motes of the sun-beam, and invisible, like them, excepting in the brightest light): which the intense chill of the air was continually freezing, and which falling in an unceasing shower of light, gave a sparkle to the atmosphere, that savoured of enchantment. This effect I have observed only at Khiva. Mixed as it was with the sounds of aërial music, of the origin of which I was long ignorant, it lent an air of poetry to the spot, which was welcome to an existence so dull and prosaic."

The "sounds of aerial music," here alluded to, proceeded from the boys' kites, which, among the Uzbegs, are made so as to present a convex front to the air, the wooden supports of the kite being bent back into bows by strings, which vibrate audibly, as the kite trembles in the wind. On arriving at the palace, our author, in his precipitation, mistook the Mehtur, or Prime Minister, for the Khan, and expended on "a common looking figure," who reminded him of the knave of clubs, salutations meant for royalty. Having discovered his mistake, he seated himself at the minister's side. "I sat," he says, "on my knees, to my infinite discomfort; good manners prescribes this posture," &c. If he sat on his own knees, he certainly performed a very extraordinary feat; but we suppose his meaning to be, that in trying to sit on his heels he rested on his knees. In attempting to converse he encountered new vexations; "the Mehtur," he goes on to relate, "now addressed several compliments to me, and was evidently nettled at my slowness of reply. The fact is, that his pronunciation of Persian is barely intelligible, and my ignorance of eastern idiom makes me unready in any exchange of compliments." After undergoing the requisite probation, he was at length conducted to the apartment of the Khaun Huzurut, or Supreme Lord, called also Khawarism Shah, whom he describes as follows:—

"Ullah Koolie Khaun, the present king of Khaurism, is about forty-five years of age, and so far as I can judge, rather under the middle height. His face is round. The features are high and regular; the expression is the most amiable possible; but there is an absence of vigour, for which, at the present crisis, nothing can atone, unless it be the powerful interposition of some foreign power. His eyes are long, and not well opened. His beard is decent; his family having some mixture of Sart blood. He is inclined to be stout. He was seated upon a carpet, and supported by cushions. Before him a wood fire blazed up, sending its smoke and sparks through the sky-light of the tent. He shifted his posture from time to time. It was always ungraceful and unkingly. Sometimes cross-legged, sometimes kneeling, sometimes half-reclining. His dress was a green cloak, fringed and lined with dark sables, and showing at the waist a gold chain, the exact use of which I know not. On his head was the Oozbeg cylindric cap of black lambskin. He wore no ornament, and his sole insignium of office was a large dagger in a sheath of gold, which lay before him. No guards were visible about the tent, but the doors of the court were guarded. The black tent of felt which he occupied, was of the usual dimensions, i. e. about twenty-four feet in diameter, and quite unadorned, its sole furniture being the carpet and cushions, on which he reclined."

The Khan of Khiva is, after all, but a secondary personage in our author's volumes, in analyzing which we are compelled to bestow our chief attention on a different kind of hero, namely, the author himself. In order to make his situation appear more interesting, he skilfully displays the difficulties besetting him. He thus proceeds:—

"My present position was one of interest and deep anxiety. I had been sent to execute what might well appear an impossibility, and my fame, as well as life, was staked upon the venture. When I considered my imperfect knowledge of even the Persian tongue, my utter ignorance of that of the court and people, as well as of their manners and temper; my entire want of instruments suited to my need: that my sole instrument of intercourse with the natives was Ali Muhummud, a ransomed slave, new to my service, and of whose capacity or fidelity I knew nothing; when I considered the lightness of my purse; the impossibility of recruiting it at Khiva; the poverty of the presents to be offered the Khaun Huzurut, contrasted with the lavish gifts, which, it was well known, had been bestowed upon the government of Heraut; my want of suite to give dignity to my mission; that the Vuzeer Yar Muhummud Khaun had agents at Khiva, secretly engaged in thwarting my endeavours, and throwing the most dangerous suspicions upon my motives; that the Persian ambassador had just preceded me, at the head of a hundred horse, and laden with handsome presents; that it must be his object to hinder the meditated alliance; that Doost Muhummud Khaun, the Ex-Ummeer of Cabul, had also agents at Khiva, who would, naturally, if possible, poison the Khaun's mind against the English,—a nation whose very existence was a recent discovery at Khiva. When I considered, that in demanding the confidence of the Khaun, I was empowered to promise him nothing, but rather to make excuses for non-compliance with every request he had made,—I confess, the case appeared to me as desperate as possible."

Here, then, we find the hero staking his fame, and even his life, for the sake of effecting what he conceives to be impossible. He meets with a friendly reception, and immediately gives vent to his feelings of despair. But what were those impracticable objects which he had in view? He never tells us explicitly what they were: to allay the reader's alarm, however, we will venture to intimate that the object of Capt. Abbott's mission was so favoured by circumstances, and so easy of attainment, that, had he understood the language of the country, he might have finished his business in a week. Aware as we are, that our author omits no opportunity of enhancing the romance of his story by disclosing all his suspicions, and exhibiting his perils in the most terrific shapes; yet we are convinced that he was, in reality, inexcusably mistrustful, fidgetty, and timid. The house in which he was lodged was surrounded, like all other respectable houses in that country, with a high wall. This offended his taste. He learned, too, that the chief people in Khiva do not visit much at one another's houses, "because the Khaun dislikes such meet-

Digitized by Google

ings." "I have a suspicion (observes the envoy) that the jealousy was confined to myself." In fact, he dropped the expression that he had got, not into a guest-chamber, but a prison. The Khan laughed at his ill-humour, and, despite the customs of the country, left him and his attendants at full liberty to go where they pleased.

The punctilios of the Mehtur, or prime minister, who impudently fancied himself to be on an equality with the representative of the greatest nation on the earth, vexed our author not a little. The Mehtur, he tells us, was a low fellow, who had pride enough, but it was not "gentlemanly pride." Throughout the East generally, asserts our author, it is usual for the minister or Vuzeer to wait on a foreign ambassador; but in Khiva, according to the Mehtur, the custom was, that for the transaction of business the foreigner should call on him. On this our author observes, "it was some time before I could reconcile myself to compliance with so barbarous a usage." So barbarous a usage! Yet this is the usage of civilized Europe—a barbarism which is daily perpetrated in Downing Street. Our author resigned himself to this supposed indignity with a nobleness of feeling which he thus expresses:—

"I then dressed, and rode over to the Mehtur's palace. None, perhaps, but an European resident of India can comprehend the sacrifice which this concession cost me. Here was a race of men, far lower in the scale of humanity than the natives of India over whom we rule, and the most ignorant and most contemptible of all these (for such the Mehtur was) was empowered to send me orders to wait upon him, in my capacity as agent for the British Government. But there is a sense of satisfaction in every such sacrifice, which ought to supply the necessary patience."

Is it not a very remarkable example of "gentlemanly pride," that a captain in the Royal Bengal Artillery, not furnished with any credentials from his government, should feel himself dishonoured by being required to attend the minister of a kingdom numbering two millions and a half of souls, which minister the said captain is pleased to style "the most contemptible of a race lower in the scale of humanity than the natives of India"? Such stickling for an ill-understood etiquette, hardly became one who affected to suppose that his fame, and even his life, depended on the success of his mission. But we can perceive, very clearly, the ground of his dislike to the Mehtur. He was disposed to estimate the invading army of Russians at 100,000 men; the minister, better informed, reduced it so much as to do away with the importance of the crisis with which our author's fancy had indissolubly connected his name. We have seen, that when Captain Abbott first arrived in Khiva, his feeling respecting his mission was that of despair; yet all the fancied obstacles melted away, and he says nothing of their disappearance. It cannot be supposed, however, that his eloquence effected much; for he candidly tells us, when speaking of his first interview with the Khan, "I made a lame business of it. But the Khan, an amiable and good-tempered man, smiled at my mistakes, and listened patiently to my explanations." The end for which the envoy was sent to negotiate at Khiva was brought about by the natural force of circumstances; and will it be believed, that when the Khan offered to give up all the Russians held in slavery in his dominions, Captain Abbott opposed that proceeding? His opinion, which eventually preponderated, was, that he should proceed to Russia to negotiate a peace prior to the liberation of the captives. Here are his reflections on this turn of affairs:

"My position was novel and romantic. I was already the representative of two states, Great Britain and Heraut, at the Court of Khiva. I was now to become in fact, though not in name, the ambassador of a Khaun of Tartary to the Court of the Muscovite. There were, heaven knew, sufficient difficulties and dangers in my path; but it was the path of duty, and I trusted, that in the encounter of obstacles and perils, my birthright, as a Briton, should be manifest. Such feelings are to be known, perhaps, in full force only by the exile—by him who has lived long and dreary years upon a single, sacred, and most beauteous remembrance, the wealth and honour of his life. I could not sleep that night, but went often into the snow-covered court to gaze upon the stars, and think of the possibility, how faint, yet how precious, that amid my many adventures, some happier wave of destiny might cast me upon my native shore. The 900 miles of snowy desert disappeared before my excited fancy. The difficulties at posts and outposts were all as nothing. I had, in the determination to succeed, a talisman which nothing could impair or confound."

We are very far from being disposed to admit that the road into Russia coincided, in any degree, with the path of Captain Abbott's duty, though it certainly led him towards England, from which he had been seventeen years absent. It was his duty not to quit Khiva without consulting his superior, who had placed him there. In this view of the matter we are confirmed by his profound silence in regard to all topics connected with his diplomatic character in Europe. His own misgivings respecting the prudence of the extraordinary step which he had taken, are discoverable in the turmoil of feelings which characterizes the immediately succeeding portion of his narrative.

We have remarked that our author omits to state the date of his arrival in Khiva; he left it, however, on his way to Russia, on the 14th of March, after a residence there, we conjecture, of about seven weeks. This is the last date with which he favours us; the remainder of his journal is inextricably confused and tedious. We believe, however, that it took him about a month to reach Mung Kishlak, on the shores of the Caspian Sea. On his route from this place to the Russian fort of Nuovo Alexandrofski, he was waylaid by the Kuzzauks (we follow his etymology), more commonly called Kirgheez, who pillaged him, and held him in captivity for some time. In this affray he lost two of his fingers. About forty days, we believe, elapsed between his capture and release, so that he could not have reached the Russian fort before the middle of May. Yet he pretends that all this time, and even until he reached Uralsk, he was still ignorant of the retreat of the Russian army.

It is on the narrative of his sufferings among the wild Kuzzauks that our author has relied, apparently, for the attractiveness of his volumes; on that he has expended all the pathos of his eloquence. But his style is much too Oriental for our taste; it resembles too closely the notes of the bulbul, in its paucity of ideas. In fact, his narrative wants the air of reality, and we find a tedious romance where we should have expected the brief truth. No reliance can be placed on his observations of Nature. The mountains which he passed on his way to the Caspian Sea, are, he informs us, two or three thousand feet high. Now, a party of Russian officers, under Colonel Berg, surveyed that very tract in the winter of 1825-6, and found no point on it exceeding, in absolute elevation, 750 feet. He is most prolix when he speaks of his own emotions, which seem to be of a peculiarly wordy character: his fluctuations between hope and fear are his favourite theme. At one moment he exclaims, "The eyes of the world are upon my movements, and the destinies of nations dependent upon my steps:" the next, he is plunged in "oceans of calamity," and riots "in all the luxury of woe." A sensual revelling in woe, and constantly recurring fears, but ill become a soldier. Here is a sample of this kind of enjoyment:—

"I said, baring and offering him my throat, and touching with my finger his sabre, strike away, but save my servants. He shook his head, and intimated that we were safe, but I did not believe him. I returned and watched the rest of the night, determining to throw myself upon the first sword, that there might be no excuse for farther bloodshed. I meditated deeply on death. I imagined to myself its pang. I never could quite reconcile myself to the shape in which it was ever threatening; namely, the crushing together of the brain beneath the hatchet of Ahris Mhatoor. I had self-control, indeed, sufficient not to flinch as he flourished it near me, but a vivid imagination left no rest for the nerves. The sabre stroke had but one terrible accompaniment. The head, when struck off, retains life until the blood has discharged itself from the vessels of the brain. The eyes open and shut, the lips and muscles move. The system is still complete, the nerves of the eyes, nose, mouth, ears, communicating direct with the brain," &c.

This is certainly luxurious speculation. Indulgence in such thoughts seems to have engendered in our author's mind a prurient wish to have his throat cut. Having succeeded in persuading himself, on one occasion, that he was about to be murdered, he says, "I lay down to rest this night in the conviction that I should never again rise. I even adjusted my throat, so that the death stroke might not awaken me." But enough of this worthless and indiscreet publication, which teaches us nothing except to trace the alarm produced in India, by the march of the Russians towards Khiva, to the incompetency of the Company's diplomatic agents.

We shall, however, relate from another source the sequel of the negotiation which fell through the fingers of Captain Abbott. Dispatches for this officer arrived at Herat, from India, on the 11th of May, 1840; but as it was known that he had left his post at Khiva, Sir Richmond Shakspeare was sent forward to execute the duties of the abandoned office. He reached Khiva on the 12th of June, had immediate audience, and was allowed access to the Khan whenever and as often as he pleased. He found in that prince, a frank, friendly, and sensible man. The abolition of slavery in Khawarism was soon resolved on: the Russian captives, being collected, above a thousand in number, were handed over to Sir R. Shakspeare, to conduct to their own country. His march, as may be well conceived, was one of joy and triumph. In Russia, he negotiated the peace of Central Asia; at that court he received honour, in India promotion. His account of Khiva contains much that is new and curious; but most curious is the Uzbeg description of the Russian General, Perofski—"A man like a snake [a slender figure in green uniform], of black complexion, yellow eyes, and a coat covered with ducats."

Rome as it was under Paganism, and as it became under the Popes. Madden & Co.

POLITICAL idolatry was the distinguishing characteristic and leading principle of Pagan Rome, from the earliest to the latest period of its history. In order that Christianity should triumph, it was necessary to change every element in the entire social system, to destroy institutions, to annihilate forms, to efface the memory of the past, and alter the hopes of the future. Papal Rome was the result, not of one revolution, but of many, and when Charlemagne was crowned Emperor of the West, he might with truth have exclaimed, "Old things are done away, behold, *all* things have become new." The design of the volumes before us is to trace the history of these joint revolutions, with particular reference to their effect on

Digitized by Google

the localities of "the eternal city" itself, where the scene of empire passed from the Capitol to the Vatican;—from the cradle of Romulus to the tomb of Saint Peter. It is abundantly evident that the author is a zealous adherent of the Romish church, that he is deeply read in ecclesiastical literature, that he places implicit reliance on the authority of the Fathers, and the received Lives of the saints, and that he has a minute and accurate knowledge of the history he proposes to examine. His literary merits are displayed in his rhetoric, rather than in his logic; he exhibits great skill in selecting the incidents most favourable to his purpose, and considerable power in grouping them together so as to form a striking picture; but his love of Plato has led him to neglect Aristotle: his premises are too frequently disguised assumptions, and his conclusions at variance with the reasoning by which they are reached.

No misstatements are more glaring than those which writers of the author's school have set forward as the history of the conversion and career of Constantine; they even conceal the nature of the authorities which they quote, for when they refer to Eusebius they do not distinguish between his writings as a historian and as a professed panegyrist. The worthy bishop's Life of Constantine is nothing more than an overgrown funeral sermon—an oration in honour of the deceased—to which from time immemorial a wide latitude of invention and imagination has been conceded. Indeed, we have abundant evidence that Eusebius did not believe his own eulogies on the emperor. He makes no mention of the miraculous vision of the cross, in his Ecclesiastical History, and yet this tale, thus discredited by the only affirmative witness who can be adduced in its support, and utterly inconsistent with the cotemporary historical records, coins, and monuments of Constantine's reign, is gravely brought forward as an established fact, admitting of no doubt.

It is not our purpose to follow the author through the vast mass of ecclesiastical legends which he has collected, and expose the weakness of the evidence for the countless miracles he sets forward; the task would not be difficult, but it would be tedious, and while one class of readers would be wearied, another, to which the authority of the Church is equivalent to all argument, would fail to be convinced. Still less are we disposed to scrutinize the system of interpretation by which the author proposes to explain the purport of the Apocalypse; a book which has had more expounders than there are letters in its pages, each of them asserting his own infallibility, and all of them leaving the real difficulties of the prophecy just where they found them.

There is, however, a great historical truth which the author has partially developed rather than fairly worked out; we mean the political character of the struggle which led to the overthrow of Roman Paganism: and as this is a topic generally neglected, we shall give such an outline of the political part of the revolution that ended in the establishment of Christianity, as may satisfy general readers, and incite students to further research.

Their city and its Capitol were more to the Romans than Jerusalem and its Temple to the Jews; every Roman superstition, every religious ordinance, every public festival, every private observance, directly tended to foster in the minds of the citizens a pious patriotism, and a patriotic piety, of which Rome was the visible impersonation, and the Roman magistrates hereditary interpreters and dispensers; so long as the empire retained its aristocratic form, the religion which consecrated every aristocratic principle and institution maintained its pride of place. But when the empire passed from an aristocratic into a military despotism, and the rude soldiery of the camp usurped the authority of the Senate, all the religious forms of the state became at once senseless and unmeaning. The emperors felt them to be so, and, weary of their trammels, resolved to remove the seat of empire from Rome, which was, in effect, a rejection of the great tutelary deity that had previously been the centre of the entire system. It was Diocletian who struck the first great blow at Roman polytheism, when he deprived the Roman city and the Roman aristocracy of their last remnant of political power.

The nobles and citizens of Rome continued to support polytheism; their memories and their hopes taught them to believe that Rome was predestined to everlasting empire, and in fact it was this destiny which they really worshipped in all their varied shrines, and different idols. When Totila and his Goths massacred the senators and their sons, drove out most of the ancient citizens, and left the city to be peopled from the mixture of barbarous races which had emigrated into Italy, then, and not before, Roman polytheism perished; Belisarius, to whom the city was indebted for partial restoration, had no associations connected with the Capitol, and when it was necessary to build walls for protection against a new attack, he made no effort to guard the ruined fanes of paganism; and the population, withdrawing from the scenes of ancient glory, began to erect what was virtually a new city. There is little more than identity of name to connect the Rome of the Popes with the Rome of the Cæsars; the transition from one to the other was effected by processes of complete destruction and the erection of an entirely new edifice. But papal Rome has clung fondly to one tradition, inherited from its pagan predecessor—a belief in its own immortality and infallibility. Whether this belief be justified by prophecy, as our author asserts, or whether it be as vain as that previous belief which events discredited, we shall not attempt to decide, but shall take leave of these volumes with a hope of meeting the author in other fields of research, where his powers will be less fettered by foregone conclusions.

Extracts from the Travelling Diary of a German Naturalist—[*Mittheilungen aus dem Reise-tagebuche eines deutschen Naturforschers*]. Basel, 1842.

IT is rarely safe now-a-days to take up a foreigner's book upon England in the hope of its feeding our national vanity. Whatever the cause may be, we seem to become daily more unpopular abroad; and British institutions, persons, and manners, now find few advocates amongst continental writers. Here, however, we have, at least, a favourable witness in Dr. Schönbein, the eminent chemist of Basel, who revisited England in 1839, as one of the scientific foreigners invited to the Birmingham meeting. The impressions received and the various objects seen on this occasion, and during a subsequent stay of some length in London, are recorded in a very pleasant style in these 'Travelling Sketches.' Could we forget the advantages with which a visitor so deservedly honoured must enter upon his career of observation, and how naturally his views are coloured by the kindness that meets him on every hand, and the pleasant way in which he sees everything, we should feel a testimony in our favour so warm as Dr. Schönbein's to be more than commonly flattering. But these considerations must not be overlooked in the pleasure with which we hear him sing the praises of England; and while we rejoice in the cordial feeling which his sketches display, and own how grateful it is *laudari a laudato*, it will occur to the temperate reader, that there is a reverse to the medal, and a shadow to the picture, in many cases, which our friendly visitor has neither pourtrayed nor perhaps always seen.

Yet there is a gravity in his remarks, and a general exactness in the matter of detail which he cites, that exclude the idea of hasty prepossession, and many of the opinions expressed, formed during a previous residence in England, and matured by subsequent observation, have weight that does not belong to the remarks of a stranger visiting the country for the first time, and new to its manners and language. Within certain limits, therefore, we see no reason to decline the compliment of the Doctor's approbation.

Although scientific matters, of course, commanded most of the author's attention, several of his sketches are devoted to lighter subjects, conveying his impressions as they occurred from things great and small; the social life, and physical aspect of the people; rural scenery, and even the population of Rotherhithe and Shadwell; runaway matches, Sundays in Greenwich Park, and the painful monotony of bell-ringers. We shall not dwell on the technical portion of the work, which does not seem to contain any particular novelty;—but, in leaving it, must not fail to commend his liberal and kindly notice of English fellow labourers in the field of science; with the remark that his respect for those who are gone is not, as sometimes happens, expressed so as to imply a covert depreciation of those who still remain. Of the merits of his contemporaries, few are more competent judges than Dr. Schönbein; and the manner in which he dwells on the names of Faraday, Owen, Daniell, and others engaged in kindred studies, is equally honourable to himself and to them.

We will only further premise, before turning to the contents of this amusing book, that the Doctor is a most hearty antigallican—and that his liking for England is evidently the result in part of a series of comparisons, which he is constantly drawing in his own mind between this country and France. He will not hear of Paris being "*le centre de la civilisation*," and rarely loses an occasion of expressing contempt for everything that is peculiarly French—from *diligences* to boy-insurrections, centralization, and bombastic tragedies:—or of denouncing the conceits of the Academy—the ambition which cries for "*la frontière du Rhin*," and the windy politics of M. Arago. He might, indeed, but for his liberal sympathy with the progress of real improvement, be claimed by the old-fashioned school of English prejudices in more respects than in this. Time-honoured forms and old systems find great favour in his eyes; he sees much to praise in the old grammar education, and the feudal law of descent; has an aversion to needless changes, and perhaps to novelty, *per se*, if not especially recommended: and in England a main subject of his admiration is the existence of long established honours and customs, and the solidity of the constitution whereby he expects that they may be preserved. With this evident bias, it is clearly to philosophy alone that he is indebted for his professed unbelief in ghosts and in the marvellous generally, and for his readiness to admit the benefit which the city of London had derived by the substitution of the new police for his former friends, "the watchmen, so called, enveloped in thick yellowish-gray gaberdines, prepared from a peculiar kind of woollen stuff, wherein they had a remarkably strange appearance!"

The Doctor was fortunate in obtaining access to several houses of the noblemen and resident gentry of Warwickshire and Staffordshire, and justly says, that he who has never seen this

Digitized by Google

aspect of English life can form no conception of one of its best and most peculiar features. These he describes with great emotion and propriety; concluding with a remark, in which we can heartily concur, that such a fortune as the wealthy English aristocrat's is far more enviable than that of many thrones. Besides his country excursions, and visits to mines, ironworks and quarries, he seems to have been indefatigable in pursuing the various notable things in and about London—which he enumerates with a fulness and accuracy rare in travellers, and likely to make his sketches extremely valuable to his own countrymen.

Although it would, perhaps, be more pleasant to feed only on the honey and comfits of the book, we shall venture to extract, as more wholesome, some of the passages in which a friendly censure is administered. It is from these that "virtuous uses" may be best collected; and the kindly disposition of the author imparts to them a weight which no sourer criticism could possess.

On landing at Tower Wharf, and commending the freedom from *personal* hindrance of any kind, enjoyed by the traveller in England, he adds:—

This liberty of landing, alas! applies to the living person only, but by no means to the property travelling with him; for although the British are ignorant of the vexations of a police, they cannot lay claim to equal credit for liberality in respect of their Custom-house. This is as prying as any other in the world; rummages your valise and carpet bags, and, scenting contraband in every part, compels you to exhibit the contents of your portmanteau as well as any French *douane* could do. And if you have books, they are not taken from you, it is true, whatever their contents may be, but they are laid in a scale, and you must pay I know not how many pence for every pound of them. Add to this, the English officers are by no means expeditious, at least those in the London Custom-house are not. Although we landed as early as three, nothing whatever was done till near four, to shift our luggage to the Custom-house, and this took place with a deliberation that drove us all nearly desperate. By five this operation was ended, and now the passengers were assembled in an ante-room beyond that in which the packages were examined. The fifty or sixty bags and portmanteaus might have been visited in half an hour, but they were searched with such precision and minuteness, that it took more than a quarter of an hour to dispatch a single passenger. I sat waiting for an hour and a half; still my name was not called, and the greater part of the company were yet untouched. Such an intolerable slowness of Custom-house visitation I had never before endured; and although I can employ a fair stock of patience, mine was in this case utterly exhausted. I left the Custom-house at last without my trunk, inwardly execrating the tardiness of the London officers.

What (continues the Doctor,) would an Englishman have said, how would he have lightened and thundered, and scolded at the bad arrangements of the Continent, if he had there encountered anything like this; and been forced to sleep, on the first night after a stormy passage, in a damp shirt, drenched with salt water and the steam of tar, and to wear clothes similarly conditioned? And he would have been quite justified in the bitterest complaints, and in denouncing such treatment publicly, in the strongest terms. * * I only wonder that this defect is not noticed by the press; for the English suffer from it as well as foreigners, and the former are not in general backward in calling on the public to remove abuses which they themselves have to endure.

If the tardiness of these gentry surprised him, he had shortly after to admire the neat-handed dispatch of another class of public searchers of travellers' property:—

At a late hour I returned, in company with a young Scotchman, to Water Lane, and on my way thither, had the pleasure of admiring the finished dexterity of a London pickpocket. We were conversing eagerly, and had just entered High Holborn, when my companion suddenly felt in his pocket, and exclaimed that he had been that instant robbed! For twenty paces on the broad footway, before and behind us, there was no one to be seen but a policeman or two, a single man of shabby-genteel appearance was just passing us quietly, and was not more than a yard from us, when my Scot cried out, "Yonder fellow has picked my pocket!" This "fellow," however, took no notice of the observation so made, nor did he either in the least quicken his pace, when I gave the very audible advice to seize the rogue instantly. My young Scot, a novice on the pavé of London, restrained me, and thought it unadvisable to begin a quarrel at midnight with a pickpocket, and expose himself to the unpleasantness of reading his own name next morning in the police reports. What practice, what sleight of hand, and presence of mind, were requisite to enable this fellow to sack the contents of a stranger's pocket, in the open well-lit street, in no crowd, and within sight of the police themselves, without being caught in the fact!

Which philosophical admiration the Doctor, perhaps, the more readily bestowed, from his part in the adventure being a spectator's only.

On the hostility displayed by some of the leading London newspapers towards the British Scientific Association, the author observes—

It is to me utterly inconceivable how a paper like this can so far forget itself as to use a language usually heard from the mouths of the vulgarest only, in a spirit of quite senseless hostility to an association headed by the most distinguished and shining names in the land;—and describe as a "parcel of ignorant fellows" the society which counts amongst its members a Faraday, a Buckland, an Owen, a Graham, and a host of other men of European reputation. What a degree of impudence, or what a depth of ignorance was requisite to give it the courage to utter to a highly cultivated nation like the British, opinions which are an insult to truth! and what ideas must a stranger receive of the condition, the moral sense, and the decorum of the British press, on reading such articles as have already appeared by dozens in the *Times* upon the Association; every passage, every word of which bears the stamp of exaggeration, calumny, malice, and vulgarity of mind,—and such as the commonest paper on the Continent would blush to admit into its columns. * * Can it be that this language of the giant of journals really expresses the sentiments of English merchants concerning science and its followers? * * I am far from believing that this is the case generally.

With respect to one of Dr. Schönbein's topics, we shall deviate from the line of self-control which has hitherto been observed in our extracts; the theme on which, though "somewhat advanced in years," he expatiates with youthful warmth, is one which no affected modesty shall restrain us from echoing, the excellencies and beauties of English women.

On my first visit to England, it seemed to me that beauty was the general rule for the women there, and its opposite a rare exception. Fifteen years later, although with eyes become more critical, I could not avoid being amazed by the number of beautiful persons amongst all classes, and being confirmed in my earlier opinion that Albion is pre-eminently the land of feminine loveliness. The skin of Englishwomen is so pure, transparent, and fresh, that the most fastidious critic's eye must pronounce it faultless. The complexion usually equals the most delicate rose-red, the hair is oftenest luxuriant, and rarely too light in colour, mostly brown, but occasionally blackish, and now and then of a red tinge. The teeth commonly vie with ivory in whiteness, and are also an object of especial care and preservation to their fair owners. * * Blue and brown eyes are the commonest, and I do not think them in the least deficient in liveliness—but their fire is subdued by a certain softness of expression. Snub-noses (*absit omen!*) are seldom seen—and the insipid Grecian outline of this important feature is happily not much oftener met with. No lack is there of coral-red lips; and the mouth which they form has often the most gracious expression, and all the charm of loveliness. Neck and shoulders are frequently of perfect beauty. * * The bust is allowed to be one of the chief personal graces of which Englishwomen may boast; and many of them in this respect may undoubtedly well sustain a comparison with the most faultless forms represented by the masterpieces of antiquity. Nay, I am inclined to think that the English outline will charm the taste of many even more than the Greek.

For all this personal loveliness, the ingenious Doctor finds curious explanatory reasons, which are excellent; but we must leave them, to extract a few remarks on the mental and moral characteristics of our fair countrywomen. On the common reproach of stiffness and reserve ascribed to them, he observes:—

English decorum certainly enjoins the observance of a measured deportment towards strangers, and hardly allows any notice to be taken of those who are not introduced. Women are naturally more strictly bound to this than men. Foreigners so treated, and accustomed to different manners at home, can therefore hardly judge otherwise than as they usually do. But it would be a gross violation of truth to assert that such a demeanour is universal in all circumstances, and that uncompanionableness is a prominent trait of the British character. * * It is not Englishmen only that show this—(friendliness to those who are properly introduced)—the ladies, too, married as well as single, and I may say even more than the men, are remarkable for a friendly tone of welcome, an unaffected behaviour almost approaching to cordiality, and a softness of manner equally distant from affectation and from prudery—[of which the good Doctor gives pleasant instances from his own experience]. The English lady, as far as I have learned to know her, possesses, besides a fine sense of the becoming, and a readiness in the practical relations of life, a deeply running strain of romance in her character, which at times, indeed, may seduce her to precipitance and error, but far oftener is the source of the noblest actions, and the most unbounded self-sacrifice.

This assertion, which is no less eloquent than true, is sustained by very just observations on the conduct of English women in their married life, on the great majority of love matches—on the heroism of wives in the reverse of their husbands' fortunes—and in the frequency of Gretna Green weddings! The last may seem an equivocal proof of elevation of character, but the demonstration may justify its correctness.

However blameable such proceedings may be, and however often they may be connected with most lamentable results, still their relative frequency is an evidence that the English woman is no cold, selfish, calculating creature, intent on material comforts only, and covetous of luxury and display; but that she is capable, on occasion, of offering to the claims of affection the greatest sacrifice of which human beings, and particularly females, are capable, with the utmost cheerfulness. Such actions bespeak a mighty energy of feeling, and betray the very deeply romantic trait which I have above described, as peculiarly belonging to the female nature in England. In cases of severe adversity this nature exhibits itself in a nobler aspect. * * Under blows of this kind, the true love of the wife, her unselfish attachment, her devotion and capacity for self-sacrifice are best shown. In the misfortunes of her husband, in his struggles with an unkind and cruel lot, the English lady appears in the fairest light, and comes forth in all her excellence. Not only does she resign herself calmly to the inevitable, not only does she confine her own grief to herself, not only does she avoid with the nicest care every expression which might even remotely sound like a reproach; she is even more caressing, officious, devoted and cordial to her husband, than in his prosperous days—she endeavours to hide from her husband and soften the hardships of their altered state, and employs all the eloquence of the heart to inspire hope for the future, and make the present endurable. I have heard traits described of more than one English lady in such circumstances, which were deeply affecting, and revealed a nobility of disposition that commanded more than admiration.

We must conclude with an adventure of the Doctor, whose zeal for science approaches the heroic, and led him into manifold discomforts, in muddy drifts of the Thames Tunnel, "where the air is neither fresh nor pure, and a shower

Digitized by Google

of clay-water is constantly falling," to descend in a diving bell, where "an uncomfortable feeling in the ears soon increased to a pain almost intolerable," and there were some fears, too, of the chain breaking; and finally to dare the worst energies of the electrical eel in the Adelaide Gallery—which "had made no use of its powers for some time," and was consequently in formidable force and terribly snappish:—

The eel, as it seemed, knew well enough that we had some design upon him that he might not exactly like, for as I planted myself to wait for him by the basin, with arms raised and shirt sleeves tucked up, prepared to seize both head and tail at once, he suddenly turned back, although he had already come pretty near me, betook himself to the opposite side of the basin, and would not again swim towards me while I kept my position. I had to retire a little, to assume an indifferent air, and wait for some time before the animal resumed his circular motions. Observing now that the right moment was come, I dashed at the water, and seized the eel stoutly at both ends. The blow which the creature gave me was of most exceeding severity; and although I used every effort to receive it with composure, my features and gestures, it would seem, must have expressed some amazement; for as I hastily drew both hands out of the water, my surrounding friends burst out into loud laughter. Nevertheless, the effect was, after all, less severe than was felt by the well known writer, Basil Hall, who, on making the same experiment a few days before, was struck so smartly by the gymnotus, that the captain, on receiving the blow, fell flat on the ground. As for the strength of the shock which I sustained, I should be disposed to compare it with those which a Leyden jar of the largest size, fully charged, or a hydro-electric battery of some 200 pairs of plates, is able to give.

—a comparison which, at once, establishes the Professor's stoutness of heart and hand, and completely justifies the fall of the gallant author of 'Patchwork.'

Here we must, for the present, take leave of the Travelling Sketches—which contain much amusing matter and friendly observation that we reluctantly pass over. Few modern travellers have written of society in England with better means of observation than Dr. Schönbein; none have spoken of us with more kind and liberal appreciation. While we must admit that his pictures are, for the most part, *en beau*, we cannot but rejoice to find this cordiality of remembrance in one whose character as a man of science is known to Europe, and whose power of reflection and observation are most favourably shown in the present work. A little praise now and then, is wholesome as well as agreeable; and it is no vulgar appetite that seeks for the approbation of travellers so well informed and considerate as the author of this Diary.

Memoirs of the Marquis of Pombal. By J. Smith, Esq. 2 vols. Longman.

"BLESSED are the one-eyed in the city of the blind." Had the Marquis of Pombal flourished in any other country than Portugal, and in any other age but that of the tame mediocrity which distinguished the middle of the last century, his fame as a statesman would shrink into narrow dimensions. His celebrity at the present day rests chiefly on his exertions to destroy the order of the Jesuits; for most of his financial schemes, planned in defiance of the plainest principles of economic science, have long since been abandoned. The biographer has not done much to increase our interest for his hero; he is deficient in the plastic power necessary to bring discordant materials into uniform shape, and he frequently discusses questions of revenue, taxation, and protection, in a style so loose and vague that it is very difficult to comprehend his object. Still more reasonably may his readers complain of his neglecting to elucidate questions of fact to which extrinsic circumstances have given some importance; such, for instance, as the Tavora conspiracy, and the conduct of the Jesuits in Paraguay. Most readers have heard of the attempt to assassinate the king of Portugal on the night of the 3rd of September 1758, and are probably aware that more than three months elapsed before any overt effort was made to bring the assassins to justice. At length, in December, the families of the Marquis of Tavora and the Duke of Aveiro were seized; they were accused of having planned this regicide at the instigation of the Jesuits, and a special tribunal was appointed to investigate the charge.

All Europe was filled with horror at the atrocious butchery which followed; the rack, the wheel, the pitched coats, the burning of the living and the dead in one funeral pile were justly deemed an excess of barbarity disgraceful to Christendom. Moreover there were strong suspicions that most of the unhappy victims were innocent, and in fact the sentences pronounced upon them were reversed in the following reign. The attempt on the life of King Joseph was attributed not to political motives, but to the revenge of an injured husband and a woman irritated at being deserted by one to whom she had sacrificed her honour. Mr. Smith leaves this disputed question just as he found it, merely intimating his own conviction of the guilt of the conspirators without furnishing the evidence on which it is founded.

He is equally reserved on the points at issue between Pombal and the Jesuits; taking the part of the ministers against the society, but not supplying any proofs that can inculpate the latter. We have no great love for the Jesuits, but at the same time we think that their name has too long been made the bugbear for that numerous class which is anxious to find some excuse for indulging in the luxurious excitement of terror. It is singular that people should always exhibit a love for being frightened, and should lavish gratitude on those who dress up for them some fearful hobgoblin. Had the Jesuits possessed one tithe of the cleverness which has been generally attributed to them, they would not have been proverbial for cunning and dangerous designs throughout Europe; they would have had art sufficient to conceal their art. If they were as artful and ambitious as Pombal represented them, they would have held Paraguay as hermetically sealed against the Portuguese, as Doctor Francia did under far less favourable circumstances. When they played they showed all the cards in their hand, and of course they lost the game.

We have been too much disappointed with the historical portion of this work to enter on any examination of the author's heresies in political economy; his views of the principles by which Commerce is regulated belong to a school older than Adam Smith, and we have quite enough of modern follies without meddling with those of antiquity.

Travels through the Alps of Savoy, with Observations on the Phenomena of Glaciers. By James D. Forbes. Edinburgh, Black.

A thick royal octavo on Alps and Glaciers, subjects which not a few of our modern tourists have authoritatively declared to be exhausted! And yet, if a volume full of interesting and novel scientific information, pleasant and readable, be a test of success, Mr. Forbes has quite justified his boldness in venturing upon this so called exhausted subject. The immediate aim of the Professor is to describe and explain the physical geography of the Pennine Alps, but more especially to consider and to test the received theories of glaciers. We may venture more fully into the scientific question at some future time: but for the present shall content ourselves with an account of the glaciers generally.

Mr. Forbes has spent six summers on the Alps, has crossed the principal chain twenty-seven times, mostly on foot, by twenty-three different passes, and has, therefore, had ample opportunity for observation. The able work before us proves how well he employed the time occupied in these tours. The Pennine Alps, which he has selected for his observations extend from the Col du Bonhomme on the W. of Mont Blanc to Monte Rosa inclusive, and are here represented, in a carefully constructed map. It was in 1842 principally that the experiments, on which the Professor's theory is founded, were made, and the Mer de Glace of Chamouni, was the glacier selected as the best for the purpose. Professor Forbes begins at the beginning, by telling us what a glacier is:—

"The common form of a glacier is a river of ice filling a valley, and pouring down its mass into other valleys yet lower. It is not a frozen ocean, but a frozen torrent. Its origin or fountain is in the ramification of the higher valleys and gorges, which descend amongst the mountains perpetually snow-clad. But what gives to a glacier its most peculiar and characteristic feature is, that it does not belong exclusively or necessarily to the snowy region already mentioned. The snow disappears from its surface in summer, as regularly as from that of the rocks which sustain its mass. It is the prolongation or outlet of the winter-world above; its gelid mass is protruded into the midst of warm and pine-clad slopes and greensward, and sometimes reaches even to the borders of cultivation. The very huts of the peasantry are sometimes invaded by this moving ice, and many persons now living have seen the full ears of corn touching the glacier, or gathered ripe cherries from the tree with one foot standing on the ice. Thus much, then, is plain, that the existence of the glacier in comparatively warm and sheltered situations, exposed to every influence which can insure and accelerate its liquefaction, can only be accounted for by supposing that the ice is pressed onwards by some secret spring, that its daily waste is renewed by its daily descent, and that the termination of the glacier, which presents a seeming barrier or crystal wall immoveable, and having usually the same appearance and position, is, in fact, perpetually changing—a stationary form, of which the substance wastes—a thing permanent in the act of dissolution. The result of the heat of the valley in thawing the ice, is a stream of ice-cold turbid water, which issues from beneath its extremity, and which, by gradually undermining, works out a lofty cavern, from beneath which it rolls. This water is derived from various sources: in the first place, from the natural springs which, it may be conceived, rise from the earth beneath the ice, just as they would do in any other valley. This source remains, in a great measure, even in winter, when the glacier stream, though diminished, does not vanish. Secondly, from the heat of the earth in contact with the ice, which probably melts annually a very small thickness of its mass. This, too, will not depend upon the season. Thirdly, the fall of rain upon the whole area which the glacier valley drains—which acts, in the first place, by melting the superficial ice and snow; and the rain water being thus reduced to the freezing point, washes through the cracks and fissures of the ice by innumerable streamlets, which unite beneath its mass, and swell the general stream. Fourthly, the waste of the glacier itself, due to the action both of sun and rain—a most important item, and which constitutes the main volume of most glacier streams, except in the depth of winter. It is on this account that the Rhine and other great rivers, derived from Alpine sources, have their greatest floods in July, and not in spring or autumn, as would be the case if they were alimented by rain water only. On the same account, the mountain torrents may be seen to swell visibly, and roar more loudly, as the hotter part of the day advances, to diminish towards evening, and in the morning to be smallest."

The glacier at its lower part is rugged and steep, the middle is generally more level, while at the top it again becomes steep. "The final

Digitized by Google

ice fall of the glacier Des Bois at Chamouni is inclined 20°, the mean portion between 4° and 5°, and the higher part 8° or 10°." The middle of the glacier slopes gently, with occasional undulations, and is broken by several broad fissures, or *crevasses*. These crevasses sometimes extend almost the whole breadth of the glacier. The silence of the night on these icy regions has often been remarked, but we cannot forbear quoting our author's description. The heat of the sun during the day partially melts the ice, which flows down in little streams:—

"These rills combine and unite into larger streams, which assume sometimes the velocity and volume of a common mill-race. They run in icy channels, excavated by themselves, and unlike the water escaping from *beneath* the glacier, being of exquisite purity, they are both beautiful and refreshing. They seldom, however, pursue their uninterrupted course very far, but reaching some crevasse, or cavity in the glacier, mechanically formed during its motion, they are precipitated in bold cascades into its icy bowels—there, in all probability, to augment the flood which issues from its lower termination. Nothing is more striking than the contrast which day and night produce in the superficial drainage of the glacier. No sooner is the sun set, than the rapid chill of evening, reducing the temperature of the air to the freezing point or lower, the nocturnal radiation at the same time violently cooling the surface—the glacier life seems to lie torpid—the sparkling rills shrink and come to nothing—their gushing murmurs and the roar of their water-falls gradually subside—and by the time that the ruddy tints have quitted the higher hill-tops, a deathlike silence reigns amidst these untenanted wilds."

Mr. Forbes gives an account of the origin and nature of the moraines, the explanation of which was so long doubtful:—

"Winter is a long night amongst the glaciers. The sun's rays have scarcely power to melt a little of the snowy coating which defends the proper surface of the ice; the superficial waste is next to nothing; and the glacier torrent is reduced to its narrowest dimensions. The glacier in this part of its course is more or less covered with blocks of stone which move along with it, or rather are borne down upon its surface. The motion of the glacier we have already inferred from the subsistence of the ice in valleys where the daily waste is immense, and where yet the glacier maintains its position; but its progress is also well marked by the displacement of great blocks of stone upon its surface, which, from their size or figure, cannot be mistaken, and which may be watched from year to year descending the icy stream, whose deliberate speed they mark, as a floating leaf does that of a current of water. These detached rocks fall from the cliffs which usually bound both sides of a glacier in its middle portion, and from which the alternate effects of frost and thaw rapidly and surely separate them. They may be seen to fall almost every summer's day, in consequence of the loosening of the icy bands which hold together fragments previously wrenched asunder by the irresistible expansion of freezing water. A single promontory may yield a great stream of those blocks in the course of years; were the ice stationary, they would accumulate on its surface at the base of the promontory, but as the ice advances, its charge is carried along with it, and the glacier becomes burdened on both sides with a band of blocks, which by their geological character bear the impress of their origin, and thus not unfrequently bring down to the reach of the mineralogist specimens which otherwise would be quite unattainable, and whose native place may be surely inferred by observing the direction of the ice stream which is charged with them. Such, for instance, are fragments of the *Gabbro* of Saas, which has not yet been found *in situ*, but which is discharged by the glacier of Allalein, in the Vallais, near Monte Rosa. What a curious internal historical evidence, then, does a glacier bear to the progress of events which have modified its surface! It is an endless scroll, a stream of time, upon whose stainless ground is engraven the succession of events, whose dates far transcend the memory of living man. Assuming, roughly, the length of a glacier to be twenty miles, and its annual progression 500 feet, the block which is *now* discharged from its surface on the terminal moraine, may have started from its rocky origin in the reign of Charles I.! The glacier history of 200 years is revealed in the interval, and a block larger than the greatest of the Egyptian obelisks, which has just commenced its march, will see out the course of six generations of men ere its pilgrimage too be accomplished, and it is laid low and motionless in the common grave of its predecessors. The stony borders now described are called *Moraines* in French, *Guffer* or *Gufferlinien* in German. The glacier retains a portion of them on its own surface, and throws up a part upon the bank or shore which confines it. If the shore be precipitous, it will be conceived that the blocks cannot be stranded, and therefore either remain on the surface of the ice, or fall into the occasional vacuities left between the ice and its wall, and there are ground and chafed, acting, of course, in a notable manner upon the rock, and producing rounded surfaces, the angles being worn off, and grooves and scratches parallel to the direction of motion of the ice. All this is an immediate and necessary consequence of the fact of the glacier moving and heaving blocks along its edges. When the rocky slope or shore of the glacier is less steep, since, owing to the heat reflected and communicated from the ground, the ice almost invariably sinks towards the sides, a portion of the load of blocks falls over, and is accumulated in a ridge as from an over-filled waggon. But the more striking cause of this accumulation is the oscillation of dimension of the glacier at different seasons, and in different years. If the glacier from any cause whatever becomes enlarged, and, like a swollen torrent, occupies its bed to an unusual depth, the *Moraines* are uplifted with it, and when the return of summer or warmer seasons reduces the ice to its former bulk, the blocks are deposited at the higher level. Such moraines are to be seen in the neighbourhood of most modern glaciers, and they are important to be observed, because the existence of similar mounds in places remote from existing glaciers, has been inferred to demonstrate their former presence."

With these moraines are connected the strange phenomena of glacier tables:—

"The presence of these blocks upon the surface of the glacier, and of the fine sand and debris which is produced by their trituration, gives rise to a peculiar and striking class of phenomena, easily explained, yet at first sight most astonishing. The surface of a glacier is usually divided by numerous rents or crevasses, stretching as we have seen, often nearly from side to side, and into these rents blocks are continually falling. Still, the fact is, that the moraines remain upon the surface, and unless after a very long or very uneven course, they are not dissipated or ingulfed. On the contrary, the largest stones are set on a conspicuous pre-eminence,—the heaviest moraine, far from indenting the surface of the ice, or sinking amongst its substance, rides upon an icy ridge as an excrescence, which gives to it the character of a colossal back-bone of the glacier, or sometimes appears like a noble causeway, fit indeed for giants, stretching away for leagues over monotonous ice, with a breadth of some hundreds of feet, and raised from fifty to eighty feet above the general level. Almost every stone, however, rests on ice; the mound is not a mound of debris, as it might at first sight appear to be. Nor is this all. Some block of greater size than its neighbours, covering a considerable surface of the ice, becomes detached from them, and seems shot up upon an icy pedestal, in the way represented in the Frontispiece, from a real and very striking example which occurred in 1842 on the Mer de glace of Chamouni. This apparent tendency of the ice to rise wherever it is covered by a stone of any size, results from the fact, that its surface is depressed everywhere else by the melting action of the sun and rain; the block, like an umbrella, protects it from both; its elevation measures the level of the glacier at a former period, and as the depression of surface is very rapid—amounting even to a foot per week, during the warm months of summer—the ice, like the fields, puts forth its mushrooms, which expand under the influence of the warm showers, until the cap, becoming too heavy for the stalk, or centre of gravity of the block ceasing to be supported, the slab begins to slide, and, falling on the surface of the glacier, it defends a new space of ice, and forthwith begins to mount afresh. These appearances are called Glacier Tables. Their origin was perfectly explained by De Saussure. Where sand derived from the moraines has been washed by superficial water-runs into the deep cavities which are occasionally formed in the glacier, the accumulation is at length sufficient to check the progress of the waste of ice, and what was a hole filled with sand, becomes a pyramid projecting above its surface, and coated with the protecting layer. These produce glacier cones, which are amongst the most singular and apparently unaccountable of this class of phenomena. They are sometimes astonishingly regular, 20 or 30 feet in height, and 80 or 100 in circumference;—but this is one of the rarer appearances. From what has been said, it will appear that a glacier has a remarkable tendency to reverse its *contour*, or to present at one time the mould or cast of what it was at another; any part of the surface prominently exposed is sure to be speedily reduced, and the hollows, whether holes or cracks or water-runs, by being silted up are protected from farther decay. The valleys are literally exalted, and the hills levelled. It is owing to this beautiful compensation that the glacier maintains a tolerable evenness of surface."

We will conclude for the present with a short description of glacier ice, which is of a rather peculiar kind:—

"The ice of which the glacier is composed, is unlike that produced by freezing still water in a lake or pond. Although remarkably pure and free from all intermixture of earthy matter, and even the smallest fragments of rock (except very near where it touches the soil) it is far from homogeneous, or uniformly transparent. It has been described as composed of layers of perfect ice and of frozen snow intermixed, but this does not express the fact as observed in the middle and lower glacier. The ice is indeed porous and full of air bubbles, and it is very probable that these bubbles result from the freezing of snow imbibed with water; but as it exists in the glacier it is not granular. Laminæ, or thin plates of compact transparent blue ice, alternate in most parts of every glacier, with laminæ of ice not less hard and perfect, but filled with countless air bubbles, which give it a frothy semi-opaque look. This peculiar structure, which gives to glacier ice its extreme brittleness, (which makes the formation of steps with a common hatchet a very easy task compared to what it would be in common ice,) may be compared to what geologists call the *slaty cleavage* of many rocks, rather than to stratification, properly so called. The distinction is important, and amounts to this, that strata are deposited in succession, and owe their form and separation to that circumstance only; whereas, slaty cleavage, or structural planes, occur in rocks, and in many bodies, wholly irrespective of stratification or deposition, and may be communicated to a mass after complete or partial consolidation."

Hereafter we shall accompany the Professor in some of his mountain rambles.

Letters of Horace Walpole to Sir Horace Mann. 2 vols.

[Concluding Notice.]

We promised another gleaning of Walpoliana: happy in the knowledge, that though the present publication be the final series of letters, a couple of volumes are yet forthcoming to complete it. So rich are the pages which remain, that to borrow Dr. Southey's phrase, in his preface to the 'Biography of Cowper,' we must "work in mosaic" and lay together a few lines, nay, even a few words, if they are of the true Strawberry Mint, certain that the result will be a whole as rich as an Alhambra arabesque; or the shrine only last year dragged from the garden chapel, on which Horace doted so devotionally, to figure in a Bond Street curiosity shop. For instance, to the confusion of those who have accused our author of a frippery taste in Art, we cannot resist the stroke of the pen, in which, while thanking Sir Horace enthusias-

Digitized by Google

tically for a volume of Masaccio's designs, the writer adds,—

"I remember at Florence a very few pictures of Fra Bartolomeo, another parent of Raphael, and whose ideas I thought, if possible, greater: as there is such a scarcity of his works, and as they have never that I know been engraved, at least not so well I am persuaded as those by Patch, make him add them to another set of Masaccio's heads. It will immortalize you both to preserve such works."

Nor, as illustrating manners, can we deny our readers the scrap in which a Haymarket manager, and a female *arbiter elegantiarum* are hit off:—

"In the mean time our most serious war is between two operas. Mr. Hobart, Lord Buckingham's brother, is manager of the Haymarket. Last year he affronted Guadagni, by preferring the Zamperina, his own mistress, to the singing hero's sister. The Duchess of Northumberland, Lady Harrington, and some other great ladies, espoused the brother, and without a licence erected an opera for him at Madame Cornelys's. This is a singular dame, and you must be acquainted with her. She sung here formerly, by the name of the Pompeiati. Of late years she has been the Heidegger of the age, and presided over all our diversions. Her taste and invention in pleasures and decorations are singular. She took Carlisle House in Soho-square, enlarged it, and established assemblies and balls by subscription. At first they scandalized, but soon drew in both righteous and ungodly. She went on building, and made her house a fairy palace, for balls, concerts, and masquerades. Her opera, which she called *Harmonic Meetings*, was splendid and charming. Mr. Hobart began to starve, and the managers of the theatres were alarmed. To avoid the act, she pretended to take no money, and had the assurance to advertise that the subscription was to provide coals for the poor, for she has vehemently courted the mob, and succeeded in gaining their princely favour. * * At last Mr. Hobart informed against her, and the bench of justices, less soothable by music than Orpheus's beasts, have pronounced against her. Her opera is quashed, and Guadagni, who governed so haughtily at Vienna, that, to pique some man of quality there, he named a minister to Venice, is not only fined, but was threatened to be sent to Bridewell, which chilled the blood of all the Cæsars and Alexanders he had ever represented; nor could any promises of his lady-patronesses rehabilitate his courage —so for once an act of Parliament goes for something."

We must now have a gloss or two, on some of the items in the catalogue of the curiosities of the Twickenham Otranto; many of which were collected, some presented, by the Florentine Secretary:—

"You must know that last winter, being asked by Lord Vere to assist in settling Lady Betty Germaine's auction, I found in an old catalogue of her collection this article, '*The Black Stone into which Dr. Dee used to call his spirits.*' Dr. Dee, you must know, was a great conjuror in the days of Queen Elizabeth, and has written a folio of the dialogues he held with his imps. I asked eagerly for this stone; Lord Vere said he knew of no such thing, but if found, it should certainly be at my service. Alas, the stone was gone! This winter I was again employed by Lord Frederic Campbell, for I am an absolute auctioneer, to do him the same service about his father's collection. Among other odd things, he produced a round piece of shining black marble in a leathern case, as big as the crown of a hat, and asked me what that could possibly be? I screamed out, 'O Lord, I am the only man in England that can tell you! it is Dr. Dee's black stone!' it certainly is; Lady Betty had formerly given away or sold, time out of mind, for she was a thousand years old, that part of the Peterborough collection which contained Natural Philosophy. So, or since, the black stone had wandered into an auction, for the lotted paper is still on it. The Duke of Argyle, who bought everything, bought it: Lord Frederic gave it to me. * * Wish me joy: I have changed all my Roman medals of great brass, some of which were very fine, particularly a medaliuncino of Alexander Severus, which is unique for the *uniquest* thing in the world; a silver bell for an inkstand, made by Benvenuto Cellini. It makes one believe all the extravagant encomium he bestows on himself: indeed so does his Perseus. Well, *my* bell is in the finest taste, and is swarmed by caterpillars, lizards, grasshoppers, flies, and masques, that you would take it for one of the plagues of Egypt. They are all *in altissimo*, nay, *in out-issimo relievo*, and yet almost inviaible but with a glass. Such foliage, such fruitage! In short, it is fit to keep company with my Eagle, and *your* Caligula —can one say more?"

"Strawberry Hill, Aug. 29, 1772.

"How can you speak so slightingly of the fine chest of Benvenuto? It is most beautiful, and fitted up in the prettiest manner; nor do I at all perceive ill usage in it; Mr. Chute, who is here, is delighted with it; and the more, in that the top is copied from a most scarce print after Raphael, by Marc Antonio, which Stosch procured for him, and which is different from three others. The chest is deposited in a new glazed closet in a sumptuous state bedchamber, which was finished but to-day, and which completes my house. It must terminate it, for I have at last exhausted all my hoards and collections: and such a quantity of things were scarce ever amassed together!"

"Mr. Patch brought me last week, with his brother's engravings, the beautiful St. John of Donatello, and its as lovely and graceful pedestal. My dear sir, how I thank you! and how pleasing is your remembrance of me! but you must send me no more. I not only cannot accept more presents from you, but it would be heaping them on my tomb. My health is gone; pain is my lot; and what are the fair things of this world to me any longer? I leave off making purchases, and put a stop to my collection: it were the hoarding of a miser to pile my house with curiosities, when I shall enjoy them so little; and extravagance to buy, when my lease of life is running out very fast. It will be five months to-morrow that I have been a close and anguished prisoner: besides several relapses, a great cold has added a rheumatism in one side of my face; and when I shall be quit of my actual sufferings, what a shattered tenement will remain? How refit it before I am called upon to sustain another storm?"

There is surely something at once graceful and affecting in the close of the last entry—a touch of the true Horatian melancholy. But in taste, Walpole never disappoints us. *Apropos* of taste, we shall at once pass (claiming Hood's example as a sanction for our abruptness) from "feelings" to "furniture":—

"Our enormous luxury and expense astonishes them. I carried their Ambassador and a Comte de Levi the other morning to see the new winter-Ranelagh in Oxford Road, which is almost finished. It amazed me myself. Imagine Balbec in all its glory! The pillars are of artificial *giallo antico*. The ceilings, even of the passages, are of the most beautiful stuccos in the best taste of grotesque. The ceilings of the ball-rooms and the panels painted like Raphael's *loggias* in the Vatican. A dome like the pantheon, glazed. It is to cost fifty thousand pounds. Monsieur de Guisnes said to me, 'Ce n'est qu'à Londres qu'on peut faire tout cela.' It is not quite a proof of the same taste, that two views of Verona, by Canaletti, have been sold by auction for five hundred and fifty guineas; and, what is worse, it is come out that they are copies by Marlow, a disciple of Scott. Both master and scholar are indeed better painters than the Venetian; but the purchasers did not mean to be so well cheated."

While on these delicate matters, we must give a hit at the French, whom Horace liked so well, because he laughed at them so shrewdly:—

"My party has succeeded to admiration, and gothic architecture has received great applause. I will not swear that it has been really admired. I found by Monsieur de Guisnes that, though he had heard much of the house, it was in no favourable light. He had been told it was only built of lath and plaster, and that there were not two rooms together on a level. When I once asked Madame du Deffand what her countrymen said of it, she owned they were not struck with it, but looked upon it as natural enough in a country which had not yet arrived at true taste. In short, I believe they think all the houses they see are gothic, because they are not like that single pattern that reigns in every hotel in Paris; and which made me say there, that I never knew whether I was in the house I was in, or in the house I came out of. Two or three rooms in a row, a naked *salle-à-manger*, a white and gold cabinet, with four looking-glasses, a lustre, a scrap of hanging over against the windows, and two rows of chairs, with no variety in the apartments, but from bigger to less, and more or less gilt, and a bed-chamber with a blue or red damask bed; this is that effort of taste to which they think we have not attained—we who have as pure architecture, and as classic taste as there was in Adrian's or Pliny's villas. Monsieur de Guisnes is very civil, and affects to like even our gardens, though I can but doubt whether they do not use more of Nature's beauties than a Frenchman can be brought to feel."

After all, it is the glimpses at humanity which give the *salt* to these letters. What a *Bunbury* do we find in the account of the Prince and Princess Giustiniani, abased from the columns of *giallo antico* of their Roman palace, to a *beefsteak* portico at a butcher's shop in Piccadilly, hired for seven sequins a month:—with the Duke of Gloucester knocking at the door, to thank the Prince for his civilities to the Duke of York! What a *Gainsborough* portrait in the few notices of the Duchess of Queensberry—Matt. Prior's Kitty who "set the world on fire!" What a family piece—not a Greuse—in the description of Horace's encounter with the Countess of Orford, on her return from her continental wanderings. What Hogarths of the Duc de Choiseul, "acting joy, spirits, happiness," on the occasion of his disgrace,—of the Maccaronis running races in Kensington Gardens on Sunday evenings!—to say nothing of such less celebrated persons as figure in the following paragraph, comparing Paris and London:—

"Paris suffers grievously; the ruin of so many fortunes has introduced the severest economy. The retirement of the Parliament, and the numbers that depended on them, has carried away, they say, forty thousand persons. Even fashion and whim are out of fashion. I heard of but one instance of remaining luxury: Mademoiselle Guimare, a favourite dancer, now belonging to the Prince de Soubize, and lately to the Bishop of Orleans, who kept her in lodgings within the precincts of a convent, is building a magnificent house. The *salle-à-manger* is to have *des serres chauds* round it, with windows opening into the room, that she may have orange-flowers and odours all the winter. As your own country is never behind the rest of the world in extravagance and folly, I must tell you of a set of young men of fashion, who, dining lately at the St. Alban's tavern, thought the noise of the coaches troublesome. They ordered the street to be littered with straw, as is done for women that lie in. The bill from the Haymarket amounted to fifty shillings a-piece."

Then, who ever described, as Horace Walpole, all the delicate distresses of royal marriages? not even De Sévigné herself, in her immortal letter written on the occasion of the wedding of *la grande Mademoiselle*. Here we have the Duke of Gloucester pairing off with Maria Waldegrave—a connexion in which our writer's secret pride cannot be concealed, while he narrates all the journeys up and down the back stairs made on the occasion; and the Duke of Cumberland taking to himself Mrs. Haughton:

"A young widow of twenty-four, extremely pretty, not handsome, very well made, with the most amorous eyes in the world, and eyelashes a yard long. Coquette beyond measure, artful as Cleopatra, and completely mistress of all her passions and projects. Indeed, eyelashes three quarters of a yard shorter, would have served to conquer such a head as she has turned."

Here we may add the apology for Lady Mary Coke, who longed for nothing so much as to go and do likewise:—

"Oh, my dear sir! you need not make any apologies about the lady, who is so angry with your tribunals, and a little with you. If you have yet received the letter I wrote to you concerning her some time ago, you will have seen that I cannot be surprized

Digitized by Google

at what has happened. It is a very good heart, with a head singularly awry; in short, an extraordinary character even in this soil of phenomena. Though a great lady, she has a rage for great personnges, and for being one of them herself; and with these pretensions, and profound gravity, has made herself ridiculous at home, and delighted *de promener sa folie par toute l'Europe*. Her perseverance and courago are insurmountable, as she showed in her conduct with her husband and his father, in which contest she got the better. Her virtue is unimpeachable, her friendship violent, her anger deaf to remonstrances. She has cried for forty people, and quarrelled with four hundred. As her understanding is not so perfect as her good qualities, she is not always in the right, nor is skilful in making a retreat. I endeavoured to joke her out of her heroine-errantry, but it was not well taken. As she does the strangest things upon the most serious consideration, she had no notion that her measures were not prudent and important; and therefore common sense not delivered as an oracle, only struck her as ludicrous. This offence, and the success of my niece in a step equally indiscreet, has a little cooled our intimacy; but, as I know her intrinsic worth, and value it, I beg you will only smile at her pouting, and assist her as much as you can. She might be happy and respected, but will always be miserable, from the vanity of her views, and her passion for the extraordinary. She idolized the Empress-Queen, who did not correspond with equal sentiments. The King of Prussia, with more feminine malice, would not indulge her even with a sight of him; her non-reception at Parma is of the same stuff; and I am amazed that the littleness she has seen in so many sovereigns has not cured her of royal admirations. These Solomons delight to sit to a maker of wax-work, and to have their effigies exhibited round Europe, and yet lock themselves up in their closets when a Queen of Sheba comes to stare at their wisdom! * * Your Scotch Princess, I doubt, is really mad. Does not she put you in mind of your friend Lord Fane, who kept his bed six weeks because the Duke of Newcastle, in one of his letters, forgot to sign himself your *very* humble servant, as usual, and only put your humble servant? These follies would have done very well when folks fancied *their* stars did everything, and had good and bad demons; but *toute* demon as the Empress-Queen is, and womanish too, I don't believe that, like Juno, she persecutes the pious Æneas in every voyage and peregrination. Then, what an impertinent quarrel with Lord Huntingdon! One sees, indeed, how peevish and persecuting her ladyship would be, if she were Empress or Queen; but it is more ridiculous to proscribe Princes and Princesses when one is nobody one's self. When the Sophi of Persia has dined, a herald gives leave for all other monarchs to go to dinner: but if a merchant's widow at Ispahan was to give the same permission to her sovereign, she would be shut up in a madhouse, though she were to insist she had been married to Kouli Khan. I really wish you were well rid of her: cannot you persuade her to go to Rome, where there is a mock court that has nothing better to do than to quarrel about a mock etiquette?"

Now for a miscellaneous matter or two,—the first curiously noticeable at the present juncture:—

"If you want any more news, you must have it from Ireland, where there is a pretty substantial insurrection of four thousand men, calling themselves *Hearts of Steel*. Whatever their hearts are, their heads are of gunpowder. Poor souls! they have had thorough provocation; reduced to starve, to be shot, or to be hanged. They are tenants of Lord Donegal, driven off their lands because they could not pay hard fines for renewing their leases. Sixteen hundred horse and infantry are marched against them. We had better have wasted an hundred hours in redressing these misfortunes, than in framing acts against marriages! * * We had last Sunday a most violent storm of thunder and lightning. The latter entered by the wire of the bell into Lady Mary Fox's dressing-room in Cavendish Square, where she was with her husband, Lord Robert Spenser and young Harry Conway. It melted the wire, fired the cornice, burned a chair, and damaged the floor. I cannot but think it was raised in a hot-house, by order of the Macaronis, who *will* have everything before the season."

A few good stories and characters shall follow, "like pearls at random strung," though we bring a Quaker into the heterogeneous companionship of an Englishwoman of quality and an Italian Princess:—

"Will you believe, in Italy, that one rascally and extravagant banker had brought Britannia, Queen of the Indies, to the precipice of bankruptcy! It is very true, and Fordyce is the name of the caitiff. He has broke half the bankers, and was very willing to have added our friend Mr. Croft to the list; but he begged to be excused lending him a farthing. He went on the same errand to an old quaker; who said, 'Friend *Fordyce*, I have known several persons ruined by *two dice*; but I will not be ruined by *Four dice*.'"

"We have an instance in our family of real dignity of mind, and I set it down as the most honourable alliance in the pedigree. The Dowager Lady Walpole, you know, was a French staymaker's daughter. When Ambassadress in France, the Queen expressed surprise at her speaking so good French. Lady Walpole said she was a French woman. 'Française!' replied the Queen. 'Vous Française, Madame! et de quelle famille?'—'D'aucune, Madame,' answered my aunt. Don't you think that *aucune* sounded greater than Montmorency would have done? One must have a great soul to be of the *aucune* family, which is not necessary, to be a Howard."

"The most ancient of our acquaintance is dead at last, the Princess Craon. She has been sitting ready-dressed for death for some years. I mean, she was always full-dressed, and did nothing, nor saw anybody; but now and then one of her old children or grandchildren."

"Lady Gertrude Hotham, (Lord Chesterfield's sister,) one of the few whom perhaps you remember, is dead; she set her ruffle, and thence the rest of her dress, on fire, and died of it in ten days. She had wit like all her brothers, but for many years had been a Methodist. About two years ago, as the Earl was ill, she went with her Primate, Lady Huntingdon, to try to tempt him to one of their seminaries in Wales, hoping to get at his soul by a cranny in his health. They extolled the prospects, and then there were such charming mountains! 'Hold, ladies, said he; I don't love mountains,—when your Ladyship's faith has removed the mountains, I will go thither with all my heart!' What pity there is nothing of that wit in his letters!"

The volume closes seriously; among regrets at Sir Horace Mann's determination not to revisit England, and lamentations for Mr. Chute's decease, which let all read who have accused Walpole of want of heart. Leaving this sorrow as too deep for the tone of the present article, we shall, nevertheless, conclude with one of the graver paragraphs, which come, after the brilliancies we have been enjoying, like an autumnal sunset after a joyous and glorious day:—

"Your old acquaintance, Lord and Lady Dacre, and your old friend Mr. Chute, dined with me to-day: poor Lord Dacre is carried about, though not worse than he has been these twenty years. Strawberry was in great beauty; what joy I should have in showing it to you! Is this a wish I must never indulge? Alas! I have had a long chain of thoughts since I wrote the last paragraph. They ended in smiling at the word *never*. How one pronounces it to the last moment! Would not one think I counted on a long series of years to come? Yet no man has the termination of all his views more before his eyes, or knows better the idleness of framing visions to one's self. One passes away so soon, and worlds succeed to worlds, in which the occupiers build the same castles in the air. What is ours but the present moment? And how many of mine are gone! And what do I want to show you? A plaything-vision, that has amused a poor transitory mortal for a few hours, and that will pass away like its master! Well, and yet is it not as sensible to conform to common ideas, and live while one lives? Perhaps the wisest way is to cheat one's self. Did one concentre all one's thoughts on the nearness and certainty of dissolution, all the world would lie eating and sleeping, like the savage Americans. Our wishes and views were given us to gild the dream of life, and if a Strawberry Hill can soften the decays of age, it is wise to embrace it, and due gratitude to the Great Giver to be happy with it. The true pain is the reflection on the numbers that are not so blessed; yet I have no doubt but the real miseries of life—I mean those that are unmerited and unavoidable—will be compensated to the sufferers. Tyrants are a proof of an hereafter. Millions of men cannot be formed for the sport of a cruel child."

OUR LIBRARY TABLE.

The Omnigraph Atlas of Modern Geography, by F. P. Becker.—The Omnigraph is, we believe, a method of engraving by impressing type on a steel or copper plate, which, judging from the specimen before us, is not greatly to be commended. In this Atlas, although professedly printed on this plan, the outline of the coasts, the ruling of the sea, most of the curved lines and of the larger names have been, we suspect, done by the engraver, and badly done. We are told, in the title-page, that all the newest discoveries are introduced into these maps, and that the geographical features of the countries delineated are carefully exhibited. The unusual pretensions of this title-page, induced us to test the fulfilment of its promises, and we find, that the work has been manufactured — like Peter Pindar's razors, for sale. In the first place, the mere mechanical part is infamous—many examples might be given in which rivers flow over mountains; in North Italy, which happens to be open before us, we might refer to the Po and a dozen others in proof—in the maps of Spain and India, mountains extend beyond even the coast line, and reach a mile or two into the sea—in North America, the river Fraser (not Frazier, as printed) stops boldly and abruptly some miles from the sea, where it is left to shift for itself. As to inaccuracies in printing, we could fill a column by adverting to them—thus we have Fareham, near Southampton, printed as Farnham, the latter place, with double the population, being omitted altogether: Glenelg, in Australia, is spelt Glenely; Landstuhl in Bavaria, Landstunh, &c. But Mr. Becker's geographical achievements are equally wonderful with his omnigraphical—thus, according to the scale given, we find that France is 520 geographical miles from N. to S., and 550 from E. to W., whereas, in fact, it is 527 from N. to S., and 515 from E. to W. In the same map, Corsica, which is 102 miles long and 44 wide, is represented (by the only scale given us) as 220 miles long and 95 wide. In Germany, Bavaria is docked of some miles of its territory, being deprived of its portion of the Lake of Constance, with its insular town of Lindau. But we should never finish were we to instance every mistake in this "new and accurate" Atlas. As to the position of places, it would have been equally correct had the words been sprinkled at random over the page. Mr. Becker, too, it must be observed, has a thorough disregard of proportion. Villages, even in England, are presented in large letters, while market towns are printed either in much smaller or wholly omitted—the hillocks of Finland are larger and blacker than the chain of the Caucasus in the same map—the Morea is literally one mass of large mountains (the highest being, in fact, not more than 6,000 feet), while Mount Zorata, in South America, 25,000 feet high, is not honoured with a single scratch. We have examined this work somewhat in detail, because we wished to show our readers to what lengths the ignorance and presumption of professed map-makers can go, and how necessary it is to be cautious in the purchase of such works.

The Philosophical Works of John Locke; with a Preliminary Discourse and Notes by J. A. St. John.—A collection of the philosophical portion of Locke's writings, prefaced by a pleasant Discourse, in which Mr. St. John defends Locke against the host who have attacked both the style and matter of his works, and gives a brief account of his controversy with Dr. Stillingfleet. The notes, which are few and brief, are confined to illustrations of the text from poets, philosophers, historians, and travellers: "in short," to use Mr. St. John's words, "I have sought from every kind of author within my reach, passages throwing light upon the matter in hand, confirming sometimes and sometimes controverting the views of Locke, whom I have not the superstition to regard as infallible." We have only to add, that this edition is neatly got up, and comprised in one substantial volume.

An Humble, Earnest, and Affectionate Address to the Clergy, by William Law, A.M.—This is a reprint

Digitized by Google

of a work by the author of the well-known 'Serious Call,' and was a merited attack on the secular studies of the clergy of his day. The evil, however, no longer exists, and the publication has, therefore, lost most of its force; it would, therefore, have been better had the publisher stated who W. Law was, and when and why he wrote, and not left the unlearned to suppose that he was a writer of the present day.

Explanation of Passages in the Epistles of St. Paul, by the Rev. R. Morehead.—A posthumous work, and has therefore claims on forbearance. It is an attempt to elucidate some difficulties in St. Paul's Epistles, by altering the received punctuation, and liberally introducing the use of parenthesis. In some of the proposed corrections we are disposed to coincide; but our reasons for agreeing with the author, or differing from him, turn on minute points of criticism, which have no interest for general readers.

The Jews in China, by J. Finn.—The accounts published on this subject, in the last century, have every appearance of being pure figments of the Jesuit missionaries; Mr. Finn has republished them, with the hope that they may lead to further investigations, by which he trusts that they will be extended and confirmed.

A Course of Practical Geometry for Mechanics, by W. Pease, Woolwich.—A little book—by a teacher in preparatory schools, &c.—dedicated, as we are told, by express permission, to Prince Albert. We think it much better suited for the boys at preparatory schools than for grown-up mechanics, and it seems to us by no means unlike the little book of problems which the boys at the military colleges used to make out under O.G.G. = OG^2. The mechanic will not find anything in it which he is likely to want, as he has already much better books of the same kind.

True Stories from the History of the Church, by the Rev. Thomas King.—*A Tabular View of the Old Testament History, with a Complete Series of Questions.—The Book of Bible Characters.—Questions to the Book of Bible Characters*, by Charles Baker.—This is a batch of little books designed to exercise children in a knowledge of the events of Scripture History. Mr. King contends—and certainly with some truth—that whilst ancient and modern history are studied, the history of the Church is neglected. His book has been compiled in order to remedy the defect. It is addressed to young persons, rather too much in the style of a preacher from his pulpit, and falls somewhat into the common error of assuming a knowledge on their part, which they are not likely to possess. It is not an easy task to write well for children, and demands an amount of qualifications which few who assume to be instructors possess. Mr. King's attainments, in this respect, do not appear to us to be great.—Mr. Baker's 'Book of Bible Characters' is simple and comprehensible; but the questions appended are not often clear or well put. Thus, after the flood, the wind assuaged the waters, the fountains of the deep and windows of heaven were stopped, and the rain from heaven was restrained. The child, in reference to these effects, thus forcibly expressed, is asked, "*What* caused the waters to abate?" Mr. Baker's works are printed by the boys at the Yorkshire Institution for the Deaf and Dumb: but the author has not looked to the correction of his proofs: at page 51, we have "taken" for "token" of the covenant; at page 53, "chansed" for "changed," &c.

The Family Topographer, by S. Tymms. Vol. VII. *Middlesex*.—A collection of facts, too brief, however, to be interesting, but useful for reference.

Sir Robert Peel and his Era.—Avowedly a mere synoptical view of the chief events and measures of his life and time, and therefore like "The Life" lately noticed, of very little interest, though not without its use.

Days at the Factories, by George Dodd.—A reprint of a series of papers descriptive of the principal manufactures in London, originally published in the Penny Magazine. They well deserved to be collected, as they furnish a guide to the trading wonders of the Metropolis, which generally escape the notice not merely of visitors but of residents.

Westminster Abbey, and *Life*, two Poems, by Owen Howell.—On the second of these poems we have already given our opinion—and our advice, which was, not to publish. (*Athen.* No. 755.) The first is another batch of its author's deliberate commonplaces. Such truths as—"The slow destroyer, Time, sees tottering Empires fall"—"To pass away is the sure fate of all created things"—"Fleeting Fame a few brief years will utterly efface"—"Beauty's a flower, * * all whose loveliness cannot avert its doom"—"Systems and sects decay"—"The marriage song precedes the funeral dirge," &c.—are not sufficiently new in themselves, nor variations upon one another, to obtain for their author the honours of profound thinking or original teaching. If he would be content to take a new measure of his own mind, applying a somewhat larger rule than that of his companions, who, as he himself states, "spend their time in rioting"—and forget that he is, on the other hand, as he also says, "writing for fame," he would deserve credit for his more intellectual choice of a recreation—might, too, do something deserving the praise of the higher spirits whose fellowship he seeks,—and would, in any case, avoid the sort of mistake which supposes that Shakspeare's Hamlet is composed of a suit of sables, and an exhibition of Yorick's skull.

Poems; by Primogene Duvard.—Mere rhymes—that do not always rhyme. But even were they other, in form and execution, than they are, it would need all the claims of close neighbourhood and familiar association to give interest to such commonplaces.

Poetry, a Satire, by Park Benjamin.—Satire is somewhat too ambitious a name for this production. It is a mere essay written for delivery "before the Mercantile Library Association" of New York; and has even less than the incompleteness which might be expected in the treatment of such a theme, for a purpose so occasional and in a frame so limited.

The Power of Conscience; or the Monopolist. And other Poems. By Thomas Latter.—It would be an unworthy desertion of the duties of our office, if we hesitated to warn this writer against the use of the pen; and it is fair at the same time to say, that those friends by whose advice he prints, are more to blame than he is for the publication of such trash as this. That he is himself deceived as to the value of his lucubrations, we can believe, as he has evidently but an imperfect acquaintance with the language which is his instrument; and no suspicion whatever of the indecencies to which, in its defective fashion, he makes it subserve; but that friends should be blind to either his grossness, cacology, crudeness or conceit, is all but inconceivable. A judicious kindness on their part would in all probability have saved our patience the trial of reading this volume, and his vanity the pain of learning our comment on it.

List of New Books.—The Social, Educational, and Religious State of the Manufacturing Districts, with Statistical Returns, &c., in Two Letters to the Right Hon. Sir R. Peel, Bart., by Edward Baines, jun., 8vo. 2*s*. 6*d*. cl.—The Law of Distress for Rent, on Property not the Tenant's, considered and condemned, 12mo. 5*s*. cl.—Family Prayers for one Month, arranged by Hodgson, post 8vo. 5*s*. cl.—Memoir of Rauschenbusch, from the German, by Rev. R. F. Walker, fc. 8vo. 5*s*. cl.—Arnold's Posthumous Sermons, 'Christian Life, its Hopes, Fears, and Close,' 2nd edit. 8vo. 12*s*. cl.—Ten Sermons preached before the University of Cambridge, by J. W. Blakesley, 8vo. 6*s*. 6*d*. cl.—Tomline's Elements of Christian Theology, 14th edit. by Dr. Stebbing, 2 vols. 8vo. 21*s*. bds.—Barnes' Notes on the New Testament, Vol. V. '1st Corinthians,' post 8vo. 4*s*. 6*d*. cl.—Chavasse's Advice to Mothers on the Management of their Offspring, 3rd edit. fc. 8vo. 3*s*. 6*d*. cl.—Chavasse's Advice to Wives on the Management of Themselves, fc. 8vo. 2*s*. 6*d*. cl.—Chavasse's Advice to Wives and Mothers, in 1 vol. fc. 8vo. 5*s*. 6*d*. cl.—A View of Cheltenham in its Past and Present State, with numerous engravings, by H. Davies, 8vo. 10*s*. 6*d*. cl.—Borrow's Bible in Spain, 4th edit. 3 vols. post 8vo. 27*s*. cl.—Borrow's Gypsies in Spain, 3rd ed. 2 vols. p. 8vo. 18*s*. cl.—The Smiths, a Novel, in 3 vols. post 8vo. 1*l*. 11*s*. 6*d*. bds.—Correspondence of John Fourth Duke of Bedford, with Introduction, by Lord John Russell, Vol. II., 8vo. 15*s*. cl.—Life of the Right Hon. Lord Sydenham, G.C.B., with a Narrative of his Administration in Canada, by G. Poulett Scrope, Esq., M.P., 8vo. 18*s*. cl.—The Cape of Good Hope and the Eastern Province of Algoa Bay, by J. C. Chase, Esq., 12mo. 7*s*. 6*d*. cl.—A Catalogue of British Fossils, comprising all the Genera and Species, by John Morris, 8vo. 10*s*. cl.—Icones Plantarum, or Figures and Descriptions of new or rare Plants, by Sir W. J. Hooker, Vol. II., new series, 8vo. 28*s*. cl.—The Animal Kingdom, by Swedenborg, translated by J. J. G. Wilkinson, Part I., 8vo. 16*s*. 6*d*. cl.—Observations on Idiopathic Dysentery, by Walter Raleigh, 8vo. 5*s*. cl.—Lawrance on Life Assurance, 12mo. 1*s*. cl. swd.—Hints and Reflections for Railway Travellers and others, or a Journey to Phalanx, by Minor Hugo, 3 vols. 12mo. 18*s*. cl.—Morrison's Practical Book-Keeping, 7th edit. 8vo. 8*s*. hf-bd.—Graham's Helps to English Grammar, with woodcuts, fc. 8vo. 3*s*. cl.—The Child's Reader, and Pleasure and Profit, 1 vol. 18mo. 1*s*. 6*d*. cl.—The Dangers of the Water Cure, and its Efficacy examined, with cases treated at Malvern, by Dr. J. Wilson, and Dr. J. M. Gully, 12mo. 2*s*. bds.

TO FLUSH, MY DOG.

BY ELIZABETH B. BARRETT.

[This dog was given to me by Miss Mitford, and is of the race which she has rendered famous among English readers.]

LOVING friend, the gift of one,
Kindly who her faith hath run
Through thy lower nature;
Be my benediction said,
With my hand upon thy head,
Gentle fellow-creature.

Like a lady's ringlets brown,
Flow thy silken ears adown
Either side, demurely,
Of thy silver-suited breast
Shining out from all the rest
Of thy body, purely.

Darkly brown thy body is,
Till the sunshine, striking this,
Alchemize its dulness;
When the sleek curls manifold
Flash all over into gold
With a burnished fulness.

Underneath my stroking hand
Startled eyes of hazel bland
Kindling,—growing larger,—
Upward, upward, dost thou spring,
Full of prank and cúrvetting,
Rearing like a charger!

Leap! thy broad tail waves a light—
Leap! thy slender feet are bright,
Glittering in their fringes;
Leap! those tasselled ears of thine
Flicker strangely, free and fine,
Down their golden inches.

Yet, O pretty, playful friend,
Little is't for such an end
That I praise thy rareness:
Other dogs may be thy peers
Haply in those tasselled ears,
And that glossy fairness;

But of *thee* it shall be said,
This dog watched beside a bed,
Day and night unweary;
Watched within a curtained room,
Where no sunbeam cleft the gloom
Round the sick and dreary.

Roses, gathered for a vase,
In that chamber died apace,
Beam and breeze resigning—
This dog, friend-like, waited on,
Knowing that, when light is gone,
Love remains for shining.

Other dogs, at sweep of horn,
Barked along the shivering corn
Till the game was started;—
This dog only, all the day,
Patient by a pillow lay,
Watching the sad-hearted.

Other dogs in thymy dew
Tracked their masters down and through
Sunny slope and meadow;—
This dog only, crept and crept
Next a languid cheek that slept,
Sharing in the shadow.

Other dogs of faithful cheer
Followed close the whistle clear,
Up the woodside hieing;—
This dog only watched in reach
Of a faintly uttered speech,
Or a louder sighing.

And if one or two quick tears
Dropped upon his glossy ears,
Or a sigh came double,
Up he sprang in eager haste,
Fawning, fondling, breathing fast,
In a tender trouble.

And this dog was satisfied
If a pale thin hand would glide
Stroking and reposing
Down his ears, and o'er his head,
With an open palm, he laid
Afterward, his nose in.

Digitized by Google

Therefore to this dog will I
Tenderly, not scornfully,
Render praise and favour:
With my hand upon his head,
Is my benediction said,
Therefore, and for ever.

And because he loved me so,
Better than his kind will do
Often, man or woman,
Give I back more love again
Than dogs often have of men—
Leaning from my Human.

Blessing on thee, dog of mine!
Pretty collars make thee fine—
Sugared milk make fat thee;
Pleasures wag on in thy tail,
Hands of gentle motion fail
Nevermore to pat thee!

Downy pillow take thy head—
Silken coverlid bested—
Sunshine help thy sleeping;
No fly's buzzing rouse thee up,
No man break thy purple cup
Set for drinking deep in.

Bearded cats arointed flee!
Sturdy stoppers keep from thee
Cologne distillations;
Nuts lie in thy path for stones,
And thy feast-day macaroons
Turn to daily rations!

Mock I thee in wishing weal?—
Rather could I weep to feel
Thou art made so straightly;
Blessings needs must straighten too,
Little canst thou joy and do,
Thou who *lovest greatly*.

Yet be blessed to the height
Of all dream and all delight
Pervious to thy nature;
Only *loved* beyond that line,
Worthily of love of thine,
Loving fellow-creature!

BRITISH ASSOCIATION.

THE following letter may be useful to the members of the Association about to visit Cork, and as such we have permission to publish it:—

So you really mean to visit Cork next month; and, nothing daunted by the wonderful tales you hear about Ireland, actually intend to make a tour afterwards—longer or shorter according to circumstances? —Well! I applaud your determination, and believe I may assure you that you will be as safe as in any part of England or Scotland, and much safer than in any parts of the continent. Nor will you fail to be greatly struck with the politeness of the people and their wishes to oblige you in every way, because I know you will address yourself to them with a kindness and confidence of manner which can never fail to win their hearts. Slow as they are to forgive or forget an insult, they are very sensible to courtesy, and quick to return it—but as they are naturally well bred and sharp-sighted, a patronising air will not go down with them. The national character has in fact within my recollection undergone much change. Only five years ago she might still be reproached as a land of intemperance; while now from habits of drunkenness, her people have risen steadily and gloriously from their bondage, discarding their rags, as they spurned the degrading poison in which those rags were steeped. Full many a sorrow still weighs them down, but thanks to good Father Mathew, the sorrow of their debasement is past, never, I firmly believe, to return.

You ask me to enlighten you about the different routes to Cork. The easiest and best in your case will probably be to proceed from London to Bristol, and there take the steamer direct; but should you wish to vary this plan, I would recommend you to go to Gloucester and take the mail to Hobbs Point, from whence the government steam packets start every evening to Waterford, and most excellent and safe vessels they are—the passage is from 10 to 12 hours. The drive through the vale of the Towy, is one of the loveliest in the world. At Llandilo, you will pass Lord Dynevor's splendid Park, which George IV. declared to be the grandest thing in his dominions. Earl Cawdor's estates, stretching south along the Towy, and Earl Dynevor's nearly opposite, with the beautiful river between them, never forgetting Grongar Hill, so celebrated in familiar poetry, and Dreslyn Castle, still proud and noble in its decay, present a series of interesting objects. Pembroke is an improving town, and its ancient castle a fine specimen of the olden time.

The scenery of Milford Haven is grand and striking, and the approach to Waterford extremely interesting. Arrived at the city, which though far from prosperous you must from its situation greatly admire, you will find a comfortable hotel close to the landing place (Shanahan's), and by an easy journey will reach Cork the same evening—though I would fain recommend a slower progress, and a visit to Lismore Castle.

Thus far I have done my best to guide you to Cork, not doubting that, when there, you will, while associated with the good and learned, do infinitely more to guide others, and through paths more intricate.

I cannot but hope that at the close of your labours, you will not hastily retrace your footsteps; but avail yourself of an opportunity which may not again so readily occur, of seeing something more of the South and perhaps West of Ireland. I trust few will depart without visiting Killarney and its magic scenery, so amply described by Mr. Weld, and Mr. Croker, and others, but undoubtedly best by Mr. Weld. Since these descriptions were written, however, a new hotel has been erected near the town of Killarney, called the Victoria, and kept by Finn, which, from experience of its comforts and advantages, I can recommend to you—but again I hope this will not be all—that Killarney, alone, will not content you; but that you will determine upon seeing as much of the coast as you can, for it will amply repay you. Cove should not be omitted on any account, nor will you be at a loss for a conveyance by land or water; but there is another excursion which I wish also to recommend —merely premising that the limits of this sketch are too confined to admit of any more particular description of scenery. It would take a page or two, for instance, to do justice to Cove—the limits of a letter therefore preclude the possibility of the task, however inviting—my duty being merely to draw an outline, to which if you adhere, I will answer for your gratification in filling it up.

From Cork therefore, where plenty of cars and other conveyances are to be had on very reasonable terms, I would recommend you to drive to Macroom, twenty-four miles; taking the north road by Sir George Colthurst's. There is a middling sort of inn at Macroom: but once for all let me caution you not to raise your expectations too high on the score of accommodations, but rather carry on with you a liberal stock of philosophy, and with your heavy baggage (which you may send to Bristol) dispense with as many wants as you can.

From Macroom I would recommend you to go to Inchegelna, seven miles, and visit the neighbouring glen and Lake Lun. There are also some interesting ruins in the glen of Kurmenea, which it may be well to seek out and visit.

At Bantry (to which town I am leading you) decent accommodation may be found at Godson's Inn. Thence you proceed to Glengariff, by the head of the bay. This is a delightful drive, and will give you a good view of Lord Berehaven's property. At Glengariff, Eccles's Inn is tolerable. You then take the road to Berehaven, along the bay, eighteen miles, an excursion which should embrace the waterfall at Adrigole; and, if curiosity should prompt you to visit Mr. Puxley's copper mines, proceed to Castletown, and returning to Glengariff, go to Kenmare; you will pass through the mountain tunnel, 400 feet in length, and see Lord Bantry's lodge, and Mr. White's beautiful property; and just in this neighbourhood, it may be mentioned, that there is very superior trout and salmon fishing.

From Kenmare to Killarney is sixteen miles, where, at the inn mentioned (the Victoria) you may repose from your labours in all the luxury you please, and for as long as you like; nor can you, after all, quit Killarney without regret, for its beauties will grow upon you more and more every day.

From Killarney there are two routes to Limerick, one by the mail direct, accomplished in a few hours, the other by way of Tralee and Listowell, by excellent cars to Tarbert. The latter I would recommend; you reach Tarbert in the evening, and will find a tolerable house—yet, if you have good daylight, and can have a boat to cross the Shannon to Kilrush, and be able to push on to Kilkee, pray do so, for a few hours at Kilkee would give you a true conception of the west coast, of the grandeur of its lofty cliffs exposed to the billows of the Atlantic. There are good accommodations at this pleasant bathing town, and cars always going to Kilrush and back, the distance being ten miles, and the fare a shilling each way. There are steamers going every day from Kilrush to Limerick, calling at Tarbert, their departure depending on the tide. With fair weather and good daylight, you will greatly enjoy the trip to Limerick, and arrived at this fine improving city, you will be fortunate if you can secure a bed at Cruise's Hotel, one of the most comfortable I know; but if full, go on to the Clare Hotel. Limerick can be seen very well in a day, and Mr. Cruise will send a guide with you if you require one. If you resolve to see no more of the west coast, and have time for a short excursion in the neighbourhood of Limerick, I recommend you to visit Castle Connell and Killaloe; for which purpose you have merely to hire a car, getting permission, if possible, to drive through Lord Clare's grounds. It will take you about an hour to see the rapids of the Shannon, and then proceed to Killaloe, where there is a comfortable hotel, and from whence you can hire a boat for a few hours, and make a delightful excursion on Lough Derg. From Killaloe to Ennis, about eighteen miles, passing Doon Lake.

At Ennis there is only one middling inn, (Carmody's). Here I would recommend you to hire a car for the cliffs of Moher, certainly the most remarkable as well as stupendous locality on the west coast of Ireland; and if you have an introduction to Cornelius O'Brien, Esq. M.P. for Clare, the proprietor of that district, whose hospitality (as I have experienced) is unbounded, you will indeed be fortunate. Failing in this, however, you will find no difficulty in seeing these wonderful cliffs to every advantage, Mr. O'Brien having expended large sums of money in the laying out of walks and terraces, and most convenient platforms, rendered perfectly secure, though actually overhanging the Atlantic, at heights varying from 800 to 1200 feet. Fine stables are there also, and a remarkably picturesque castle, the doors of which are always open for the reception of visitors; and for the accommodation of parties every facility is given for the enjoyment of a pic-nic, even to the attendance of a good piper. I hope, therefore, you will not forget your little basket of *vivres*, but discuss its contents with the greatest satisfaction, some 1,200, or, it may be, 1,400 feet above the ocean, while the long majestic waves are thundering beneath you, against this iron-bound coast. I declare I have never experienced such sensations anywhere else, as in contemplating these scenes of magnificence and grandeur—scenes to which no description can render adequate justice. By all means coax or press into your service a good *voluble* guide—Paddy O'Brien for my money! He will induct you into the mysteries of this charmed coast, will show you how the bird-catchers and samphire gatherers pursue their dizzy sport. He will point to the particular crag upon which a beautiful foal was reposing, when that indescribable monster called the Mochteedee, rose from the deep, scaled the cliff, and would have devoured the foal but for its dam, "who made a rush at the cratur, and kicked him clane into the say." Nor will he fail pointing out to you where, under the troubled sea, lies the ill-fated island of Kylestaffeen, waiting for its disenchantment "barring a little bit of it called the Munasthir, or Temple, on which the sea breaks every day in the year." The legend goes on to record, that once in every seven years, the island, with its fine city, rises for a single moment to the surface of the Ocean, and then, if any one can throw but a handful of earth upon it, without so much as drawing his breath, the spell will be broken, and Kylestaffeen re-established in its pristine glory. O'Brien will tell you that the women of the city (often seen under the clear waters) are dark and beautiful, and wear red mantles; and he will also tell you that he has a friend, who saw a person, who told him he knew another person who declared most solemnly he had seen both the men and women of the city walking in the streets; and as to the noises

Digitized by Google

heard by everybody about here, they are not occasioned by the waves breaking upon the rocks,—such an idea is improbable,—but from the blacksmiths, who labour day and night in the city, which was renowned for the manufacture of its arms. Truly may Lord Eliot, amidst the turmoils of the Irish Arms Bill, congratulate himself that the Kylestaffeen blacksmiths, at least, are under water! If you see nothing else on the west coast, see the cliffs of Moher. You can then proceed to Miltown Malbay—a capital hotel and bathing-place—or you can vary your drive back to Ennis by Lemenea castle, the ancient seat of the O'Brien family, and in later years too much renowned by the extravagancies and cruelties of Mauria Ruh, or red-haired Mol, about which every one you converse with will tell you something; and that she was a wild ungovernable dame few can doubt. The Lake of Inchiquin, with its fine ruined castle and picturesque back-ground, will be in your way. The poor little town of Corofin is a sad wretched place, and the sooner you get back to Ennis the better—if to return to Limerick and Cork, or Dublin, you will find conveyances in abundance; but will you be contented? Can you think of returning without seeing Galway, Connemara, and Westport? I hope not! at all events, I will hazard a few remarks which I trust you will find of some service should you proceed.

The mail from Limerick to Galway passes through Ennis about noon, but I would recommend you to hire a car to Gort, and start after an early breakfast—stop at Lord Gort's gates, and, driving into his demesne, look at his fine castle and gardens if you can, and at his beautiful lake; and afterwards, on your way to the town of Gort, stop for a few minutes where a fine river plunges into a rocky abyss, and is lost sight of, but, rising again near the town, turns two or three mills, and, as if weary of its labour, buries itself again among the limestone rocks, and is seen no more, till it bursts up into the sea at the edge of Galway bay. There is a good inn at Gort, and the mail, passing through between two and three, will take you to Galway in a couple of hours, and will set you down at Kilroy's Hotel, where you will find comfortable accommodations and an intelligent host, who will put you in the way of seeing this remarkable place,—and very curious you will find it, but most so from its resemblance in many of its ancient parts to a Spanish city. Fail not to look at the old house distinguished by a death's head inserted in its wall, to commemorate the inexorable deed of a magistrate, who, rather than yield to the clamours of the populace for his release, hung his own son from an upper window, for having, in a fit of jealousy, violated the rights of hospitality by killing a young Spanish gentleman. You will be conducted to the new Dock, near which generally lie huge blocks of the marble of this district, brought there for shipment. You will pause upon the bridge, and admire the overflow of Lough Corrib—a lake which you will see to great advantage in your drive to Connemara. You will also visit the Cloddeaughs, a peculiar race of fishermen, who inhabit a suburb of their own, and assume and exercise many independent privileges, not always sanctioned by law.

Every morning one of Bianconi's excellent mail-cars leaves Galway for Clifden, at ten o'clock: before you arrive at the picturesque town of Oughterarde, you will see another but smaller river lose itself in the rocks beneath; it flows, however, to the ancient castle of Aughunamore, an old possession of the O'Flaghertys, formerly kings of Connaught, whose lineal descendants live a little further on, and are much respected in the country, having still numerous, and it is said very remarkable, papers in their possession, and among these several letters written by Queen Elizabeth. You will arrive at Clifden in time for dinner at a comfortable house, conducted by a respectable and well informed family; and do not fail to keep in mind, while driving into this flourishing town, that in the year 1815 one house alone was there, showing how much may be done in Ireland when people go about it properly. The late proprietor, Mr. John D'Arcy, gave much judicious encouragement in every way, and was a constant resident; hence the rapidity with which it rose. Fail not to take a walk to the Castle, now the residence of his son, Mr. Hyacinth D'Arcy. Returning from the castle by the high road, you will have as splendid a view as I know anywhere—the celebrated Pins or Bins, which average about 3,000 feet in height: the town and spacious bays present objects of grandeur and interest seldom exceeded. Several days may be spent in excursions from Clifden, and I am sure a trip to High Island would greatly interest you, where are various remains of churches, &c., said to be Danish, but probably of an age more remote, when numerous settlements were made on the west coast of Ireland by warlike adventurers from Spain.

Taking leave of Clifden, you hire a car to Linane, sixteen miles, and you will be delighted with this drive—with the beautiful lake of Kylemore (well filled with fine trout)—the grand approach to the Killeries, and the views just above this deep arm of the sea. Proceed immediately to Maam, twelve miles, through the Joyce country, where, at the head of Lough Corrib, there is a small but comfortable inn. Make an excursion by land or water to Headfort, return by Cong, back to Linane, and thence to Westport, where you will find a comfortable hotel. Here you will be at the head of the celebrated Clew Bay, and if the weather permits you to ascend Croagh Patrick, you will be amply repaid by the magnificent prospect round and beneath your feet, including the bay, studded with its 366 islands, the largest of which (Clare Island) is at the extreme west. No one has described this part of Ireland so well as did the late Rev. Cæsar Otway; and his book, with Inglis's tour through Connemara, I recommend you to take with you.

From Westport a great deal might be undertaken, for there are many beautiful lakes to be seen, and by way of Elphim, Carrick, and Boyle, you might make your way to Ballyshannon and Londonderry—thence to Ballycastle, the Giants' Causeway, Colerain, Belfast, &c.; but as I have not visited these parts of Ireland since the year 1815, I will not venture to offer you the result of antiquated notes, which would probably mislead.

Yours, &c., P. M. T.

FOREIGN CORRESPONDENCE.

Labyrinth of Mœris, June 15, 1843.

We have been in this place of ruins, dust, and wind three weeks; on one side a miserable crude brick half-ruined pyramid; our tents in a hollow, surrounded by mounds of rubbish, confining our horizon to a mere span; no tree in view. The Doctor is well again, and all our party; though one broke his arm six weeks ago,—another has had a gastric fever,—and, last Sunday, a great block of stone, which we had excavated and left in an inclined position, fell upon three children, who had taken shelter under it from the mid-day sun: two of them escaped with slight bruises, but the third was crushed, and died before we got him out. It was a long entablature stone, under which we had dug a hole to copy the inscription. The Arabs attributed his death, not so much to the stone falling upon him, as to its having been decreed by the Disposer of Events. He was carried home by his companions, and the Doctor sent 60 piastres to his parents. Everything went on and goes on as usual—his place among the excavators was filled up the next day by another. Yesterday I saw his grave, near the village Hawara, distinguished from the other graves by a yet green palm branch stuck in the little mound. There are about eighty or ninety people employed every day. The excavations have placed beyond a doubt that here is the famous Labyrinth. Perhaps we shall succeed in getting into the pyramid, but as that is doubtful, (rather owing to the mass of rubbish we shall have to cut through, and the time it will take, than anything else,) having gathered all else we can from this spot, we may leave before it is accomplished. Then we all return to Cairo. From Cairo, the expedition goes to Thebes, beginning its researches in the Valley of the Nile at Benescrif, and we hope to winter at Thebes.

The Faioum is a most extraordinary place. I have made several excursions with ——: the others have never left our encampment but once, when we dined in a garden, on the estate of Drovetti; our host had prepared the wheel of a machine for irrigation, on which we passed the river Bahr Usuf, on the banks of which the estate is placed, and I had paid him a visit three days before when no such vehicle was at hand; so we had to swim, he having sent over a man to fetch our clothes, which he did, by tying them on his head. These things do not trouble us much.

The locusts have left this province, but we hear that the Pasha has ordered that two piastres should be paid for every two pounds and a half (a measure called kotl), and that they are still so abundant in *the* valley, that the sheikh of a village had gained by this traffic thirty purses (150*l*.). Locusts destroying what is planted—no oxen to turn the water-wheels or plough the ground—always some disaster in Egypt. Next year this will be felt, I fear. What is doing in our own country—in the manufacturing districts? I read in the *Athenæum* the report of an inquiry into the state of the people of the iron counties: I doubt whether even here the people are worse off. I have not seen a crooked person yet—no deformity but blindness; yet the people of this province are not so fine a race as those of the valley; they are lighter in complexion than those of the provinces north.

ON THE APPROPRIATE DISPOSAL OF MONUMENTAL SCULPTURE.

[We have great pleasure in giving publicity to the following letter, addressed by Mr. Richard Westmacott, A.R.A., to the Rev. Henry H. Milman, Prebendary of Westminster. The subject is twofold—the proper style of ecclesiastical and monumental sculpture, and the proposed removal of the monuments which now disfigure Westminster Abbey. Our opinion on both points is on record (see No. 788, &c.). It is true Mr. Westmacott does not go quite so far respecting the appropriation of the Pagan monstrosities, though his suggestion is not the less likely, we fear, to encounter opposition. No matter—their removal is a mere question of time: go they must, either to the Chapter-house, as proposed by Mr. Westmacott, or to the Macadamizers. There is scarcely a modern monument in the Abbey that does not offend against taste, judgment, and Christian feeling.]

As I hear it is in contemplation to make some changes in the disposition of the monuments now in Westminster Abbey, and that sites are to be found for others that are likely to be placed in that church, I avail myself of the opportunity thus afforded me to address to you a few observations on a subject that has long engaged my attention, and upon which I already have had conversations with yourself and others who feel an equal interest in such matters; namely, on the appropriate treatment, technically speaking, and disposal of monumental and ecclesiastical sculpture. I am the more strongly tempted to put forth my views at the present moment by the growing disposition that is evinced to give Art, generally, more consideration than hitherto it has received in this country, and especially by seeing how much attention is now bestowed on ecclesiastical architecture and decoration. I venture to think, therefore, that the remarks I am about to make may not be thought altogether undeserving of the attention of those in whose hands is the power of giving effect to such suggestions as may appear of any value, and of remedying one of the greatest abuses, in its way, which long continued carelessness has caused, and still suffers to exist.

Westminster Abbey and St. Paul's Cathedral, from the importance derived from their scale and character as the great metropolitan churches, have been considered the fit depositories of almost all the public memorials that have been erected in this country to departed eminence or worth. Perhaps no single church in the world contains monuments of greater interest than are to be found in the former; and its character in this respect is so generally recognized on the continent, that I well remember on being taken into the church of Santa Croce at Florence, the Italian friend who accompanied me thither, exclaimed, pointing to the monuments of Galileo, Michael Angelo, Machiavelli, and others of his distinguished countrymen,—"*Ecco il nostro Westminster Abbey.*"—This reputation of the cemetery of our kings, statesmen, poets, and heroes, is not undeserved; but standing, as I truly believe it does, pre-eminent for the interest which attaches to it for its public monuments, it may as truly be said, that it is quite as remarkable for the inappropriate and even objectionable style of the greater proportion of the works, particularly those of comparatively modern date, which its guardians have allowed to be placed in it. In making this reflection, I do not mean to allude to the style of *art* exhibited in the various works referred to, which may be simply characteristic of a period; nor to the quality or merit of the workmanship, with which the present question has nothing to do: but it does apply most forcibly to

Digitized by Google

the feeling, the sentiment, which pervades many of the designs, and which renders them as unfit for their situation as they are foreign to the purpose for which such works originally were intended.

Two classes of monumental design have been required in memory of the dead. One, of a personal and commemorative character, and having reference to worldly honour and achievements, and therefore illustrating the importance of the individual; the other, intended to be simple records of the dead, the reminders, not of the glory and honours of a transitory life and of this world, but of that change to which all are doomed—of that change in which the tenant of the most gorgeous tomb, however "high, and mighty, and puissant" he may have been in his lifetime, must be viewed as only equal with even the least distinguished of his fellow men, and who, instead of being pointed at as an example of greatness, can only help to give greater force to the simple lesson which the dead may teach the living. I am anxious to mark strongly the distinction that exists between the two classes of monuments; and, without meaning in any way to interfere with the erection of works that, doing just honour to great deeds, may incite others to deserve equal acknowledgment from their country, to insist upon the importance of the classification; and, by so doing, to endeavour to pave the way for a more appropriate destination of the respective works.

A great error has, it appears to me, been committed in allowing monuments of the two kinds, and erected for such entirely different objects, to be placed in a common receptacle—more especially in our churches—in depositing thus, in close juxtaposition, the proud boasting illustration of heroic or warlike achievement, and the simple and unostentatious tomb of humble piety—one put forth as the incitement to attain to earthly distinction, the other placed there as the impressive record that "greatness is departed," and that "unto dust must we return." It is to this point then, especially, I wish to call your attention, with the hope of procuring your support and co-operation in persuading so important and influential a body as that of which you are a member, to give at once its sanction, by the steps it has the power to take in Westminster Abbey, to a more correct and a more decorous regulation.

It is well known to all who have studied the history and character of ecclesiastical sculpture, that in the earlier times monumental Art was peculiarly distinguished for its quiet, unpretending, and, if it may be so said, religious sentiment. Even the most wealthy and the most dignified personages, whether sovereigns, warriors, or ecclesiastics, were represented simply extended, on the lid of their stone tomb. When accessories were added, they appear as angels, supporting the pillow under the head of the deceased, or kneeling in prayer, or watching at his feet. In some monuments are found also figures of saints, or ecclesiastics, or even of members of the family to which the deceased belonged, placed in niches in the pedestal, or around the tomb on which the body is lying: but they usually are in attitudes of prayer or penitence. Sometimes the wall against which the tomb stands is decorated with paintings, or the niche which receives it, or the canopy over it, are enriched with rilievi, illustrating some scripture or religious story; subjects which afford a wide and attractive field to the artist for the display of deep feeling, fine composition, and every other high quality of Art. There certainly are occasional exceptions to this rule among the older works, but it seldom happens, till a later period,—when perhaps the fervour of truly religious feeling was grown cold—that subjects are introduced having an exclusive reference to this world and the deeds of this life. It is not necessary to dwell upon this fact. An examination of monuments of the kind alluded to—the earliest of which, in this country, date from the eleventh century—will satisfy the observer of the truth of the remark; and a comparison of these with the style of monument of the sixteenth century, and extending down to our own time, will sufficiently, and, I may be permitted to say, painfully, illustrate the change of sentiment that had crept in, when ingenuity, finery, fancy, and mechanical skill, were substituted for earnestness of feeling and simplicity of design.

It does not become me to presume to lay down any rules for the treatment of monumental sculpture; but I am desirous to answer some objections that have been offered to returning to the more simple style of design. It has been said that if this should become general all monuments would be alike; that they would be tame copies of each other; that there would be no room for the display of skill, or the exercise of imagination; and finally, that monumental art would be so mechanical that it would cease to have any effect on the spectator. But it must not be supposed, that in carrying out the principle of simplicity and singleness of feeling in monuments of this class, sculptors would necessarily be limited to one type. It is not necessary to recur to the monuments of the thirteenth and fourteenth centuries, as the models that are to be implicitly followed. It is quite natural that when sculpture was first used in monuments, and art in its infancy, the most simple forms should have been adopted; and these were shown in the effigy of the person commemorated lying on his tomb. This, therefore, was the type generally employed, and it continued to be used, prescriptively as it were, for a long period. But the unqualified adoption of these primitive forms need not be insisted on as the only means to give modern sculpture an equally expressive character. An artist, without losing sight of the principle, may still introduce a sufficient variety of action, to save himself from the suspicion of poverty of ideas, and his works from the charge of a dull, monotonous uniformity. Statues of all classes—of the king, the judge, the philosopher, the soldier, or the senator—of simple design, and in attitudes of meditation, offer ample opportunity for the display of all the higher attributes of art, whether of expression or form; and when to these are added appropriate illustrations in rilievo or in figures, it is going too far to say that church sculpture, so to call it, does not give the artist room to exercise his imagination, and to show his skill. It might be interesting to trace the origin and growth of the mixed or pseudo-classical taste, and to attempt to account for the abandonment of the devotional or religious feeling which characterizes all the earlier specimens of monumental design; but the inquiry does not necessarily bear upon the purpose I have particularly in view, and its consideration would carry me far beyond the limits to which I desire to confine myself in this letter. A distinguished French writer has made the following remarkable observation:—"Quand la foi est morte au cœur d'une nation vieille, ses cimetières ont l'aspect d'une décoration païenne." Surely, whatever may be the cause of such an effect, this may too truly be said with regard to the "aspect" of those of our churches in which monuments are found. Instead of inviting meditation, or giving rise to serious thoughts, they are in this respect little better than places of amusement—and, too often, exhibition rooms of bad taste and no feeling; and so far justify the doubt felt by a certain right reverend Prelate, who as he looked round at the anomalous half pagan and mythological representations which crowd Westminster Abbey, inquired "whether he was in a Christian church or a heathen temple!"

This false taste is not confined to this country, and it is most unjust to charge it, as some are too much inclined to do, to the change of feeling produced by the Reformation. It is needless to particularize the numerous examples of it that may be found all over the Continent, in the churches of Germany, France, and Italy. In St. Peter's, at Rome, the monuments even of the Popes exhibit the most absurd and incongruous compositions. Their figures are frequently seen seated, standing, or kneeling, in the midst of mythological and allegorical personifications (under the forms of male and female attendants, either half naked or not clothed at all), which, instead of adding to the proper interest of the work, entirely rob the design of anything like a religious character. This style of design was at one time universal; it is, as I have stated, met with abroad, and it dates there from the same period as the objectionable taste which has helped to disfigure, and it may almost be said to desecrate, the churches of England with the same kind of monumental compositions—and it is more striking on the Continent, from the greater scale on which sculpture has there been practised.

It has been said that those who are intrusted with the care of our churches have endeavoured to prevent the introduction of objectionable designs; and one of the arguments that have been used in favour of charging fees for the admission of monuments into churches is, that it acts as a check to the erection of works of a character that are inappropriate to such buildings. That the imposition of high fees may occasionally prevent the erection of monuments *at all*, admits of no doubt, but that the fees, however exorbitant, have the slightest influence upon the style, or taste of the design of a work, or, to go further, that they are ever charged with the view to exclude a work simply on account of its demerits or inappropriateness to a place of worship is, we all know, contrary to the fact. The fees charged for erecting a monument, however humble its pretensions, in Westminster Abbey, are proverbially heavy. What effect has this produced? None; but to prevent those whose means are unequal to meet the demand from erecting monuments in that church†—certainly none whatever either in giving a higher or better character to design; or in preventing the introduction of the most absurd, and, occasionally, the most objectionable fancies and follies that ever were "done into stone." I am told no fee is charged for the erection of monuments in St. Paul's Cathedral; but, with the view of preventing the erection of tablets and other works of small dimensions and trifling character, which might disfigure the church, a general rule exists that no monument or statue shall be admitted there, the expense of which does not amount to such a sum as shall secure the work being of a certain importance as respects size and character. This is well in its way, and as far as it goes;—but there is no regulation to insure the design being of a Christian character, as may be seen by any one who walks round that church. The monuments, creditable as they are to their respective authors for other qualities, are fully as often illustrations of the fables and mythology set forth in 'Natalis Comes,' or in Dr. Lempriere's 'Dictionary,' as they are intelligible and suggestive records of deceased Christian men.

In the above remarks I have referred, generally, to the distinction that properly exists between two classes of design; and I have stated the more striking objections that have occurred to others as well as to myself, to the admission into churches of monuments eminently deficient in the treatment appropriate to such destination. It now remains to be considered whether there are any means by which this evil may be removed, or if not removed, at least partially remedied. If these can be discovered, another important advantage will be gained, in addition to that alluded to, in the prevention of such questions as unfortunately have arisen with respect to admitting into churches ordinary commemorative statues of individuals whose lives or writings have been considered of a character to justify their exclusion. The guardians of our churches would then be spared that most painful and apparently uncharitable office, of pronouncing sentence upon a fellow creature no longer amenable to human judgment: and a statue intended to do honour to the poetical genius of a Byron would not then be left for years in the cellars of the Custom House, because the authorities of the Church cannot consent to admit it within the walls of a place of worship.

The most obvious mode of effecting these objects would be to establish distinct receptacles for monuments so distinct in character as those last referred to, and what may be termed sepulchral monuments: to appropriate some public building, or apartments in such building, exclusively for heroic commemoration, and to let it be generally understood that no works but such as have a distinctive ecclesiastical character in their mode of treatment, are to be placed in edifices used for religious purposes. It is clear that any general rule established on this principle can only be made to apply to the future; but it may not be altogether beyond our means to effect some beneficial changes in the disposition of existing works, and it is to this subject that I would now earnestly invite your attention. Taking the projected changes as the ground-work for a more extended operation, I should propose to carry the partially new arrangement of the monuments much further than at present may be

† [Mr. Westmacott observes, in a note,—"It is due to the Dean and Chapter to state that the fees go to the restoration and repairs of the fabric; and that no charge is made for permission to erect a public monument." Is not this a distinction without a difference? If it were not for the fees, must not the Dean and Chapter repair the fabric out of the revenues of the Church?]

Digitized by Google

intended, and suggest that an entirely new *locale* may be used for those statues which are either placed where they cannot be seen, or inconveniently or improperly occupy situations in the body of the Abbey, or in its chapels. The fact of these works having already been received into a sacred edifice might seem to form an objection to their being removed; and it may be urged that, whatever regulations may be made with regard to admitting works in future, respect should be shown to these "older tenants of the soil." Some objection to change may also be felt by those who connect historical associations with the monuments placed as they now are in the Abbey. It is far from my wish to disturb a charm that gives so great an interest and value to commemorative art. On the contrary, it is to increase the value of the associations to which monumental sculpture should give rise that I urge the adoption, as far as may be, of my plan. I feel as strongly as any one, that the great object which art is intended to effect, is only to be advanced by elevating it above the mechanical: that it is the power to excite thought that gives the productions of genius their hold upon the feelings, and raises the real artist to the rank of the poet and the moral teacher. It is, then, with the hope of giving the fullest effect to fine creations of art (too often destroyed from the works being placed in inappropriate situations), and, at the same time, of advancing another great purpose, by removing from a place of worship objects that are calculated rather to disturb than induce reflection, that I make the above suggestion. I would observe, too, that the question is not one of destruction nor rejection, but simply of change of situation. It must be remembered that very few of the monuments in the Abbey are immediately over, or, indeed, very near the remains of those in whose memory they have been erected: nay, it is perfectly well known that the subjects of many of them—as Shakespeare for instance—are not even interred in the church. Making, then, every allowance for these objections, and admitting that they rest on grounds deserving respect and consideration, I still venture to think they are not insuperable. The change of situation *within* the Abbey is, as I have observed, already contemplated. An occasion fortunately presents itself, if it can be taken advantage of, for carrying out a very important part of the plan I venture to recommend, while at the same time the utmost regard may be paid to the works which it may be thought expedient to select for removal. Admitting that the entire rejection of any monument already received into the Abbey might give offence, a simple change of situation to a building connected with, and contiguous to, the church, could not be considered to involve any disrespect to the works placed there. The opportunity of effecting this is now offered to the Dean and Chapter, if they should be pleased to avail themselves of it, by the removal of the public records from the Chapter House, in which hitherto they have been deposited, to a building exclusively intended for the reception of such documents. I would most respectfully, though earnestly, recommend, if the necessary permission can be obtained, that this portion of the Abbey should be used for commencing the reform every well-wisher to monumental or ecclesiastical art must be anxious to see made. The statues—for at present I only contemplate the removal of a limited number of these—might, under proper superintendence, be advantageously placed round this fine chamber; and thus, while the church would gain in beauty and character by having many of those works removed from it, a kind of Walhalla, or Hall of Heroes, would be commenced, having for its first tenants and decoration memorials consecrated, as it were, by having originally stood in the church itself. The works in rilievo, and other more extensive compositions, which are fixed against the walls of the church, are, for the most part, quite as objectionable in style and taste as some of the single statues, and equally disfigure the building; but their removal would involve so much difficulty, both as regards cost and finding other places for them, that I will not venture to offer any opinion upon the best way of re-arranging such works, lest, in my recommendation to do more than appears practicable, I fail in gaining your support towards what I feel really is so, if those in whose power it is to sanction the alteration will but earnestly give their assistance in carrying it into effect.

The adoption of some such principle as I have here endeavoured to advocate, would tend more than anything else to improve the character of monumental design of all kinds. Much has already been done by some of the more distinguished of our sculptors, by the adoption of a more simple mode of treatment, and by giving a more concentrated interest to their subject, to discountenance the miserable and objectionable mixture of times and character that have pervaded works of art; and it is gratifying to witness the manner in which this attempt to give a better direction to taste has been received, as well as the effect it already has had on the public mind. There is now no fear that we shall again see the heathen mythology ransacked to illustrate the character of a contemporary hero or divine. Mars and Hercules will no longer be the aides-de-camp of the victorious general; nor a naked Neptune, flourishing his trident, the attendant of a full-dressed admiral of the British fleet; nor will the presence of Apollo, or the supervision of the goddess Minerva, be considered essential to direct the pen, incite the genius, or advance the studies, of the poet, the orator, or the theologian;—but were it understood that no sepulchral monuments would be admitted into churches that have not upon them the impress of serious thought, artists would by degrees have their minds attuned to the proper mode of composing and treating such subjects; while their poetical fancy would find abundant exercise in statues and rilievi of the commemorative class, to be placed in the open air, or in halls and porticoes, where feelings of triumph, and aspirations after worldly honour and the praise of men, may not improperly be indulged in. A more florid style of design may also have its advantages where a striking or picturesque effect is to be produced, or where great variety in the composition may be in harmony with surrounding objects.

I offer the foregoing suggestions with great deference and respect; but I trust I shall not be considered presuming for thus expressing my opinions upon a subject to which, from the nature of my pursuits, I have given much of my attention; and to which I attach a greater degree of importance than many are disposed to attribute to it. The records of the dead, in whatever form they come before us, are among the most interesting and affecting of the works of man, and, in many respects, among the most valuable monuments which one age can leave to another. In all regions, savage or civilized, and from the most remote periods, have such memorials existed; and, whether they are the offerings of private affection or the tribute of public gratitude, they make their strong appeal to our sympathies, and are associated with many of the best feelings of our nature. In this point of view, then, they claim our highest regard; and I am most anxious to see such works justly appreciated and properly disposed of. I have presumed to think it is in the power of those who have the management of our cathedrals and churches, to avail themselves advantageously of the feeling that is now developing itself on all matters relating to art; and, especially, to effect great improvements in those particulars to which I have alluded. The Dean and Chapter of Westminster, from their position and character, may exercise a most valuable influence in this respect, by boldly, though judiciously and carefully, taking the lead in these improvements. Their high authority and example could not but have great weight in advancing the cause I have endeavoured to advocate; and the attention of other ecclesiastical bodies would thus be drawn to a subject which calls for their interference, and fully merits whatever consideration may be given to it. I remain, &c.

RICHARD WESTMACOTT, Jun.

Wilton Place, Belgrave Square, July, 1843.

OUR WEEKLY GOSSIP.

Two new cartoons by Raffael, are in the possession of Messrs. Colnaghi, Pall Mall East, discovered not long since under the usual circumstances—defoulment and dilapidation. Both cartoons have attracted much notice from connoisseurs, especially that for the 'Virgin and Child,' a picture now belonging to Mr. Rogers; of which we think there can be little doubt, as a genuine design by the hand, and the sole hand, of Raffael. An engraving has been well taken, in full size lithograph; yet its tone, at first glance, suggested to us *Andrea del Sarto*, but the cartoon itself dissipated this suspicion; there is a character, palpable though indefinable, about the Child far above Andrea, whether we regard its artistical or poetical attributes. Considering the faded state of Mr. Rogers's once admirable and still beautiful picture, this cartoon has a high value: Messrs. Colnaghi ask, we believe, 1000*l.* for it from any individual purchaser, but would, perhaps, with a fair compromise between their private interest and public spirit, accept a fifth less from the Nation. Of the other cartoon, 'David slaying Goliah,' it might be enough to say that Raffael executed sketches only, not designs, for the Loggie subjects, of which this is one, at least for none beyond the first *cupoletta*: yet his inspiration renders itself visible throughout the copies made by his pupils, and gives them special worth; the present specimen, though almost obliterated, would do honour to *Giulio Romano*.

During the short period of twelve days, during which the Exhibition of the Cartoons was open, on payment of 1*s.* each person, the visitors averaged 1,800 a day, and the whole sum taken exceeded 1,100*l.*, nearly all of which has been divided among the ten candidates whose names we had the pleasure to announce last week. We now add the numbers of their Cartoons, and the subjects of each:—

No. 11. Una coming to seek the assistance of Gloriana; an allegory of the reformed religion seeking the assistance of England.—*Spenser's Faëry Queen.* Mr. Frank Howard, jun.

No. 13. The Seven Acts of Mercy. Una and the Red-cross Knight led by Mercy to the Hospital of the Seven Virtues. Mr. G. V. Rippingille.

No. 16. The Death of King Lear. Mr. F. R. Pickersgill, jun.

No. 31. The Angel Raphael discoursing with Adam. *Milton's Paradise Lost.* Sir W. Ross, R.A.

No. 45. Man beset by contending Passions. Mr. Henry Howard, R.A.

No. 60. The Brothers releasing the Lady from the Enchanted Chair. *Milton's Comus.* Mr. F. R. Stephanoff.

No. 63. The Brothers driving out Comus and his Rabble. Mr. John Green Wallen.

No. 92. St. Augustine preaching to the Britons. Mr. W. C. Thomas.

No. 103. Alfred, a harper, went into the enemy's camp, where he was everywhere admitted. Having thus acquired a knowledge of their situation he returned in secrecy. Mr. Marshall Claxton.

No. 122. The Plague of London, A.D. 1349. The bishops and clergy are represented at St. Paul's-cross praying for the cessation of the pestilence. Mr. E. Corbould.

The Exhibition is now open gratuitously every day in the week except Saturday; on the afternoon of which day 1*s.* will be charged for admission.

The Right Rev. Dr. Carey, Bishop of St. Asaph, and for many years Master of Westminster School, has lately placed in the hands of trustees the munificent sum of 20,000*l.*, for the benefit, after the death of his Lordship and Mrs. Carey, of students elected from Westminster School to Christ Church, Oxford.

We are sorry to record another instance of that Vandal mischief, which, to the honour of the enlightened capitals of the continent, has been so rare amongst them till of late, that precautions against its practices have not been thought of. During the night of Sunday, the 2nd inst., the frescoes, which decorated the arcades in the garden of the royal residence at Munich, were so injured with some pointed instrument, as to be wholly undistinguishable. The strictest investigations have failed, yet, to discover the author of this disgraceful outrage.

The Lady Chapel of the church of Saint-Nicolas-des-Champs, Paris, has recently been enriched by a Christ, of colossal proportions, painted on lava, on a gold ground, by M. S. Perlet, after the manner of the Byzantine mosaics which still adorn some of the Italian churches. This modern painting on lava is said to be one of the first essays of a kind peculiarly adapted to a northern climate, by its presenting a surface enamelled by fire, and therefore proof against damp.

From Dresden, we hear of three new models for colossal works, by the sculptor Haenel, to see which, the public are flocking to his studio. One of these, a statue of Beethoven, is to be cast in bronze, at the Royal Foundry of Nuremberg, for Bonn, the great composer's native town. The two others, which are sitting figures of Shakspeare and Molière, respectively, will be executed in Carrara marble, for the façade of the new theatre at Dresden.

A marble column, with an inscription, has been erected on the Hill of Colonus, near the Academy at Athens, to the memory of the great classical scholar, Ottfried Müller.—An observatory is in the course of erection, and will soon be completed, on the Hill of the Nymphs, in the same city. It is

Digitized by Google

cruciform, built of materials dug on the spot, and stands so high that it is visible from the Piræus. Freiherr von Lina, a Viennese gentleman, has contributed 60,000 drachms towards the work.—A beautiful colossal statue, in good preservation, has been found in the plain of Marathon, and deposited in the Museum at Athens. It is Egyptian in style, and is supposed to be either an Antinous or an Apollo.

A correspondent at Carlsruhe thus writes to us:—"Dr. Schreiber, Professor at Freiburg, in the Grand Duchy of Baden, an antiquarian of high repute in Germany, has lately published a pamphlet on the well-known Mosaic discovered at Pompeii, which has hitherto passed for one of Alexander's battles with Darius. The author of this little treatise, after detailing the events connected with the discovery, canvasses and rejects the opinion that it represents one of the battles of Alexander, and attempts to prove it to be a representation of a victory won by Marcellus, at Clastidium, over the Gauls." "I abstain," he says, "from pronouncing an opinion as to whether the author has fully made out his case, but recommend the work, entitled, 'Die Marcellus Schlacht bei Clastidium. Ein Archäologischer Versuch von Dr. H. Schreiber,' to the notice of your antiquarians."

M. Binet has been elected a member of the Académie des Sciences, in the room of M. Lacroix, deceased. M. Binet had 33 votes—his competitor, M. Chasles, 16.—The King of the French has given the cross of the Legion of Honour to the historian Von Raumer.

A work is about to appear on the Egyptian Museum at Rome. The execution of the plates has been intrusted to the architectural engraver Troiani, to whom a sum of 8,000 scudi has been allowed for the purpose. The letter-press will be from the pen of the Barnabite, P. Ungarelli.—The Italian architect Canina has just published a work on the construction of the most ancient Christian churches, which is very highly spoken of. It contains 57 engravings on copper, and 147 folio pages of letter-press.

Some time since we announced, with such commendatory terms as both the project and execution deserved, a volume which had then gone through the press, and was entitled 'Arabesque Frescoes by Raffael and his Scholars,' otherwise, 'The Architectural Decorations of Rome during the Fifteenth and Sixteenth Centuries.' Its editor, *Ludwig Gruner*, (the eminent engraver,) has thought good to enlarge its plan, to give double the number of plates, and thus to render it illustrative of *Italian* arabesques, rather than of *Roman* alone. It is now entitled 'Fresco Decorations and Stuccoes of the Churches and Palaces in Italy,' exemplifying the Milanese, Umbrian, Parmesan, and other styles as well as the one first illustrated. We could wish the plan had been still more comprehensive, for it falls short of all the beautiful embraced by the name; but we have, at present, only to make brief and favourable report on the additional plates, while we reserve our criticism upon the whole work till it comes before the public together with the promised letter-press. In justice, however, to the distinguished artist, and to his royal patrons—not yet much distinguished for their encouragement of high art—we must add, that his work was presented last week to the Queen, from whom it received a most gracious approval; and that it is, by a permission as creditable, dedicated to Prince Albert, and to the Members of the Royal Commission of the Fine Arts.

The history of the International Copyright question exhibits a new feature, at the present moment, which is worth recording, as significant of its progress. From one of the strongholds of the piracy has come out an accession to the army of reformers. One of the leading houses of publication, in Brussels, Messrs. Famar and Co., has petitioned for the abolition of literary piracy; and announced its determination to have no other competition with French publishers than that which aims at the relative perfection of the original works produced in the respective countries.

An expedition to the Caucasus is about to be undertaken, at the expense of the King of Prussia, by Prof. Koch, the Asiatic traveller, and Dr. Rose. Their instructions are to commence their researches at Trebisond, to trace to their sources in the high lands of Erzerum, the Western Euphrates, the Araxes, and the Tschorock. From thence they are to proceed to the second high lands of Armenia, and so on to the ruins of Ani. They are also to visit and examine the range of mountains which connects in one unbroken line the ranges of the Caucasus and the Armenian Taurus. They are directed to investigate the question, as to whether there ever was a wall extending over the whole of the Caucasus, similar to the great wall of China. Prof. Koch will then proceed to the Tartarian Circassia, and the sources of the Kuban: he will also make an attempt to ascend the Elbrus, and examine the numerous monuments in the valleys of the Karatschai.

A statement appeared in the newspapers last week to the effect, that at the meeting of the Paris Academy, on the 3rd instant, M. Arago announced that the great work of cutting through the Isthmus of Panama, which had been so long talked of, was about to be seriously undertaken, a contract having been entered into by Messrs. Baring & Co. of London, with the Republic of New Grenada, in virtue of which the Republic was to cede to them the line required for the projected canal, with 80,000 acres of land on the two banks, and 400,000 acres in the interior of the country. Messrs. Baring & Co. had, it was said, in the first instance, fixed the amount of toll for the navigation of the canal at the price of 18 fr. per ton, but they had reduced it to 8 fr. The work, upon which from 4,000 to 5,000 men are to be engaged, was to be completed in five years. We are able to contradict, on the best authority, the statement that any such contract whatever has been undertaken by Messrs. Baring. It is quite true, that the work of cutting the canal across the Isthmus of Panama is a matter still talked about; but we believe the privilege of executing it remains in the hands of Messrs. Solomon of Panama, to whom it was granted by the Grenadian Republic in 1838. It is said, that under the authority of this privilege, Messrs. Solomon have caused a survey of the Isthmus to be made, and that the result of this survey is to show, that a passage may be made between the two oceans, by uniting the rivers Chagres and Grande by a canal of about thirty miles in extent.

When speaking of the *Lieder* of Herr Lindblad (p. 220), we pointed to the possibility of a new vein of musical invention developing itself in Northern Europe. It seems as if the speculation was not wholly chimerical. Within the last few days we have heard well-authenticated tidings of an instrumental composer, M. Gade, who was for a while engaged in the orchestra of the Copenhagen Opera, as violoncellist, and is also, we believe, a pianoforte player of more than common promise. The genius of this young artist, it is said, has *broken out* in a form no less ambitious than the score of a Symphony, which was forwarded by him to Dr. Mendelssohn Bartholdy, at Leipsic, and which, it is further said, the author had never heard even rehearsed. Upon inspection of the score, however, and still more upon trial, the Leipsic conductor, and the Leipsic orchestra, are said to have found this production so remarkable, that a first letter of hearty acknowledgment from the former was shortly followed by a second, inviting the young Dane to Leipsic, with every flattering encouragement. We hope that this is but the beginning of a long career; at all events, our Philharmonic Directors should look to it. Never was composer more eminently wanted than at the present juncture.

Two years ago, we noticed the experiments of M. Léonard, in which that gentleman exhibited two dogs under a degree of command which implied a higher developement of faculties than had hitherto been witnessed. M. Léonard is here again, having in the interim, he informs us, tested his theories and the skill of his methods, by applying them to the education (if it may be so styled) of horses; and he is now anxious to go, step by step, through his process of training, in the presence of those whom it may interest, with the view of promulgating principles which he believes capable of general application. We must add, that M. Léonard appears anxious not to be confounded with those who exhibit tricks for pecuniary profit; his desire apparently being, to bring what he conceives an important discovery before some of the scientific bodies, for philanthropic purposes.

(Will Close Saturday Next, 29th Inst.)

The NEW SOCIETY of PAINTERS in WATER COLOURS.—The NINTH ANNUAL EXHIBITION, at their GALLERY, 53, PALL MALL, next the British Institution, OPEN from 9 till Dusk. Admittance, 1s. Catalogue, 6d.

JAMES FAHEY, Secretary.

Last Week.

ROYAL ACADEMY OF ARTS, TRAFALGAR SQUARE.

Notice is hereby given, that the EXHIBITION of the ROYAL ACADEMY will continue OPEN until SATURDAY NEXT, the 30th inst., when it will FINALLY CLOSE. Admission (from 8 o'Clock till 7), 1s. Catalogue, 1s.

HENRY HOWARD, R.A., Sec.

Exhibitors are requested to send for their works on Tuesday the 1st, or Wednesday the 2nd, of August.

DIORAMA, REGENT'S PARK.

JUST OPENED, with a NEW EXHIBITION, representing the CATHEDRAL of NOTRE DAME at Paris, with effects of Sunset and Moonlight, painted by M. REMOUX, and the BASILICA of ST. PAUL, near Rome, before and after its destruction by Fire, painted by M. BOUTON. Open from Ten till Six.—N.B. A GRAND MACHINE ORGAN has been constructed expressly for this Exhibition, by Messrs. Gray and Davison, of the New-road, and will perform the Gloria, from Haydn's Service, No. 1, during the midnight effect of the Cathedral of Notre Dame.

THE CHINESE COLLECTION, Hyde Park-corner.—This UNIQUE COLLECTION consists of objects *exclusively Chinese*, and surpasses in extent and grandeur any similar display in the known world. The SPACIOUS SALOON is 225 feet in length, and is crowded with rare and interesting specimens of virtù. The Collection embraces upwards of SIXTY FIGURES AS LARGE AS LIFE, portraits from nature, appropriately attired in their native costume, from the MANDARIN of the highest rank to the wandering Mendicant; also MANY THOUSAND SPECIMENS in Natural History and Miscellaneous Curiosities, the whole illustrating the appearance, manners, customs, and social life of more than THREE HUNDRED MILLION CHINESE.—Open from 10 till 10.—Admittance 2s. 6d. Children under 12 years, 1s.

SCIENTIFIC AND LITERARY

ROYAL SOCIETY.—Sir J. P. Boileau, Bart., and the Rev. J. Wright, M.A., have been elected into the Society since our last report (p. 594), and the following papers read.—

'Magnetic-term Observations for January, February, March, and April, 1843,' made at Prague, by Professor Kreil.

'Hourly Meteorological Observations, taken between the hours of 6 A.M. March 17th, 1843, and 6 A.M. of the following day, being the period of the Spring Tides of the Vernal Equinox, at Georgetown, British Guiana.' By D. Blair, Esq.

'On the minute Structure of the Skeletons, or hard parts of Invertebrata.' 'On the structure of the Shell in the several families and genera of Mollusca.' By W. B. Carpenter, M.D.

'On the supposed Developement of the Animal Tissues from Cells.' By J. Stark, M.D.

'Contributions to Terrestrial Magnetism.' No. V. By Lieut.-Colonel Sabine, R.A.—In this paper the author details and discusses the magnetic observations made on board Her Majesty's ships Erebus and Terror, between October 1840, and April 1841, being the first summer which the expedition under the command of Captain James Clark Ross, R.N., passed within the Antarctic Circle. The elimination of the influence of the ship's iron in the calculation of the results of these observations occupies a considerable portion of the paper. Formulæ for this purpose are derived from M. Poisson's fundamental equations, and the constants in the formulæ are computed for each of the two ships, from observations made on board expressly with that object. With these constants, tables of double entry are formed for each of the three magnetic elements, namely declination, inclination, and intensity, giving the required corrections of each, for all the localities of the voyage. These and other corrections being applied, the results are tabulated, and charts formed from them. The full consideration of the charts is postponed until the whole of the materials collected by the Expedition shall be before the Society. Meanwhile the paper concludes with the following general remarks, viz. 1. The observations of declination, particularly those which point out the course of the lines of 0 and 10° east, indicate a more westerly position than the one assigned by M. Gauss in the 'Atlas des Erdmagnetismus,' for the spot in which all the lines of declination unite. The progression of the lines in the southern hemisphere generally, from secular change, is from east to west; the difference consequently is in the direction in which a change should be found in comparing earlier with more recent determinations. 2. The general form of the curves of higher inclination in the southern hemisphere is much more analogous to that in the northern than appears in M. Gauss's maps. For example, the isoclinal line of —85°, instead of being nearly circular, as represented in the 3te Abtheilung of Plate XVI. of the 'Atlas des Erdmagnetismus,' is an elongated ellipse, much more nearly resembling in form and dimensions the ellipse of 85° of inclination in the northern hemisphere in the same work, Plate XVI. 2te Abtheilung. The analogy between the two hemispheres in the characteristic feature of the

Digitized by Google

elliptical form of the higher isoclinal lines is the more important to notice, on account of the particular relation which appears to subsist in the northern hemisphere between the change in the geographical direction of the greater axis of the ellipse, and the secular changes of the inclination generally throughout the hemisphere. The present direction of the greater axis in the northern hemisphere, is nearly N.N.W. and S.S.E., or that of a great circle passing through the two foci of maximum intensity. In the southern hemisphere the present direction of the greater axis differs little from E.S.E. and W.N.W. 3. Captain Ross's observations of the intensity do not appear to indicate the existence anywhere in the southern hemisphere of a higher intensity than would be expressed by 2 1 of the arbitrary scale. In this respect also the analogy between the two hemispheres appears to be closer than is shown in M. Gauss's maps, Plate XVIII. With respect to the direction of as much of the line of highest intensity (2.0) as it has been possible to draw with any degree of confidence from the observations now communicated, it will be found to be in almost exact parallelism with the isodynamic line of 1.7 in Plate III. of the author's report 'On the Variations of the Magnetic Intensity,' in the Report of the eighth meeting of the British Association for 1838; which line was the highest of which the position could be assigned at that period for any considerable distance by the aid of the then existing determinations.

'An Account of several new Instruments and Processes for determining the Constants of a Voltaic Circuit,' by C. Wheatstone.

'On the Organ of Hearing in Crustacea.' By A. Farre, M.D.

'A statement of Experiments showing that Carbon and Nitrogen are compound bodies, and are made by Plants during their growth.' By R. Rigg, Esq.—The author, finding that sprigs of succulent plants, such as mint, placed in a bottle containing perfectly pure water, and having no communication with the atmosphere except through the medium of water, or mercury and water, in a few weeks grow to more than double their size, with a proportionate increase of weight of all the chemical elements which enter into their composition, is thence disposed to infer that all plants make carbon and nitrogen; and that the quantity made by any plant varies with the circumstances in which it is placed.

'Physiological inferences derived from Human and Comparative Anatomy respecting the Origins of the Nerves, the Cerebellum, and the Striated Bodies.' By J. Swan, Esq.

'Nouveaux Faits à ajouter à la Théorie de la Chaleur et à celle de l'Évaporation.' Par. D. Parat.

'On the Nature and Properties of Iodide of Potassium, and its general applicability to the cure of Chronic Diseases,' by J. Heygate, M.D.—The author has been led by his experience to estimate highly the medical properties of the iodide of potassium (which he prefers to the tincture of iodine) in various diseases, and thinks that when it is administered judiciously no deleterious effects are likely to arise from its use.

'Observations on the relation which exists between the Respiratory Organs of Animals, and the preservation of independent Temperatures,' by G. Macilwain, Esq.—The author expresses his dissent from the prevailing opinion that the temperature maintained by animals above the surrounding medium is proportionate to the extent of their respiration; and adduces many instances among different classes of animals in which he can trace no such correspondence, and others, on the contrary, where increased powers of respiration appear to diminish instead of raising the animal temperature. Hence the author is disposed to regard respiration as a refrigerating rather than a heating process.

The Society then adjourned, to meet again on the 16th of November.

MEETINGS FOR THE ENSUING WEEK.
Mon. Institute of British Architects, 8, P.M.
Tues. Zoological Society, 8.—Scientific Business.

MUSIC AND THE DRAMA

HER MAJESTY'S THEATRE.—The losses of our Italian Opera are felt heavily in 'I Puritani,' which is now played to but languid audiences; and the listlessness is not wholly ascribable to the ephemeral nature of the music, but, in part, to the novelties in the cast. Grisi and Lablache remain; the one a fountain of melody, the other a tower of strength—and both in this opera, apparently, stronger than Time: since not even in the first season of 'Son vergin' and 'Suoni la tromba,' was the one more brilliant, the other more impressive, than on Saturday: but Mario *vice* Rubini is cold, half-finished, and, as far as *falsetto* goes, incompetent. The last deficiency is not one to regret. With Rubini ought to retire all those *altissimo* tenor parts, which are, in fact, the property of the *contralto*, and, however amazing from the lips of the person whose peculiar powers they were meant to exhibit, are intrinsically unnatural and offensive. Still less satisfactory as substitute is Fornasari, when doing Tamburini's duty. With all his monotony of vocal style and ornament, Tamburini, in concerted music, was consummate. There he could supply precisely the required quantity of support, or filling-up; never out of his place, whether the music was grave or gay—the most sentimental *cantabile*, or the sauciest Italian chatter. Fornasari, on the other hand, makes all his effects *alone;* when in company with other singers he never seems at home. In fact, as a vocalist, we find him, after a season's trial, less satisfactory, than many of his predecessors—Coletti, for instance; and the public must look for a time when his fine person and casual bursts of energy will no longer, as at first, be accepted as evidences of dramatic versatility and musical skill. Mdlle. Fanny Elssler has returned from Belgium, to dance for us a few nights more: she made her reappearance in 'Giselle,' and novelties, we hear, are in preparation.—The *pas de deux* between her and Mdlle. Cerito is really

A dainty dish to set before a Queen.

OPERATIC PERFORMANCES.—We have been led into a vein of speculation, by this week's entertainments. On Monday Mr. Benedict took a benefit at Covent Garden. Besides a concert with Signor Sivori, himself, and other attractive performers—and besides a farce with Harley and Mrs. C. Jones—he entertained his friends with a scene from 'Robert,' sung by Miss Novello, and that best of *Bertrams*, Herr Staudigl (the original, Levasseur, not forgotten,) with three scenes from 'Cinderella,' charmingly filled by Mrs. Shaw, assisted by Messrs. Stretton and Giubilei. After this came an excerpt from 'Norma,' in which Miss Novello exhibited her superb voice, aided by Miss Rainforth, Mr. Manvers, and the Herr. The *prima donna*, however, is a better peasant of Normandie, than Priestess. On the same evening Madame Albertazzi and Miss Sara Flower were doing the honours to a translation of 'La Gazza Ladra,' at the Princess's Theatre. Of this, including the efforts of Messrs. Allen, Weiss, and Burdini, who also had part in the cast, more on a future day. But for the moment, it is enough to call attention to the strength of native musical talent just counted up, and to remind the reader, that it by no means exhausts our stores. We wish, too, to draw his attention to the fact that it is by opera that audiences are to be collected. Now is there no plan by which these scattered materials could be assembled, so as to form a permanent establishment? The want has hitherto been singleness of purpose—organization—foresight. The operatic manager has always been too ready to lay down Opera for Tragedy or Comedy—to slacken his efforts instead of redoubling them on the strength of a success—or to allow some scheme of immediate profit to lure him aside from sound artistic judgment in selection, and care in preparation. The size of the Theatres Royal will at once be objected, as obstacles to the fulfilment of any such dream. And, as difficulties, it must be confessed, they are enormous. But no one has yet satisfactorily declared, why it would be impossible to open the one theatre exclusively for Music, the other for Drama, on alternate nights. Some plan of this kind, besides putting an end to rivalry and interference, must, at once, materially reduce the expenses of each establishment (say by one third) and enable the "contracting parties" to give the highest perfection to their several productions.

HERR ERNST.—It gives us pleasure to report the success of the *Matinée* for the benefit of the French charity, announced last week, and that, too, of the grander concert held on Tuesday—the proceeds of which are to serve as *nucleus* to a fund for establishing a German Hospital in London. The time and exertion devoted by the musicians to charitable objects, form a feature of their professional life, which has hardly been sufficiently appreciated by their biographers and the historians of Art. We, too, must be content with this short allusion. To say that Herr Ernst's public appearance was triumphant, is hardly enough: taking into account the fagged spirits, and the satiated ears of a London audience at the season's close, the success was unprecedented. To be more precise—Herr Ernst at once took the widest ground on Tuesday, by the music he selected. He played four times; first, Spohr's Dramatic Concerto—which established his mastery over classical music, since nothing could be more grand or more simple than his rending, or larger than the whole style of his execution; secondly, a *fantasia* of his own on themes from 'Otello,' including the March and the Willow Song, the first brilliantly, the second expressively varied. Here, with every device of execution by way of embroidery, he gave us a specimen of the modern sentimental school of *instrumental song*. To this, perhaps, Herr Ernst's sympathies the most largely incline: there is a peculiarity in his tone even when it is richest, a manner in the delivery of his passages, even when they are the most brilliant (only sufficient, however, to stamp him with individuality), which are of the Bellini and Rubini school, in default of better definition. His third performance was Mayseder's air with variations (Op. 40) a *solo* which, fifteen years ago, was in every violinist's hands, and the very beauty of which caused it to be hackneyed, and thence laid aside for worse and easier compositions. Herr Ernst has reinstated it for another dozen years' popularity, not merely by the grandeur and finish of his execution, but by a final cadence appended, which is assuredly one of the most marvellous and striking things to be heard on the violin. It was this, we think, which most completely took his audience, musical and amateur by surprise, and nothing but the heavy duty laid upon the performer and his own obviously delicate health saved him from an *encore*. The last piece was an *andante*, followed by those variations on the 'Carnival de Venise,' composed by Herr Ernst, which have been recently the subject of some controversy: and in which the player who is capable of executing them, substantiates his claim to mastery over the grotesque and the fanciful style. These, too, were admirable. In one respect Herr Ernst appears to us to have the advantage over most recent wonder players: namely, that, whereas, their flexibility, power over harmonic sounds, command of *pizzicato* and bowed passages, &c., are facilitated by thinness of string, and hence acquired at the expense of tone—he produces a body of sound, rich, deep and voluminous, with which a large space and a powerful orchestra are in harmony. He is an impressive, as well as an astonishing player. Other peculiarities and accomplishments could be dwelt upon; but we must have done. Herr Ernst must return to us next year, and it will be then a labour of love to correct, perhaps, what is merely an outline—at all events, to fill it up with the details and demi-tints belonging to the original, and demanded by a complete portrait.

MISCELLANEA

Popular Cyclopædia.—We have received from the publishers of this work a letter, which, at their earnest desire, we insert—at least, so much of it as relates to the immediate subject under consideration:—

Amen Corner, July 7, 1843.

Our attention has been called to a review of Dr. Carpenter's 'Cyclopædia of Natural Science.' * * It is not our intention to discuss the merits of the work, but some of the points to which you have thought proper to call public attention are founded on quotations so unfairly made, that we may without presumption venture to point them out to your notice, especially as they are calculated to mislead your readers, and require no previous scientific knowledge to enable us to judge for ourselves. 1st. The words "Popular without puerility," which you repeat several times, and use as if quoted from the book, as well as the words, "Profound without pedantry," are your own, as we believe, and not to be found either in the book or prospectus. 2nd. The illustration of the washing tub, is purposely made a homely one; the author's object being to connect scientific principles with simple and well known facts; and if the fact is true, and the principle properly applied, the author's object is attained. Besides, if you take the trouble of reading the whole paragraph, you will find that it does not admit of the ridicule you attempt to throw over it. 3rd. The phenomenon of *Endosmose* is briefly touched on at paragraph 28; but if fair criticism was the object intended, why, in remarking on this paragraph, was it not stated that a note was attached,

Digitized by Google

referring the reader to page 117 of the first volume of the series, where a full explanation is given? 4th. You sneer at the *welding* of glass and platinum, being probably as ignorant and incredulous as we were ourselves, until informed that Professor Daniell had introduced this process into the manufacture of the better sort of barometers, "The welding of platinum to the HOT glass (we quote from Daniell's 'Introduction to Chemical Philosophy,' 1st edit., p. 57) is another instance of strong heterogeneous adhesion." This may not, in the strictly technical language of the artizan, be *welding*, but it would be difficult to find a more suitable word, even if the inventor of a new process were not by courtesy entitled to name it. 5th. The explanation of the familiar phenomenon of the floating of a needle on water, is neither "novel" nor "startling" enough to render it necessary to invoke the shades of Monge and Legner, Dr. Young, Laplace, and Poisson; being the same as that adopted by Professor Daniell, and we believe familiar to most men of science. It is difficult to tell whether the reviewer here sneers at the simplicity of the experiment, or is incredulous of its correctness: perhaps Professor Daniell's authority may lead him to try it, if he really entertains such doubts.

There are other points in your review to which we would call your attention did space admit of it, but they are really too trivial to be dwelt upon, and it is only the shadow of support they give to your injurious comments which induces us to notice them at all. For instance, it is surely unnecessary to inform you that fig. 31 was never intended as a working plan, but is merely given to convey more clearly than words could do, the names applied to different parts of the arch. It may not be altogether correct in drawing, and on this ground is a fair object of criticism, a remark which may probably apply to some other points, on which you comment; but surely none of the objections urged against the book are sufficient to justify the sweeping condemnation of a whole series. We are, &c.

W. S. ORR & Co.

It is obvious that this letter does not benefit the cause, or raise the character of the work on which we commented. We asserted that such a work was not required; that it did not possess equal claims to popularity and excellence with those already before the public; that the volume under consideration was evidently written by a person unacquainted with the subject; and that in many cases he erred in his own knowledge, and so led his readers into error. The work professes to be "popular without puerility," but the publishers find fault with us because we substituted that *concise phrase* for their diffuse mode of making the same statement: then they illustrate capillarity by the washing tub and apron string, which we say is not only puerile, but absolutely false, as stated. Next, they admit that the phrase, "welding," was first of all (improperly) applied by Daniell, and that—like all who are imperfectly acquainted with a subject—the author copied the impropriety of phrase, without even clearly conveying the idea of the author; forgetting their own doctrine, that such a phrase, though it might not be misunderstood by the reader of an original scientific treatise, was very liable to mislead the reader of a popular compilation. In regard to the fifth count, we admit what everybody knows, that a dry needle swims on the top of water; we deny, as every man of science will, that it swims in virtue of the air jacket, or life preserver, with which Dr. Carpenter furnishes it. It is admitted that their figures were not intended for (accurate) working drawings; but if figures are intended to convey knowledge, they should not represent to an unscientific or young reader impossibilities and falsehoods as facts! On the whole, then, there is not even an attempt to reply to our criticism; and worst of all, silence admits, that in the ample explanation of a common and a cycloidal pendulum, the author has made the length of the pendulum *double* of the truth, and totally misconceived both the pendulum and the curve. Thus, the reply admits everything we asserted, and proves all, in conceding that the author did not understand the subject he treated of, and therefore should not have written on it.

Paris Academy of Sciences.—July 10.—On the extent of insanity in France, by M. Moreau de Jonnés. The author states the number of insane persons in France to be 18,350. In every 1,000 there are on an average 221 idiots and 112 epileptic persons. The annual mortality is great, being from 9 to 10 per cent. M. Moreau de Jonnés states, that instead of its being found that moral causes have a great preponderance in cases of insanity, it appears that of every ten cases, on an average, the loss of reason in seven proceeds from physical causes, and moral causes only operate on three. Taking the returns of M. Moreau de Jonnés as correct, they show that the number of insane persons in France is considerably less than has hitherto been supposed.—A letter was received from Mr. Bowring, written at Guadalupe y Calvo, in Mexico, and dated Feb. 28. It gives an account of his observations of the comet. Mr. Bowring mentions that whilst in many parts of the world the appearance of a comet spreads consternation, under the belief that it is the precursor of calamity, in Mexico it is hailed as the harbinger of good fortune, and announcing the approaching discovery of a new and very productive mine of gold or silver. It is said in Mexico, of the comet of 1811, that it came expressly for the discovery of the mine of Refugio; that the comet of 1818 brought about the discovery of the bed of native silver of Morelas; and that of 1835 the discovery of the mines of Guadalupe y Calvo, situated in the midst of a desert, which has now a town of five or six thousand inhabitants.

Mr. Morritt.—We are sorry to have to announce the death of Mr. J. B. S. Morritt, of Rokeby-park, Yorkshire, who died on the 12th inst., after a lingering illness, in the 72nd year of his age. He was one of the earliest and most extensive Greek travellers of the present generation, and after two years spent in the interesting countries of the East, he returned with a mind replete with classical information, and a taste for every liberal art. It was during his residence abroad that Bryant promulgated his fanciful theories on the site of Troy. On his return, with Chevalier and others, he entered keenly into the Trojan controversy, and became one of the most successful supporters of Homer, and able vindicators of his location of the Troad. His two dissertations are familiar to every classical scholar, and went as far towards the settlement of that "*vexata quæstio*" as any of the productions of the period.—*Times*.

Lightning.—The *Courrier du Bas Rhin* of Strasburg relates that, during a violent storm on the 10th inst., the lightning was attracted by the conductor affixed to the Cathedral, to which building it did no injury; but, on reaching the ground, instead of descending into the earth, went off at an angle, and entered the open door of the workshop of a tinman. In the shop, which is about 30 feet square, there were seven persons, through whom the first portion of the electric fluid was seen to pass, in the shape of a small ball of fire, along the ground, without touching any one of them, and then burst into a large and bright flame against an iron bar at the bottom. The conductor, on being examined, was found to be without any defect at the foot, or elsewhere.—The *Alsace*, another Strasburg journal, attributes the above divergence of the lightning to the superior attraction of a large quantity of iron and lead that was in the workshop.

Earthquakes.—A letter from Tabriz brings the disastrous account of an earthquake having nearly destroyed the whole of the town of Khoi, between the Lake of Urnia and Persia, by which upwards of a thousand people perished.

Thunder Storm.—The *Sherborne Mercury* gives an account of violent thunder which visited that neighbourhood on the afternoon of the 13th.—The effects of the storm were most destructively felt at Marnhull. Several labourers engaged in the fields, haymaking, had taken shelter from the storm under a tree with a waggon load of hay, and were struck by the electric fluid. One of them was killed on the spot, another struck blind, and four others with one woman very seriously injured. The waggon and hay were entirely consumed, and the whole ground torn up as though a plough had passed through it. The storm was accompanied by a fall of hailstones of an extraordinary size. In many places they were picked up measuring from three to six inches in circumference.

British Museum.—The number of persons admitted to view the general collections during the past year amounted to 547,718, being an increase over the previous year of 228,344, and the number of visits made to the reading-rooms for the purpose of study or research was 71,706, being an increase over the corresponding year of 2,403. The number of visits by artists and students to the galleries of sculpture had been 5,627, and the number of visits to the print-room 8,781.

TO CORRESPONDENTS.—An Admirer of Art—R. R.—An Italian—Cætera desunt—W. B.—A Cartoon Exhibitor—received.

Thanks to Theta.—The explanation requested by "A Country Clergyman" would be a dissertation, and lead to endless discussion. We agree with him that pews are very ugly, and ought to be abolished.

Erratum.—In Mr. Pratt's Advertisement last week—the word "Paper" should have been *Taper*.

Now ready, with a Portrait, 8vo. 18s.

MEMOIR of the late LORD SYDENHAM, with a Narrative of his Administration of Affairs in Canada, and Selections from his Correspondence. Edited by his Brother, G. POULETT SCROPE, Esq, M.P.

Every description of Life Assurance may be effected, upon a moderate scale of premium, either with or without participation in profits.

Endowments for Children or Widows, and immediate or deferred Annuities, granted upon fair and equitable terms.

Loans may be obtained on personal or other security by individuals Assuring their lives with this Association.

Risks taken on the Lives of Master Mariners and Passengers by sea, either for the whole term of life, or for the voyage.

EDWARD GILBERTSON, Secretary.

Prospectuses, and every other information, may be obtained by applying at the Offices, No. 24, Lombard-street, City.

FREEMASONS' and GENERAL LIFE ASSURANCE COMPANY, 11, Waterloo-place, Pall Mall, London.

Business transacted in all the branches and for all objects of LIFE ASSURANCE, ENDOWMENTS and ANNUITIES, and to secure CONTINGENT REVERSIONS, &c. Loans granted. Information and Prospectuses furnished by

JOSEPH BERRIDGE, Secretary.

CORPORATION of the AMICABLE SOCIETY for a PERPETUAL ASSURANCE OFFICE. Incorporated by Charter of Queen Anne, A.D. 1706. 13, Serjeants' Inn, Fleet-street, London.

Directors.

The Rt. Hon. the Earl of Devon	William Everett, Esq.
Benjamin John Armstrong, Esq.	John Hodgson, Esq.
John Barker, Esq.	Mr. Serjeant Merewether
Francis Boott, M.D.	James Mountague, Esq.
The Hon. Frederick Byng	Mark Beauchamp Peacock, Esq.
Colbett Derby, Esq.	Theophilus Thompson, M.D.

Every person on whose life an assurance is effected for one or more Shares, whether for his own benefit, or by a contributor having an interest in his life, is admitted a member of the Corporation.

The *whole of the Profits* are divided among the representatives or nominees of the deceased members in proportion to the amount of their respective assurances, and without reference to the length of time during which the Policy may have been in force.

There is no proprietary body,—no commission is allowed to agents,—and the affairs of the Corporation are managed at the smallest possible expense; the profits are, therefore, the utmost the premiums can afford.

T. GALLOWAY, Registrar.

SCOTTISH WIDOWS' FUND and LIFE ASSURANCE SOCIETY, upon the Principle of Mutual Contribution.

Abstract Statement of the Funds as at 31st MARCH, 1843.

Sums invested in real Security	£329,670 0 0
Loans to Members, on the Security of their Policies	235,461 0 0
Sums invested in the purchase of Redeemable and Irredeemable Annuities	105,985 7 10
Sums invested in Government and Bank Stock	55,291 14 2
Value of Reversionary Rights, Government Annuities, and Feu-duties	39,307 9 1
Value of House Property and Floating Balances, after deducting the amount due under Policies emerged, but not paid	9,935 1 0
Total	£1,275,590 12 1

N.B.—Whilst this Great Fund of upwards of ONE MILLION AND A QUARTER has been accumulated, and whilst upwards of HALF A MILLION has been paid to Members, or to the representatives of Members under emerged Policies, it affords the Directors much gratification to state, that not a shilling has ever been lost upon any one of the Society's Investments.

The Annual Revenue of the Society at the same date was 202,889*l.* 14*s.* 3*d.*

Whereof arising from Premiums	£145,386 14 4
Capital	57,502 19 11
	£202,889 14 3

By order of the Court of Directors.

JOHN MACKENZIE, Manager.

LONDON OFFICE, 7, Pall Mall,
HUGH M'KEAN, Agent.

PROMOTER LIFE ASSURANCE and ANNUITY COMPANY, 9, Chatham-place, Blackfriars, London. Established in 1836.

This Society is supported by an ample subscribed capital, and by a considerable accumulated premium fund.

Assurances are effected at a low rate of premium, without profits, or at an increased premium, with participation in the profits of the Office.

A Bonus in ready money, at the rate of 15 per cent. on the premiums received (equivalent to a reversionary bonus of about 30 per cent.) was declared in May last, on all beneficial policies on which three annual premiums had been paid in December, 1841.

A division of the profits takes place every five years, and the holders of beneficial policies can receive their bonuses in ready money, or have them applied in augmentation of their policies, or in reduction of their future premiums.

Assurers may contract to pay their Premiums either in one sum, in a given number of payments, in annual, half-yearly, or quarterly payments, *or on the ascending or descending scale.*

Officers in the Army and Navy on active service, persons afflicted with chronic and other diseases, and such as are going beyond the limits of Europe, are also assured at moderate rates.

Prospectuses and all necessary information may be obtained at the Office. MICHAEL SAWARD, Secretary.

ARGUS LIFE ASSURANCE COMPANY, 39, Throgmorton-street, Bank.

Empowered by special Act of Parliament, 5 & 6 Will. IV. c. 76.

Thomas Farncomb, Esq. Alderman, *Chairman.*
William Leaf, Esq. *Deputy-Chairman.*

William Banbury, Esq.	Rupert Ingleby, Esq.
Edward Bates, Esq.	Thomas Kelly, Esq. Ald.
Thomas Camplin, Esq.	Jeremiah Pilcher, Esq. Sheriff of London and Middlesex
James Clift, Esq.	Lewis Pocock, Esq.
Rt. Hon. J. Humphery, M.P. Lord Mayor of London	

Physician—Dr. Jeaffreson, 3, Finsbury-square.
Surgeon—W. Coulson, Esq. 2, Frederick's-place, Old Jewry.
Consulting Actuary—Professor Hall, of King's College.

Advantages of the Argus Life Assurance Company.

Low Rates of Premiums.

In addition to the subscribed Capital of 300,000*l.* the assured have the security of the Company's Income of nearly 60,000*l.* per annum, yearly increasing, and an accumulating Assurance Fund invested in Government and other available Securities, of considerably larger amount than the estimated liabilities of the Company.

The Rates of Premium are reduced to the lowest scale compatible with the safety of the Assured and the stability of the Company, thereby, in effect, giving to every policy-holder an immediate and certain bonus without risk, in lieu of the deferred and frequently delusive prospect of a periodical division of profits.

Annual Premium to Assure £100.

Age.	For One Year.	For Seven Years.	Whole Term.
20	£0 17 8	£0 19 1	£1 11 10
30	1 1 8	1 2 7	2 0 7
40	1 5 0	1 6 9	2 14 10
50	1 14 1	1 19 10	4 0 11
60	3 2 4	3 17 0	6 0 10

One-third of whole-term Premiums may remain unpaid at 5 per cent. comp. int. as a debt upon the Policy for life, or may be paid off at any time without notice.

In Assurances for advances of money, as security for debts, or as a provision for a family, when the least present outlay is desirable, the varied and comprehensive Tables of the Argus Office will be found to be particularly favourable to the assured.

A Board of Directors, with the Medical Officers, attend daily, at a quarter before 2 o'clock.

EDWARD BATES, Resident Director.

A Liberal Commission to Solicitors and Agents.

Digitized by Google

ECONOMIC LIFE ASSURANCE SOCIETY,

No. 34, Bridge-street, Blackfriars, London: established 1823.
Empowered by Act of Parliament, 3 William IV.

Lower Rates of Premium than those of any other office that entitle the assured to participate in the profits.

The bonus declared in 1834 amounted upon an average to 16*l.* per cent. on the premiums then paid; and in 1839 a second bonus was awarded, amounting on the average to 31*l.* per cent. on the premiums paid during the preceding five years.

Prospectuses and other particulars may be obtained at the Office, between the hours of ten and four, or will be forwarded to persons resident in the country, on application.

CAMPBELL JAMES DOWNER, Sec.

SUN LIFE ASSURANCE SOCIETY,

LONDON.

Managers.

Charles Pole, Esq. *Chairman.*
William Burnie, Esq. *Deputy Chairman.*

Charles Boulton, Esq.	H. Francis Shaw Lefevre, Esq.
Hon. P. Pleydell Bouverie.	Hon. Hugh Lindsay.
James Campbell, jun. Esq.	Charles Littledale, Esq.
Harry Chester, Esq.	Henry Littledale, Esq.
John Cockerell, Esq.	George Warde Norman, Esq.
John Drummond, Esq.	Brice Pearse, Esq.
Charles Bell Ford, Esq.	Charles Richard Pole, Esq.

Joseph Hoare, Esq.	Claude George Thornton, Esq.
Felix Ladbroke, Esq.	George Smith Thornton, Esq.

JOSHUA MILNE, *Actuary.*

LOW RATES.—PARTICIPATION IN PROFITS.

THE MANAGERS OF THE SUN LIFE OFFICE beg leave to inform the public that their Rates, on Young Lives, are much lower than those of many other Offices, and that the Assured are entitled to an participation in the Profits of this Society.—Persons having Life Interests, such as Clergymen, Medical Men, and others deriving incomes from their Professions or Trades, also those holding Estates on Lives, will see the advantage of effecting Insurances in the Sun Life Office.

Tables of Rates may be had at the Sun Life Office, in Cornhill, at the Sun Fire Office in Craig's-court, and at No. 65, Welbeck-street, Cavendish-square, London; also of any of the Agents for the Sun Fire Office.

NATIONAL LOAN FUND LIFE ASSURANCE, ANNUITY, and DEFERRED ANNUITY SOCIETY, 26, Cornhill, London.—Capital, 500,000*l.*—Empowered by Parliament.

Directors—T. LAMIE MURRAY, Esq. *Chairman.*

John Elliotson, M.D. F.R.S.	George Lungley, Esq.
John Griffith Frith, Esq.	John Rawson, Esq.
H. Gordon, Esq.	Clement Tabor, Esq.

Joseph Thompson, Esq.

Auditors—Prof. Wheatstone, F.R.S.; Prof. Graves, A.M. F.R.S.
Actuary—W. S. B. Woolhouse, Esq. F.R.A.S.

The superior advantages to those Assured with this Society will be best understood by a comparison of its principles and a reference to the last Annual Bonus declared on Policies of five years' standing, viz.:

Entry	Policy No.	Age	Sum	Annual Premium.	Bonus added.	Cash Bonus.	Premium reduced.
			£	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1837	39	59	1000	67 8 4	132 14 6	56 19 9	8 19 4
1838	114	56	3000	175 15 0	296 9 7	123 0 6	16 9 7

Policies now entered upon entitled to participation in next Annual Division. Two-thirds of all premiums paid can be borrowed by the assured without loss of Policy.

F. FERGUSON CAMROUX, Secretary.

BRITANNIA LIFE ASSURANCE COMPANY, 1, Princes-street, Bank, London.

This Institution is empowered by *Special Act of Parliament*, (4 Vict. cap. 9), and is so constituted as to afford the benefits of Life Assurance in their fullest extent to Policy-Holders, and to present greater facilities and accommodation than are usually offered by other Companies. The decided superiority of its plan, and its claim to public preference and support, have been proved incontestibly, by its extraordinary and unprecedented success.

Assurances may either be effected by Parties on their own Lives, or by Parties interested therein on the Lives of others.

The effect of an Assurance on a person's own life is to create at once a property in reversion, which can by no other means be realized. Take, for instance, the case of a person at the age of thirty, who by the payment of 5*l.* 2*s.* 4*d.* to the Britannia Life Assurance Company, can become at once possessed of a bequeathable property, amounting to 1000*l.*, subject only to the condition of his continuing the same payment quarterly during the remainder of his life,—a condition which may be fulfilled by the mere saving of EIGHT SHILLINGS weekly in his expenditure. Thus, by the exertion of a very slight degree of economy—such, indeed, as can scarcely be felt as an inconvenience, he may at once realize a capital of 1000*l.*, which he can bequeath or dispose of in any way he may think proper.

Detailed Prospectuses, and every requisite information as to the mode of effecting Assurances, may be obtained at the Office.

PETER MORRISON, Resident Director.

A Board of Directors attend daily at 2 o'clock, for the dispatch of business.

PALLADIUM LIFE ASSURANCE SOCIETY, 7, Waterloo-place, London.

Directors.

George Arbuthnot, Esq.	Sir T. F. Fremantle, Bart. M.P.
Sir John Barrow, Bart. F.R.S.	Henry Harvey, Esq. F.R.S.
Lord Wm. R. K. Douglas, F.R.S.	James Murray, Esq.
Rt. Hon. Sir Edward Hyde East, Bart. F.R.S.	Samuel Skinner, Esq.
Charles Elliott, Esq. F.R.S.	Patrick Maxwell Stewart, Esq. M.P.
Joseph Esdaile, Esq.	Sir William Young, Bart.

Bankers—The London and Westminster Bank.
Physician—Theodore Gordon, M.D.

The Bonus declared by this Society is larger, in proportion, than that of most other Offices. The Assured are entitled to FOUR-FIFTHS, or 80 per cent. of the profits; which have produced, on an average, to the Assured, additions to their Policies of FORTY-THREE PER CENT. on the Premiums paid. This Bonus may, at the option of the Assured, be applied in *Reduction of future Premiums.*

ADDITIONS TO POLICIES.

The following Table shows the Additions made to Policies for 500l., which had been in force for Fourteen *Years, to the 31st December, 1838.*

Age at commencement.	Premiums paid in the 14 years.	Additions made to the Sum assured in the 14 years.	*Total Sums* now payable, in case of death.
10	£1192 18 4	£586 6 7	£5586 6 7
15	1250 8 4	681 2 7	5681 2 7
20	1325 5 4	768 5 1	5768 5 1
25	1662 18 4	767 2 8	5767 2 8
30	1989 11 8	813 15 6	5813 15 6
35	2094 3 4	854 6 5	5854 6 5
40	2377 1 8	923 18 1	5923 18 1
45	2727 1 8	1011 2 9	6011 2 9
50	3173 6 8	1139 15 7	6139 15 7

Persons travelling in Europe, by sea or land, in time of peace, are *not* charged any extra premium.

NICHOLAS GRUT, Secretary and Actuary.

VICTORIA LIFE ASSURANCE COMPANY.

Trustees.

Sir Jas. Duke, Ald. M.P. *Chairman*	Benj. Hawes, Esq. *Dep. Chairman*
Benj. Barnard, Esq.	Charles Baldwin, Esq.

Peculiar advantages are offered by this Company. Thus:—

Parties assuring the lives of others may make their policies secure, notwithstanding the life assured may go out of the limits of Europe, without the necessary permission of the Directors having been previously obtained.

Credit of half the premiums for the first five years allowed on policies effected for the whole term of life.

Assurances may be effected *with* or *without* profits—on an ascending or descending scale, or for short periods.

Advances made to Assurers on real or undoubted personal security, for terms not exceeding three years, repayable by instalments.

Attention is particularly requested to the detailed prospectuses of the Company, which may be obtained at the Office, 18, King William-street, City, or by letter, addressed to the Secretary. WILLIAM RATRAY, Actuary and Secretary.

CORPORATION of the LONDON ASSURANCE. Established by Royal Charter, A.D. 1720.

FOR FIRE, LIFE, AND MARINE ASSURANCES.

Offices, 19, Birchin-lane, Cornhill, and 10, Regent-street.

John Clark Powell, Esq., *Governor.*
Abel Chapman, Esq., *Sub-Governor.*
Lestock Peach Wilson, Esq., *Deputy Governor.*

Directors—Robert Allen, Esq.	John Furse, Esq.
John A. Arbuthnot, Esq.	Edwin Gower, Esq.
George Barnes, Esq.	Samuel Gregson, Esq.
Henry Blanshard, Esq.	Edward Harnage, Esq.
John Watson Borradaile, Esq.	Charles Kerr, Esq.
Edward Burmester, Esq.	Robert King, Esq.
Henry Cayley, Esq.	William King, Esq.
Aaron Chapman, Esq. M.P.	John Ord, Esq.
Robert Cotesworth, Esq.	George Probyn, Esq.
Charles Crawley, Esq.	John Rees, Esq.
James Dowie, Esq.	Daniel Stephenson, Esq.
Richard Drew, Esq.	Thomas Weeding, Esq.

Persons effecting Life Assurances with this Corporation have the choice of two plans: the one entitling them to an annual abatement of premium after five years' payment; the other at a lower fixed rate without abatement.

The leading features which distinguish the first of these plans from those of other Life Assurance offices are—

The guarantee of the Corporation for the full payment of the sums assured:

Annual abatements of premium, commencing after full five years' payments:

Total absence of partnership of any kind whatever:

Absolute exemption from the possibility of being called upon to contribute towards making good any losses:

And freedom from all charges of management.

The abatement of premium for the year 1843 on policies of five years' standing, under the first of the above plans, was 31*l.* 10*s.* 2*d.* per cent.

It may be here sufficient to state, as an example, that under the above system a person having effected a policy on or before the 1st of January, 1838, at an annual premium of 100*l.*, had, on the 1st of January, 1843, only the sum of 68*l.* 9*s.* 10*d.* to pay as that year's premium.

The future annual abatement must vary according to the success of this branch of the Corporation's business.

In the Fire Department assurances are effected at the lowest rates.

Attendance daily, from Ten till Four, at both Offices, where prospectuses and every information may be obtained.

ABEL PEYTON PHELPS, Esq.,
Superintendent of the Office in Regent-street.
JOHN LAURENCE, Secretary.

The Corporation having determined to increase the number of their agents, are desirous of receiving applications for appointments from parties of respectability and influence residing in the several towns and districts of England and Wales.

PERFECTLY NEW AND UNIQUE PATENT BEDSTEADS.

H. PRATT respectfully solicits the particular attention of the Nobility and Gentry furnishing, and Officers joining their regiments, to the PATENTED TAPER METALLIC DOVETAIL JOINTED BEDSTEADS, which he has made arrangements with the Patentees to introduce to their notice. It is long since so necessary and useful an improvement has been invented, and one more especially deserving their notice. The facility with which they are fixed up and taken down in a few minutes, without the use of tools—the elegant and light appearance—the firmness of construction, and the utter impossibility of annoyance from insects,—all join to render them paramount to any other ever invented. The PATENT ELASTIC SPRING BEDS, &c. and complete Fittings, supplied in plain and decorative appointments. Now on view at H. Pratt's Trunk and Military Outfit Warehouse, 123, New Bond-street.

GROWTH OF PLANTS.

HUMPHREYS'S INODOROUS SOLUBLE COMPOUND, to PROMOTE the GROWTH of PLANTS.—Dissolved in water, this valuable preparation may be used with great advantage either in the drawing-room or in the conservatory. A single bottle is equal in fertilizing force to some hundred weight of rich compost; and by its use, not only common plants are improved by increased brilliancy of flower and deeper verdure, but valuable exotics are so strengthened, as to resist the usual alternations of temperature, and may be preserved without a greenhouse.—Sold in bottles, 1*s.* 9*d.* each, with full instructions for use, by the leading Chemists, Druggists, &c. in Town and Country. Wholesale Agents, Davy, Mackmurdo & Co. 100, Thames-street, London.

MOULD CANDLES to BURN WITHOUT SNUFFING.—KEMPTON'S PATENT.—These candles do not require snuffing; they burn longer and are cheaper than any other candle; the flame is steady and brilliant. No metallic or deleterious matter is used in the manufacture. Price 8*d.* per lb. Sold by G. E. Parish, agent for exportation, 21½, Bread-street, City, and by Slodden & Stocking, 63, High-street, Marylebone; W. Gethem, Broadley-terrace, Blandford-square; W. Evans, Italian warehouse, Greenwich; John Hawkins, grocer, High-street, Whitechapel; George Hawley, grocer, Pitfield-street, Hoxton; S. Game, Fish-street-hill; J. Pain, grocer, Bethnal-green-road; G. H. Hudson, 239, Blackfriars-road; C. H. Nicholas, 19, Bolingbroke-row, Walworth; and at the manufactory, Old Bargehouse, Christchurch, Surrey.

WATCHES by WEBSTER & SON, Chronometer Makers to the Lords of the Admiralty (Established 132 years), 3, BIRCHIN-LANE. The largest assortment of fine Second-hand Watches of any house in London, by the most eminent makers—many nearly equal to new, and at little above half their original cost, all of which W. & Son warrant. They consist of fine Repeaters, Duplex, Lever, and Horizontal Escapements, all of superior manufacture. New Watches of the most elegant patterns upon the principle of their Chronometers, to which the Government awarded the prizes three years in succession, with compensation balances to counteract the variations of temperature. Also a large assortment of Lever and elegant Horizontal Watches, for Ladies and Gentlemen, at considerably reduced prices. Old Watches taken in exchange. The most experienced workmen are employed on the premises in the repairing department.

Webster & Son, 3, Birchin-lane, Cornhill.

STONE-COLOURED CEMENT.

FELIX AUSTIN, of the New Road, Regent's Park, begs to inform Architects, Builders, Plasterers, &c. that during the process of manufacturing a very superior composition which has greatly improved his well-known Artificial Stone Ornaments, he has succeeded in making an excellent STONE-COLOURED CEMENT, adapted to building, more especially for facing brick walls and repairing decayed stone work, which he can supply at 2*s.* 6*d.* per bushel, at his Manufactory, near the Thames Tunnel, Rotherhithe.

MESSRS. BARRY & SON, Stationers and Engravers, beg to inform the Nobility and Gentry that they are now enabled to PRINT ARMS, CRESTS, &c., for book plates, in their proper heraldic colours, and at very moderate prices. Crests engraved on visiting cards in the first-rate style, 6*s.*; without the crest, 2*s.* 6*d.*; and 100 cards, 2*s.* 6*d.*: also every description of elegant engraving. Specimens of the above may be selected from a large and fashionable assortment, at their warehouses, Egyptian Hall, Piccadilly, and 132, Bishopsgate-street Within, or sent on application any distance free of expense. Superfine letter papers, 27*s.*, 23*s.*, 20*s.*, 18*s.*, 17*s.*, 14*s.*, 12*s.* and 8*s.* per ream; Note ditto, 18*s.*, 16*s.*, 12*s.*, 8*s.*, 6*s.* and 4*s.* per ream. An additional charge is made for stamping either of the above with arms, crest, coronet, or initials. Their miscellaneous stock, which is very large and particularly adapted for presents, consists of dressing cases, writing desks, inkstands, envelope cases, albums, blotting-books, bibles and prayers, gold and silver pencil cases, penholders, toilet and smelling bottles, souvenirs, ladies' companions, sachets, card and glove cases, pocket-books, papeterie, and envelopes, suitable for invitations, complimentary notes, weddings, &c. Either of the above articles may be had plain, or of the most costly description, with every description of useful stationery. Postage stamps and envelopes at Government prices. Messrs. Barry & Son are also the West-end Agents for Mr. Robert Best Ede's Perfumery.

METCALFE'S NEW PATTERN TOOTH-BRUSH and SMYRNA SPONGES.—The Tooth-Brush has the important advantage of searching thoroughly into the divisions of the teeth, and cleaning them in the most effectual and extraordinary manner, and is famous for the hairs not coming loose—1*s.* An improved Clothes-Brush, that cleans in a third part of the usual time, and incapable of injuring the finest nap. Penetrating Hair-Brushes, with the durable unbleached Russian Bristles, which do not soften like common hair. Flesh-Brushes of improved graduated and powerful friction. Velvet-Brushes, which act in the most surprising and successful manner. The Genuine Smyrna Sponge, with its preserved valuable properties of absorption, vitality, and durability, by means of direct importations, dispensing with all intermediate parties' profits and destructive bleaching, and securing the luxury of a genuine Smyrna Sponge. Only at METCALFE'S Sole Establishment, Oxford-street, two doors from Holles-street.

CAUTION—Beware of the words "From Metcalfe's" adopted by some houses.

LEA & PERRIN'S 'WORCESTERSHIRE SAUCE.' Prepared from the Recipe of a Nobleman in the County.—The above celebrated Sauce has, from the time of its introduction, been steadily progressing in public favour. Its peculiar piquancy, combined with exquisite flavour, establish it of a character unequalled in sauces. Noblemen and others, of acknowledged gout, pronounce it to be 'the only good sauce;' and for enriching gravies, or as a zest for fish, curries, steaks, game, cold meat, &c., especially unrivalled. As a rapidly-increasing inquiry is now made for it in all parts of the kingdom, the Proprietors beg to state that druggists, grocers, and others may be supplied by their agents—Messrs. Barclay & Sons, Farringdon-street; Mr. J. Harding, 59, King-street, Stepney; Messrs. Metcalfe & Co. 16, Southampton-row; and by the Wholesale Oil and Italian Warehousemen in London, upon the same terms as at their Warehouse at Worcester.—Sold retail, in half-pint bottles, at 1*s.* 6*d.*; pints, 2*s.* 6*d.*; and quarts, 5*s.* each, with the Proprietors' stamp over the cork of every bottle.

COMPOSITION FOR WRITING WITH STEEL PENS.
STEPHENS' WRITING FLUID.

THESE COMPOSITIONS, which have so remarkably extended the use of the STEEL PEN, are brought to very great perfection, being more easy to write with, more durable, and in every respect preferable to the ordinary Ink. In warm climates they have become essential. They consist of—AN INSTANTANEOUS BLACK INK—A BLUE FLUID, changing to an intense Black colour—PATENT UNCHANGEABLE BLUE FLUIDS, remaining a deep Blue colour—A SUPERIOR BLACK INK, of the common character, but more fluid—A SUPERIOR CARMINE RED for Contrast Writing—A CARBONACEOUS RECORD INK, unchangeable by any Chemical Agent—Also, a new kind of MARKING INK for Linen; and Inkholders adapted for preserving Ink from Evaporation and Dust. Bottles at 3*d.* each, convenient for writing from, are prepared, which will enable those who may wish to try either of these articles to do so at a small expense. Prepared by HENRY STEPHENS, the Inventor, 54, Stamford-street, Blackfriars-road, London; and sold by Stationers and Booksellers.—N.B. These unchangeable Blue Fluids are Patent Articles; the public are therefore cautioned against imitations, which are infringements; to sell or use which is illegal.

STEPHENS' SELECT STEEL PENS.—The utmost possible care having been bestowed upon the manufacture of these articles so as to procure the highest finish, they can be confidently recommended both for flexibility and durability.

DELICACY OF COMPLEXION.—The use of GOWLAND'S LOTION is speedily followed by the disappearance of every species of cutaneous defect and discolouration, and the establishment of a pure surface of the skin, accompanied by the brilliant circulation which constitutes the tint of beauty; whilst as a refresher it preserves the most susceptible complexion from the effects of heat, freckle, and sallowness, and sustains in all cases to a protracted period the softness of texture and vivacity peculiar to earlier years.—'Robt. Shaw, London,' is in white letters on the Government stamp, without which it is not genuine.—Prices, 2*s.* 9*d.*, 5*s.* 6*d.*; quarts, 8*s.* 6*d.* Sold by all Perfumers and Medicine Venders.

FOR BEAUTIFYING THE SKIN.—GODFREY'S EXTRACT of ELDER FLOWERS, a most fragrant perfume, and delightful cosmetic. It speedily and completely removes tan, redness, &c., and by its cooling, balsamic, and healing qualities, renders the skin soft, pliable, and free from dryness, scurf, &c., and clears it from every humour, pimple, or eruption. By its use the skin becomes, and continues, delicately clear and soft, and the complexion fair and beautiful. In shaving, it is invaluable, rendering the skin smooth and firm, and protects it from the effects of sun and dust. It is beyond all praise as a general family lotion. Sold in bottles, price 2*s.* 9*d.*, by all respectable Medicine Venders and Perfumers.

FOR GOUT, RHEUMATISM, AND RHEUMATIC GOUT.

SIMCO'S GOUT and RHEUMATIC PILLS are a certain and safe remedy; they restore tranquillity to the nerves, give tone to the stomach and strength to the whole system. No other medicine can be compared to these excellent pills, as they prevent the disorder from attacking the Stomach or Head, and have restored thousands from pain and misery, to health and comfort. Sold by A. Willoughby & Co., late E. G. Windus, 61, Bishopsgate Without, and nearly all Medicine Venders, at 1*s.* 1½*d.* or 2*s.* 9*d.* per box.

THE ATHENÆUM

Journal of English and Foreign Literature, Science, and the Fine Arts.

No. 822. LONDON, SATURDAY, JULY 29, 1843. PRICE FOURPENCE (Stamped Edition, 5d.)

For the convenience of Subscribers residing in remote places, the weekly numbers are reissued in Monthly Parts, stitched in a wrapper, and forwarded with the Magazines.—Subscriptions for the Stamped Edition for the Continent, for not less than Three Months, and in advance, are received by M. BAUDRY, 3, Quai Malaquais, Paris, or at the Athenæum Office, London. For France, and other Countries not requiring the postage to be paid in London, 28fr. or 1l. 2s. the year. To other Countries, the postage in addition. [JAMES HOLMES, TOOK'S COURT, CHANCERY LANE.]

BRITISH ASSOCIATION for the ADVANCEMENT of SCIENCE.

The THIRTEENTH MEETING of the BRITISH ASSOCIATION for the ADVANCEMENT of SCIENCE, will commence in CORK on THURSDAY MORNING, the 17th of AUGUST, 1843.

JOHN TAYLOR, F.R.S., General Treasurer.

2, Duke-street, Adelphi.

SCHOOL, FAMILY, and CLERICAL AGENCY, 30, SOHO-SQUARE.—Mr. HINTON, late of Trinity Hall, Cambridge, Author of 'Stenography for Schools,' &c., respectfully states that he forwards the views of Principals of Schools, Families, Clergymen, Tutors, and Assistants, in any changes they may contemplate; also in the transfer of Scholastic and Clerical Property.—Mrs. Hinton, who has resided many years on the Continent, can introduce superior English and Foreign Governesses, with good references. Letters must be free.

RESIDENT GOVERNESS.—A LADY, who has resided some years in Paris, speaks the French language fluently, teaches it grammatically, and undertakes also Music, the rudiments of Italian, with the usual routine of English Education, wishes to RE-ENGAGE in a Family where the children would be under 12 years of age. She has had considerable experience in the management of children; her connexions are good, and her references are unexceptionable.—Address, Mr. Rolandi, Foreign Bookseller, Berners-street, Oxford-street.

SCOTTISH INSTITUTION for the EDUCATION of YOUNG LADIES, 9, Moray-place, Edinburgh. Tenth Session.

The Institution will RE-OPEN after the Vacation, on MONDAY, the 2nd of OCTOBER. The Course embraces the English, French, Italian, and German Languages, Drawing, Dancing, Singing, Pianoforte, Writing, Arithmetic, and the Elements of Mathematical and Physical Science, including Natural Philosophy, Chemistry, Botany, Geology, and Mineralogy.

Each branch has its respective Master; and there is one uniform fee for all the Pupils, viz. Six Guineas for each of the First Three Quarters, and Two Guineas for the Fourth, making in all Twenty Guineas for each Session of Ten Months,—and the additional charge of 10s. 6d. per Quarter, for those who attend Music, every Pupil being allowed to attend those Classes which her parents may think most conducive to her advantage.

The Lady Superintendent, Miss MURRAY, and several respectable families in the neighbourhood of the Institution, which is situated in one of the most delightful localities of the (New) Town, have excellent accommodation for Boarders, at rates varying from 30 to 50 Guineas.

Prospectuses, containing full information regarding hours, &c. will be sent free on application to Mr. Lees, the Secretary; or to Miss Murray, at the Institution.

Edinburgh, July, 1843.

BOLTON HOUSE SCHOOL, TURNHAM GREEN, for a limited number of Pupils, five miles west of London, adjacent to the Chiswick Horticultural Gardens.—This Establishment unites the advantages of the Continent, in reference to modern languages, with the comforts of an English home, and the inculcation of knowledge, carefully based on Christian principles. The Principal, Mr. J. G. DYNE, has spent many years in several of the capitals of Europe, for the purpose of investigating the most approved methods of Education. Every endeavour is made to promote the moral and intellectual welfare, as well as the personal comforts of the Pupils: the Principal and the Assistant Masters regulate and encourage the recreations of the play-ground. The course of instruction, without extras, comprehends the Greek and Latin Classics, on the Eton principle, French and German, which are much spoken in the Establishment; the Mathematics, Natural Philosophy, Drawing, Music, the Elements of Chemistry, &c. &c., with all the branches of a liberal education. Each young gentleman has a separate bed. References to Pupils' Parents and Clergymen, to Professional and Commercial Gentlemen of the highest respectability, will be found in the Prospectus, which may be obtained, post-free, from Mr. J. G. Dyne; or, by personal application, at Drewett's Library, 62, Regent Quadrant; or at Suter's, Stationer, 19, Cheapside.—School re-opens this day.—There are Five Vacancies.

Bolton House, 20th July, 1843.

BIRMINGHAM MUSICAL FESTIVAL, in aid of the Funds of THE GENERAL HOSPITAL, SEPTEMBER 19th, 20th, 21st, and 22nd, 1843.

Under the especial Patronage of
HER MOST GRACIOUS MAJESTY THE QUEEN.
HER MAJESTY THE QUEEN DOWAGER.
HIS ROYAL HIGHNESS PRINCE ALBERT.
HIS ROYAL HIGHNESS THE DUKE OF CAMBRIDGE.

President.
THE RIGHT HONOURABLE THE EARL OF CRAVEN.

Vice-Presidents.
The Neighbouring NOBLEMEN and GENTLEMEN.

Principal Singers.
Miss Clara Novello, Miss Rainforth, and Mrs. Knyvett; Miss Maria B. Hawes, and Mrs. Alfred Shaw. Signor Mario and Signor Fornasari; Mr. Bennett, Mr. Manvers, Mr. Giubilei, Mr. Machin, and Mr. Phillips.

Organ, Dr. Wesley. *Assistant Organist*, Mr. Stimpson.
Conductor, Mr. Knyvett. *Assistant Conductor*, Mr. Munden.

East India Company, 7, Leadenhall-street.

GOVERNORSHIP OF PARKHURST PRISON.

THE Committee of Visitors, being directed by the Secretary of State to examine the TESTIMONIALS OF CANDIDATES for the OFFICE OF GOVERNOR of the Prison for Juvenile Offenders at Parkhurst, in the Isle of Wight, request that applications for this Office, accompanied by Testimonials, stating the age of the applicant, and whether married or single, may be addressed to "THE COMMITTEE OF VISITORS OF PARKHURST PRISON," care of Major Jebb, No. 45, Parliament-street. Applications will be received until Twelve o'clock on the 5th of August. The Governor will be required to reside within the walls of the Prison. His Salary will be 400l. per annum, and he will be provided with a House, and Coals, and Candles. The Visitors are instructed that a Gentleman who has had experience in the discipline of the Army or Navy, and who would be prepared by his character and habits to combine that discipline with the measures adopted by the Chaplain for the instruction and moral reformation of the prisoners, would probably be preferred. A Circular, containing further information respecting the duties, may be obtained on application at 45, Parliament-street.

FRESCOS BY PAUL VERONESE.—For SALE, by PRIVATE CONTRACT, THREE SPLENDID FRESCOS by this celebrated Master. Now on view at No. 49, Pall Mall.

TO an INVALID of the WEALTHIER CLASS, who may desire to combine the advantages of domestic comfort and constant medical superintendence, with the daily use of a carriage, in any protracted or difficult case, in the house of a Physician of standing and experience, unmarried, residing in a healthy and airy situation in the suburbs of London.

Letters to be addressed, M.D., 20, Golden-square, London.

THE FRIENDS' RETREAT, YORK.—In consequence of recent alterations in this Establishment, there are at present several VACANCIES FOR PATIENTS of the higher class, without limitation to the Society of Friends, at from two to five guineas a week.—Applications may be addressed to the Superintendent of the Retreat, York.

DERBY.—OPTICAL AND PHILOSOPHICAL INSTRUMENT REPOSITORY.

JOHN DAVIS, OPTICIAN, Derby (late Cheltenham), has the honour to inform his Patrons that he has centralized his extensive connexion in Derby, where, in future, he will be happy to receive orders. He begs to call attention to his celebrated Pocket Telescopes, measuring but 3½ inches when closed, and are capable of defining clearly Jupiter's moons. Oberhäuser's Objectives supplied to the trade. Several second-hand Telescopes, by Dollond, on sale.—No connexion with any house in London.

CONCHOLOGY.—LOVELL REEVE respectfully invites his Friends and the Public to view his extensive Collection of SHELLS, now newly arranged, with many valuable additions (at the lowest possible prices), in illustration of the Lamarckian genera. Gentlemen residing in the country supplied with specimens to any amount, named and priced, to examine and select from at leisure.

WHITTAKER & CO. Ave Maria-lane.

FELIX SUMMERLY'S

RECREATION HAND-BOOK GUIDES,

Corrected for the Season of 1843.

"Recreation is a second creation, when weariness hath almost annihilated one's spirits. It is the breathing of the soul, which otherwise would be stifled with continual business ... As for those that will not take lawful pleasure, I am afraid they will take unlawful pleasure, and by lacing themselves too hard grow awry on one side."
FULLER'S HOLY AND PROFANE STATE.
"All work and no play makes Jack a dull boy."
OLD ENGLISH PROVERB.

Now ready, price 3s. 6d.
In an Ornamental Cover of the 16th Century,

HAND-BOOK FOR THE NATIONAL GALLERY,

WITH FIFTY REMINISCENCES OF THE MOST CELEBRATED PICTURES, DRAWN EXPRESSLY FROM THE ORIGINALS, BY MESSRS. JOHN JAMES AND WILLIAM LINNELL.

(Open daily, from Ten to Four, except Friday and Saturday.)
Other Editions, price 6d., 3d., and 1d. Also,

Catalogue des Tableaux qui se trouvent dans la GALERIE NATIONALE, suivi par la Chronologie des Peintres.' Prix 6d.

HAMPTON COURT PALACE.
(OPEN DAILY, EXCEPT FRIDAYS.)

Being a Guide to the Architecture, Tapestries, Paintings, Gardens and Grounds of Hampton Court: with numerous Embellishments on Wood, engraved by Ladies; and Plans of the Palace and Grounds from Official Surveys. The Illuminated Cover is taken from a design for a book-cover produced by Hans Holbein for Cardinal Wolsey. Second edition, price 3s. in cloth, and Holbein's cover in gold, with Maps and Plans; and 2s. 6d. not gilt, and with plan only.
"Decidedly the best popular guide to the picturesque beauties of Hampton Court of any extant."—*Spectator.*
"A charming specimen of a Hand-book, literally crammed with information."—*Atlas.*

FREE PICTURE GALLERIES;

Being a GUIDE to all the PICTURES in the NATIONAL GALLERY, the DULWICH GALLERY, the SOANE MUSEUM, the SOCIETY of ARTS, and the BRITISH MUSEUM. Price 1s. 6d.
"These Catalogues are more raisonnés and correct than the correspondent official ones; are more portable, and to their limits every way commodious, whilst they cost together much less than several of the latter cost separate."—*Athenæum.*

HOLIDAYS; or, a Guide to London Sights.

Giving details of the Locality—Means of Access—Nature of Admission—Time when Open—Principal Objects, and Descriptive Catalogues of all the Permanent Sights. Notes for Days' Excursions out of the Metropolis. Price 6d.

WESTMINSTER ABBEY.

(The Abbey opens at 9 A.M., and closes, in the Summer, at 6 P.M. The Tombs are shown until half-an-hour before, and about an hour after, Divine Service, which commences at 10 A.M. and 3 P.M. Entrance to Poets' Corner, free; to the Nave, alone, 3d.; with the Chapels, 6d.)

A Guide to the Architecture, Sculptures, Tombs, and Decorations, with 56 Embellishments on Wood, engraved by Ladies, 4 Etchings, a Specimen of Encaustic Tiles in the Chapter House, and an Illumination. Price 7s. Cheaper Editions, 3s., 1s. 6d.
"Its pages are not disfigured by the usual Guide-book sentimentality, rambling on without method, and mixing inaccurate if not false information with indiscriminate and nauseating praise, but it gives a well arranged and correct description, neither too popular nor too pedantic, of the Sacred Edifice."—*Ecclesiologist*, published by the Cambridge Camden Society.
"A volume got up in excellent taste, and written in a right spirit; critical so far as criticism could be allowed, but always suggestive, and testing opinions by reference to principles. As if to perfect the interest of the work, its fifty-six illustrative engravings have all been executed by women; and some amateurs, Lady Callcott and Lady Palgrave, amongst others, have gracefully contributed drawings, and thus associated their names with their sister artists."—*Athenæum.*

Also, for Foreigners, GUIDE A L'ABBAYE DE WESTMINSTER. Par Félix Summerly. Prix 1sh.

TEMPLE CHURCH.

With Eight Illustrations. Printed in three colours, in novel combinations of lithography and type, with Ornamental Cover of the pattern of the Encaustic Tiles. Second Edition. Price 1s.

A HAND-BOOK for CANTERBURY; with 35 Illustrations, 3s. 6d.; cloth extra, 5s. 6d.

Just published,

DAYS' EXCURSIONS OUT OF LONDON; with Maps and Illustrations, 2s. 6d.

GEORGE BELL, 186, Fleet-street.

Digitized by Google

VALUABLE SCHOOL BOOKS,

PUBLISHED BY

CRADOCK & Co., 48, Paternoster-row.

THE REV. JOS. EDWARDS'S KING'S COLLEGE BOOKS.

1.

P. VIRGILII MARONIS ÆNEIS in usum studiosæ Juventutis, accurate recensuit. By J. EDWARDS, A.M. Trinity College, Cambridge, Second Master of King's College School, London. Fcap. 8vo. price 3s. 6d. bound; or with the 'Quæstiones,' 6s.

*** With this edition of the Æneid great pains have been taken to render it as accurate a text-book as possible. The books are divided into paragraphs indicated by Roman numerals, the object being to aid the memory and judgment of the pupil, since each paragraph contains as complete a subject as the main action of the poem will admit. The arrangement has also reference to its companion the Quæstiones Virgilianæ.

2.

QUÆSTIONES VIRGILIANÆ; or, Notes and Questions on the first Six and the Ninth Books of the Æneid, adapted to the Middle Forms in Schools. By the same. Fcap. 8vo. price 3s. bound.

*** The Quæstiones are published separately to suit the convenience of those who possess other editions of the text. The work is prepared, partly to give the young pupil such help as may not ordinarily lie within his reach; and partly to introduce him to the habit of carefulness and accuracy in the preparation of his lessons. The Quæstiones will be found extremely useful also to the self-taught student.

A GERMAN GRAMMAR, EXERCISES, AND KEY, IN ONE VOLUME.

GERMAN EXERCISES, with a Grammatical Introduction: being a Guide to German Writing. By FRANCIS STROMEYER, Ph. D., Professor of German Literature at the College for Civil Engineers. Price 2s. 6d. 12mo. cloth.

A HEBREW GRAMMAR, FOR SELF-TUITION.

A HEBREW GRAMMAR in the ENGLISH LANGUAGE. By the Rev. J. S. C. F. FREY, Author of a Hebrew, Latin, and English Dictionary, &c. The 10th Edition, revised and enlarged, by Reading Lessons, Rules, and Analysis, from Genesis and the Book of Psalms. In 8vo. handsomely printed by Whittingham, price 8s. 6d. bound, extra.

*** In this revised and much enlarged edition, the author hopes he has succeeded in opening the way to obtain the knowledge of this most ancient and sacred language in less time, and with far less difficulty and perplexity, than any other language, ancient or modern. The Grammar is divided into distinct chapters, and each chapter is followed by Exercises, according to the preceding Rules, that practice and theory may go hand in hand.

The following cheap publications are admirably adapted to be read in school classes; they are ably written, and full of useful information.

1. THE YOUNG MAN'S MENTOR on his Entrance into Life; with Rules for his General Conduct after leaving School. The whole intended to assist in Forming and Strengthening the Intellectual and Moral Character of Youth and Manhood. Price 6d.

2. THE STEAM ENGINE familiarly Described, with a Brief Account of its History and Uses. Illustrated with Engravings. Price 6d.

3. COTTON from the POD to the FACTORY. A Popular View of the Natural and Domestic History of the plant; the adaptation and improvement of the raw material; with the Rise and Progress of the Cotton Factory to its present state of perfection. Price 6d.

4. GEOLOGY; a Clear and Concise Introduction to a Knowledge of the Principal Facts of that Interesting and Popular Science. Price 6d.

5. CHINA: its History from the earliest Periods to the Peace; with an Account of the Manners, Customs, and Institutions of the Chinese, and a Description of Hong Kong and the other ports opened to British Trade. Price 6d.

6. CANADA, NOVA SCOTIA, NEW BRUNSWICK, NEWFOUNDLAND, &c.: their History, Present State, and Future Prospects; with a Map of British America. Price 6d.

7. AUSTRALIA, VAN DIEMAN'S LAND, and NEW ZEALAND: their History, Present State, and Future Prospects. With a Map. Price 6d.

8. VEGETABLE PHYSIOLOGY; a Treatise intended to Explain, in a concise and lucid manner, the Structure and Functions of Plants, with a view to render the Study interesting and practically useful. Price 6d.

9. THE STUDY of BOTANY facilitated by a familiar Introduction to the Natural System. Designed to awaken a taste for, and pave the way to, a sound and accurate knowledge of that fascinating Science; comprising STRUCTURAL BOTANY, or a Description of the component parts of Plants, DESCRIPTIVE BOTANY and SYSTEMATIC BOTANY, exhibited in a rational Classification. Price 6d.

10. BRITISH FOREST TREES; a Guide to the Beauties of our Woods and Parks, with the Natural History, and various uses of Forest Trees. Price 6d.

*** The name affixed to the different trees in St. James's Park, Kensington Gardens, Chiswick Gardens, &c., will greatly assist the student in this agreeable study.

11. THE FARM and the GARDEN; an Account of every Vegetable Production cultivated for the Table by the Plough and the Spade. Price 6d.

*** A popular view of all Vegetables grown in the field and garden used for human food; with a History of their first introduction amongst us, their nourishing qualities, and the places best adapted for their propagation.

12. THE CHRISTIAN RELIGION; an Account of every Sect, its Origin, Progress, Tenets of Belief, and Rites and Ceremonies, accurately described, and carefully compiled from the latest and best Authorities. Price 6d.

New Works and New Editions.

I.

In a handsome volume, imperial 8vo. illustrated by a large Map of the *Mer de Glace* of Chamouni, lithographed Views and Plans, and Engravings on Wood, price 28s., or with the large Map, coloured, in a Case, 31s. 6d.

In post 8vo. price 6s.

PAINTING AND THE FINE ARTS.

By B. R. HAYDON and WILLIAM HAZLITT. Forming the Articles under those Heads in the Seventh Edition of the ENCYCLOPÆDIA BRITANNICA.

ADAM & CHARLES BLACK, Edinburgh; Longman & Co. London; and sold by all Booksellers.

In a few days will be published, by

JOHN W. PARKER, West Strand,

Printed in various Styles and Sizes,

FOUR EDITIONS of

The Psalter;

Or, PSALMS OF DAVID, IN METRE;

FROM THE AUTHORIZED VERSION OF TATE AND BRADY.

Set to Appropriate Tunes, arranged for four Voices, with and without Accompaniments.

Together with the necessary Indices, and Tables showing the Psalms applicable to the Morning and Evening Services of the Sundays, and other Holy-Days, throughout the Year, according to the Form and Order of the Book of Common Prayer.

Edited by JOHN HULLAH.

EDITION I.

The Psalter, with the Tunes in Score, set for Four Voices, with Accompaniments for the Organ or Pianoforte.

This Edition is printed in Folio, being adapted for the Organ Desk, the Drawing Room, or the Study. Bound in cloth and lettered.

EDITION II.

The Psalter, with the Tunes in Score, for Four Voices.

An Edition of the Psalter in Score, without Instrumental Accompaniments, for use in Church, and for practice in Families. Super-royal 8vo. bound in cloth and lettered.

EDITION III.

The Psalter, with the separate Voice Parts,—SOPRANO, ALTO, TENOR, and BASS, each in a distinct Volume.

These Volumes of separate Voice Parts are elegantly printed in foolscap 8vo., uniformly in size with some of the most approved editions of the Common Prayer, Church Services, &c.

EDITION IV.

The Psalter, with the separate Voice Parts, each in a Volume, as above.

In the same size as the Nonpareil Twenty-fours Editions of the Prayer Book, and adapted by its cheapness to general use, and gratuitous distribution.

In these Editions of the Psalter, each, or one or more portions of each, of the Psalms is set to an appropriate Tune; and every word of each verse is placed under the note to which it is to be sung. The work, therefore, forms a complete Psalm Book for those who do not, as well as for those who do, join in congregational singing.

The Four Editions, of Scores and Voice Parts, extend to Ten Volumes, each Volume containing Three Hundred and Fifty Pages of Music, besides the Indices and Tables. But as all the volumes are printed page for page with each other, the most perfect uniformity extends throughout the whole series.

HULLAH'S PART MUSIC, in SCORE and in SEPARATE VOICE PARTS.

The following publishing arrangements are now in progress.

CLASS A, SACRED MUSIC for FOUR VOICES. The SCORE, bound and lettered, price 9s. The SEPARATE VOICE PARTS, (SOPRANO, ALTO, TENOR, and BASS,) 3s. each, bound and lettered.

CLASS A, SECULAR MUSIC for FOUR VOICES. The SCORE, price 9s., bound and lettered. The SEPARATE VOICE PARTS, (SOPRANO, ALTO, TENOR, and BASS,) 3s. each, bound and lettered.

CLASS A may also be had in the current form of publication, namely, in Numbers, containing both Sacred and Secular Music.—Nos. I. to VIII. (to be continued). Price, of the SCORE, 2s. 6d. per Number, and of the SEPARATE VOICE PARTS, 8d. each.

In every case, the Separate Voice Parts and the Score of the same Number or Volume, exactly correspond.

CLASS B, MUSIC in SCORE for the VOICES of WOMEN and CHILDREN. Nos. I., II., III., (to be continued), price 8d. each.

CLASS C, MUSIC in SCORE for the VOICES of MEN. Nos. I., II., III., (to be continued), price 8d. each.

HULLAH'S PART MUSIC, (though equally well adapted for the use of Families, Schools, and Amateur Societies,) is got up with a particular view to the requirements of the numerous UPPER SCHOOLS, now forming in every part of the kingdom, from among the Pupils instructed in Singing on the Method of Wilhem, as adapted to English use by JOHN HULLAH, under the Sanction of the Committee of Privy Council on Education.

London: JOHN W. PARKER, West Strand.

REVIEWS

Memoir of the Life of the Right Hon. Charles Lord Sydenham: with a Narrative of his Administration in Canada. Edited by his brother, G. Poulett Scrope, Esq., M.P. Murray.

THIS memoir contains but a brief and a slight sketch of a life of almost heroic industry and practical utility; for it is an appendage only to the more lengthy "Canadian Narrative," which was written at the death-bed request of Lord Sydenham, by Mr. Murdock, his civil secretary. Brief, however, as it is, it is pregnant with valuable suggestions, replete with instruction, profitable in example; and it will be perused with sympathy by the good, and with pleasure by all whose minds are elevated above the level of a fanatical tract or a Newgate novel. In this respect it fully justifies the preliminary observations of the Editor:—

"The public life of Lord Sydenham offers a rare, perhaps an unexampled, instance of the rapid attainment of eminent station by the force of personal qualifications alone. Without any peculiar advantages of birth, rank, fortune, or connexion, by the unaided exertions of his talents, industry, and tact, he had, before the age of forty, sat for fifteen years in Parliament—ten of them as the spontaneously selected representative of the great manufacturing capital of the country, Manchester—had been Minister of State ten years, in the Cabinet five, and occupied the station of Governor-General of all the British North American Colonies; being rewarded for his brilliant administration of this high office by a Peerage and the order of the Bath. Such a career cannot but be well worthy of study, whether by those who themselves are struggling forward in the pursuit of fame, wealth, and honour, or those who are contented to contemplate as by-standers the busy drama in which the million are toiling for these objects. Still more worthy of close study is such a life, if it can be shown, as in this instance it unquestionably can, that the mainspring of exertions thus arduous and successful was neither barren ambition, nor the vain lust of popular reputation, but a sincere desire to obtain the means of wide-spread usefulness."

To the other merits of this volume may be added that of the apropos. Of the race of statesmen who have made themselves names amid the din of war, or in the arena of party politics, the showy diplomatists, and brilliant orators, leaders of parties, and fortunate comers out of "great and glorious" wars, we have had enough. The wood of which such "great men" are made is as well known as the uses of which they are susceptible: but of that other and better race, who have achieved the glory of fixing a moral or legislative principle, who have advanced civilization by their teaching and their acts, who have developed social truths, beaten down time-honoured prejudices, and introduced practical improvements into the institutions of their country, our specimens have not been numerous. We have, as a nation, not learned to honour these peaceful triumphs, the victories of honest and laborious thought; and, as a nation, we are further than ever from the capability of comprehending them. Amidst the sterility of the literature of the day, we have need of works of some moral calibre, calculated to announce a higher sphere of action than that in which we habitually move; —works that will shake the complacent apathy of voluptuaries, disturb the blind confidence of routinists, and awaken the slaves of mammon from their dream of security. Such a book is the volume before us. Its moral atmosphere is wholesome and invigorating; and what is yet more, while it breathes of virtue, and is conversant with high thoughts, its matter is positive, demonstrable, and tangible. We must also add (for we will not conceal a portion of our thoughts), that the review of the free trade question which this Life offers to the reader, the honest confidence with which it advocates the doctrine, and the convincing proofs it offers of the success attendant upon even a partial adoption of the principle, confer on the memoir a positive utility, more immediate, if not more extensive, than that derivable from its general philosophy.

In adopting the editor's sentiment respecting the birth, rank, and fortune of Mr. Thomson, (for by that name Lord Sydenham is best known to the public,) in their influence on his future fortunes, we have considered these antecedents with reference to the ordinary statesmen of ordinary times. With such men, high rank and station, set off by the showy superficialities of a classical course of education, sufficed to success; and to want them was equivalent to a sentence of excommunication from office. But at the particular epoch at which Mr. Thomson entered upon public life, other endowments and other acquirements were in requisition; and we consider that the eminence to which this gentleman attained, depended immediately on his business education, business habits, and perfect isolation from conventional prejudices. The son of a prosperous merchant, he was independent in his circumstances, without being placed above the necessity for steady labour. His industry, too, was conversant with men and with things, more than with books, and the daily necessities of his vocation, while it supplied him with the facts so necessary to the formation of a new public opinion, gave that particular turn to his mind, which enabled him to draw from them their legitimate inferences. Of his education, Mr. Scrope says it was "in no degree completed at any public school, college, or university; but confined to a small private school or tutor." Those only who have been trained in the trammels of a public education, and have outgrown them, can know the load of prejudices which were thus avoided. On this point Mr. Scrope speaks with great judgment:—

"The peculiar qualifications which such an education is generally supposed to have a tendency to confer, namely, the spirit of emulation, the habit of pushing your way through a herd of jostling competitors, self-knowledge, and a just estimation of your own faculties, amenity in social intercourse, and a pleasing popular manner, the *savoir vivre*, in short, of society, are precisely those qualities for the possession of which Mr. C. Thomson was very peculiarly distinguished. And yet he was not only not educated, as has been said, at either a public school or university, but the possession of some at least of these qualities may undoubtedly, in a great degree, be traced to that very fact, and to his consequently being cast upon the busy world itself, rather than its supposed miniature resemblance, dependent only on his own resources, at a time of life at which young men, academically educated, are usually in a state of pupilage, watched by preceptors, associating only with youths of their own age, and kept under the control of a strict scholastic discipline."

Independent of the training of the counting-house, Mr. Thomson was enabled to acquire extensive and sound views of commercial interests, by a residence in St. Petersburgh, where he proceeded for the purpose of learning the business of his father's firm. This residence involved, also, the external and superficial advantages of grace and manner derived from a free intercourse with the polished society of that capital. The necessities of health likewise, after a short stay in Russia, carried him to Italy, and this also was not without influence upon his future destiny.

If chance did not place Mr. Thomson by his birth in the ranks of aristocracy, he seems to have been, in the German sense, (that is, in limb and feature,) "well born;" and in noticing the fact, Mr. Scrope relates an anecdote worth repeating:—

"In his infancy he was remarkable for the perfection of childish grace and beauty, yet attested by the pencil of Sir Thomas Lawrence; and hence, during the sojourn of the younger part of the family at Weymouth in the summer of 1803, he attracted the attention and became the especial favourite of the good old King, George III., then residing there for the benefit of his marine excursions, and whose partiality to children is well known. His elder brother yet remembers the terror inspired when at their first meeting with the sovereign on the Parade, General Garth was dispatched to bring the children to the presence, and they were subjected to a rapid interrogatory from the impatient monarch as to their names, birth, and parentage. After this, the King became so partial to Charles, the youngest, then not quite four years old, that he insisted on a daily visit from him, often watched at the window for his arrival, ran down himself to open the door to let him in, and carried him about in his arms to show all that could amuse the child, in the very ordinary lodging-house then occupied by the royal party, and especially the suppers laid out for the children's balls, which their majesties frequently gave for the amusement of their young favourites. On one occasion, the King being on the pier-head, about to embark in the royal yacht upon one of his sailing trips, and having the child in his arms, he turned round to Mr. Pitt, who was in attendance at his elbow, and exclaimed, 'Is not this a fine boy, Pitt? Fine boy, isn't he? Take him in your arms, Pitt; take him in your arms: charming child, isn't he?' Then suiting the action to the word, he made the stiff and solemn premier, weighed down as he seemed to be with cares of state, dandle and kiss the pretty boy, and carry him some minutes in his arms, albeit strange and unused to such a burden. * * Pitt, although no doubt fretted by his master's childish fancy, which exposed him to the ill-suppressed titter of the circle around, including several of the younger branches of the royal family, to whom the scene afforded great amusement, put the best countenance he could on the matter, but little thought, no doubt, that the infant he was required to nurse would, at no very distant time, have the offer of the same high official post which he then occupied, the chancellorship of the exchequer, and would be quoted as, perhaps, *next to himself*, the most remarkable instance in modern times of the early attainment of great public eminence by the force of talent alone; equally purchased, alas! by premature extinction, at the zenith of a brilliant career."

The mercantile occupations of Mr. Thomson not only opened to him the sources of an information unknown to the college-bred statesman of the day, though hourly becoming of greater importance to the legislator and the public functionary; but it introduced him under circumstances the most favourable, to the class of men who were just rising into political importance, the thriving constituencies of the great manufacturing towns.

The counting-house, however, did not long suffice to occupy Mr. Thomson's activity. His brother attributes his disgust with it to the excitement of foreign travel; and travel might indeed have made him acquainted with a better sphere, and have given direction to his first thoughts of emancipation. But it can scarcely be doubted that consciousness of the intellectual power he possessed must, from the first, have had much effect in awakening ambition, and directing him to pursuits of a loftier promise. On this point Mr. Scrope thus enlarges:—

"After so long a holiday, spent in the amusement and excitement of foreign travel, it was quite natural that the young man should feel the confinement and dull routine of a London counting-house extremely irksome; and his letters at this period contain many complaints of the kind. His anxious desire, indeed, both then and for some time after, was to exchange the occupation he had so far engaged in, for that of diplomacy, for which both his natural and acquired

Digitized by Google

qualifications, as well as the habits of foreign travel, and the society in which he had for some time moved, peculiarly fitted him. He had a remarkable knowledge of many languages, speaking French, German, Russ, and Italian, almost like a native; and his manner and address were courtly, refined, and fascinating. At his earnest solicitation endeavours were made by his friends with a view to obtain employment for him in some foreign embassy, fortunately without success. It was not long before he had reason to congratulate himself on the failure, and to discover that in an age and country of so practical a character as this, the knowledge of facts and habits of business to be acquired in commercial pursuits, by a mind endowed with faculties of a high order, are far more likely to lead to station and power than any familiarity with foreign courts or diplomatic intrigue. Had his wishes been fulfilled, and his career consequently changed, he might, and probably would, have grown grey in the pleasant but somewhat idle occupation of a *chargé d'affaires* at some petty foreign court, without ever attaining one-tenth part of the reputation or power, to which his mercantile education and information, gathered in the busy marts of British industry, speedily elevated him."

Notwithstanding all dislikes, however, Mr. Thomson did not retire from the firm; and after a year and a half's probation at home, he was sent a second time to St. Petersburgh, with a share in the conduct of the business—another accident most influential in his future success; as it stored his mind with additional and important observations on the practical workings of commerce,—that particular knowledge, which gave him his chief power over the minds of his contemporaries:—

"Here he remained for nearly two years, making the most of his time and the opportunities afforded by his admission to the best society of that capital, in which he was a general favourite, and especially among the diplomatic body. Nor did he neglect the study of books, and his anxiety to store up knowledge appears, from entries in his journal of this period, in which he occasionally records as a 'lost day,' one in which he had been able to add nothing to his previous acquirements."

In 1825, on his father's decease, we find Mr. Thomson once more actively engaged in the London counting-house; when he appears to have paid his tribute to youthful inexperience; having been in a slight degree "hit" on the breaking of the great commercial bubble of that speculating year. That year was further remarkable, in relation to Mr. Thomson's future destiny, inasmuch as it saw Mr. Huskisson President of the Board of Trade, and thus enabled to effect a revisal of the revenue laws and tariff:—

"Commercial questions were thus assuming a prominence in the debates of Parliament which might well suggest to a merchant entertaining enlarged views on these subjects, and conscious of the possession of an amount of knowledge and information which might be usefully brought to bear upon their discussion, the desire to take part in these debates. It was not difficult to perceive, that the time was favourable for men of practical experience in commercial affairs, not only to obtain a hearing, but even to exercise considerable influence in the deliberations of the House of Commons. Mr. C. Thomson, moreover, entertained strong opinions of a liberal character on the more ordinary political questions of the age. These principles were entirely self-formed. Those of his family, of his father certainly, were rather of the opposite complexion. But whether acquired by reflection during his residence among the despotic, and consequently stagnating states of the continent, or from his course of reading, or from the general bent of his mind, or, as seems most probable, from all these influences combined, certain it is that his political principles were from the first of a very liberal character, and led him to cultivate the society of those who entertained similar views on questions of public interest. He thus became acquainted about this time, among others, with Dr. Bowring, Mr. Mill, Mr. Warburton, and Mr. Hume, and was occasionally admitted to the hospitality of the eccentric and amiable Bentham. He likewise studied the science of Political Economy with Mr. M'Culloch, and frequented the Political Economy Club then lately instituted."

In the summer of 1825 Mr. Thomson offered himself (much against the advice of his business friends,) as member for Dover, and, after a severe struggle, he was returned. It is needless to add, that Mr. Thomson entered warmly under the banner of Mr. Huskisson, and proved himself a valuable ally, while he made a reputation, not indeed as a brilliant speaker, but of one whose knowledge would always ensure him the ear of the house. In 1829 he made his most successful speech on the motion for a committee on the silk trade. His peroration on the inefficiency of protection was striking, and will even now be read by many with profit:—

"Buonaparte, when at the height of his power he fulminated his decrees from the palace of the Duomo of Milan, which was to annihilate his only rival, thought but little that his orders could be contested, or his will disputed. And yet, what was the result? He, whose armies successively occupied every capital of Europe,—who made and unmade kings with a breath,—was set at nought by the lowest of his subjects. The smuggler bearded him in the streets of his capital, and set his power at defiance in his own ports and cities. The goods, which he refused to admit, found their way through the Frozen Ocean into the heart of France. I speak from personal knowledge when I say, that an uninterrupted line of communication was established between Archangel and Paris; and goods, even the bulky articles of sugar, coffee, and manufactures, were conveyed with as much ease and safety, though at a proportionally increased cost, as from London to Havre. Insurances were then as currently effected at Brody and at Leipsic as at Lloyd's or at New York."

The policy of awaiting treaties of reciprocity to grant reforms otherwise admitted desirable, he completely smashes in a few words:—

"It is hopeless, then for any nation to attempt to exclude the productions of another. They may injure their own subjects by enhancing the price, but exclude they cannot. But the advantage to a country in first adopting the principle of freedom of trade is not merely relative, but positive. Under a system of restriction with us, other nations may make and uphold corresponding restrictions; but if we set the example of free intercourse, they may make, but I defy them to uphold them. They may struggle for a time to comply with the wishes of the ignorant and interested producers in their own country, but they cannot do so long. The ruin of their own trade,—the destruction of the property of all those who are not immediately interested in the monopoly,—the outcry of the whole mass of consumers, will drive them into a better and wiser course. If we wait till they grant reciprocity, we are the slaves of their will; if we give free admission to their produce, they become the servants of ours. What is the case with France at the present moment? * * I refer to it with deep regret,—I lament it, because I consider her interests as identified with our own,—because I think that we have run too long the race of competition in the arts of destruction;—because I think that the time is come, when we should run that course for which nature intended us—the race of competition in industry, in wealth, and in civilization;—I lament it, because, from my soul, I believe that one country cannot improve without benefiting her neighbour,—because I feel sure that no gale can pass over France, fraught with wealth, with prosperity, or with happiness, without bearing a portion of those blessings to Britain. I will not speak of her cotton mills—she may raise printed cottons at a dear rate—she may raise iron, instead of taking it from us, at double the cost; but what effect does this have upon the general industry of the country? What do those classes of producers say to this system, who find that there is no longer any demand for their produce? Are they satisfied? * * 'What,' say they, 'is the basis of the prohibitive system? A chimera. To sell without buying. A secret still to be discovered.' * * It is no more in the power of governments to uphold for long, than it is for the interests of nations to suffer, such a system."

It is a lamentable fact, and one that speaks volumes for the defective education of the "educated classes," both at home and in France, that these truths should still require reiteration, and that the common sense of the public should not long ago have enforced the adoption of a wiser and more generous policy.

In the year 1830, Earl Grey, in coming into office, offered the Vice-Presidentship of the Board of Trade, with the Treasurership of the Navy, to Mr. Thomson, and he accepted the offer; thus succeeding to the dropped mantle of Mr. Huskisson, whose premature and violent death, still deplored as a national misfortune, had, then, not long occurred. He now withdrew altogether from the commercial firm, and devoted all his time and faculties to the public service.

We cannot follow the new official through the detail of fiscal reforms which he was then enabled to carry; but we must notice with pain, that so early as 1832 his journals announce that his health was grievously impaired by the labours of office; preparing the reader to anticipate that he was eventually, like so many other faithful servants of the public, to pay with his life his share in the overwrought direction of our national affairs:—

"The excessive application of Mr. Thomson to public business during this session materially affected his health. Attendance on some committees in the morning, his office, and the night passed in the House, often till two or three in the morning, were more than any constitution could bear, any energy successfully contend with. His journal, which from about this period was kept with tolerable regularity, contains occasionally such entries as the following:—'August 28th, Saturday.—A week of the hardest possible labour. I have not returned from the House any day till three o'clock; on Wednesday not till four. It is impossible to stand this! I find my body quite exhausted, and my mind equally worn out. All this week I have alternated between the bank and silk committees, and then the House. On Wednesday I carried my bill (the Customs Duties) through the committee: was at it from five till two in the morning, nine mortal hours! . . . I passed my bill to-day, thank God!'"

This evil is still in mischievous existence, enhancing the embarrassments, and distracting the attention of the ablest officials: strange that an instinct of self-preservation has not long since led the parliament to a revisal of its mode of business, and delegated much of its laborious trifling with trifles to subordinate authorities!

In 1832, at the general election, Mr. Thomson was chosen member for Manchester, without his personal interference; and he availed himself of the circumstance to end the burthensome and unsatisfactory connexion with the borough of Dover, which he had, at great pecuniary sacrifices, hitherto maintained. Mr. Thomson's sentiments on the Corn Laws are well known; and in explanation of his holding office without attacking them, it is stated that the apathy of the commercial classes had enforced on the ministry that delay in introducing measures of reform, for which they were at the time so perseveringly reprobated. When the time for action came, he was no longer at home; but his letters are highly interesting, and not less honourable to his principles than to the accuracy of his anticipations. On the announcement of the budget, in 1841, he thus writes to Mr. Baring:—

"You have taken a bold step, and I am all impatience to learn the result, which must of course have been ascertained by this time. But, whatever it be, I sincerely rejoice at your having taken your stand with the country upon a great, an intelligible, and, above all, a *practical* measure of reform. It has every thing to recommend it, in what it touches, and in what it lets alone. It does *not* meddle with religious

Digitized by Google

prejudices; it does *not* relate to Ireland; it does *not* touch on any of the theoretical questions of government on which parties have so long been divided. It *is* a new flag to fight under, and must prevail eventually, whatever be its success now. The only criticism I should be disposed to pass on your proceeding, is the mode of introducing the question."

And again, a month later:—

"The last accounts I have make me think that the whole of your plan is likely to be upset by the Tories and the class interests. But, never mind. The seed is sown—and the flag of commercial reform is at last unfurled, and sooner or later it must triumph. The debate of the 18th May (my latest news) tells me nothing of what your course will be; but I trust, for your own sakes and that of the cause, that you will not have abandoned the helm to the Tories upon the mere defeat upon the Sugar Duties, which was of course inevitable. It seems to me that, having once entered upon this new contest, you are bound to proceed with it. If they beat you on Sugar, give them Timber; if they beat you on that, give them Corn. The discussions must benefit you, and *must* injure them. And when beaten on all, and your course of policy fairly before the country, test it with a dissolution, which though it can scarcely be expected to give you a majority, or render resignation unnecessary, will at least have ranged parties under the new banners, both on one side and the other, and enable you *to force your measures on another government*, should your own not get back."

Finally, when the result of the elections was fully known, he thus once more gives vent to his convictions:—

"I am too much broken in health to take much more than the interest of a spectator in the political struggle, if there be one, next session; and I shall not be at all sorry for the opportunity of trying by quiet and amusement to save the remains of my constitution; but I cannot but feel deeply anxious about the country, and I am very gloomy as to its prospects. *The evil which ten years ago I predicted, if we did not liberalise our commercial policy, has fallen on it.* We have successful rivals everywhere, and friends nowhere. Even the bold and gallant struggle you have made is misrepresented, and attributed, not to its true motive, a conviction of the truth of the principles of free trade, but the desire to *mislead* other nations, and prevent them from following you in your (*successful!!*) policy of protection and prohibition. That, however, is no excuse for the folly and ingratitude of the English people, for which they will pay dearly if I am not mistaken."

On the subject of Mr. Thomson's mission to Canada we are told that—

"In the early part of the year 1836 Mr. Poulett Thomson had found his health so seriously affected by the long night sittings in the House of Commons, that he began to consider the necessity of some change from the position he then occupied to one which should be more compatible with his physical powers. * * In discussing the idea with his friends, the government of Canada was mentioned as a post that might be open to him. In conversation with Lord Spencer (his oldest and warmest political associate and friend), the latter recommended him to accept this noble task. And Mr. Thomson's private journal quotes one of the expressions he made use of, and which deserves to find a place here, as characteristic of the real motive and spring of the public conduct of both men. 'Lord A. said he thought Canada 'the finest field of exertion for any one, as affording *the greatest power of doing the greatest good to one's fellow-creatures.*' I agree with him.' It was by this consideration, no doubt, that his determination was guided, when, towards the close of the session, new ministerial arrangements being in contemplation (consequent partly on Mr. Spring Rice's elevation to the peerage, and appointment to the comptrollership of the Exchequer), he had to make choice between the Chancellorship of the Exchequer, and the Government of Canada, which were offered to him. Either alternative presented disadvantages perhaps of equal force as respected health. The continued fatigue of attendance in the House of Commons was likely to be quite as injurious in the one case, as the severity of a northern climate would be in the other. His decision was therefore chiefly influenced by the feeeling of where he could make his abilities and energies most useful. The situation of affairs in Canada was perplexing, and the difficulties great in the way of an harmonious settlement of the all-important question of the union of the provinces, and the establishment of an entirely new constitution for their future government. But Mr. Thomson felt confident of being able to surmount these difficulties. He expressed this confidence repeatedly to his private friends. And the result justified his most sanguine anticipations."

It is delightful to contemplate human nature under a point of view so exalted; but we cannot pursue our very brief and imperfect *resumé* of Mr. Thomson's career, through the multitudinous details of his Canada government. The clear narrative which Mr. Murdock has drawn up of his administration, we must therefore leave to the notice of journals professedly political. The account may be thought by some too eulogistical; but, for our own parts, we consider it as a pregnant illustration of the influence of personal character upon the success of public measures. Common honesty in dealing with the colony, the application of sound political principles, candour and steadiness of action, a manly yet conciliating deportment, and an energetic firmness in dealing with persons and events, in one year restored peace and contentment to a distracted colony.

A few incidental passages of episodical interest we may advert to next week.

Oberon's Vision in the Midsummer Night's Dream, illustrated by a comparison with Lylie's Endymion. By the Rev. N. J. Halpin. Printed for the Shakespeare Society.

THIS is one of the most curious and interesting Shakspearian essays that has come under our notice for a long time. We cannot do better than begin by citing the enchanting passage which has been the subject of Mr. Halpin's critical labours:—

Oberon. My gentle Puck, come hither. Thou rememberest,
Since once I sat upon a promontory,
And heard a mermaid, on a dolphin's back,
Uttering such dulcet and harmonious breath,
That the rude sea grew civil at her song;
And certain stars shot madly from their spheres,
To hear the sea-maid's music.
Puck. I remember.
Oberon. That very time I saw—but thou couldst not—
Flying between the cold moon and the earth,
Cupid all-armed: a certain aim he took
At a fair Vestal, throned by the West,
And loosed a love-shaft smartly from his bow,
As it should pierce a hundred thousand hearts;
But I might see young Cupid's fiery shaft
Quenched in the chaste beams of the wat'ry moon,
And the Imperial Votaress passed on,
In maiden meditation, fancy-free.
Yet marked I where the bolt of Cupid fell:
It fell upon a LITTLE WESTERN FLOWER—
Before milk-white, now purple with Love's wound—
And maidens call it *Love in Idleness.*
Fetch me that Flower.

The allegorical character of this passage has been acknowledged by all the commentators, who have generally adopted (some, indeed, with much hesitation) Warburton's solution of the poetical riddle. The reader may be briefly reminded that, according to that critic, "the fair vestal" shadowed Queen Elizabeth; the mermaid represented Mary Queen of Scots; the "dolphin's back" alluded to Mary's union with the Dauphin, son of Henry II. of France; the "rude sea" meant Scotland, which rose up in arms while she was in France, but "grew civil" upon her return home; and lastly, that the "stars," which "shot madly from their spheres," were the Earls of Northumberland and Westmoreland, who fell in the quarrel of the Queen of Scots.

We think Mr. Halpin has demonstrated that this is "an explanation which explains nothing," and that he has succeeded in discovering the true key to the crypt. To overthrow the hypothesis of Warburton was the easiest part of Mr. Halpin's task. He observes—

"Warburton says, 'the *action* of the Mermaid is laid in the *same time and place* with Cupid's attack upon the Vestal.' Supposing the Mermaid to mean Mary, as the Vestal unquestionably means Elizabeth—supposing also the *action* ascribed to Mary to be any one of the fatal amours which involved the death of Darnley, the Duke of Norfolk, and others of the English nobility—what is the *cotemporary* action of Elizabeth, which, occurring at the *same place*, is figured out in the remainder of the allegory? What light has the critic thrown on this? Not a sparkle. Dazzled with his own conceit, he did not perceive, nor does any of the succeeding editors, appear to have observed the lache, that, in his exposition, *one* of the supposed cotemporary actions is left unexplained, nay, unalluded to, except in the *obiter* remark, that it affords 'as fine a metamorphosis as any in Ovid:' and the sum total of this brilliant illustration amounts to no more than that, somewhere in the reign of Mary Queen of Scots, Cupid aimed a love-shaft at Elizabeth Queen of England, which, repulsed by her chastity, fell upon a *little flower*, and metamorphosed it from *white* to *purple!* Who is not inclined to exclaim at such an anti-climax, 'Oh, most lame and impotent conclusion!'"

Again, he justly remarks—

"The main source of this error—or rather of its perpetuation—is the uncritical conception that part of the language and imagery of the allegory is figurative, and part literal. Thus all about the mermaid, all about the vestal, all about Cupid, every thing, in fact, till we come to *the little flower*, is supposed to be allegory; but, though the very bolt which falls upon and wounds it has an allegorical meaning—yea, though its change from white to purple partake of the same allegorical character—*the little flower* itself is nothing but a little flower—a real, literal, 'little western flower'—a species of *pansy* commonly known by the name of *Love in idleness!*"

But what if the "little western flower," despised or o'erlooked by Warburton, should turn out to be the principal figure of the whole mystic group!—

"It is obvious that, throughout the passage under consideration, the little flower is the leading object, the principal figure, to whose developement all the rest—the mermaid and her dolphin, the music and the stars, Cupid and his quiver, the vestal and her moonbeams—are but accessories, intimating the time, the place, and the occasion, of its investment with its present singular qualities. The language throughout, with the exception of *the little flower*, is admitted to be allegorical. If this be really the case, if we are to take the little flower in its literal meaning, as a little western flower and 'nothing more'—we have then, instead of a poetical beauty, a poetical anomaly, of which it would be difficult to find another example in the whole range of literature—an allegory, to wit, in which all the accessories are allegorical, but the principal figure real and literal! I think this is too absurd to be charged even upon Shakespeare, with all the ignorance, all the carelessness, and all the absurdities which commentators spare not on any occasion to lay to his account. I therefore infer that our 'little western flower' is also an allegorical personage: and I am the bolder to do so, because I find it susceptible of such passions as flesh and blood is heir to—the wounds of love, and the deep blush of either secret passion or conscious guilt. I conclude also that this personage is a female; not only because the delicate flower is an appropriate image of feminine beauty, but because the shaft levelled at a female bosom penetrates its heart and influences its destinies."

Here Mr. Halpin anticipates the objection that if the "little flower" be a lady of humble rank, rivalling her royal mistress, "we ought to find that royal mistress under the correlative image of a more magnificent flower." And so we do!—that other herb—

Whose liquor hath this virtuous property,
To take from thence all error by its might,

and which, applied to the eyes of Titania and Lysander, produces that blessed effect—

Dian's bud o'er Cupid's flower
Hath such force and blessed power.

That "Dian's bud" is emblematic of the maiden Queen, Mr. Halpin establishes by

Digitized by Google

reference to Greene's drama of Friar Bacon and Friar Bungay, in which Elizabeth is complimented under the type of "Dian's rose."

Now, can "the little western flower" be the Queen of Scots? No, for many reasons:—

"Mary did not stand, with reference to Elizabeth, as a *little* flower, or a *western* flower. She was a Queen, therefore Elizabeth's equal; and her kingdom lay north, not *west*, of her rival's. But the conclusive fact against them is, that the two Queens were never engaged (as this supposition and the text require) in an affair of the *heart* with the same person, though they each had a tender of the same *hand*."

The subject of the allegory is plainly "a lover seeking vehemently, but in vain, to win the hand of Elizabeth, whilst he was successfully engaged in winning the affections or corrupting the virtue of a lady of inferior rank." "This," says Mr. Halpin, "is the plain prose of Shakespeare's exquisite poetry."

There are, therefore, three questions to be answered: Who was the lover? who was the lady shadowed out by the "little western flower"? what was the time and place of Cupid's feat of archery?

In the answers to two of these questions, Mr. Halpin has been anticipated by Mr. Boaden, who was led, by Scott's romance of Kenilworth, to approximate to the truth which the author of the essay before us has developed. But if Scott conducted Mr. Boaden in the right direction, so far as to show him the Earl of Leicester in "Cupid all-armed," and to indicate the "princely pleasures" of the Castle of Kenilworth, during the visit of the maiden Queen in 1575, as the scene and epoch of Oberon's vision,* the great novelist (indifferent to exact chronology) also led him astray, by fixing his attention upon Amy Robsart as the hapless rival of the "imperial votaress," figured "beautifully and touchingly," says Mr. Boaden, by the—

> Little western flower—
> Before milk-white, now purple with love's wound—
> And maidens call it *Love in Idleness*.

But Amy Robsart could not have been the lady intended, for, says Mr. Halpin, "her death took place full fifteen years before the Princely Pleasures of Kenilworth," and "was in nowise connected with the dark intrigue which troubled those festivities."

Leicester, however, had two other wives! Are we to seek in the Lady Douglas, the widow of the Earl of Sheffield, or in Lettice, the wife of the Earl of Essex, the lady truly intended by Shakspeare? Mr. Halpin briefly recapitulates the stories of the three wives of the voluptuous and profligate Leicester, and arrives at the conclusion, that the dark intrigue with the lady of the unfortunate Lord Essex, was the event so beautifully allegorized by our poet.

Of the historical evidence produced to establish this interesting point, we have only room for so much as directly relates to the Countess of Essex:—

"The death of Essex took place in July, 1576; and, as the intrigue with his wife was productive of two children, it must have been going on throughout the whole of 1575 (the year of the Princely Pleasures of Kenilworth) and part, at least, of the preceding year. And when we consider that the bringing up of young Dudley (his son by the Countess of Sheffield) was kept carefully concealed, 'as well to hide it *from the Countess of Essex*, to whom Leicester was privately contracted, if not married, as to prevent the Queen's knowledge of the Earl's engagements with his mother,' we trace with certainty the guilty connexion with the Lady Lettice up to the year following that in which her unhappy husband first set out on his Irish expedition. It was under the untoward circumstances of this fatal intrigue that Essex first returned to the court of Elizabeth in 1575; 'and here,' says his biographer, 'he was far from stifling the just indignation he had conceived against the all-powerful favourite for the inexcusable usage he had met with. But as was the custom of that great man to debase his enemies by exalting them, so he procured an order for the Earl's return to Ireland with the sounding title of Earl Marshal.'"

And again:—

"The date of his intrigue with the Countess of Essex brings the Princely Pleasures of Kenilworth close upon the time when either its natural effects, or the intimacy of the parties, the more free because as yet unsuspected, or the alarm between them on the arrival of the injured but unconscious husband, would betray it to observers so acute and practised as the royal coterie. Doubtless, the ladies of the court attended their mistress on her Summer Progress: doubtless, the wives of her principal officers of state and of her chief nobility either attended in her suite, or were invited to grace her reception. Amongst one or other of those classes, it is but natural to suppose that the wife of a nobleman so high as Essex in the confidence and employment of the Queen, and a mistress so dear to the heart of her Majesty's princely entertainer, would not have been omitted. We may then safely conclude that the Countess of Essex was a partaker of those splendid festivities; and as lovers are known to think themselves most unobserved when most in a crowd of company, no occasion can be imagined more likely to encourage those petty indiscretions which would betray their secret to the keen-sighted few, than the crowded and bustling scenes of pleasure in which they were engaged. '*I* saw, but *thou* couldst not,' is the sly remark of Oberon."

The historical and biographical character of this essay is even more fascinating than its merits as a piece of elegant criticism. How interesting it is to find the romantic tale, so long hidden under the figured veil thrown over it by the poet's art, closely and tragically connected with the fate of Shakspeare's own near kinsman! This was Edward Arden. Let Mr. Halpin, aided by old Dugdale, relate his history:—

"Edward Arden, of Parkhall, in Warwickshire, was, at this period, the head of the Arden family. He and Mary Shakespeare, the mother of William, were the lineal descendants of Walter Arden (or Ardern, as the name was sometimes spelled) and Alionora, daughter of John Hampden, of Hampden, in Buckinghamshire; they were consequently nearly akin, and inherited in common a portion of that independent blood which, in a succeeding generation, animated the great and virtuous Hampden in his struggles against the abused prerogatives of Royalty. Young Arden sustained the name and honours of his family with an independent spirit: but in 1583 he fell a victim to the vengeance of the implacable Leicester, on the pretence, indeed, of high treason against the Queen, but in reality, for the higher treason of having scorned the pretensions of the overbearing 'Upstart,' discovered his guilty intrigue, and boldly taxed him with the crime. Dugdale's account of the matter is too essential to the story to be degraded to a foot-note; I shall therefore, at the risk of repetition, transcribe it into the text. 'This Edward,' quoth he, in his account of the Arden family, 'though a Gentleman not inferiour to the rest of his ancestors in those virtues wherewith they were adorned, had the hard hap to come to an untimely death, in the 27th of Elizabeth: the charge laid against him being no less than high treason against the Queen, as privie to some foul intentions that Master Somervil, his son-in-law, (a Roman Catholic) had towards her person: for which he was prosecuted with so great rigour and violence by the Earl of Leicester's means, whom he had irritated in some particulars, (as I have credibly heard) partly in disdaining to wear his livery, which many of this county of his rank thought, in those days, no small honour to them, but *chiefly for galling him by certain harsh expressions, touching his private accesses to the Countess of Essex, before she was his wife*; that, through the testimony of one Hall, a priest, he was found guiltie of the fact, and lost his life in Smithfield.'"

The conjecture is highly reasonable, that it was on the occasion of the reception of the Queen at Kenilworth that Arden was required, or expected, to appear in the livery of the proud Earl. That he was present on that occasion, may be presumed from the fact that he was High Sheriff of Warwickshire in the preceding year. Is it not probable, then, that it was *there* he discovered the dangerous secret which cost him his life? Have we not, "at all events, in this transaction the certain source of our poet's interest in the Kenilworth mystery, and of his accurate acquaintance with its details?" And have we not, also, "in the connexion between the death of Edward Arden, and the guilty secret of the Lady Essex, the grounds of a probable conclusion, that her ladyship is the person intended to be designated under the allegory of '*the little western flower*'?"

But Mr. Halpin has opened another mine of evidence in his examination of the Endymion of John Lylie, the euphuist. He discovers in that quaint drama more than "the resuscitated images of a faded mythology"—the "masquerade of real and recent events," those events being the amours of the Earl of Leicester, figured by Endymion, while Queen Elizabeth and the Countesses of Sheffield and Essex appear under the respective names of Cynthia, Tellus, and Floscula. The reader will be instantly struck by the name of Floscula,—the "little flower" of the vision of Oberon! But where is the Tellus of the Shakspearian allegory? Has the Countess of Sheffield no place there? the author calls our attention to one line, which has hitherto escaped the notice of the commentators. Oberon describes Cupid as—

> Flying between the *cold Moon* and the *Earth*!

whilst aiming the shaft which, leaving unhurt the "fair vestal," proved fatal to the "little western flower." "This passage," observes Mr. Halpin, "brings the two versions of the story into such complete harmony, and represents so exactly the position which Leicester occupied with respect to the three ladies at the particular crisis, that I cannot but think its evidence, fairly considered, almost demonstrative of the view I have undertaken to establish."

Again he says:—

"The result of a comparison between the two pieces gives the following *dramatis personæ*, with their respective originals, namely:—

LYLIE'S.	SHAKESPEARE'S.	THE ORIGINALS.
Cynthia.	The Moon.	Queen Elizabeth.
Tellus.	The Earth.	Countess of Sheffield.
Floscula.	The Little Flower.	Countess of Essex.
Endymion.	Cupid.	Earl of Leicester.

A glance at those corresponding names will, I conceive, suffice to confirm the assignment I have made (in the first part of this essay) of the character of the Little Flower to the Countess of Essex, and (in the second part) of Tellus to the Countess of Sheffield. For if *Tellus*, in the Endymion, be (as I think we have reason to believe) the Lady Douglas, and her counterpart in Oberon's Vision be the *Earth*, it follows, as a necessary consequence, from the conformity of the allegory with the original story, that the Little Flower can be no other than the Lady Lettice. Again; if *the Little Flower* in Oberon's Vision be (as we have equally good grounds to suppose) the representative of the Lady Lettice, and that her counterpart in the Endymion be *Floscula*, the inference, in like manner, is irresistible that Tellus must signify the Lady Douglas, and nobody else. This looks like an argument in a circle, but it is not so. It is merely the light mutually thrown from two converging surfaces, each illumining what is dark in its fellow by reflection from what is bright in itself—the illustration which cotemporary poets lend to and borrow from each other."

It is right to mention that Mr. Halpin considers the Endymion to have been written during the life-time of the Earl of Leicester, and the Midsummer-Night's Dream, after that event.

* That the prodigies described by Oberon refer to the pageants exhibited at Kenilworth for the Queen's entertainment, is proved, by comparing the language of Shakspeare with the accounts of the Kenilworth festivities by Gascoyne, Laneham, and Dugdale. Mr. Halpin cites these accounts, but our limited space must excuse us for not doing so.

Digitized by Google

The concluding part of the essay applies to the anticipated objection "that no poet during the lifetime of parties so powerful, would have ventured to take such liberties with their characters and concerns; and, least of all, presumed, in presence of the Queen, to depict with such exactness the circumstances of her domestic life." To obviate this remark Mr. Halpin goes into a learned consideration of the character of the drama of the Shakspearian age. He observes that the degree of licence with which it "staged" the lives and fortunes of living personages, "would startle those who have not studied it in this point of view." We have over-stepped our limits, or we should follow the writer through some few instances which he produces, of liberties taken in both the regular drama and the mask, even with crowned heads. But Mr. Halpin promises a work upon this subject, proportioned to its extent and importance, so that we trust we shall have another and speedy opportunity for examining the views of so competent an inquirer.

The Hand-Book of Taste: or, How to Observe Works of Art, especially Cartoons, Pictures, and Statues. By Fabius Pictor. Longman & Co.

THE thoughtful reader will be startled at the very title of this work—'The Hand-Book of Taste: *or*, How to Observe Works of Art, *especially* Cartoons, Pictures, and Statues.' Why, surely the principles of Taste are universal, and applicable alike to poetry, to painting, to sculpture, to eloquence—to the mere motions of the body—to dress—in short, to most things, great and small, which are the subject of man's thoughts and actions; and a title so comprehensive as 'The Hand-Book of Taste' ought not to have been modified or limited, as it is, by the subsequent paragraph.

Notwithstanding this degradation of a great and universal principle to a temporary purpose and a special use—this stopping a bung-hole with the noble dust of Alexander—we opened the book with eagerness, and sat down to its examination, in the fond expectation that some philosophic and high-souled man had stooped to guide the British public through the untrodden fields of that new era of Art which is now opened up in the institution of a national school of historical painting, or had, at least, furnished to the hand of the learned or the unlearned the torch of æsthetic science and the *filum labyrinthi* of critical skill, by the aid of which the unseeing might be able to see and the unskilled to understand. Nor, indeed, do we know a task more fitting to a noble mind, versant in the mysteries of the true and the beautiful, than to undertake to lead the willing minds of his countrymen up to the love and the discrimination of that which is admirable in the works of the great and the wise, who have created beautiful forms for precious truths in our own or other times.

But, alas! this is not *the* book. Our disappointment is not less than was our hope. It is, indeed, a disservice to the cause it professes to advance. It is a collection of the trite truisms of writers on art, unenlivened and disjointed; vague generalities are thrown together, but without the cement of systematic views, or the warmth of high feeling; they want unity or continuity, and are little else than a collection of the dry bones of effete dilettantism. There are, nevertheless, many truths in the book, but bald and inconsequential, so that we have truth itself looking untrue. We regret this exceedingly; for a Hand-Book of Taste was wanted, and this is published at the right time, and plainly with the right intention. The author has doubtless read up his subject, but he has failed to place himself in the position of an individual of the multitude, whom he undertakes to teach. Let us conceive that, with this book in his hand, one of our honest citizens should sit down before the Cartoons, and put, *bonâ fide*, this question to himself. How am I to examine these Cartoons? He begins, as we now do, at its beginning. The first chapter tells him that "the spirit of the fine arts consists in the union of beauty with utility"; that "taste is a standard formed by experience"; that there are "Rules of Taste, possessing the authority of all men of intelligence, both critics and artists"; and that by these the author proposes "to teach the observer how to distinguish a good artist." Now let us see how the question, well put, is solved by our author for the willing spectator.

1. "An object of art should produce pleasure; now pleasure is a moderate impression which objects produce on our organs,—not too strong nor too weak." 2. "Allegorical and metaphorical subjects are unfit for the good artist." 3. "Perfection is what constitutes beauty." 4. "Nature never presents us with any one individual uniformly beautiful." 5. "The artist must improve upon Nature" [gild refined gold?] 6. "The artist who imitated Nature precisely would fail entirely in his aim" [alas, poor Nature! poorer artist!] "The real value of art does not consist in pourtraying Nature as she is, but as she might be."

And is it thus, says our worthy citizen, that I am to judge of these Cartoons? They should represent Nature not as she ever is, but as she always ought to be? Ah, very well, I will try! But then how am I to know what Nature ought to have been? I will read on, and see!

Of portraits:—1. "A portrait, to be really good, should approximate as near as possible to the beau ideal." 2. "In truth, there is no great merit in it if the portrait be merely a likeness." 3. "This beau ideal is well exemplified in the instance of Reynolds's Garrick between Tragedy and Comedy!" [This, it must be inferred, is the author's best of portraits!!!] 4. "It is an error to suppose that delusion, that is, cheating us into a belief that the images represented are realities, forms an object of the fine arts!"

What, then, am I to look for, (the bewildered citizen inquires,) in a portrait, if not for a likeness, that looks at me, and seems to wish to speak to me, and is plainly my friend, as I have seen him in his happiest, gayest, most confidential hours?—what, in the name of all that is great and good, am I to look for in the portrait, if not for a living, breathing, speaking, thinking likeness of my friend? Patience, my good sir. "When an accomplished actor personates Lear or Richard with the most eloquent gesticulation, &c. and artful arrangement of countenance, you never imagine that kings and princes really so act and speak"—"in like manner, no sculptor ever sought to persuade you that the marble he had fashioned was a sentient being."—"All he wants is not to destroy that tacit convention which exists between yourself and him, that his statue represents the object *he wishes!*"

Alas! citizen friend, you look unutterable despair. This portrait business, simple as it is, passes your comprehension. You went to see a likeness of your old friend. The artist paints instead the *beau ideal*—you grumble, and Fabius Pictor tells you how to observe portraits and to judge of artists. They are to paint the beau ideal, and you are to admire it, according to the book, or for ever hold your peace.

But now forgetting, dear citizen, your friend and his portrait, pray go on and be instructed. We are now to read of beauty and of the beau ideal. You know not yet how to look, observe, judge, or admire—pray pick up the Hand-book, try once more, and you *shall* admire, and *shall* know. 1. "Beauty consists in form and colour, but principally the former." 2. "Forms vary—but of whatever description they may be, they should never be ordinary, but always select." 3. "The human body exhibits on its surface [precisely] 666 parts—4. "each of these parts is therefore possessed of a form more or less approaching to, or receding from, the standard of beauty,"—"he who possesses the greatest number of them [these 666 parts] in most perfection, possesses the greatest natural beauty of form." 5. "Nor can the observer appreciate the merit of his works without somewhat of a similar knowledge" [viz. of these 666 parts].

Here, then, good friend, you have it: you have only to begin and learn your 666 parts, and you have then mastered the A B C of artistic criticism. Luckily, "the climate and habits of European nations do not permit the person to be exposed," and this somewhat mitigates the difficulty; but then you must in a proportionate degree study the mysteries of drapery, which "assists materially in producing variety, not only in colouring, but in the forms and lineaments, by a judicious distribution of the folds and plaits," and which the artist disposes "round his figures in a manner which indicates their principal lineaments"—after the fashion of the ancients, we presume, who "had none of those feelings of delicacy which influence us; their drapery therefore was commonly managed so as to conceal as little as possible the forms beneath it. For this purpose it was generally wetted; * * the effect thus produced is excellent when the robes are not too scanty. * * The examples of ancient drapery not wetted are very few. * * The artist evinces his power when he has the skill to adjust them round the limbs with ease and simplicity, and yet preserve a character of lightness and grace."

Thus you see, good citizen, the drapery is to be wet, and then it is to be adjusted as it ought—that is, with ease, simplicity, lightness, and grace: this is the beau ideal in textures and fabrics—you understand, don't you?

As a Hand-book for the multitude, or as a Hand-book at all, this work fails of its design: it is not, however, without merit; there is some pleasant enough talk about Art in it, and there are one or two good enough criticisms on individual works of art. The vague plausibilities of empirical criticism are, however, the weeds that most of all encumber and check the growth of wholesome art; and the tendency of this work is to give circulation to the cant of superficial criticism rather than to foster the openness, honesty, and susceptibility which a sound and kindly heart should bring to the contemplation of those works of genius and skill, which are designed to perpetuate and extend among the people the enjoyment of whatever in nature is most beautiful, in human character most lovely, in the records of the past most instructive, or in the conceptions of the human mind most pure and perfect.

This sorrowful protest entered, we shall quote occasional passages from the little work, in the hope that in themselves, or as suggestions for thought, they may do some small service to the good cause.

"Sir Joshua Reynolds," the writer says, "did not succeed in teaching the young student how to become a good artist, because public taste was unable to appreciate works in the grand style, which Reynolds himself deserted. It has not advanced much, from his time to our own—partially, perhaps, it has receded, while that of other countries has advanced with giant steps."

There is some truth here, but not without its consolation. If any one surveys the progress of Art in this country, he cannot fail to see that since the Reformation, there have existed no circumstances to call into being and foster Art in the grand style. Had there been, why should we doubt that it would have ap-

Digitized by Google

peared? Was English Art, in the fifteenth and sixteenth centuries, in its various modes of developement, in Architecture, Sculpture, Decoration generally, &c., much behind that of other European nations? Up to the days of the Reformation, did we not create works of Art, which are still remarkable among those of their period. What has Mr. Eastlake said? "That the Arts in England, under Henry III. in the thirteenth century, were as much advanced as in Italy itself; that our architecture was even more characteristic, and freer from classic influence; that sculpture, to judge from Wells Cathedral, bid fair to rival the contemporary efforts in Tuscany, and that our painting of the same period might fairly compete with that of Sienna." Of late years Art, in the grand style, was called for in Germany, and it came at the bidding. There is a prospect that such Art will be wanted by ourselves. Will it not come at our call? If England be behind what Italy was, England is not worse off than Italy itself. We admit that the standard of public taste is low in this country; but if we can awaken public attention—if we can rouse the public to take an interest in the subject, it will soon be raised. We do not propound such questions with a view to discuss them; they are only suggestions for the reader's consideration.

"*Art* is intended as a source of gratification; but that gratification will be fallacious, unless it is beneficial; and it cannot be beneficial unless it strives to render us wiser or better than we are, by attaching us to those objects which are the most beautiful, and, at the same time, the most pregnant with utility. * * A painter who only knows how to colour, if he colours well, has made himself master of a difficult craft, and deserves such praise as you would bestow upon a good workman; but he is not an artist.—A painter who invents, composes, and colours subjects which are pretty and pleasing enough in themselves, but produce no effect upon the mind, nor any result beyond the visual gratification of the observer, merits undoubtedly the first rank amongst decorators; but he is not an artist.—But the painter who represents ideas exalted, just, and noble, in such a manner as to transmit them from the canvas into the breasts of those who behold it, and to excite in them the emotions, thoughts, affections, or antipathies with which he is himself inspired,—he *is* an artist, equal in all respects to the first of orators, poets, or historians."

Taste.—"It is pretended that taste is innate, and not to be acquired. Never was there a greater error. Taste is a standard formed by experience. Taste is knowledge. The organization which constitutes the disposition of an individual is, no doubt, a gift of nature; and that is bestowed in different degrees upon different persons. There are some whose deficient organization renders them incapable of acquiring any sort of knowledge, and amongst others that knowledge which constitutes taste in art. But no man was ever born with an originality and maturity of judgment which would enable him to pronounce an accurate opinion upon the merits of any really great production of the pencil or chisel, without previous study."

Imitation.—"The artist who imitated Nature precisely as she is, would fail entirely in his aim. A representation of what is constantly before our eyes is not worth so much trouble. A country lout, betraying in his attitude and countenance the very picture of rustic simplicity, while he scratches his head to stimulate it for an answer to the plainest question,—a servant girl down on her knees, with sleeves tucked up to the elbows, laboriously employed in scrubbing away at the floor of a room furnished with a couple of straw-bottomed chairs, a deal table of which the legs appear to have a *lien* on the wall, a bandbox of blue paper, and a bed covered with a patchwork quilt,—are, no doubt, quite natural. And when the artist has represented these objects so truly that you feel obliged to listen for the vacant reply,—that you seem to see the flush of perspiration on the housemaid's face,—or fancy for the moment that the counterpane is really made of cotton print,—what have you gained? Would you wish to live in constant intercourse with just such companions at your hearth?—to see the room you occupy bedecked with such materials? Then why do you wish to have them on your walls? No; the real value of art does not consist in pourtraying Nature just as she is, but as she might be;—in depicting that which is not of common but uncommon occurrence,—which, in short, is never seen at any one time, or united in one object. Hence those employed in reproducing images of mere nature are but copyists; and however much manual labour they may bestow upon these copies of theirs, they certainly do not merit any very great degree of praise."

Extracts from the Travelling Diary of a German Naturalist—[*Mittheilungen, &c.*]

[Second Notice.]

IT will be seen, by a cursory notice of some of the various scenes which Dr. Schönbein has sketched, that acquaintance with the more refined and exclusive classes of English society did not render him too fastidious to seek its characteristic exhibitions in humbler walks. Accordingly, we find him on one occasion, leaving the gaieties of the West End to visit the precincts of Shadwell and Tower Hill:—

The sailors that stroll in crowds in the neighbourhood of the docks, offer abundant matter for the study of an observer; and especially the taverns frequented by them, are well qualified to exhibit "low life" in many of its forms. One evening, after inspecting the London Docks, I entered with some friends an alehouse, which serves as the principal rendezvous for sailors in that district. There might be some hundreds of good fellows present, amongst whom not only was the English "Jack" represented, but all the hues of the human complexion were mingled, and nearly every language on earth was spoken. At the first opening of the door, we obtained a fore*taste*, or rather *scent* of the select company which was quartered in the inner rooms of the house. We were assailed by a stream of heated air, which it required a courageous nose to encounter. Tobacco, in the first degree, porter, ale, gin, whiskey, port wine, punch, onions, garlic, cheese, fish, oysters—these, and other scents were blended together, creating an atmosphere such as it would not to be easy to find in many other places. Nor was the ear deprived of its share of the reception. Here, was one scraping on a fiddle, there a Scotchman screamed on his bagpipes; in one corner, a dozen sturdy fellows were shouting at the utmost stretch of their lungs, with the laudable design of singing; in another, sailors of different nations were quarrelling, and struck the tables in the heat of debate with their vigorous fists so forcibly, that the glasses danced again. The eye, too, was regaled with many scenes worthy of the pencil of a Hogarth. Here were a set of broad-shouldered fellows, wearing their hats aslant, over features bronzed by the sun, courting their sweethearts in true seamen's fashion, and entertaining them with wine, grog, and other good things; yonder a dozen couples were dancing in the maddest confusion, to music which it racked the ears to listen to. In one corner dice were rolling on the table amidst laughter and imprecations; in the next, groups of passionate card-players might be seen, earnestly engaged. Some of the company lay about, conquered by the might of "Grog," stretched snoring upon benches; and near them bronzed fists were clenched, and boxing attitudes (*Boxerstellungen!*) assumed. However characteristic and piquant these marine groups might be, we nevertheless felt little inclination to remain longer than was needful for their survey; for the apparition of gentlemen in such a place always creates some remark, and is not much liked by the seafaring guests.

Perhaps good Dr. Schönbein, whose courage we saw tried in the encounter with the gymnotus, thought that no scientific result was to be expected from a casual discharge from the "embrowned fists," and wisely withdrew from the shock. The next of his excursions, by a flight allowable to critics, will transport us to a scene of strange contrast to this, and afford a glimpse of the young Queen of this wild ocean-race, in her own royalty of Windsor:—

A royal residence nobler and grander than this castle (he says) there cannot be in all the universe. The peculiar architecture, the massive walls, the mighty towers, spacious doorways, and majestic avenues, the grandeur of its compass, the extent of its courts, even the blueish-grey hue of the building, and finally the elevated site of the palace, cannot fail to impress the spectator with a feeling, not only pleasurable, but imposing.

While inspecting the beauties of the park from one of the towers, he observes "an unusual movement in the grand court below—state carriages drove up, handsomely caparisoned riding horses were led in, servants ran to and fro. In reply to my inquiry, the housekeeper said that this was the usual hour of the Queen's morning ride":—

"Did you ever see Her most gracious Majesty?' asked the loquacious lady in her turn: on my answering that I had not yet been so happy: "In that case," she said, "you must make haste, and go down directly"—showed me a little doorway leading to the park, and advised me to plant myself there, as the Queen usually rode out by that way. Though I fain would have enjoyed the splendid prospect a little longer, I could not let pass so favourable an opportunity of seeing Her Majesty of Britain close at hand. Arrived at the door indicated, I found people already standing there, who, like myself, wished to see the exit of the Queen. An attendant kept order amongst the curious; an office which he fulfilled, however, with extreme gentleness, and with every observance of civil forms. As often as a sound from within was heard through the little door, a whisper ran through the crowd: 'she is coming, she is coming.' All heads were uncovered, and the people put on their most obedient looks. After many disappointments, and long waiting, we heard a positive rolling of wheels, a trampling of steeds,—and at last two noble chargers stretched their proud heads through the narrow doorway. In an instant, the expectant crowd ranged themselves in due order; the hat flew from every male head; a moment or two elapsed, and the maiden of twenty, on whom fell the singular lot of being called to reign over the mightiest nation in the universe, and to be the mistress of more than a hundred million of human creatures, appeared mounted on a noble palfrey. The cavalcade was followed by a light calèche, drawn by four elegant little ponies, to be used in case the Queen should be tired by her ride. As Her Majesty rode out quite slowly, and I had planted myself so close to the door, that the royal garments almost touched me, I was thus enabled to view the object of my curiosity with sufficient leisure to impress its image distinctly on my memory. Though it would be palpable exaggeration to describe the British Queen as the perfection of female beauty, it would, on the other hand, be as great a deviation from truth, to deny her the possession of grace and of an attractive appearance. The expression of her roundish face has a certain fresh youthfulness, an engaging and truly feminine expression: and her person appeared to me beautifully proportioned, and of more than common gracefulness—a point on which I had a good opportunity of judging, as the English riding dress displays the female bust better than any other. Placed as I was, so near the royal person, I did not fail, of course, to express my respect for her, not merely by uncovering, but by a low reverence, which was the occasion of procuring, for my humble person, (*meine Wenigkeit*) the unmerited honour of a benignant and condescending glance from Her Majesty, and even besides this, the distinguished favour of a gracious nod."

An honour which fell more appropriately than her Majesty could guess, on the head of one as discerning in feminine graces as in the properties of chemical solvents: and not less ready to receive the charge from a pair of bright eyes, than the discharge of a Leyden jar, or its rival, an electric eel.

On one occasion, at the table of Lord —— (says the Doctor), a happy chance made me the cavalier of Lady ——, daughter of Lord ——, one of the loveliest female visions I ever beheld. Although I am not particularly shy, and feel no embarrassment in the intercourse with persons of either sex, I have, all my life, been subject to a slight confusion on the sudden apparition of any remarkable beauty—indeed, more than once in my life I have actually felt startled by the unexpected sight of a beautiful woman.—[alas! good Doctor, who has not?]—I leave it to psychologists to decide the origin of this singular effect; but must remark, in the meanwhile, that the said alarm is not exactly like that which is often caused by faces as ugly as witches (!) Fortunately, too, this lively disorder

Digitized by Google

never prevails long with me; and I speedily recover the composure indispensable for social intercourse. Lady —— was the unintentional cause of a strong case of this kind of seizure, a confession which would doubtless make her smile, were these lines ever to fall under her charming eyes. * * Never, in my life, had I a table companion who surpassed Lady —— in personal beauty, liveliness of spirits, freshness of original fancy, pleasant humour, refinement of feeling, and amiable demeanour. As such natures are, of all gifts, the rarest, it will naturally be imagined, that after dinner, also, I sought the conversation of this richly endowed creature, and at tea occupied myself more with her than with all the learned and other persons who were present. At midnight I reluctantly left the presence of so much enchantment.

We hope Lady ——'s "charming eyes" *will* fall on this tribute to her manifold charms: and with this good wish, we will now turn to hear a few pointed words of the Doctor's on Animal Magnetism, which he found spreading in England on his arrival:—

I cannot deny that, as a German, I felt a kind of satisfaction and malicious pleasure when I heard that at last the sober folks on the far side of the Channel had snapped at this bait of the marvellous, and had begun, as my own good countrymen formerly did, to hunt in hard earnest after an intangible spectre. The British can now no longer, with a clear conscience, make the credulity and dreaminess of their German relations a theme of ridicule; for they have shown that even they themselves have not yet become quite superior to such weaknesses. A thing that reasonable people in our country have long ceased to regard as belonging to reality, is now beginning to excite serious attention on the other side of the water; and this not amongst the ill-judging and credulous vulgar, but in persons of cultivated minds and scientific eminence.

There is good sense and observation in some casual remarks on the subject of the Church Establishment, and the spread of dissent, which some friend of the traveller attributes, in part, to the want of churches:—

This defect it is now sought by the bishops to remedy, by the building of many new churches; and large sums are now annually devoted to this purpose by ecclesiastics, as well as laymen. Yet it can hardly be expected that these means will effect the object proposed; as it cannot be denied that causes more deeply seated, and grounds of no merely material nature, must bear the blame of the continually growing appetite for schism from the national church. I neither wish nor am able to enter here into a nearer investigation of this interesting subject, but cannot pass unnoticed the papistical tendencies which, for the last few years, have established themselves in the very seat of English orthodoxy, to the great chagrin and painful embarrassment of the heads of the church. The Oxford doctors, who have introduced something like a mass service into the Anglican worship, re-asserted the authority of the Fathers, and in general demand a nearer approach of the ritual and creeds of the English Church to those of Rome, can hardly have been prompted in their schismatical efforts by the existing want of churches. What the future hides in her dark bosom I cannot, of course, pretend to say, but to me it seems very probable, that, at no distant period, the English Church will be involved in a warm struggle, and have to defend itself strongly against enemies, arising not from without, but in its own body.

With so much readiness and relish for general topics, the doctor seems never to have forgotten for a moment the especial objects of his journey. No exhibition of this kind appears to have escaped him; and after hours spent in experimenting with the highest proficients in science, he is ready to descend to join the audience of a "popular lecturer" on chemistry at the Adelphi Theatre, a scene which is well described:—

The experimenter (on the properties of laughing gas) appeared in a plain frock, with the gas in caoutchouc bladders, disposed on either side; and addresses the "ladies and gentlemen" in an elegant exordium, describing the properties of the gas, its component parts, and the mode of preparing it, in a manner which would have done credit to any chemical professor. At the close of his lecture, he expresses a wish that some one of the present company would come on the stage, and inhale a dose of the laughing gas. The invitation was accepted at once: a long-legged fellow cleared the orchestra at a bound, and, before any one was aware, had seized one of the bags placed on the stage. But the public were by no means pleased with the interloper, and he was greeted with the unwelcome sounds, "Off! off!" At first he seemed disposed to disregard the call, but as the cry became worse every moment, he retired at last. A second candidate appeared; but he, too, was hooted from the stage; and as a third, too, met with the same reception, the experimenter advanced, and besought the audience, in a civil but determined manner, to cease their wilfulness, and let the trial proceed. This address had the effect intended, and the business of the evening was allowed to go on. The person who wished for a draught, sitting on a chair, took the pipe in his mouth, and with one hand closed his nostrils, while he inhaled the gas, and the exhibitor held the bag. The stop-cock was then turned, the inspired air returned through the nose, the cock reopened, the nostrils closed again, and a new supply of gas passed into the lungs: and thus the inspiration and expiration went on, until the bag was exhausted. The exhibitor now stepped back; the man, drunk with the gas, remained for some minutes seated, staring fixedly before him, and still holding one hand on his nostrils. As may well be imagined, this comic posture excited inordinate laughter, which honour was still increased, when the intoxicated person rose from the chair with a vigorous start, and executed the strangest capers up and down the stage. After all were tired of laughing, and the man's fit had subsided, a voice cried out, "All nonsense and humbug!" and the cry was instantly re-echoed by a hundred throats. "No! no!" was as stoutly replied. As the shouts seemed unlikely to end, the exhibitor at last came forward, made his "Ladies and gentlemen" loudly audible, protested, as soon as he could obtain a hearing, that there was no deception in the case, and invited the gentleman who had first so loudly expressed his distrust to make the experiment on himself. This request was instantly complied with, and the gas wrought so powerfully on the unbeliever that he laid about him like a madman, and attacked the exhibitor with fury. But this performance only confirmed the sceptical part of the public in their doubts, and evoked new exclamations of distrust.

Nothing can be more characteristic of the disposition of a vulgar English audience, on the appearance of anything unusual or beyond their powers of comprehension; and the whole scene must have been both amusing and instructive to the philosophical Doctor, accustomed to more submissive spectators.

We must now take leave of him; not as a mere stranger, but as one whose acquaintance we should be glad to resume on some future occasion, and in the spirit which dictated the following passage:—

In an earlier period of my life, I lived for many years both in Great Britain and in France. To the last named country I brought many letters of introduction, to the former a single one only. In the respective capitals of both I made several acquaintances; my French ones have long since expired, having barely survived my residence in Paris; while my English friendships still exist in all their former cordiality although nearly two decennial terms have passed away since they were cemented.

We will only add, that the present work is well calculated to multiply and strengthen these kindly relations.

The Poems of Duke Charles of Orleans. By Aimé Champollion-Figeac. Paris, Belin Leprieur.

THIS is a collection of the poems of one of the most elegant authors of France, at a time when the French language had lost nothing of its purity and originality, and before pedantry and affectation had entirely deprived it of the melodious simplicity which renders a tongue the proper vehicle for lyrical compositions. At the period when French writers conceive that the finishing touch was put to the perfection of their diction, all that deserved to be called poetry disappeared, and for more than a century the Muse has deserted France. Whether she will ever revisit the land where she once held undisputed sway, is yet a mystery: occasionally she exhibits meteor glances in the provinces, speaking in melodious *patois*, but she does not appear to understand the refinements of Parisian expressions, or to be at home with the romanticists of the new school. She goes to sleep with Lamartine, is terrified at Victor Hugo, and acknowledges but slight acquaintance with Delavigne. Nevertheless, her memory is not entirely past away; there is a struggle to revive her, and the attempt promises a better time: if the old poets of France are once listened to and admired, a more simple and natural taste may spring up, and something beyond words and correct rhymes may please the heart and ear. Nature in France, one is apt to conclude, is not the Nature of other countries; but when we read such verses as those of Charles of Orleans, we are obliged to confess that she is the same everywhere, and is welcome wherever met with.

M. Champollion-Figeac has enriched the literature of his country by the volume he has contributed; and he is deserving of great praise for the care and industry he has bestowed on the collection of poems, which he has drawn from the most authentic sources: the chief of these is the celebrated MS. of Grenoble, which he has compared with those of Paris and London. That which the British Museum is so fortunate as to possess, of Charles of Orleans' poems, is one of the most beautiful, from its brilliant illuminations and historical details; for therein the history of the unfortunate prince, who sang so sweetly in captivity, is presented to the eye in a series of exquisitely painted miniatures, unrivalled in finish and delicacy.

Charles of Orleans may almost be considered as belonging to England, for the greater part of his early life was passed on our soil; and it was while in captivity that he composed those lays which have given him poetical immortality. He was one of the prisoners taken at the battle of Azincourt, and for twenty-five years he remained a captive, first in one strong castle, then another. His release was owing to the embarrassment of the State, after the death of his great conqueror, Henry the Fifth, whose dying advice was, that he should not be allowed to give ransom.

A hundred and twenty thousand golden crowns at length procured the illustrious poet's liberty; nor with his freedom ended his song: the caged bird had vented his sorrows in melody, but when he had spread his wings, his voice was still heard, and generally in sadness. Alas!

> Long years!—it tries the thrilling frame to bear
> And eagle spirit of a child of song."

And he had, during that dreary period, told his griefs to his prison walls, and made even captivity charming with his enchanting songs, till they caught a tone of melancholy not to be overcome. His biographer remarks—"The first years of the fifteenth century have left so many sad and cruel recollections to history, that it is not without pleasing emotion the historian finds the means of separating from the hideous and barbarous forms of such an epoch that of a prince of the royal blood of Valois, 'the happiest genius,' observes M. Villemain, 'which had appeared in France in his time, to whom we are indebted for the most original poems the fifteenth century produced, rich in correct and simple imagery, and remarkable for a premature elegance.'"

Charles was a prince distinguished by superior taste and wit, and his compositions are the most important productions which his age has given

Digitized by Google

to France. His history was romantic and unfortunate, as his name was illustrious, both as being the greatest poet of his period, and the father of the *Father of his People*, Louis the Twelfth, of excellent memory.

He was born in May, 1391, at the Hôtel St. Pol, in Paris, his mother being that fair and sad Valentine de Milan, who had to deplore the murder of her husband by the very prince who held her son at the font, and swore to protect him. His birth was hailed by his delighted father, Louis of Orleans, as a presage of glorious fortunes to come; and on that occasion he instituted the Order of the Porcupine, so celebrated though short-lived. When the Queen Isabeau de Bavière, the "fair and fatal enemy" of France and her king, heard of the arrival of the royal stranger, she rewarded the *écuyer-panetier* who took the news to the palace with two hundred livres of gold.

Valentine brought up her cherished son at a distance from the dangerous court and from her enemies, and her elegant mind probably influenced his early years, and formed his infant taste. Although she had adopted the sad device of—

Rien ne m'est plus, plus ne m'est rien,

she had still a heart for her children, till sorrow removed her too early from them. Previously, however, to her great loss, Charles had been married, while still a child of thirteen, to the youthful widow of Richard the Second of England, whose cause Louis of Orleans had espoused. Nothing could exceed the splendour of this marriage, although the young bride is said to have been so much discontented at the match, which gave her a boy for a bridegroom, that "she wept exceedingly." Duke Louis, who shone on the occasion one blaze of jewels and gold, had scarcely joined the hands of the ill-assorted pair, when his fate overtook him, and he fell beneath the assassin's knife, directed by his perfidious cousin, the Duke of Burgundy.

The first scenes of the life of the young Prince of Orleans were sad enough: forced to make peace with his father's murderer, deprived of both his natural protectors, surrounded by dangers and difficulties, his country torn to pieces by civil wars, anarchy and confusion reigning supreme, and no friend to guide or assist him, it required a strong mind to surmount such misfortunes.

He had lost the wife whom his father's policy had forced on him, and he soon after allied himself with the beautiful daughter of the powerful Count d'Armagnac; thus strengthening his cause and gaining a powerful friend. The fatal contentions of his country, however, continued, those with England still desolating it, and in the disastrous battle of Azincourt, after performing prodigies of valour, the young bridegroom was found under a heap of slain, and taken away for dead by the English, who, when his rank was discovered, and signs of life appeared, hailed him with triumph as a glorious prize.

The Duke was brought to England by Sir Richard Waller, who was permitted by Henry the Fifth to retain him as his captive at his manor of Groombridge, near Tunbridge Wells, where, a few years ago, might be seen the moated house which received the illustrious prisoner, and the panelled rooms occupied by him. We have lately heard, with concern, that that interesting relic of the fifteenth century has been removed, and a modern house now occupies its site. Still, however, over the church door of the parish of Groombridge remains a shield with the arms of Orleans, placed there in commemoration of the repairs made at the prince's expense, in gratitude for the kindness he experienced during his detention in the neighbourhood. How long he stayed there, does not appear. Windsor heard his sighs and his lays for some time; and it seems he passed some of his weary years in the Tower of London, where the MS. before mentioned represents him receiving the news of his restoration to liberty.

His young wife, Bonne d'Armagnac, died soon after the day of Azincourt, probably of grief for his loss, and his sorrowful regrets are feelingly expressed in verse:—

On the Death of his Wife.

"Ballades, chançons et complaintes
Sont par moi mises en oubliance."

Ballads, songs, and mournful lays,
Are forgot in my despair;
Sorrow fills my weary days,
And I sleep to dream of care.
If sad thoughts it could beguile,
I would sing, as oft of yore,
And revive those tones awhile,
Which have soothed my heart before;
But, alas! my voice, my lute,
Both with grief are hoarse and mute!

All the pleasant words I spoke,
Are extinct and passed away;
Lo! the spell of song is broke,
And no sweetness marks my lay.
Those who once have heard me sing,
Full of youth, and hope, and joy,
Pity now the falt'ring string,
Which but echoes my annoy;
Lost my voice and sad my lute,
Both in sorrow hoarse and mute.

Lovers utter painted words,
Fresh and fair their language glows,
Pleasure eloquence affords,
And each thought with spirit flows;
Thus I warbled once—but past
Is the time I sang so well,
All my skill is ebbing fast,
And no more my numbers swell;
When I tune my feeble lute,
Every note is harsh or mute.

The following is an address to his country, of which we only give a part:—

Complaint of France.

France!—once thy name was never spoken
In every land but as the peer,
Of honour and of fame the token,
To courtesy and prowess dear.
And strangers lov'd to seek thy shore—
But now what grief my bosom wrings,
To see thy sorrows more and more,
And mark thy ceaseless sufferings,
To know thy wrongs and thy mischance,
Belov'd, bold, Christian realm of France!

Know'st thou the source of all these ills?
Must I, tho' harsh, the truth reveal?
List, though my soul thy anguish chills,
List, for I counsel for thy weal:
Thy tow'ring pride has been the cause,
Thy luxury, too great and high,
Injustice, and contempt of laws,
Thy cost, and sloth, and vanity,
Have drawn God's anger and mischance
On thee, brave Christian realm of France.

But yet despair not, Heaven has store
Of mercy for the weak and frail;
Go, plead for grace, thy sins deplore,
And God thy late remorse will hail.
For he has promised, and will hear,
If humbly thou approach his throne;
Joy is in Heaven to heal and cheer,
And in that trust is hope alone;
For God bore crosses and mischance
For all—and thee, brave realm of France.

Oh! call to mind thy war-cry bold,
Montjoy St. Denis! and thy shield,
Where three fair lily-flowers of gold
Shine brightly in an azure field:
Oh! call to mind the holy sign
Heaven in the Oriflamme display'd,
And how thy kings, with oil divine,
Were by its virtue sacred made:
Heaven loves, and will thy power advance,
Dear, bold, brave land of Christian France.

I, Charles of Orleans, captive still
In youth's gay season, sing for thee—
For thee exert my minstrel's skill,
And fain would hail thee blest and free.
Long ere my fleeting youth is past,
May peace, my own dear land, be thine;
May I behold thee saved at last,
Whatever adverse fate be mine;
And bless the close of thy mischance,
Dear, bold, brave, Christian realm of France.

After much sickening hope deferred, Charles, being at Calais, saw a brighter prospect of release, and is recorded to have there busied himself in purchasing numerous jewels, and wines of repute, which then appeared to be of the growth of Orleans and Blois, to offer as presents to the negotiators of his ransom. This was, at length, happily concluded, and the prisoner of five-and-twenty years once more trod "his own, his native land." His course from Gravelines to his Castle of Blois was one triumph: he was received with enthusiasm, and his betrothment to the niece of the Duke of Burgundy was immediately settled. The jealous tyrant, Louis the Eleventh, was, however, displeased with the demonstrations of affection shown him, and harshly made known his opinion! consequently, Charles refused to appear at his court, and occupied himself for some years in his own affairs, contending for his rights in the Milanese, wrested from him by the usurper Sforza.

His castle of Blois now became the resort of all the men of taste and learning of the age: painters, poets, and musicians there found a ready welcome; and the Duke himself began, at that late period, to enjoy the pleasures of literature and science. He made many excursions in various parts of his dominions, visiting all that was curious and interesting in art and nature, and neglecting nothing that deserved notice. Not a minstrel or poet passed the door of his castle; they were sure of being received with honour and rewarded with munificence. Amongst others, those beings favoured and disfavoured by Nature—namely, dwarfs and fools, were secure of a good reception, and their wit found a theatre in the court of the poet-prince. Maître Colas was his favourite male, and Dame Belou his chief female jester: a war of wit was constantly going on between them and Thommie, the female fool of the Duke of Bourbon, and Jehannet, his jester. The dwarf of the Bishop of Macon often figured also in these trials of skill.

France was at this period in a state of profound peace, and the Duke of Orleans found no interruption to his elegant leisure, but occasional journeys, and sometimes pilgrimages—for he was very devout—to Lyons, Tours, &c.

Innocent and harmless as was this life, Louis XI. discovered something in it that awakened his envy and suspicion; and his remarks were of the severest kind. Although the Duke had kept himself as much as possible out of the dangerous sphere of the Court, he was mortified to find that he could not escape censure and malignity; and it preyed deeply on his mind, shaken, no doubt, by continual disappointment and long captivity. A sad ballad of his, beginning

"Dieu vous garde d'injurieux soupçons,"

expresses his feelings. His health began to fail, and his faculties to decay: he made one last effort for the good of his country, and at the meeting of the States at Tours, pronounced a discourse in favour of the Duke de Bretagne, which drew from the tyrant Louis a bitter and unfeeling reply. This so much shocked the sensitive prince, that he withdrew to his own castle, never to leave it more. He expired at Amboise, the 4th of January, 1465, regretted by all but the unworthy monarch who had insulted him, and who was never known to entertain affection for a human creature, or to cherish a generous sentiment.

Fate seemed to have destined Charles of Orleans to sorrow from his cradle; and if there occurred a short interval of enjoyment for him,—

Still there came some cloud between,
And chased it all away!

He was persecuted during his life, and insulted after his death. His works even felt the power of his destiny, and remained long in oblivion: they have of late, however, been brought forward and appreciated by his countrymen.

The collection of verses given by the present editor is copious and interesting: among them we find difficulty in selecting specimens, so various is the style of the poet. The following,

Digitized by Google

on caution in speech, is like an extract from Sadi:—

"Quelque chose derrière,
Convient tousjours garder."

Something should remain unseen,
All the will should not appear;
For light thoughts will intervene,
And light words to danger veer.

Sometimes, on the verge of speech,
Better not be overbold,
But little pausing caution teach,
What to say and what withhold.

Idle talk is ever free,
And with riches soon runs o'er;
Reason should the treasurer be,
And still something keep in store.

And these lines tell the poet's story:—

"Comme le subgiet de Fortune."

I the slave of Fortune ever
From my early youth became,
And in age we do not sever,
She to me is still the same.
I am one, beneath the moon,
Whom she orders at her will;
I, her subject, late and soon
Ceaselessly have served her still.

Her, as mistress, to obey,
Is the lesson of my life,
And I cannot turn away,
In good or ill, in peace or strife;
Nor my bondage can I break,
But the fruit she gives must take.

Travels through the Alps of Savoy and other Parts of the Pennine Chain, with Observations on the Phenomena of Glaciers. By James D. Forbes, F.R.S.

[Second Notice.]

We shall now select from the narrative some of the more stirring incidents. Here is one which shows the danger of venturing into these Alpine regions without a guide. On one of his excursions to the Mer de Glace, the Professor visited the wild promontory of Trélaporte, which, as it leads nowhere, is unfrequented except occasionally by the shepherd carrying salt to his sheep. Having stopped to sketch the bold outline of the scene, the Professor sent his assistant, Auguste, for some water. Auguste was so long absent that Mr. Forbes began to fear that he had met with some accident, when he was seen approaching with two lads, whom they had seen start in the morning for the mountains, and leading between them a man exhausted, and with his clothes torn to rags:—

"On approaching, I found Auguste scarcely less excited than the man he led, and to rescue whom from a ledge of rock, on which *he had passed the whole night*, he had placed himself in imminent danger. This person proved to be an American traveller, who had wandered all alone the morning of the day before over the hill of Charmoz, above the Montanvert, and scrambled as far as the solitary precipices of Trelaporte, unvisited as we have said, except casually by a shepherd, and still more rarely by some chamois hunter. Towards afternoon (by his own account) he had slipped over a rock, and being caught by the clothes on some bushes, had his fall checked, so as to gain a little ledge surrounded by precipices on every side, where he found himself lodged in a perfectly hopeless prison. Here he passed the whole night, which, fortunately, was not cold, and in the morning he succeeded in attracting, by his cries, the young men of Chamouni, who were on their way across the glacier, at a great distance below. The two boldest, with difficulty, climbed, by a circuitous path, so as to gain a position above him; but their united efforts would have been unequal to rescue him had I not providentially gone, with my guide, the same morning, to this remote spot. Whilst he was on a search for the water which I required he came within sight of the boys, vainly attempting to extricate the traveller. Balmat instantly joined them, and by great personal courage, as well as strength, succeeded in dragging the man up by the arm, from a spot whence a chamois could not have escaped alive. Balmat told me, that whilst he bore the entire weight of the man on the slippery ledge to which he himself clung he felt his foot give way, and for a moment he thought himself lost, which was the cause of the very visible emotion of which he bore traces when he joined me. I gave wine and food to the traveller, and the others, and especially applauded the humanity and courage of the lads, one of whom conducted the traveller back to Chamouni, for his nervous system was greatly affected, and for a time I doubted whether he was not deranged. I returned with Balmat to view the exact spot of the adventure, and a more dreadful prison it is impossible to conceive. It was, as I have said, a ledge about a foot broad in most places, and but a few feet long, with grass and juniper growing on it. It thinned off upon the cliff entirely in one direction, and on the other (where widest) it terminated abruptly against a portion of the solid rock, not only vertical, but overhanging, and at least ten feet high, so that no man, unassisted, could have climbed it. The direction of his fall was attested by the shreds of his *blouse*, which were hanging from some juniper bushes, which he had grazed in his descent, but for which evidences it would have appeared to me inconceivable that any falling object could so have attained the shelf on which he was almost miraculously lodged. Immediately below the spot he fell from, the shelf had thinned off so completely that it was plain he must have fallen obliquely across the precipice, so as to attain it. The ledge was about twenty feet below the top of the smooth granitic precipice, to which a cat could not have clung, and below, the same polished surface went sheer down, without a break, for a depth of at least 200 feet, where it sinks under the glacier, whose yawning crevasses would have received the mangled body, and never would have betrayed the traveller's fate. A more astonishing escape, in all its parts, it is impossible to conceive. It is probable, that had the young men not crossed the glacier at the fortunate moment, my guide and I would have passed the rock fifty yards above him, (it was in the direction in which we were going) without either party having the remotest idea of the other's presence."

The account of the visit to the Col du Géant shows, that even with guides these excursions are not without danger:—

"We continued to descend with precaution, though without any inconvenience, excepting from the sun, which was now high and brilliant, and its light reflected with more intensity than I had ever felt it from the *facettes* of the highly crystallised and fresh snow by which we were surrounded. I began to think that the passage was to be effected without any difficulty worth mentioning, until we arrived at the part of the valley where the three tributary glaciers already mentioned begin to unite, and are together squeezed through the comparatively narrow passage between the Aiguille Noire on the right, and the rock which I have marked *Petit Rognon* on the left. It is difficult to say, whether the ascent or descent of such a glacier is more arduous; but in descending, one is at least more taken by surprise; the eye wanders over the wilds of ice sloping forwards, and in which the most terrific chasm and rents are hidden like the ditch in a *ha-ha* fence. The crevasses of the glacier gradually widened; the uniting streams from different quarters met and justled, sometimes tossing high their icy waves, at others leaving yawning vacuities. The slope, at first gradual, and covered continually with snow, became steeper, and as we risked less from hidden rents, the multitude and length of the open ones caused us to make considerable circuits. But the slope ended at last almost in a precipice. At the point where the glacier is narrowest it is also steepest, and the descending ice is torn piece-meal in its effort to extricate itself from the strait. Almost in a moment, we found ourselves amidst toppling crags and vertical precipices of ice, and divided from the Mer de Glace beneath by a chaos of fissures of seemingly impassable depth and width, and without order or number. Our embarrassment was still farther increased by the very small distance to which it was possible to command by the eye the details of the labyrinth through which we must pass. The most promising tract might end in inextricable difficulties, and the most difficult might chance ultimately to be the only safe one. The spectacle gave us pause. We had made for the north-western side of the glacier, near the foot of the Petit Rognon, hoping to get down near the side of the rocks, although not upon them. But when we neared this part of the glacier, even Couttet shook his head, and proposed rather to attempt the old passage by the foot of the Aiguille Noire, where De Saussure left his ladder,—a passage avoided by the guides on account of the steep icy slopes it presents, and the great danger which is run from the fragments of stone which, during the heat of the day, are discharged, and roll down from the rocks above. These stones are amongst the most dangerous accidents of glacier travels. A stone, even if seen beforehand, may fall in a direction from which the traveller, engaged amidst the perils of crevasses, or on the precarious footing of a narrow ledge of rock, cannot possibly withdraw in time to avoid it. And seldom do they come alone. Like an avalanche, they gain others during their descent. Urged with the velocity acquired in half rolling, half bounding down a precipitous slope of a thousand feet high, they strike fire by collision with their neighbours—are split perhaps into a thousand shivers, and detach by the blow a still greater mass; which, once discharged, thunders with an explosive roar upon the glacier beneath, accompanied by clouds of dust or smoke, produced in the collision. I have sometimes been exposed to these dry avalanches; they are amongst the most terrible of the ammunition with which the genius of these mountain solitudes repels the approach of curious man. Their course is marked on the rocks, and they are most studiously avoided by every prudent guide."

It was now resolved to try the pass in the direction of La Noire:—

"But there, barriers still more insurmountable appeared. One prodigious chasm stretched *quite across the glacier*; and the width of this chasm was not less than 500 feet. It terminated opposite to the precipices of the Aiguille Noire in one vast *enfoncement* of ice bounded on the hither side by precipices not less terrible. A glance convinced every one that here, at least, there was not a chance of passing, unprovided as we were with long ropes or ladders. Nothing remained but to resume the track we had at first abandoned; for the whole centre of the glacier was completely cut off from the lower world by this stupendous cleft. Here the experience of Couttet stood us in good stead, and his presence of mind inspired me with perfect confidence, so that we soon set about ascertaining, by a method of trial and error, whether any passage could be forced amongst the labyrinth of smaller crevasses on the northern side of the glacier. A chamois, whose track we had followed earlier, seemed here to have been as much baffled as ourselves, for he had made so many crossings back and forward upon the glacier, and had been so often forced to return upon his steps, that we lost the track for a time. This animal is exceedingly timorous upon a glacier covered with snow, since the form of the foot prevents it from offering almost any resistance when hidden rents are to be crossed. We had accordingly passed earlier in many places where the chamois had not ventured; but the case was now different on the hard ice. He took leaps upon which we dared not venture; and as we were never sure of not being obliged to retrace every step we made, we took good care never to make a descending leap which might cut off our retreat. Many a time we were obliged to return, and many a weary circuit was to be made in order to recommence again; but we seldom failed ultimately to recover the chamois track, which is the safest guide in such situations. The excitement was highly pleasing. The extrication from our dilemma was like playing a complicated game, and the difficulty of the steps was forgotten in the interest of observing whether any progress had been gained; for now we were obliged to descend into the bosom of the glacier, and to select its most jagged and pulverized parts, in order to cross the crevasses where they had become choked by the decay and subsidence of their walls. Thus hampered by our icy prison, we only emerged occasionally so as to catch a glimpse of what lay beyond, and to estimate our slow and devious progress. At length, by great skill on the part of Couttet, and patience on the part of all of us, (for we remained inseparably tied together all this time) by clambering down one side of a chasm, up another, and round a third, hewing our steps, and holding on one by one with the rope, we gradually extricated ourselves from a chaos which at first sight appeared absolutely impenetrable, and that without any very dangerous positions."

An incident on Mont Collon would have damped the courage of most travellers:—

"A dark object was descried on the snow to our

Digitized by Google

left. We were not yet low enough to have entered on the ice, but were still on snow. This proved to be the body of a man fully clothed, fallen with his head in the direction in which we were going. From the appearance of the body as it lay, it might have been presumed to be recent; but when it was raised, the head and face were found to be in a state of frightful decay, and covered with blood, evidently arising from an incipient thaw, after having remained perhaps for a twelvemonth perfectly congealed. The clothes were quite entire and uninjured, and, being hard frozen, still protected the corpse beneath. It was evident that an unhappy peasant had been overtaken in a storm, probably of the previous year, and had lain there covered with snow during the whole winter and spring, and that we were now, in the month of August, the first travellers who had passed this way and ascertained his fate. The hands were gloved, and in his pockets, in the attitude of a person maintaining the last glow of heat, and the body being extended on the snow, which was pretty steep, it appeared that he had been hurrying towards the valley when his strength was exhausted, and he lay simply as he fell. The effect upon us all was electric; and had not the sun shone forth in its full glory, and the very wilderness of eternal snow seemed gladdened under the serenity of such a summer's day as is rare at these heights, we should certainly have felt a deeper thrill, arising from the sense of personal danger. As it was, when we had recovered our first surprise, and interchanged our expressions of sympathy for the poor traveller, and gazed with awe on the disfigured relics of one who had so lately been in the same plight with ourselves, we turned and surveyed, with a stronger sense of sublimity than before, the desolation by which we were surrounded, and became still more sensible of our isolation from human dwellings, human help, and human sympathy, —our loneliness with nature, and as it were, the more immediate presence of God. Our guide and attendants felt it as deeply as we. At such moments all refinements of sentiment are forgotten, religion or superstition may tinge the reflections of one or another, but, at the bottom, all think and feel alike. We are men, and we stand in the chamber of death. Our friend of Biona, though he was the first to raise and handle the body, from which the others rather shrunk,—and though he examined the rigid clothes for the articles which they contained, and with our consent took out a knife and snuff-box from the pocket, and a little treasury of mixed Swiss and Piedmontese small coins, concealed in a waistband all entire and untouched, (by means of which we could identify the person and restore the money to his friends,)—though he performed all this with seeming indifference, we had no sooner left the spot than he declared that he would rather make a circuit home by the Great St. Bernard than return alone by this spot. Indeed it might well require resolution in a solitary man, with the chances of weather, to pass alone a Col like this, where, supposing him caught in a *tourmente*, it would require no vivid sensibility to raise the image of the last sufferer before him, and hasten the moment of despair, when the spirit yields to the pressure of hunger, fatigue, and bewilderment, and subsides insensibly into the sleep which knows no waking. A very little farther on we found traces of another victim, probably of an earlier date; —some shreds of clothes, and fragments of a knapsack; but the body had disappeared. Still lower, the remains of the bones and skin of two chamois, and near them the complete bones of a man. The latter were arranged in a very singular manner, nearly the whole skeleton being there in detached bones, laid in order along the ice,—the skull lowest, next the arms and ribs, and finally the bones of the pelvis, legs, and feet, disposed along the glacier, so that the distance between the head and feet might be five yards, a disposition certainly arising from some natural cause, not very easy to assign."

In the account of the pass of the Col d'Erin, we have another of the hair-breadth risks, which it seems impossible for Alpine travellers to avoid:—

"Our object was now to descend upon the Glacier of Zmutt, of which, as I have endeavoured to explain, the lower or more level part swept along the base of the Mont Cervin and Dent d'Erin, whilst a higher stage of it rose to the foot of the lofty precipice above which we stood. Now, whilst the *top* of this precipice sunk from the summit of the Stockhorn, westwards to the Col, and then rose a little, the glacier and the *foot* of the precipice rose rapidly and continuously to the westward, so that the top and bottom of the precipice became at length blended together, under a snowy sheet. To reach this point, however, would have been a long *détour*, and the glacier appeared dangerously crevassed. Having, therefore, descended from the Stockhorn to the Col, (which was not a great deal lower.) Pralong proposed to attempt descending the cliff, by which he recollected to have passed when he last crossed, and to have successfully reached the glacier below. We began cautiously to descend, for it was an absolute precipice: Pralong first, and I following, leaving the other guides to wait about the middle, until we should see whether or not a passage could be effected. The precipice was several hundred feet high. Some bad turns were passed, and I began to hope that no insurmountable difficulty would appear, when Pralong announced that the snow this year had melted so much more completely than on the former occasion, as to cut off all communication with the glacier, for there was a height of at least thirty vertical feet of rocky wall, which we could by no means circumvent. Thus, all was to do over again, and the cliff was re-ascended. We looked right and left for a more feasible spot, but descried none. Having regained the snows above, we cautiously skirted the precipice, until we should find a place favourable to the attempt. At length, the rocks became mostly masked under steep snow slopes, and down one of these, Pralong, with no common courage, proposed to venture, and put himself at once in the place of danger. We were now separated by perhaps but 200 feet from the glacier beneath. The slope was chiefly of soft deep snow, lying at a high angle. There was no difficulty in securing our footing in it, but the danger was of producing an avalanche by our weight. This, it may be thought, was a small matter, if we were to alight on the glacier below; but such a surface of snow upon rock rarely connects with a glacier without a break, and we all knew very well that the formidable 'Bergschrund,' already mentioned, was open to receive the avalanche and its charge, if it should take place. We had no ladder, but a pretty long rope. Pralong was tied to it. We all held fast on the rope, having planted ourselves as well as we could on the slope of snow, and let him down by degrees, to ascertain the nature and breadth of the crevasse, of which the upper edge usually overhangs like the roof of a cave, dropping icicles. Were that covering to fail, he might be plunged, and drag us, into a chasm beneath. He, however, effected the passage with a coolness which I have never seen surpassed, and shouted the intelligence that the chasm had been choked by previous *avalanches*, and that we might pass without danger. He then (having loosed himself from the rope) proceeded to explore the footing on the glacier, leaving me and the other two guides to extricate ourselves. I descended first by the rope, then Biona, and lastly Tairraz, who, being unsupported, did not at all like the slide, the termination of which it was quite impossible to see from above. We then followed Pralong, and proceeded with great precaution to sound our way down the upper Glacier of Zmutt, which is here sufficiently steep to be deeply fissured, and which is covered with perpetual snow, now soft with the heat of the morning sun. It was a dangerous passage, and required many wide circuits. But at length we reached in a slanting direction the second terrace or precipice of rock which separates the upper and lower Glacier of Zmutt, and which terminates in the promontory marked Stockhi in the map. When we were fairly on the débris we stopped to repose, and to congratulate ourselves on the success of this difficult passage."

While proceeding from Zermatt to Gressonay, the party met with a curious and at first inexplicable phenomenon:—

"The atmosphere was very turbid, the ground was covered with half melted snow, and some hail began to fall. We were, perhaps, 1500 feet below the Col, or still above 9000 above the sea, when I noticed a curious sound, which seemed to proceed from the Alpine pole with which I was walking. I asked the guide next me whether he heard it, and what he thought it was. The members of that fraternity are very hard pushed indeed, when they have not an answer ready for any emergency. He therefore replied with great coolness, that the rustling of the stick no doubt proceeded from a worm eating the wood in the interior! This answer did not appear to me satisfactory, and I therefore applied the *experimentum crucis* of reversing the stick, so that the point was now uppermost. The worm was already at the other end! I next held my hand above my head, and my fingers yielded a fizzing sound. There could be but one explanation—we were so near a thunder cloud as to be highly electrified by induction. I soon perceived that all the angular stones were hissing round us like points near a powerful electrical machine. I told my companions of our situation, and begged Damatter to lower his umbrella, which he had now resumed, and hoisted against the hail shower, and whose gay brass point was likely to become the *paratonnerre* of the party. The words were scarcely out of my mouth when a clap of thunder, unaccompanied by lightning, justified my precaution."

As we introduced this work with an account of a glacier, we shall conclude with a summary of the Professor's theory of glaciers:—

"A glacier is an imperfect fluid, or a viscous body, which is urged down slopes of a certain inclination by the mutual pressure of its parts. The sort of consistency to which we refer may be illustrated by that of moderately thick mortar, or of the contents of a tar-barrel, poured into a sloping channel. Either of these substances, without actually assuming a level surface, will *tend* to do so. They will descend with different degrees of velocity, depending on the *pressure* to which they are respectively subjected,—the *friction* occasioned by the nature of the channel or surface over which they move,—and the *viscosity*, or mutual adhesiveness, of the particles of the semifluid, which prevents each from taking its own course, but subjects all to a mutual constraint. To determine completely the motion of such a semifluid is a most arduous, or rather, in our present state of knowledge, an impracticable investigation. Instead, therefore, of aiming at a cumbrous mathematical precision, where the first data required for calculation are themselves unknown with any kind of numerical exactness, I shall endeavour to keep generally in view such plain mechanical principles as are, for the most part, sufficient to enable us to judge of the comparability of the facts of Glacier motion with the conditions of viscous or semifluid substances."

Whether this is the true theory remains to be decided: it has assuredly not been adopted hastily, or without patient and laborious investigation. Scientific men will, of course, eagerly consult the work; but we must say, that it has great interest for all.

OUR LIBRARY TABLE.

Some Account of the African Remittent Fever, by Morris Pritchett, M.D.—This is a strictly professional treatise on a subject which we have recently discussed in reviewing Dr. M'William's Medical History of the Niger Expedition, (*ante*, p. 603). We there observed that, "we would explode the doctrine of miasmata altogether, as being worse than useless"; and we are now rejoiced to find that Dr. Pritchett entertains the same opinion. On the whole, this is a remarkably clear and acute little volume; and is evidently the production of one, who, while thoroughly acquainted with the medical practice of the day, is yet not the slave of routine, but has philosophy enough to look for the truth beyond the circle of fashion. His views with respect to the nature and origin of African fever appear to us to be just, and his reasonings show a healthy disinclination to encourage quackery. On one point only are we unable to agree with Dr. Pritchett; he is disposed to reckon among the causes of fever, disturbance of the animal electricity. But is not this a mere hypothesis, and one of which the sole advantage consists in the mysterious nature of the agent referred to? Most of the experiments relied on to show that vital influence and electricity are identical, are, we feel convinced, delusive.

The Smiths; a Novel, by the Author of 'The Maid's Husband.'—With the exception of 'Meredith,'—the *romance* of 'Marmaduke Wyvil' not forgotten—this is one of the best novels we have had since the publication of Frederika Bremer's 'Home,'

Digitized by Google

auspice Mary Howitt. Like those works, 'The Smiths' does credit, we suspect, to "the sex." There is a touch of the authoress of 'Cleone' in it, both as regards style, speculation, and character-drawing. If we are mistaken, it is the most lady-like writing we recollect from a masculine hand:—a little affected, too, as well as lady-like. We could mention half a score of prettinesses and pretensions to a terse and aphoristic manner of expression, which recur so often as to become an offence. Yet, all due allowance made, we rate 'The Smiths' high. Nothing can be simpler than the story. A Mr. Smith (no *Sydney*, but a plain, undistinguishable tradesman-like Mr. Smith, one of three brothers,) leaves a large fortune to the son of *John* Smith, on condition that he marries the daughter of *Dick* Smith, with sundry further queer provisos, in case the youth proves recusant, or the lady unwilling. The three brothers have, of course, been separated early in life—and the cousins are consequently strangers; in short, we have once more the particularly new combination of *Young Meadows* and *Rosetta*, with what result we shall not tell. The strength of the tale does not lie in its plot; a good deal of it residing in Mrs. Smith, the agreeable and manœuvring mother of the heroine, —a good deal in Bessie, the heroine aforesaid, whose direct simplicity and unconsciousness is "*ben trovato*," if not absolutely "*vero*" in these sophisticated days. Then the secondary characters are conceived with shrewdness and finished with care. Charming Mrs. Smith has a capital block on which to try her artful powers, in Squire Walrond, the Dumbiedikes of the village. Artless Bessie is provided with a famous foil in coquettish Miss Atherton, whose entangling airs and graces are done in the true *arabesque* style, which such drawing-room Cleopatras affect. But the passage which we recognize as the most original is the love-story of well-born Lucy Aubrey and John Smith, the hair-dresser. Our author does not share Hazlitt's openly expressed predilection for the class to which 'Pamela' and 'Joseph Andrews' belong, even while *she* (no man would have hazarded this!) vindicates the humanity of what is called an ill-assorted match, without grossness or caricature; showing, too, as in truth bound, how the real evils of the step became only felt when the birth of a son wakened up the mother's ambition; and in his aspirings and struggles to breathe the air she had been born in, the real price of the sacrifice she had made must needs be paid. To conclude: this novel is full of thoughts, some searching, one or two deep, all of them tinctured with a certain bitterness of spirit, to be detected in the general impression left by the tale, rather than in any separate portion which could be specified. We recommend 'The Smiths' to the acquaintance of that much-be-talked and much-be-written class—the Mothers of England.

The Pageant; or, Pleasure and its Price, by F. E. Paget, M.A.—We are not great admirers of Mr. Paget, or his tales, in general. There is a flippancy pervading them; a disregard of the feelings of others; a disbelief in all sincerity but his own; and a pugnacious restlessness, little consonant with the character and position of the author. In the story before us, however, we find few of these faults; and if there be some needless allusions to controverted points in Church and State matters, we willingly pardon them, in consideration of the good that may result from a clergyman of the Church of England, and the chaplain of a bishop, proclaiming the duties of society towards the poor and humble, and warning all of the misery they are preparing for themselves and their country, by indifference to, or disregard of, those duties. Mr. Paget's trumpet gives no uncertain sound; and we are glad, for once, to have to thank him for a great and needful service to the cause of humanity and religion. The rich and noble have as yet thought little of the "price" of their pleasure, which the author presents to their consideration in strong but not overstated language. "Oh, gay ladies!" said John Knox to Mary of Scotland, "what a fine world would this be if all these braveries could last for ever!" Mr. Paget shows clearly that, putting aside all religious considerations, this state of things *cannot* last; and suggests, plainly and forcibly, the remedies. We hope they are not too late.

The Farmer's Daughter, by Mrs. Cameron.—A pleasing story, told in simple, unaffected language.

The Orphan; a Tale for the Young.—Rarely have we seen a tale more unfit for the young, or more tedious for the old to read.

A New Purchase, or Seven and a Half Years in the Far West, by R. Carlton, Esq.—We always turn to a new American book with appetite. Famine's self, however, could not make a meal on the volumes before us. They are full, from first to last, of affectations: the copy of a copy. Pleasant Miss Mitford has to answer for some freaks of sentimentality, some amiable exaggerations of homeliness on the part of Mistress Mary Clavers: and the American lady, we fear, is chargeable with the conceit in these sketches, which are written in direct imitation of 'A New Home.' Need we add, how distasteful are all such "nods, and becks, and wreathed smiles" in the Back-woods? There was more of reality in Charles Lamb when he was expatiating on the pleasures of the green-room and the shilling gallery, than in R. Carlton, Esq. when he rants and riots, in his off-hand fashion, about clearings, hut-buildings, camp-meetings, and perils from snakes, swamps, &c.:—in short, about the rudest features distinguishing life in 'A New Purchase.'

The Young Maiden, by A. B. Muzzey.—This work, originally published in America, was reprinted in London by the Old Bailey firm of Clarke & Co., and sold under the title of 'The English Maiden.' We mentioned the circumstance some time since, but will allow the author to record here the history of his wrongs: —"By a London paper of November, 1841, I perceived that a work which I had written and published in America, entitled, 'The Young Maiden,' had been reprinted in this country, under the title of 'The English Maiden.' * * On reaching this country, a few weeks since, I procured a copy of the book, and, to my amazement, found that not only was my own name omitted on the title-page, but the initials of another name, 'H. G. C.', were given at the close of an Advertisement by some unknown individual, who called himself 'the Author.' I found a Second Edition, and in that a new Advertisement, in which the writer thus unblushingly speaks of his production:—'A Second Edition of this work having been called for within four months of its publication, is a gratifying proof of the interest felt,' &c. 'In this Edition some slight alterations have been made, which *the Author* hopes will tend to make the volume more acceptable to the maidens of England.'" Mr. Muzzey has now issued a new edition, and appeals "to a generous public to sustain him." We certainly hope that every copy hereafter sold will be of the genuine edition, but must abide by our declared judgment, that it is a poor foolish book, neither worth printing, pirating, nor republishing.

The Flower Girl, and other Poems, by R. M. Willan. —This lady we will assume to be very young, though the fact is not so stated; and if we be right in our assumption, it may be worth while to offer her a word of encouragement, and a word of advice. She has poetic instincts and sensibilities, which may be refined and cultured into yielding poetical fruit;—but she has been studying in a bad school. For mere sentimentalism, in the present day, there is little chance, even in poetry. The change from that morbid condition of the public mind we cannot look upon as amongst the signs which testify to the decay of the poetical sense amongst us: nor is the muse less gracious and endearing, in her added majesty, because she seeks to increase her audience by adding those who think to those who feel. A step further in her present direction, and we can give the author little hope; but, if the list at the head of her volume contain the names of friends as well as subscribers, there are those among them (of her own sex, too,) who may serve her both as counsellors and examples in her further course.

The Storm: and other Poems, by T. Bennock.—Amongst those who can be satisfied with mere facility, and a not very frequent felicity of expression, this bard may, perhaps, find an occasional audience. The number of such readers is, however, daily diminishing; and the doctrines of the political economists fail to explain how it is that the verse-makers of the above class are, at the same time, on the increase. The relations of supply and demand are here inverted. When the market shall re-adjust itself, Mr. Bennock, we think, will scarcely feel himself sufficiently furnished for a venture in that direction; and the issue of his present speculation will, in all probability, help him on to that opinion.

Facts of Vital Importance relative to the Embellishment of the Houses of Parliament. Detailed by an Eye-Witness, edited by F. P. Davis.—If there be any particular meaning in this little publication, we have not been able to find it out. We read it, expecting a Satire,—or, at least, an attempt at one; but can only report of it that it is an allegory—offering neither lesson nor innuendo that we can perceive.

Letters to the Farmers of Suffolk, by the Rev. J. S. Henslow, M.A.—These letters, written by the Professor of Botany in the University of Cambridge, were intended to direct the attention of the farmers of Suffolk to the great importance of conducting their experiments in such a manner as might render any results obtained by them available to the progress of science, and consequently to the more rapid improvement in agriculture. The object is so obviously good, and the letters are so plain and simple, as to lead us to hope that they will satisfy the farmers generally of the advantages that must result from adopting the system suggested, and which has been, we believe, extensively adopted in Suffolk. There is attached to the pamphlet a well written address on the subject of manures, delivered at the last anniversary of the Hadleigh Farmer's Club.

Two Lectures on the Defective Arrangements in Large Towns, by H. Sandwith, M.D.—These lectures, delivered before the Hull Literary and Philosophical Society, are clear and forcible expositions of the many improvements which might be made in all large towns, to secure the health of their inhabitants. There are no new causes of disease brought forward, but the old abuses are clearly stated, and remedies suggested.

The Imperial Family Bible, Nos. 1–22.—This Bible, published by Messrs Blackie, of Glasgow, is printed in a large bold type, on good paper, with a few well selected notes, and is adapted for what is called the Family Bible of the middle classes. Each number is illustrated with an Engraving from some celebrated picture, together with a few original designs by Martin. When complete, it will form a very handsome volume.

Counting-House Manual, by Calculator.—*System of Expeditious Calculating*, by Mercator.—It is the opinion of Calculator that much time is lost in attaining a very imperfect knowledge of what is called book-keeping, from the teachers themselves not having been initiated into the mysteries of buying and selling; he therefore offers his work as a practical system, and as adapted for use in commercial academies. —Mercator's book, as its title imports, consists of a series of rules for concise and expeditious calculating.

National System of Penmanship, by J. Carstairs.— "After the lapse of nearly fifty years of severe, attentive application and study," Mr. Carstairs sends forth to the world, amidst a flourish of his own trumpets quite unequalled,—his National system of penmanship. "It will be noticed, perhaps, by some litigious critics," to use the author's own happy diction, that Mr. Carstairs, though a teacher of "writing, mathematics, the English and Latin languages and classical literature," is by no means master of the *national system* of composing English sentences: and this unfortunately leaves us, occasionally, in the dark as to his precise meaning. It is clear, however, that an art which requires fifty years of severe study to master it, is far more difficult than we had supposed the art of penmanship to be, and that its Professors have a far heavier responsibility attached to them than we had dreamed of—wherefore we dare not hastily hazard an opinion on so important a subject. Enough, then, if we announce that Professor Carstairs here offers to philosophers a goodly quarto, adorned with his own portrait, and, after the fashion of medical treatises, copiously illustrated with cases.

ECCLESIASTICAL ARCHITECTURE.

On the Determination of some Principle for the Establishment of an Ecclesiastical Style of Architecture, expressing the Reformed Church of England.

THE following observations have originated in a communication from the Secretary of one of the Church Building Societies, which seems to indicate that their principle is the prohibition of "a departure from ancient Ecclesiastical Example," as essential to the advancement of modern Church Architecture.

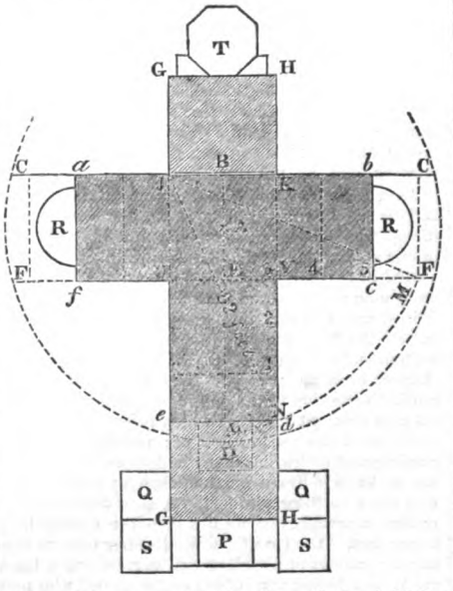
That the Diocesan Architectural Societies have effected great good in aiding to subvert the "Carpenter's Gothic" of Batty Langley, it were most unjust to deny: but, if they have done this only to insist hereafter on the close imitation of the mere *models*, rather than those *motives of fitness*, which guided our old Roman Catholic architects, they will tyrannically impede those progressive movements, which might, ere long, lead to the perfection of a form and style of Architecture emphatically expressing the "True and perpetual Church."

The magnificent cathedrals of our ancestors are admirable, from their perfect adaptation to the religious ceremonies which prevailed in the English Church before the Reformation; and it is said to have been in the hope of reviving the popish service, with its processional pageantries, that the Duke of York opposed Sir C. Wren's first design for St. Paul's cathedral, on account of its "departure from ancient example;" thus precluding the only opportunity which has ever yet been afforded of our possessing a cathedral essentially Protestant.*

It is not intended to defend the hostility which Wren entertained towards the Gothic styles of Architecture, farther than in respect to the fact that his feelings, in this particular, were at that period common to all Europe. But the mere question of *style* —of the dress in which the substantial body of the fabric shall be clothed—is secondary to that which affects the body itself; and, in regard to the latter, the consideration of its *purpose* should certainly be dominant. The model being planned and reared, with the closest reference to the peculiar and permanent uses of the intended building, it *then* becomes a question how far *any* style of "ancient example" is the best suited to give expressive effect to it.

We will, therefore, now place ourselves in the position of an architect who is called upon to construct a church, which shall, at once, truly serve all the purposes, and eloquently proclaim all the sentiment, of Christian worship, as now by law established in England. The vulgar datum of a merely utilitarian principle is put entirely aside; but, at the same time, nothing shall be admitted which does not supply a convenience or symbolize a feeling.

* "This," says Mr. Cunningham, "not only caused the rejection of Wren's favourite design, but materially affected the other, which was approved. The side oratories were proposed by the Duke; and, though it was resisted by Wren, even to tears, all was in vain. The architect was obliged to comply. He felt that his fame would suffer; and as he was a sincere and pious man, he might mourn for the land which he suspected was, at no distant day, to experience the revival of religious strife."



The positive requisites we assume to be these:—first, under the head of *Convenience*—

1. A main space for public worship, &c., wherein a maximum number of persons† shall be commodiously seated without impediment to sight and hearing. Pillars, therefore, and galleries which must be supported by pillars, are prohibited. 2. An altar, as open as possible to the whole congregation, with the least practicable interception by the pulpit and desk. 3. A highly raised pulpit, and a lower raised reading pew or lettern, having one desk for the Prayer-book, looking towards the altar, and another for the Bible, looking towards the people. Also a faldstool for the Litany, in a central position, directly facing the altar. 4. A font, within view of the assembled congregation; or, 5. A Baptistery, united with the body of the church. 6. An organ loft, at the west end of the church, opposite the altar at the east end. 7. Chapter room, library, vestry, or other offices as required, near the chancel. 8. A tower, or towers, for the reception of bells, and as also useful in attracting the distant observer to the locality of the church.

Secondly, under the head of *Expression*:—

9. The general plan to be cruciform, as prominently symbolizing the Christian faith. 10. The visible signs of Trinitarian belief to be indicated, wherever practicable, consistently with the unity of the whole. 11. The sentiment of Infinity to be observed in the adoption, or invention, of a style most conducive to it, as affording the best opportunities for proportional loftiness and length of perspective. 12. The utmost respect to be manifested for our ancient examples, in the consideration (and if practicable in the adoption) of so much of their form, style, and particular features, as may be pure, and interesting in their connexion with the progressive history of the "Holy Catholic Church"; and equal care to be taken in avoiding the repetition of those architectural dispositions and decorative details which were derived only from Romish superstition.

Such being the conditions under which we place ourselves, we proceed to consider the all important subject of *sight* and *hearing*, under the restrictions of the required cruciform plan.

Round A, as a centre, describe a circle of 75 feet radius. Set back a distance of 17 feet from A to B. Then is B the spot whence a speaker may reach the hearing of any one within the curve C F D F C. Make A E equal A B, and through B and E draw the parallels C C and F F for the transepts. Also, at right angles, and equidistant with the latter, draw the parallels G G and H H for the nave. From J, as the most eligible position for the preacher, and with a radius equal to B D (the greatest distance at which the speaker can be heard), describe the segment L M. Then will the point of intersection at N determine the length of the nave; M being, of course, the point beyond which the transepts may not extend. Presuming it, however, desirable to make the length of the transepts less than that of the nave, the latter will be divided into equal compartments, as 1, 2, 3; a certain number of the like, as 4, 5, being apportioned to the transept. Thus, in the part marked *a*, *b*, *c*, *d*, *e*, *f*, we obtain that portion of a cruciform plan which affords the free sight and perfect hearing of a reader at K or a preacher at J; the central position A being well suited for the Litany desk or faldstool.‡ We place the altar at B that it may be as open as possible to the eastern side of the transepts. A scale being thus obtained for governing the *length*s, the required capacity of the church will be met by accordingly regulating the widths between the parallel walls. In short, these relative proportions will vary with the taste of the architect and the necessities of the case. If the font be required in the body of the church, E is obviously its position; otherwise, it would be well placed in the *pronaos*, ante-chapel or baptistery at D, separated from the main division by the organ screen at N. The addition of this ante-chapel is, of course, only conditional on the desire of giving greater proportional length to the *foot* of the cross, the *head* of which, J G H K, would include the chapter room, library, vestry, &c.

† It has been found, by experiment, that not more than 2,000 sitters can be conveniently placed within a church (even where there are galleries), so as to have the advantage of perfect hearing; the sight being, of course, rendered imperfect by the pillars supporting the galleries.

We have now answered all the requirements under the head of *Convenience*, Nos. 1 to 7; observing the cruciform outline demanded under *Expression*, No. 9; and leaving it dependent on the size, proportion, simplicity, or splendour of the intended building; whether, in regard to No. 8, there shall be a central dome, lantern, or tower over A; a single western tower at D or P; coupled towers at Q Q, flush with the main front, at G H; or advancing towers at S S, with or without an intervening porch at P. Apses might be appended at R R, either as inferior accessories, or as continuous extensions of the arms of the cross; and, in the case of a cathedral (requiring more room for secular purposes than could be included within the head of the main cross), the chapter-room, T, might be added with great effect.

Now it must be admitted, that the mere cruciform plan, as the most important feature under the head of Expression, leaves us (if we can invent nothing better) to adopt, under certain modifications, any of the architectural styles which have prevailed in Europe since the building of the Pantheon at Rome; and, when we contemplate the triumphant majesty of the cupolas of Buonarotti and Wren, we cannot but feel a desire to justify their repetition by some unanswerable argument. There is a *firmamental* sublimity in the overhanging concave of St. Paul's dome—an overwhelming expression of congregational unity—which defies a corresponding result from an equally single feature in any other variety of architectural design. What form can be imagined of more august amplitude as the crowning member of the intersection of the nave and transepts? Nor does it stop here: for the principle of the cupola, on its pendentives, may be carried out in the vaulting of the radiating perspectives. There is, in short, nothing in the mere genius of the Roman style which renders it unsuitable to our intended building, as a piece of self-consistent architecture, whatever may be said in respect to the associations connected with it.*

The Norman and Pointed styles of our old cathedrals require, of course, no apology on the score of association and suitability; and we may dismiss from consideration all the other styles of the Middle Ages —not as unfit, but simply as inferior in critical character to either of those previously mentioned.

Following up the several other requirements under the head of Expression, we may exhibit the visible

‡ We gain no advantage by moving the reader and preacher to U and V, because the additional length of nave thereby gained between N and H would be beyond the hearing of the Commandments read at B.

* The reader will, perhaps, scarcely credit the bigotted hostility which a member of a certain diocesan Architectural Society has more than once expressed towards the only cathedral of which he has any just reason to be especially proud. It is, by no means, presumed that he spoke the sentiments of the society at large; but it is, at all events, a symptom of the mal-influence which zealous leaders may exercise over their followers. This gentleman stated, that nothing would give him greater satisfaction than the destruction of St. Paul's Cathedral, and that he had a hand ready to assist!

Digitized by Google

signs of Trinitarian belief in the T form of our choir—the triad of nave and transepts; in the application of three entrance doors; and in the employment of one central and two western domes, towers, or spires.

In reference to the sentiment of Infinity, we are brought at once to acknowledge, that the Pointed style of the old cathedrals of Christendom is supreme. In them we have, not only the multiplicated sections of a *length* so extended as to baffle the eye's measurement, but also the expression of inconceivable *altitude*; for, as a point is only negatively definable, as having no superficies nor dimension, so the meeting curves of a pointed arch may be regarded as having their mysterious and invisible union in that Heaven where, alone, their finite approximation can be comprehended. A mere *proportional* loftiness may, of course, be given to any form of section; but the expression of still—and still continuing ascent—defying

The white-upturned wondering eyes of mortals—

is afforded only in the vaulting of our pointed cathedrals.

The movement which Pointed architecture has now taken as most suitable to the Christian temple, derives additional impetus when we consider it as the positive offspring of Christianity itself. Churches have been built in almost all styles; but the Gothic Pointed architecture of Catholic Europe is exclusively Christian in its origin, progress, and perfection. In form, in detail, in mysterious effect, it proclaims the spirit of which it is the sign.

But, by that same authority under which our Saxon architects differed from those of the Constantinal era, by that under which the designer of the first pointed church differed from the matured and established Norman model, and by that under which were practised all the successive modifications of Pointed architecture, from the Temple Church to the chapel of King's College at Cambridge, we claim the privilege of allowing our regard for present necessities and altered circumstances, to co-operate with our respect for ancient usages and forms, in the production of what shall have both a retrospective and prospective merit; nor will we be told that, because we may find it imperative to deviate from "ancient example" in general form and proportion, we shall therefore exhibit a "departure" from the *spirit* of our pious ancestors. We have looked minutely into the merits of Pointed architecture, and have vainly sought to improve on its essential principles and details, whether of construction or ornament; but we have now to provide for certain requirements which did not exist when our Gothic churches were built, and to avoid the mere imitation of such forms, &c. as are no longer necessary, but are rather hostile to our reformed worship.

It is, then, in the cherished continuance of that love which our ancestors entertained for the symbols of Christian faith, and in submissive respect for the pious enthusiasm, artistical feeling, and constructive skill manifested in our old cathedrals, that we retain the cruciform plan, and adopt the pointed style. And it is with an equally reasonable regard for the peculiar purposes of the reformed church, that we make our interior as free and spacious as possible, to the total exclusion of all pillars and arcades. Thus the aisles of our old churches are banished, as no longer required either for the view of processions or the reception of confessionals; nor is there any necessity for accommodating the nuns, or hanging out golden draperies from the triforium above. The nave and transepts (formerly regarded as imposing avenues to the choir, and as chiefly serviceable for processional pageants and *outer* preaching places,) are now required for the reception of the congregation; while the head of the cross (formerly the choir and chancel) is excluded from the main space, as invisible to persons in the transepts.

The general form and size of our plan, and the style of architecture being thus determined in strict accordance with the several requisites stated under the heads of Convenience and Expression, we proceed to consult the numerous examples of antiquity, with a view to decide on the sectional outline of our structure; nor shall we easily meet with an existing model so immediately adapted to our purpose as the chapel of King's College, Cambridge, distinguished as having no aisles, and only requiring to be intersected by transepts, with a grand central tower over the breast of the cross, to render it the most magnificent and perfect *Church of England* in the kingdom. In the erection of an entirely new building, we should employ a more highly pointed curve for the vaulting, and considerably diminish the length; but, in a general way, it would be difficult to improve on this noble structure, except by the addition also of two western towers, extending on each side, flush with the front, in correction of the excessive length alluded to, and giving a more adequate breadth and importance to the principal façade.

In adopting any of the sectional elevations of our cathedral naves or choirs, it will of course be necessary to provide a sufficient substitute for the lateral resistance lost in the removal of the aisle, and the flying buttresses above them, and to bring down the clerestory windows to the horizontal line now forming the sill course of the triforium. It is not, however, our present purpose to enter into further particulars of detail. We have briefly attempted to illustrate the reasoning on which we conceive architects should act, and architectural societies should judge. Such, at least, would be the principles on which the writer would proceed, were he commissioned to use his own discretion in constructing a model English church, unrestricted by any peculiar circumstances of site, or limited means. At the same time, he is quite open to any corrective arguments which may be advanced, and is most desirous for that mutual improvement which may result in the co-operation of professional architects and incorporated amateurs. It is only for the former to maintain that amount of independence which should appertain to them as professors, lest they become a mere body of architectural draughtsmen, with nothing but the laws of building societies to obey, and only "the bookish theorick" to follow.

Plymouth, June, 1843. GEO. WIGHTWICK.

FOREIGN CORRESPONDENCE.

[The following letter from M. Botta gives further particulars of his investigations at Nineveh. We are happy to know, from a note of a later date, that he has overcome the prejudices of the people, and been enabled to pursue his interesting researches. It is difficult to form an opinion respecting this Monument before the excavations are complete, but up to this time every discovery tends to prove that the building is Assyrian, and of a date anterior to Cyrus.]

Mosul, May 2, 1843.

IN my former letter (*ante*, p. 632) I announced the archæological discovery made by me in the village of Khorsabad. I now send you details of all I have disinterred since that time.

You remember, no doubt, that in my former report, the excavations stopped at the end of the wall forming the north side of a passage paved with an inscription. I gave instructions to my workmen to start from this point, and follow the course of the wall, in order to ascertain whether it joined the one more to the east, on which the two colossal figures were discovered. This was found not to be the case. Before reaching the point, the wall opens on a passage running northward, similar to that which I discovered before, but a little larger; I will call it passage No. 2. The eastern wall has now been followed to a point where it turns at right angles to the east; the western wall, on the opposite side, at the same point, turns to the west, then to the north, and forms, with an opposite wall, a third passage. This latter runs from the north, and following it up, I ascertained that at five mètres distance it turned to the west.

The intention of the Monument, as a whole, is still a mystery. It appears to be but a small portion of a large building, which may be traced out as we proceed. I will now give a description of the sculptures and inscriptions. The second and third passages are paved with a large stone, bearing a cuneiform inscription, of which I send copies as accurate as possible. The largest, that in the second passage, cost me a day's labour, consisting, as it does, of forty-six lines. Although broken, it is complete, with the exception of some few characters, which are effaced, especially towards the south. The inscription of the third passage is somewhat incomplete, but to judge by the proportions there cannot be much wanting, especially as there are large spaces between the characters. In these two new inscriptions, as in the first, the characters were incrusted with copper, or a coppery cement, which is now very hard, and has given to the surface of the stone a greenish tint. At the end of the passage No. 1, the wall presents the lower part of a colossal figure, dressed in a long fringed robe, similar to those which decorate the walls of the opposite building. There were probably two of these figures, but in parts the wall is actually destroyed to the very base. The eastern wall of passage No. 2 presents two figures nearly nine feet high, turned towards the south: one is winged, and holds a basket in his hand, is dressed in a short tunic, with a very rich belt. It seems to have had the head of an animal, which, however, it is now impossible to ascertain, on account of the dilapidated state of the upper part of the wall. The other figure walking behind it is a bearded man, dressed in a great-coat (if I may use such a term), richly fringed, the upper part apparently made of fur. He bears in his hand a trident, terminating in balls, and painted red.

As the passage widens, its western wall presents, in the lower part, a small bas-relief of a horseman at full gallop, about three feet high, which is too much decayed to allow of my drawing it: but as the horseman's head is still in good preservation, I was enabled to observe that the eyes have been stained black with the *kohl*, according to Eastern practice. Over this bas-relief was a scroll, containing a cuneiform inscription, too much damaged to be copied; and above that another bas-relief, representing several figures, of which only the legs are visible. I must observe, once for all, that this same arrangement prevails everywhere, where the figures are not colossal, the scroll dividing the two bas-reliefs being about fifty centimetres wide.

Turning towards the west, the same wall presents two galloping horsemen, side by side, then another horseman riding slowly, sculptured on that part which, turning to the north, forms the third passage, where it ceases, being entirely destroyed. It is worth noticing, that these different windings form together a building very different in form and dimensions from what I conjectured in my last letter, the two being separated from each other by passage No. 1.

The wall, which forms the opposite side of the passage No. 3 has on its eastern extremity traces of a figure three feet high, walking westward, but scarcely visible. More to the east, two armed horsemen are visible, one following the other at full gallop. Above them is a scroll, but the upper bas-relief is totally destroyed. I regret that my time would not allow of my copying them, although they are very perfect. The movement of their horses is very animated: both men and horses present evident traces of colour.

Turning northward, the wall of the third passage offers to our notice a curious bas-relief, of which I send an exact drawing. It represents a chariot drawn by two horses, and in it three persons. The principal one appears to be a bearded man, lifting his right arm, and holding in his left a bow. He wears a tiara, painted red. Behind him is a beardless slave, carrying a fringed parasol, and at his left is the charioteer, holding the reins and the whip. The principal person and the charioteer wear earrings.

The chariot wheels have eight slender spokes: the chariot itself has been covered with carving, now impossible to be made out. The most noticeable thing is a bench which seems to be attached to the chariot by a double belt, and which hangs over the pole. I suppose it to be a metal rod, intended to secure the solidity of the whole. The drawing of the horses is better than I could imitate. They bear the marks of pure Arabian blood. The harness is very rich, and still presents evident traces of colour. I can only distinguish, with certainty, red and blue: there appears to have been other colours, but they have turned completely black. The blue is extremely bright. On the horses' heads is a pointed plume, formed of three tufts. Their forehead is covered with a broad band. Under their necks is a large acorn, painted blue, hanging from a large red band, that comes from the back of the neck. The neck seems covered with a large red band, divided in front into several bands, and fastened on the side by a large rosette. On the breast is an ornament formed of four rows of acorns, alternately red and blue, suspended by a red belt much ornamented. The reins are attached to the bit by a single riband, and then appear to be divided into three red ribands, of which one is fastened to the chariot, probably for safety, in case the charioteer should let the reins slip. Where this riband joins the

Digitized by Google

chariot hangs a rich ornament. Neither these horses, nor any others in the bas-relief, have ears visible. Behind the chariot rides a cavalier, bearing a lance, with a sword in his belt, and a quiver over his shoulder. His horse, like the others, has rich trappings, the band in front being blue, dotted with red; the acorn under the neck red and blue, and very large: the ornament of the head is a species of curved horn. This bas-relief, which is about three feet high, is, as usual, surmounted by an inscription. The bas-relief above is, however, completely effaced. I have been able to copy a few characters just above the chariot. The appearance of these scrolls and bas-reliefs lead me to believe that the monument has been covered with earth at different times and by degrees, but that part of it remained a long while exposed to the action of the atmosphere. The lower parts are generally complete; but their surface is encrusted with a layer of calcareous matter, which fills up the letters and renders them illegible. The upper bas-reliefs, on the other hand, and certain parts of the inscriptions, are not encrusted, but so worn by exposure to the air, that only a few traces of the sculpture and the deeper parts of the letters are visible.

In front of the chariot is another bas-relief; but the proximity of a house prevented us from digging. All I can make out is, that it is an animal, probably not a horse, but, as far as its defaced state will allow me to guess, an elephant. I have now to describe the east side of passage No. 2. Here are two horsemen walking their horses side by side. The only one visible has a sword, a quiver and bow over his shoulders: his legs are clothed in mail. The horses' trappings are rich, and similar to the others. Above this bas-relief is, as usual, a scroll, surmounted by several figures, of which only the legs remain. Passage No. 2 presents, on the two walls, a figure bearing a trident, and in front of him a winged figure with a basket; then the wall turns to the east, and there are found the two colossal figures of which I have spoken in my preceding letter. The robe is loose, not fitting close, as I at first imagined, before it was completely disinterred. The construction of this monument is in all parts the same: the walls are formed of large slabs of marble-like gypsum, behind which there is nothing but earth. These slabs are about a decimètre in thickness. I am led to believe, that the interior of the buildings was originally hollow, and has been filled by time. The roof, if there was one, must have rested on the slabs fixed to them by nails and bands of copper, of which numerous fragments remain. In fact, the earth which fills the buildings does not differ from that which has choked up the passages. I should add, that, besides the copper nails, numerous fragments are found thickly covered with a beautiful blue, like that on the bas-reliefs; as there are also many pieces of charcoal, I suppose that the roof was of wood, and was burned, and that it calcined, at the same time, the gypsum, and converted it into plaster. This, I think, has caused the ruinous state of the sculptures, which renders it impossible to preserve them. They crumble to pieces, and are only upheld by stays. I hope, however, to be able to preserve the large female figure, and the three stones with inscriptions which fill the passage.

We have found a piece of unbaked clay bearing a good copy of a mythological seal. It represents the common emblem of a man piercing with a sword a rampant lion, which he holds by the head: the piece of earth looks as if it had been rolled in the hand, and then flattened by the impression. I have visited the second altar, which is similar to the first, but the inscription is too defaced to be of any use. We cannot proceed any farther with our excavations, as we have reached the houses, and the prejudices of the inhabitants offer many obstacles to my purchasing them. I had forgotten to tell you that the hill of Khorsabad appears to have been formerly surrounded by a thick wall, formed by great calcareous stones, roughly cut.

OUR WEEKLY GOSSIP.

ACTIVE preparations are going on at Cork for the reception of the British Association, which is to assemble on the 17th of next month. In addition to the usual promenades, soirées, and excursions, there is to be an exhibition of philosophical apparatus, models, machinery, collections of natural history, and manufactured products; an exhibition of flowers, fruits, &c., on Tuesday the 22nd; an exhibition of the pictures of native artists; and the Cork Agricultural Society will hold their annual exhibition on Thursday the 24th.—The following information, from the local Committee, is a valuable addition to the letter which we published last week:—

Steam boats will sail—
From Bristol for Cork, on Saturday the 12th of August, at 7 o'clock in the morning, and Tuesday the 15th of August at 8 o'clock in the morning.
From Liverpool for Cork, on Tuesday the 15th of August, at 12 o'clock, noon.
From London for Cork, on Saturday the 12th of August, at 8 o'clock in the morning.
From Plymouth for Cork, *calling at Falmouth*, on Monday the 14th of August, at 9 o'clock in the morning.
From Dublin for Cork, on Friday the 11th, at 11 o'clock, A.M., and Tuesday the 15th of August, at 11 o'clock, A.M.
From Glasgow to Cork, on Saturday the 12th, at 8 o'clock in the morning, and Tuesday the 15th of August, at 11 o'clock in the morning.
Steamers sail twice a-day from Liverpool, and once a-day from Holyhead for Dublin, and daily from Milford for Waterford.
Mail Coaches leave Dublin twice every day for Cork.

A project is afloat for establishing a British and Foreign Literary Institute, as a centre to which men of talent and education, of all countries, shall be drawn during their visits to London. According to the Prospectus, it is estimated that not less than 100,000 strangers visit this city yearly, many of whom would rejoice at an opportunity of meeting each other, and men of note in England, under proper guards for respectability, and at a moderate expense. These requisites, it is said, are not to be found in any of the existing Clubs, and the deficiency is proposed to be remedied by this Institution. The building will include a Library, a Theatre for Lectures, large enough to hold at least a thousand auditors, saloons for soirées, an apartment for the daily use of Members, to receive their friends, called "The Visitors' Reception Room," at which appointments may be made, and interviews granted, as occasion may require: and a similar apartment for the use of Members only, called "The Members' Writing Room," furnished with all the necessary materials for conducting their correspondence. The annual subscription is to vary from six guineas to one guinea, according to the privileges desired.

Several years ago (1829) we remember having seen at an exhibition, near Hanover Square, a set of frescoes attributed to *Paul Veronese*, and having also, in those "salad days" of our dilettante-ship, admired them much. Many, if not all, were, we believe, purchased soon afterwards, which seemed to justify our favourable opinion; but our impression is, that some had far less merit than others, and that it struck us as probable we should behold certain of them, whether purchased or not, on sale again. The late stir about fresco-painting appears to have hastened this event: three, from among the original set, are now exhibited at No. 49, Pall Mall, and fifteen hundred pounds asked for them; a moderate price, if they be, instead of the least valuable (according to our hypothesis above-mentioned), the choicest specimens of the whole, as their proprietor asserts. We have no wish to pit our theory against such deliberate evidence, but can only say, worse frescoes than these must ill support Paul Veronese's pretensions. In these we recognize all the characteristics of the great ornamental Painter—the greatest, we might have said, Rubens himself not excepted—his high-pitched tone of colour, his airs and attitudes, his architectonic composition, his free outline and facile touch—all his qualities, *minus* the soul that inspired them. We detect here neither his genius of mechanism nor of conception (to adopt a popular distinction)—nought whatever of the ethereal spirit which makes Venetian saloon-cornices resemble frames opening into the sky, with sun-bright personages sitting in conclave around them. Still there is here the reflection of that genius, an elevated style, besides some grandeur about the heads, movements, and ordonnance: Paul had a brother and two sons, who were his pupils, his sedulous, and oftentimes successful imitators. These frescoes, we should likewise add, have lost much of their merits by age, accident, and removal. A Count Balbi, the description tells us, transferred them from the walls of the Palazzo Serano, near Venice, in 1817, from whence they passed, over many a flood and field, to their different temporary receptacles. Notwithstanding our scepticism, and scanty praise, we may well recommend them to the notice of all embryo fresco-painters—by no means as models, but as studies. They afford several examples in draughtsmanship to be avoided, with some in composition and other generalities to be followed; and are, on the whole, we think, mediocre productions, wherein the traditional skill of a good school, rather than the original work of a good artist, is observable.

At a recent meeting of the committee charged to superintend the completion of the Cathedral of Cologne, Archbishop de Geissel stated that he had received a letter from the King of Bavaria, announcing that he had directed his representative at the Germanic Diet to present a proposition to the other members, calling on each to engage to pay some certain sum every year until the edifice was completely finished. Should this proposition, as he hoped, be acceded to, the King undertook to contribute 10,000 florins a-year from his privy purse during his lifetime, and he had no doubt that his successor would continue the same contribution.

The sculptor Schaller, and the Belgian painters De Keyser, Gallait, and De Biefve, have been elected members of the Imperial Society of Arts in Vienna.—The Emperor of Russia has conferred on M. Horace Vernet the order of Ste. Anne of the second class, with the star enriched with diamonds.

We have accounts from America of the decease of its most imaginative painter, Mr. Washington Allston, Associate of our Royal Academy. This took place at Cambridge, in his sixty-fourth year. Though nearly thirty years have elapsed since Mr. Allston quitted England, and his works have since but seldom appeared in our exhibition rooms, we have not forgotten some which remain in our principal collections: the Egremont 'Jacob's Dream,' and 'Elisha,' Mr. Labouchere's 'Elijah in the Desert,' and the Stafford 'Uriel.' We have heard those curious in pedigree point to Mr. Allston as the first in that gorgeous style of perspective painting, which Martin and Danby have so richly adorned. A still elder artist, however, might be named, Paul Brill. Mr. Allston occupied himself with other graceful pursuits besides his own art. A volume of poems was published during his residence in England, and it is but a year or two since, that we reported on his 'Monaldi,' an Italian romance of considerable power. He married a sister of Dr. Channing, whom he survived some years.

An edition of Dante's Letters, containing nine recently discovered by Theodore Heyse, has been published at Pisa, in one 8vo. volume. At the end of the volume, the editor, Alessandro Torri, has given a reprint of a discourse upon Earth and Water, delivered by Dante, the year before his death (1320), in the church of St. Elena, at Verona. This discourse is so scarce, that the copy of the first edition, in the library of the Marquis Trevulzio, at Milan, from which the present edition was reprinted, is considered as valuable as a MS.

The past season of the Philharmonic Society has not been wholly unsatisfactory; the progress of decay having been apparently arrested for the moment. The Directors elected for the next year are, Sir H. R. Bishop, Messrs. Cooke, Howell, Griffin, Lucas, Anderson, and Calkin. From these gentlemen much will be expected: they must carry forward the disposition to reform, a prospect of which has this year manifested itself. The final regeneration of the Society, however, as we understand the term—that is, its replacement among the highest contemporary orchestral concerts—is beyond the reach of any measure short of entire reconstruction, since the system of perpetually changing leaders and conductors, and the state of discipline as regards rehearsal, are fifty years behind the requirements of the times. Believing, however, that it is useless to call for a remedy of these evils, we will only mention such measures as could certainly be carried into effect, even under existing circumstances. Assuredly, with so long a time for reflection and research at command, the Directors might organize some plan for the whole season, which would ensure a tempting variety of performances. Besides many works which have neither been often nor well played, the Symphony of Schubert still lies untouched on their shelves. We have still to hear the 'Walpurgis Nacht,' Mendelssohn's last Concert-cantata;—his 'Antigone' music being too exclusively choral for a [illegible] instrumental concert: the new work by [illegible]

Digitized by Google

worth inquiring after; and public curiosity, too, might as well be set at rest touching some of the productions of M. Berlioz, though we confess that the career of that eccentric artist, and clever critic, seems to have passed its meridian, if we are to judge by what we hear and read from abroad. Then the Directors should not let M. Ernst go, without securing the first and the best of his services for their coming season. All who, like ourselves, have been compelled to cavil at the proceedings of this Society, are bound to suggest some measures of renovation, and the above, at least, are feasible.

The visit of Dr. Spohr to England closed more brightly than it began. His 'Fall of Babylon' was performed yesterday week by the *Sacred Harmonic Society*, at Exeter Hall, to a crowded and enthusiastic audience, laudable care having been taken to render the execution as perfect as possible. The evening must have wound up very agreeably to the composer, by the presentation of a piece of plate on the part of the members of the Society.

A new ballet, 'La Peri,' by MM. Gautier and Coralli—a filling-up of our *divertissement* 'Les Houris'—has been successful at *L'Académie Royale*. The music is by M. Burgmüller. The Spirit in love with a mortal is performed by Carlotta Grisi. We are somewhat weary of this perpetual recurrence to one idea; but to construct a *ballet* which shall have "a human interest," is perhaps not so easy as to find fault. Donizetti's 'Don Sebastian de Portugal' is now in rehearsal,—being, indeed, wanted, since the 'Charles Six' of Halévy has proved a dead weight, to which even French puffing cannot give buoyancy. We will hazard a guess that the present management of the French Opera has not a long career before it. Whispers have reached us that M. Véron has been seen gazing wistfully at his ancient throne, which all who remember his successful management will fain hope may have its consequences.

On the 20th, the Académie Française held its annual meeting for the distribution of its prizes in literature, and also the Monthyon prizes, for examples of moral and social virtues. The business of the day was opened by M. Villemain, the perpetual secretary, who read the report. The following prizes were awarded, viz.—3,000fr., to M. Wilm, for his *Essai sur l'Education du Peuple*—2,500fr., to M. Salmon, for his *Conférence sur les Devoirs des Instituteurs Primaires*—2,000fr., to Mlle. Louise Bertin, for her poems intitled *Glanes*. The following rewards were also announced, viz.—1,500fr., to Mlle. Félicie d'Ayzac, for her poems entitled *Soupirs*—1,500fr., to M. Mary Lafon, for his *Histoire Religieuse, Politique, et Littéraire du Midi de la France*—1,000fr., to M. Ernest Fouinet, for his *Gerson, ou le Manuscrit aux Enluminures*—1,000fr., to Mlle. Anaïs Martin, for her *L'Amie des Jeunes Personnes*. The first extraordinary prize, founded by Baron Gobert, was granted to M. Thierry, for his *Récits des Temps des Mérovingiens*; and the second to M. Bazin, for his *Histoire de France sous Louis XIII*. M. Villemain next announced that the Academy had awarded its prize in poetry to Mme. Louise Colet, for her verses on Molière. The sitting was concluded by the reading of the list of two prizes of 3,000fr. each, three of 2,000fr. each, and ten of 1,000fr. for acts of moral and social virtue.—On the 22nd, The Academy of Inscriptions et Belles Lettres adjudged the prizes founded by the late Baron Gobert, amounting to 12,000fr. a-year. Nine-tenths of this sum were to be given to the author of a modern work on French History surpassing in erudition preceding works, and the other tenth to the production ranking next to it. The first prize was awarded to M. Floquet for his *History of the Parliament of Normandy*; and the second to M. Monteil. The income is to be enjoyed by the present holders until the Academy shall judge that superior works have been produced by other persons.

The Minister of Public Instruction has issued a decree for the formation of an honorary commission, charged with the publication of a general collection of Latin inscriptions, comprising, for each of the different ages of Roman antiquity, all inscriptions capable of throwing light on History, whether in a religious, military, civil, or domestic view. Correspondents at home and abroad are to be named, to assist in perfecting the work; and it is, at present, intended to bring the collection down to the close of the sixth christian century.

The theatre-going public will regret to hear that Mr. Elton, the actor, was among those who lost their lives in the recent wreck of the steam ship *Pegasus*. According to the *Morning Post*, Mr. Elton was born in the year 1794, and educated for a solicitor. He first appeared as an actor in London, at the Olympic, in 1823; was subsequently engaged at Liverpool, Birmingham, and many provincial and suburban theatres: in 1833 at the Haymarket, and in 1837 at Covent Garden, and from that period continued a member of the Theatres Royal. From an advertisement in the daily papers, we learn that Mr. Elton has left seven fatherless and motherless children! and that a committee has been formed, Mr. Dickens president, for the purpose of arranging a Benefit, and receiving subscriptions for their relief and support.

BRITISH INSTITUTION, PALL MALL.
The Gallery is OPEN DAILY, from Ten in the Morning until Six in the Evening, with one Room containing the Works of Sir Joshua Reynolds, the next those of Ancient Masters, and the third with those of Deceased British Artists.—Admission, 1s.; Catalogue, 1s.
WILLIAM BARNARD, Keeper.

DIORAMA, REGENT'S PARK.
JUST OPENED, with a NEW EXHIBITION, representing the CATHEDRAL of NOTRE DAME at Paris, with effects of Sunset and Moonlight, painted by M. Renoux, and the BASILICA of ST. PAUL, near Rome, before and after its destruction by Fire, painted by M. Bouton. Open from Ten till Six.—N.B. A GRAND MACHINE ORGAN has been constructed expressly for this Exhibition, by Messrs. Gray and Davison, of the New-road, and will perform the Gloria, from Haydn's Service, No. 1, during the midnight effect of the Cathedral of Notre Dame.

ROYAL POLYTECHNIC INSTITUTION.
A LECTURE on AERIAL NAVIGATION, illustrated by MODELS of several kinds, which elevate themselves by MECHANICAL FORCE alone, is delivered by Professor Bachhoffner, on Mondays, Wednesdays, and Fridays, at Twelve o'Clock; and on the Evenings of the same days at Eight o'Clock. A LECTURE on CHEMISTRY, or on some branch of NATURAL PHILOSOPHY, by Dr. Ryan, daily, at Two o'Clock. The Exhibition of the COLOSSAL ELECTRICAL MACHINE, the DIVER and DIVING BELL, NEW DISSOLVING VIEWS, and the other varied and instructive Objects of the Institution, continue as usual. The MICROSCOPE daily, at Five o'Clock, and at Ten in the Evening, under the direction of Mr. Goddard. Several NEW MODELS and WORKS of ART, have lately been placed in the Gallery. Admission, One Shilling. Schools, Half-price. Open Mornings and Evenings, except Saturday Evening.

THE CHINESE COLLECTION, Hyde Park-corner.—This UNIQUE COLLECTION consists of objects *exclusively Chinese*, and surpasses in extent and grandeur any similar display in the known world. The SPACIOUS SALOON is 225 feet in length, and is crowded with rare and interesting specimens of virtù. The Collection embraces upwards of SIXTY FIGURES AS LARGE AS LIFE, portraits from nature, appropriately attired in their native costume, from the MANDARIN of the highest rank to the wandering Mendicant; also MANY THOUSAND SPECIMENS in Natural History and Miscellaneous Curiosities, the whole illustrating the appearance, manners, customs, and social life of more than THREE HUNDRED MILLION CHINESE.—Open from 10 till 10.—Admittance 2s. 6d. Children under 12 years, 1s.

SCIENTIFIC AND LITERARY

Institute of British Architects.—*July* 24.—W. Tite, Esq., V.P., in the chair.—A paper was read by Prof. Donaldson, V.P., explanatory of the peculiar arrangement of the fronts of some houses in Belgian towns, erected in the 15th, 16th, and 17th centuries, illustrated by a numerous collection of sketches of decorated fronts of ancient dwelling-houses, &c. formed of stone, brick, and wood, in Tournay, Mechlin, Antwerp, and Bruges, taken by him during a tour last Autumn.

Mr. Maugham explained the process adopted by Mr. C. Payne, the patentee, for the preservation and improvement of wood, and other vegetable matters.

This being the last meeting of the session, the chairman addressed the members, and alluded generally to the results of the session as having been satisfactory; that many papers of great interest had been read at the meetings, and various committees had been engaged during the session in the consideration of topics of an important nature, connected both with the practice of architecture in general, and the interests of the Institute. He alluded likewise to the proposed New Building Act, now before Parliament, as having met with very general opposition, but was now referred for revision to three gentlemen, two of whom were members of the Institute, and there was reason therefore to expect that it would be greatly modified and improved; that the subject had much occupied the attention of the Council, who were desirous of doing everything in their power towards the accomplishment of that desirable object. He further noticed the increased attention given to the subject of Gothic architecture, of which he avowed himself a warm admirer, but at the same time considered it proper to caution the junior members from being led astray by the very strong and unqualified language of some writers of the present day on the subject, which tended to recommend the exclusive practice of that style on all occasions and for all purposes, to the total neglect of the classical styles of Greece and Italy, which must nevertheless be acknowledged as infinitely more suitable on many occasions for modern purposes.

Numismatic Society.—*July* 15.—*General Anniversary Meeting*.—The Annual Report was read.

The Society has lost by death four Members during the past year:—Charles Brooker, Esq., Robert Fox, Esq., John Gage Rokewode, Esq., and Benjamin Smith, Esq.; and one Honorary Member, Captain J. J. F. Hely. The Society has also to regret the death of three of its Foreign Associates, all of whom were eminently distinguished for their labours in numismatic science, or in kindred branches of inquiry. They are Mons. Mionnet, Dr. Gesenius, and the Chevalier P. O. Bronstedt.

The name of Theodore Edme Mionnet has been associated with the numismata of classical antiquity for nearly half a century. He was born in 1770. His taste for numismatic investigations developed itself even in his boyhood; and in early youth he became known to all the amateurs and collectors of Paris, as a diligent frequenter of the cabinets of that city, and as a numismatist full of promise, from his industry, acumen, and acquirements. The reputation he thus established gained him the notice of the government of France, and he received an appointment in the Cabinet des Médailles, of Paris. He commenced his public career on the 5th of May, 1795; and, by a somewhat singular coincidence of dates, terminated his duties and his existence on the anniversary of that day, or on the 5th of May, 1842. M. Mionnet devoted the whole of this period of forty-seven years to the unremitting and assiduous discharge of his public functions: and up to the time of his death held the office of "Conservateur Adjoint du Cabinet des Médailles et Antiques de la Bibliothèque du Roi." However precious the collection, with the conservancy and arrangement of which he was intrusted, its value was enhanced by the use which was made of it by M. Mionnet, and the materials which he derived from it for the compilation of his laborious and useful work, the 'Description des Médailles Antiques,' in which he has embodied the observations and information of a long and eminent numismatic life, and has brought together, from a variety of sources, a vast mass of important details. The rapid growth of the collections under his care, and the extension of his plan so as to embrace similar collections, of which an account was available, induced M. Mionnet to add to his early volumes a still more copious supplement. This has injured the unity of the work; and the two parts need to be recast into one whole, to render it commodiously accessible to numismatic students. This defect in the arrangement was, however, the necessary consequence of the great increase of new materials; and the prompt and conscientious industry with which M. Mionnet kept pace with the progress of discovery, is not the least of the many merits which his exertions may justly claim. As it is, in its present form, the 'Description des Médailles' is a work which is indispensable to the study of the numismatic treasures of the ancient classical world.

Although the researches of Dr. Gesenius were addressed principally to critical and philological subjects, and especially to the illustration of the Hebrew language, yet he also directed his uncommon learning and unwearied perseverance to a collateral branch of inquiry, in which numismatic science was an important, and, indeed, indispensable auxiliary, the determination of the Phœnician characters and language. Accordingly, in his celebrated work, published at Leipsic, in 1837, 'Scripturæ Linguæque Phœniciæ Monumenta,' his third book treats De Numis Phœniciis; and in the plates accompanying it, he has given representations of a number of Phœnician coins, of which he has endeavoured to explain the several legends in the old Phœnician characters. The latter days of his life were in great part devoted to the further elucidation of the same topics, through the media of inscriptions and coins: and different dissertations on these subjects appeared in the German journals from his pen. He was also engaged, at the same time, in the completion of his 'Thesaurus Linguæ Hebraicæ.' Dr. Gesenius died in October last, at Halle, in the university of which city he had held the professorship of Hebrew for thirty-two years.

The Chevalier Peter Olaf Bronstedt was a native

Digitized by Google

of Denmark, and was born in 1780. In 1796 he entered the University of Copenhagen, and took the degree of doctor of philosophy in 1806. Attaching himself, with enthusiastic ardour, to the study of Greek literature and antiquities, he spent several years after leaving the university, in Italy and Greece, cultivating the language, and exploring, with indefatigable industry and discriminating taste, the monuments of the latter country. The results of his travels and researches were to have been given to the public in eight parts, but of these two only were published. The second of these is devoted to an architectural, archæological, and historical description of the Parthenon, and is a work of great ability and erudition. Besides these travels and researches, the Chevalier Bronstedt published a number of minor works, either separately, or in the Transactions of different societies, written by him in French, German, Italian, and English. Amongst the latter, an important disquisition on Panathenaic Vases is published in the Transactions of the Royal Society of Literature. The Chevalier Bronstedt was for many years absent from his native country, engaged in learned and antiquarian investigations, and sometimes in public affairs, having at one time represented the government of Denmark at the court of Rome. After his final return to Copenhagen, he was nominated Privy Counsellor of Legation, and received the silver cross of the order of the Dannebrog. He was also appointed Ordinary Professor of Philology and Archæology in the University of Copenhagen, Director of the Royal Collection of Coins and Medals, and, finally, Rector of the University.

The receipts of the past year were 222*l.* 16*s.* 6*d.*; and as there are no outstanding demands against the Society, it starts with a clear cash balance in hand of 55*l.* 4*s.* 6*d.* The present subscribing members of the Society are 130.

MUSIC AND THE DRAMA

MRS. HAMPTON'S CONCERT.—This was a pleasant meeting held in a private drawing-room, and *starred* by Madame Albertazzi, the Balfes, Mr. John Parry, Herr Boerhalter, a very accomplished clarinet-player, and Herr Ernst. The *bénéficiaire* appears to aspire to the mantle of Mrs. Bland and Miss Stephens, as a pathetic ballad-singer, and to have given particular attention to Irish melody. This is wise: every artist moving more easily forward, both as regards himself and the public, in proportion as he defines his career. Just now, too, national music is becoming an object of attention, as the crowds who throng to Mr. Wilson's recitations, and other like entertainments, testify. Nothing, however, short of exquisite finish as well as feeling, will conduct the national songstress to a musical success. Who will attempt a Swiss melody now that Stockhausen has left us—or a Provençale romance—Malibran being no more? If Mrs. Hampton really mean to be the Glorvina of our concerts, she must betake herself seriously and severely to smooth a rebellious note or two.—To our experiences recorded last week, Herr Ernst on this occasion added his 'Élégie,' a rich and passionate performance in the grand *cantabile* style. We are informed, too, that his playing of chamber-music is of the very highest order. More of all this, we hope, next year.

ST. JAMES'S THEATRE.—*French Plays.*—A line or two will record the close of the season, and the rumour that it has fallen far short of its predecessor in profit. A few of the reasons may be given. It was too long-drawn; then Mdlle. Plessy failed to please, owing to the gentle dulness of her repertory; while Madame Doche—in Paris rated as a beauty, and therefore popular, though a poor actress,—was found less attractive than our own Nisbetts and Stirlings. Further, Vernet was brought hither without his playmates—*ditto* Déjazet: Levassor made haste to escape from the stage to the pianoforte, wisely imagining that his French comic songs would form "a feature" in the season, more marked than his cleverest personations. As to Bouffé—that our audiences have not done their own taste honour by [illegible] the greatest actor of his kind, is a reproach which we are ashamed to repeat. We will charge it on the Income-tax, on the distractions of the full season—on Repeal, or Rebecca, even, rather than confess to such a mortifying want of due feeling and appreciation for Genius. Our summary might be "improved," we think, to good effect by the manager, should he count upon recommencing his career in 1844.

MISCELLANEA

Paris Academy of Sciences, July.—M. Peligot read a paper on the chemical combinations of tea. M. Peligot states that tea contains essential principles of nutrition, far exceeding in importance its stimulating properties, and shows that, as a stimulant, tea is in every respect a desirable article of habitual use. One of his experiments on the nutritive qualities of tea, as compared with those of soup, was by no means in favour of the latter. The most remarkable products of tea are—1st, the tannin, or astringent property; 2nd, an essential oil to which it owes its aroma, and which has a great influence on its price in commerce; and 3rd, a substance rich in azote and crystallizable, called *theine*, which is also met with in coffee, and is frequently called *cafeine*. Independently of these three substances, there are eleven others of less importance, which enter more or less into the composition of tea of all the kinds imported into Europe. What was most essential, as regards the chemical and hygienic character of the plant, was to ascertain the exact proportion of the azoted principles which it contains. M. Peligot began by determining the total amount of azote in tea, and finished by finding that it was from 20 to 30 per cent. greater than in any other kind of vegetable. M. Peligot states that by reason of this quantity of azote, and the existence of cascine in the tea-leaf, it is a true aliment.—A letter was received from Dr. Brière de Boismont, on the subject of the paper read in the last sitting, by M. Moreau de Jonnés, relative to the number of insane persons in France, and the causes of their insanity. —A report was made on a communication by M. Siret relative to a powder of his invention for the disinfection of organic and other matter, and preventing the putrid emanations which are so dangerous to health, as well as offensive to all ideas of cleanliness. The report was favourable to the invention.

Irvell.—I have been for some years a reader of the *Athenæum*, and believe its criticisms to be as able, honest, and free, as any Review in the kingdom. Permit me, however, to draw your attention to the fact of your having, in a notice of a collection of poems, entitled 'Irwell,' given a specimen of the author's imagination, by quoting half a line from the book, accompanied with an interpretation of its meaning which the author never intended it to bear. "Huge candelabrum, with its thousand lights," you represent as being applied to the starry heavens. There is no mention of stars in the piece, and I am at a loss to understand how you can twist such a meaning out of it. Give it a second reading, and you will perceive that the effect of a cloudless sunset on the ocean is alluded to, and as producing an appearance which is compared to a huge candelabrum illuming the depths of the waters. I do not carp at your criticism, believing you to be always honest in the opinions you express, but I believe, in this particular instance of the half line quoted, with the interpretation rendered by you, that you have hardly acted fairly to yours, &c.

THE AUTHOR.

[Assuming this statement to be correct, it is the "cloudless sunset," and not "the starry sky," which is compared to "the huge candelabrum with its thousand lights,"—a distinction without a difference, so far as our criticism is concerned; but we are quite willing that the author should have the benefit, if any, of his explanation.]

Electrotype.—At the last meeting of the Horticultural Society, some beautiful specimens of the application of the Electrotype process to vegetation were exhibited by Messrs. Elkington, of Regent-street. Upon the surface of leaves a deposit of copper was thrown down, so as to form a perfect representation in metal of the surface of the foliage. Since that time we have been favoured by Messrs. Elkington with a sight of other leaves coated with gold and silver as well as copper. Among these were a Pelargonium-leaf, having all its glandular hairs preserved with admirable precision; an ear of Wheat; a leaf of Fennel; a Fern, with its fructification; a shoot of the Furze-bush, and an insect (a Carabus), with every part of it encrusted with the metallic deposit. In our opinion this opens quite a new view and most interesting field to the application of the Electrotype process.—*Gardeners' Chronicle.*

Progress of Lotteries.—Five splendid paintings to be disposed of in eight hundred shares at Five Shillings each. The drawing to take place on the same principle as the Art-Union. To be seen at the —— Cigar Divan, —— where shares may be obtained.

Annual sale, by way of lot. Messrs. —— & Co., in tendering their grateful acknowledgments for the liberal manner they were supported last year, most respectfully solicit the patronage of the public on the present occasion, assuring them that they have nearly doubled the amount of prizes this year. A prize will be attached to every ticket. Single ticket Five Shillings and Sixpence. List of a few of the prizes in the catalogue for 1843: the grand Coronation picture of Her Majesty Queen Victoria. Proof impression, &c. Graves & Company's grand historical picture of the Coronation, &c. A gentleman's elegant writing desk, value 2*l.* 12*s.* 6*d.*, ladies' writing desks and dressing cases in great variety, Heath's Picturesque Annual for 1843, the Book of Beauty for 1843, 1*l.* 1*s.*, the Keepsake for 1843, 1*l.* 1*s.*, gentleman's portable dressing case, fitted up complete, 1*l.* 11*s.* 6*d.*, &c.

Edinburgh. Scheme for the disposal of the magnificent historical picture of —— &c. Five hundred shares, one Guinea each; one hundred and one prizes, or one prize for every five tickets.

The power of Oil to allay the violence of Waves.—The existence of this property in oil has been so often asserted, that a commission was lately appointed by the Royal Institute of the Pays Bas to make experiments on the subject:—"The Commission assembled at Zandvoort, on the shore of the North Sea. Some of them proceeded a short distance from the shore, in order to pour the oil upon the water, and observe the results; the others remaining on land, and not knowing either at what moment or how many times the oil was poured out, were to keep their eyes fixed on the waves, which rolled from the boat towards the shore; by these means, their opinion, exempt from all influence, might be considered as so much the more impartial. The wind was south-west, and of moderate force; the quantity of oil poured out at four different times, namely, at 43, 45, 50, and 54 minutes past nine o'clock, amounted to 15 litres (upwards of 3 imperial gallons); the tide was flowing, and would not reach its full height till 21 minutes past eleven o'clock. The Commissioners who remained on the shore not having remarked any effect which could be ascribed to the effusion of the oil, and the same thing being the case with those engaged in pouring it, we might already consider the question, if oil poured at a little distance from our piers could protect them from the fury of the waves, as answered in the negative. Nevertheless, the Commissioners thought it incumbent upon them to make a second trial at a somewhat greater distance from the shore. Two of them were rowed beyond the rocks, and then cast anchor. The distance was calculated by the boatmen at 300 yards; the sounding line indicated a depth of about three yards; and the waves were rolling considerably. More than the half of 15 litres of oil was poured out in the space of five minutes (from 15 to 10 minutes before 12 o'clock), and the Commissioners did not observe the slightest effect in relation to the object of their mission. They saw the oil swimming on the surface of the water, partly united in spots of an irregular form, partly extended and forming a pellicle, and partly mingling with the foam of the waves, and sharing in their oscillatory movements. When returning to the shore, at the moment of passing the rocks, the Commissioners caused the rest of the oil to be poured on the water, and they can testify that it had no effect in diminishing the motion of the waves, for they were many times abundantly sprinkled with the spray. It is unnecessary to add, that those who remained on land had remarked nothing at all which could be attributed to the effusion of the oil. After all that has been said and written on this subject, the Commissioners are astonished at the negative result of their experiments, and, limiting themselves to the account of them, they add no observations. They believe themselves, however, authorized to assert, as their personal opinion, that the idea of protecting our piers by means of oil, is not a happy one.

TO CORRESPONDENTS.—G.—Taste—A Sculptor—A Constant Reader (Bath)—A Constant Reader (Portsmouth)—R. A. B. —received.

We had the folly last week to publish Messrs. Orr & Co.'s letter, and on the strength of this, we suppose, Dr. Carpenter now "asserts his individual claim to a hearing." At this rate every criticism would give rise to a volume of controversy: we therefore decline all further discussion.

Errata.—P. 671, col. 1, for "much safer than in *any* parts of the continent," read, much safer than in *many* parts of the continent; p. 673, col. 1, "Cloddeaugh's" should be *Claddeaugh's*; col. 2, "Elphin" *Elphin.*

At a numerous Meeting of Governors, held at the London Tavern, on Wednesday, the 12th of April, 1843, Sir JOHN PIRIE, Bart., V.P. in the chair.

REPORT.

On this, the Seventh Anniversary of the foundation of the Infirmary, your Committee, in the discharge of the trust reposed in them, are impressed with an earnest desire that the Public should be made acquainted (so far at least as they can be, within the brief limits of an Annual Report), with the nature of its objects and the extent of its usefulness: for they are well assured of two truths—first, that in proportion as the Charity becomes more generally known, its revenues cannot fail to be greatly increased; secondly, that as the sphere of its operations is enlarged, so one wide field of misery and disease, must, of a certainty, be narrowed and reduced.

The sufferings to which the Institution extends its healing hand, affect its victims with an unusual degree of mental and physical depression. It is a lamentable fact, which every day's experience verifies, that those who labour under these distressing diseases, frequently conceal their affliction, even from their dearest friends, until their disorders which, if treated in an earlier stage, might have admitted of a safe and certain cure, have progressed to lingering wretchedness, terminating only in the grave. Neither is this false sensibility confined by any means to the wealthier portions of society; on the contrary, its prevalence among the poor, engenders on their parts an insuperable repugnance to seek relief at our general Public Hospitals. And it is no detraction from the merits of those excellent Institutions to say, that amidst the many more obtrusive shapes of human suffering and agony constantly seeking a refuge within their walls, sufficient attention can scarcely be bestowed on slow and shrinking ills like these, which have often been the chronic growth of years, and are frequently in their cure the tardy work of months.

It was to remedy this serious defect; to afford to the Poor afflicted with such diseases an Asylum which, in its name, and in its plain pretensions, should invite their confidence, until then too commonly bestowed on ignorant empirics, who at once despoiled them of their hard earnings, and, by unskilful treatment, robbed them of their chances of recovery; it was to do thus much to the extent of its then most feeble means, that in the year 1835, this Institution was founded in one small incommodious chamber. Since that period, Two Thousand One Hundred and Fifty-four Poor have sought relief. Barely four years ago, the present Establishment, containing fourteen beds, was opened; yet in this brief space, seven Hundred Patients, all requiring Operative Surgery, have been received; and your Committee have the heartfelt satisfaction of adding, that in no instance, out of this great amount, has any fatal consequence ensued.

That all this relief has been afforded, and all this good accomplished, with the utmost regard to economy and prudence in the management of the Charity, is sufficiently shown by the average amount of its annual expenditure, which has been less than Seven Hundred and Fifty Pounds. That the Infirmary solicits investigation and inquiry, is manifest from its practice being freely open to all Members of the Medical Profession. That no undue influence is, or can be, exercised in the admission of Patients, is evidenced by the fact, that suffering and necessity are the only credentials an applicant need prefer. That its worth is gratefully and deeply felt by those who have experienced the benefits it affords, is proved in a very marked and striking manner, by the existence of an Auxiliary Society, founded, and entirely supported, by those who have been relieved.

Your Committee venture to express a hope, that the example furnished in this noble and affecting mark of sympathy felt by the poor for the afflictions of their fellow-creatures, will not be lost upon the rich. They trust that when they appeal as they now do, to all who have any cause for bearing grateful hearts within their breasts, to lend some aid towards extending the blessings of this Infirmary to hundreds, whom it is unable to admit for want of room, and unable to assist for want of funds, they will not make appeal in vain.

The Judge upon the bench, the Advocate in his court of justice, the Legislator in parliament, the Scholar in his Study, the Painter at his easel, the Clerk at his desk, the Shoemaker at his last, the Weaver at his loom, the poor young Sempstress in her many hours of daily labour, and her scanty share of rest, all in their turn are liable to be stricken down by these diseases, which have no fixed place in the great social scale; but are the common lot of all, though aggravated to an immense extent by poverty and want. Let no man sitting in a high place, say "these are the unseemly visitations of the poor, and I am safe," for every day's experience shows, that costly apparel covers such miseries quite as often as the humblest clothing. Neither let the subject be dismissed as unsuitable for conversation, since Heaven, for its own wise purposes, inflicts these evils every hour, where no intemperance or vice has called them into being.

We shall do well to remember, that the great Teacher of Charity and Benevolence did not disdain to lay his pure right hand upon the foulest leprosy, but sought it out and healed it. The Pharisee thanked God that he was not like unto other men, but men of a better leaven thank Him that they are, and that they know they are; and they do not turn away with a nice delicacy from an affliction they cannot brook to hear named today, but which they may be doomed to bear in all its bitterness to-morrow.

The Committee have great satisfaction in announcing the following Donations and Subscriptions received at the Anniversary Festival, on the 1st of May, Major-General Sir J. Law Lushington, K.C.B., in the Chair:—

Every Subscriber of One Guinea annually is entitled to the admission of two out-patients during the year.

A donation of Ten Guineas constitutes a Life Subscriber, and entitles the donor to two out-patients every year.

A Subscriber of Ten Guineas in one sum, and One Guinea annually, is entitled to one in and two out-patients every year.

A Subscriber of Twenty Guineas at once, or in separate sums, of Ten Guineas each, is a Life Governor, and entitled to the admission of two in and four out-patients every year.

The following form of Bequest is recommended to those charitable individuals who may feel disposed to assist the Infirmary by Will:—

"*I give and bequeath out of such part of my personal Estate as may lawfully be applied for that purpose, the sum of £* 'Infirmary for the Relief of the Poor afflicted with Fistula, and other Diseases of the Rectum,' *established in London, which sum shall be for the use and benefit of the said Infirmary; and the receipt of the person who shall be Treasurer thereof at the time when the above Legacy is paid, shall be a good discharge to my Executors for the same.*"

Subscriptions will be thankfully received by the Treasurer; at the Banking Houses of Jones, Loyd & Co.; Barnard Dimsdale & Co.; and Messrs. Ransom, Pall Mall East; by the Honorary Secretary; or by the Collector, Mr. W. H. Harben, 20, Great Marlborough-street.

By order, W. B. OGDEN, Hon. Sec.
8, St. Mildred's-court, Poultry.

In the press, and shortly will be published, handsomely printed in royal 4to. with numerous Illustrations,

NEW WORK ON PATENTS.

Just published, price 5*s.*

THE INVENTOR'S MANUAL: a Familiar and Practical Treatise of the Law of Patents for Inventions.

The object of this work is to furnish to Inventors and others interested in Patent Property, such an exposition of this branch of the law as may enable them, without entering into details merely technical, to acquire a knowledge of the nature and extent of the rights it confers, and the remedies provided for their infringement. With this view considerable pains have been taken to divest the subject of the perplexity which has hitherto rendered it incomprehensible to most of those chiefly interested in it.

Published by John Weale, 59, High Holborn; and at the Office for Patents, 20, Carey-street, Lincoln's Inn.

BY ROYAL AUTHORITY.

This day, price 2*l.* 2*s.*; Large Paper, 4*l.* 4*s.*

*** The Third Volume, now completed, furnishes some Supplementary Information to the preceding Volumes, previously published, with a complete Index: price of the Third volume, 10*s.* The previous volumes are 7*s.* 6*d.* each, or the complete set for 1*l.* 4*s.*

22, Ludgate-street, July 26, 1843.

FREEMASONS' and GENERAL LIFE ASSURANCE COMPANY, 11, Waterloo-place, Pall Mall, London.

Business transacted in all the branches and for all objects of LIFE ASSURANCE, ENDOWMENTS and ANNUITIES, and to secure CONTINGENT REVERSIONS, &c. Loans granted. Information and Prospectuses furnished by

JOSEPH BERRIDGE, Secretary.

NORTH BRITISH INSURANCE COMPANY, 4, New Bank-buildings, and 10, Pall Mall East.

His Grace the Duke of Sutherland, *President.*
Sir Peter Laurie, Alderman, *Chairman of the London Board.*
Francis Warden, Esq. (Director H.E.I.C.) *Vice Chairman.*
John Webster, M.D. 24, Brook-street, *Physician.*

LIFE DEPARTMENT.—This Institution is incorporated by Royal Charter, and is so constituted as to afford the benefits of Life Assurance in their fullest extent to Policy-holders, combined with perfect security in a fully subscribed Capital of One Million, besides an Accumulated Premium of Three Hundred and Fifty-five Thousand, and an Annual Revenue, from Life Premiums alone, of Eighty-two Thousand Pounds.

The last Bonus declared averaged 37 per cent. on the premiums paid. The next appropriation of profits will be made in December, 1844; and persons who now insure will participate therein according to the number of annual premiums paid in the interval.

FIRE DEPARTMENT.—Insurances against Loss by Fire may be effected at the Company's Western Branch Office, 10, Pall Mall East, on Private Houses, Country Mansions, Furniture in the same, and Farm Steadings, at the lowest rates of premium corresponding to the risk.

Prospectuses, containing Tables of Rates, and a full List of the Directors, &c. who are all responsible *Partners*, may be obtained on application to Messrs. B. and M. Boyd, Resident Members of the Board, 4, New Bank Buildings; or to the Actuary, Mr. John King, 10, Pall Mall East. JOHN KING, Actuary.

Annual Premium..	£. s. d. 2 4 7	£. s. d. 3 0 3	£. s. d. 4 4 9	£. s. d. 6 2 5

Endowments for future and existing children, and Annuities of all kinds are granted by this Society.

The usual commission allowed to Solicitors and others, and 5*l.* per cent. extra on the first premium.

JOHN CAZENOVE, Secretary.

THE WESTMINSTER and GENERAL LIFE ASSURANCE ASSOCIATION,

At the WESTMINSTER FIRE OFFICE,
No. 27, King-street, Covent-garden.

A DIVIDEND OF THE PROFITS OF THIS SOCIETY WAS DECLARED ON THE 1st JANUARY, 1842, by which an addition, amounting on the average to 45 PER CENT. on the Premiums received was made to all Policies entitled to share therein.

FOUR-FIFTHS, or 80 PER CENT. of the total profits, are divided among the Assured at intervals of five years; and all Policies on which two payments have been made, participate in the division.

The Profits respectively allotted may be received by the Assured in present money, by a reduction of the Annual Premium, or by adding to the Policy an equivalent reversionary sum.

All Persons Assured on their own lives for 1,000*l.* or upwards, have the right (after two Annual payments) to attend and vote at the General Meetings of the Society.

W. M. BROWNE, Actuary.

UNIVERSAL LIFE ASSURANCE SOCIETY

1, KING WILLIAM-STREET, LONDON.

Directors—Sir Henry Willock, K.L.S. *Chairman.*
John Stewart, Esq. M.P. *Deputy Chairman.*

Major-Gen. Sir Rd. Armstrong, C.B. K.C.T. & S. | William Kilburn, Esq.
John Bagshaw, Esq. | Francis Macnaghten, Esq.
Augustus Bosanquet, Esq. | Charles Otway Mayne, Esq.
Charles Dashwood Bruce, Esq. | Robert Saunders, Esq.
Ellis Watkin Cunliffe, Esq. | James Duncan Thomson, Esq.
Raikes Currie, Esq. M.P. | Capt. Samuel Thornton, R.N.

The principle adopted by the Universal Life Assurance Society of an annual valuation of assets and liabilities, and a division of *three-fourths of the profits* among the assured, is admitted to offer great advantages; especially to those parties who may wish to appropriate their proportion of profit to the reduction of future premiums.

The following table will show the result of the last division of profits, as declared on the 10th of May, 1843, to all persons who had on that day paid six annual premiums:—

Age when Policy was issued.	Date of Policy.	Sum Assured.	Original Premium.	Reduced Annual Premium.
20	On or before 10th of May, 1838.	£1,000	£19 6 8	£9 13 4
30		1,000	24 8 4	12 4 2
40		1,000	31 10 0	15 15 0
50		1,000	42 15 0	21 7 6
60		1,000	66 11 8	33 5 10

(By order of the Board)
DAVID JONES, Actuary.

ASSURANCES, Annuities, and Loans are granted by the NORTH OF SCOTLAND LIFE ASSURANCE COMPANY, 1, Moorgate-street, London.

Board of Directors.

John Abercrombie, Esq. | Æneas Mackintosh, Esq.
George G. Anderson, Esq. | Charles R. M'Grigor, Esq.
James Farquhar, Esq. | James Ramsay, Esq.
Peter Laurie, Esq. | Alexander Rogers, Esq.
Robert Low, Esq. | Alexander Ross, Esq.

Medical Officers—Seth Thomson, M.D.; Patrick Black, M.D.; Chas. Guthrie, Esq.; *Consulting Physician*, Ed. J. Seymour, M.D.
Solicitors—Messrs. Johnston, Farquhar & Leech.
Bankers—The Union Bank of London.

The Proprietary of this Company exceeds 850 in number.

Healthy lives of all classes are assured in capital sums or reversionary annuities at very moderate rates.

The assured of the participation class reap the whole profit of their premium fund, and are guaranteed by the proprietary for a fixed per centage.

Loans are granted upon approved real or personal security, to be further secured by policies to be effected with the Company.

Annual Premium for the rest of life to assure 100*l.* *on death:*

Age.	20	30	40	50	60
	£1 15 7	£2 1 11	£2 14 6	£3 19 11	£6 1 9

ALEX. EDMOND, Sec.

PELICAN LIFE ASSURANCE OFFICES,

70, Lombard-street, and 57, Charing-cross.—Established 1797.

Directors.

Matthias Attwood, Esq. M.P. | Sir W. Heygate, Bart.
W. Stanley Clarke, Esq. F.R.S. | Kirkman D. Hodgson, Esq.
John Coope, Esq. | R. Henshaw Lawrence, Esq.
William Cotton, Esq. F.R.S. | J. Petty Muspratt, Esq.
Sir William Curtis, Bart. | George Shum Storey, Esq.
William Davis, Esq. | C. Hampden Turner, Esq.
J. A. Gordon, Esq. M.D. F.R.S. | Matthew Whiting, Esq.

The Plan of this Office will be found to comprise all the Solid Advantages of Life Assurance.

Persons have the option of insuring upon the Return or Non-Return Systems; and the Tables, which include Ascending and Descending Scales of Premium, have been framed to suit the convenience of all parties.

The Rates have recently been reduced agreeably to the most approved calculations; they are also verified by the experience of the Office during Forty Years, and are as low as consistent with safety; those adapted to the RETURN SYSTEM entitle its assured to an equitable participation in the surplus premium, according to the plan detailed in the Company's prospectus.

The Assured under both Systems will possess the guarantee of a large PAID-UP Capital, and the further security of a responsible body of Proprietors, without being exposed to the liabilities of partnership.

Policies are purchased on liberal terms when the object of an assurance is effected;—or, loans will be granted thereon to the extent of five-sixths of such purchase-money.

Prospectuses and every information obtained on application at the Offices as above, or to the Agents of the Company appointed in every City and principal Town in the Kingdom.

R. TUCKER, Secretary.

NATIONAL LOAN FUND LIFE ASSURANCE, ANNUITY, and DEFERRED ANNUITY SOCIETY, 26, Cornhill, London.—Capital, 500,000*l.*—Empowered by Parliament.

Directors—T. LAMIE MURRAY, Esq. *Chairman.*

John Elliotson, M.D. F.R.S. | George Lungley, Esq.
John Griffith Frith, Esq. | John Rawson, Esq.
H. Gordon, Esq. | Clement Tabor, Esq.

Joseph Thompson, Esq.

Auditors—Prof. Wheatstone, F.R.S.; Prof. Graves, A.M. F.R.S.
Actuary—W. S. B. Woolhouse, Esq. F.R.A.S.

The superior advantages to those Assured with this Society will be best understood by a comparison of its principles and a reference to the last Annual Bonus declared on Policies of five years' standing, viz.:

Entry	Policy No.	Age	Sum	Annual Premium.	Bonus added.	Cash Bonus.	Premium reduced.
			£	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1837	39	59	1000	67 8 4	132 14 6	58 19 9	8 19 4
1838	114	56	3000	175 15 0	296 9 7	123 0 6	16 9 7

Policies now entered upon entitled to participation in next Annual Division. Two-thirds of all premiums paid can be borrowed by the assured without loss of Policy.

F. FERGUSON CAMROUX, Secretary.

BRITANNIA LIFE ASSURANCE COMPANY, 1, Princes-street, Bank, London.

This Institution is empowered by *Special Act of Parliament*, (4 Vict. cap. 9), and is so constituted as to afford the benefits of Life Assurance in their fullest extent to Policy-Holders, and to present greater facilities and accommodation than are usually offered by other Companies. The decided superiority of its plan, and its claim to public preference and support, have been proved incontestibly, by its extraordinary and unprecedented success.

Assurances may either be effected by Parties on their own Lives, or by Parties interested therein on the Lives of others.

The effect of an Assurance on a person's own life is to create at once a property in reversion, which can by no other means be realized. Take, for instance, the case of a person at the age of thirty, who by the payment of 5*l.* 3*s.* 4*d.* to the Britannia Life Assurance Company, can become at once possessed of a bequeathable property, amounting to 1000*l.*, subject only to the condition of his continuing the same payment quarterly during the remainder of his life,—a condition which may be fulfilled by the mere saving of EIGHT SHILLINGS weekly in his expenditure. Thus, by the exertion of a very slight degree of economy—such, indeed, as can scarcely be felt as an inconvenience, he may at once realize a capital of 1000*l.*, which he can bequeath or dispose of in any way he may think proper.

Detailed Prospectuses, and every requisite information as to the mode of effecting Assurances, may be obtained at the Office.

PETER MORRISON, Resident Director.

A Board of Directors attend daily at 2 o'clock, for the dispatch of business.

PROMOTER LIFE ASSURANCE and ANNUITY COMPANY, 9, Chatham-place, Blackfriars, London. Established in 1826.

This Society is supported by an ample subscribed capital, and by a considerable accumulated premium fund.

Assurances are effected at a low rate of premium, without profits, or at an increased premium, with participation in the profits of the Office.

A Bonus in ready money, at the rate of 15 per cent. on the premiums received (equivalent to a reversionary bonus of about 30 per cent.) was declared in May last, on all beneficial policies on which three annual premiums had been paid in December, 1841.

A division of the profits takes place every five years, and the holders of beneficial policies can receive their bonuses in ready money, or have them applied in augmentation of their policies, or in reduction of their future premiums.

Assurers may contract to pay their Premiums either in one sum, in a given number of payments, in annual, half-yearly, or quarterly payments, *or on the ascending or descending scale.*

Officers in the Army and Navy on active service, persons afflicted with chronic and other diseases, and such as are going beyond the limits of Europe, are also assured at moderate rates.

Prospectuses and all necessary information may be obtained at the Office. MICHAEL SAWARD, Secretary.

SCOTTISH (WIDOWS' FUND) ASSURANCE SOCIETY, constituted by Act of Parliament.

ESTABLISHED A.D. 1815.

General Principles of the Society.

The Principles of this Society are those of Mutual Assurance, or, as it has been more properly termed, Mutual Contribution. The Members are their own Assurers. They are the Proprietors—the Sole Parties interested in the Funds; and, although by the Articles of Constitution, no Member is personally responsible for any Sum of Money beyond the Contribution conditioned to be paid by him in his Policy, the stability of the Society is amply provided for and secured by the salutary Regulation,—That at each Period of Investigation, one-third of the ascertained Profits shall be set aside and retained as a Guarantee Fund.

Practice of the Society.

Whilst this Society owes very much unquestionably to the Equity of the Rules and Principles upon which it has been established, some share of its popularity is attributable to the manner in which these Rules and Principles are practically carried out. The tables and calculations are all founded upon data which the long and successful experience of the Equitable Society of London has shown may confidently be relied upon as safe.

Although almost universally practised by other Offices, and although it unquestionably adds considerably to their business, the system of *bribing* parties unconnected with the Office, by the offer of a Commission on all business introduced through their medium or influence, is not countenanced by this Society. The Directors have always looked upon it as a practice which, for many reasons, is equally to be deprecated in the Company or Society offering, and in the party accepting, the bribe.

One of the great characteristics of the Society is the liberal, punctual, and simple manner in which the claims are settled, combined with the very great care bestowed by the Directors, (with the advice and assistance of the Medical Officers,) in the selection of lives. Instead of affording every facility to parties to join the Society, and afterwards throwing all manner of unnecessary obstacles in the way of settlement, when the claim emerges, the Directors proceed upon the opposite principle of being most cautious and particular in their inquiries before admitting members to the benefits of the Society; but, after being admitted, they are entitled to all the advantages which the Society affords; and when the claim emerges, no undue delay takes place, and no difficulties which can be avoided are interposed to prevent an easy and expeditious settlement.

The utmost care is bestowed upon the Investment and Accumulation of the Funds: many advantageous opportunities, which are not open to others, being afforded to this Society, in the large amount of its capital, and its rapidly increasing annual revenue.

Forms of Proposal, and all farther information, may be had on application at the Head Office, or at any of the Society's Agencies. JOHN MACKENZIE, Manager.

LONDON OFFICE, 7, Pall Mall,
HUGH M'KEAN, Agent.

COLD WATER CURE.—The HYDROPATHIC ESTABLISHMENT, at Stanstead Bury House, near Hertford, is now in full operation, with baths of every description. The place is delightful, situated on a hill noted for its salubrity, with 16 acres of pleasure-ground, and the water, walks, and drives excellent. The director, Mr. Weiss, is thus referred to in Capt. Claridge's book:—"The prevalent opinion among the visitors to Græfenberg seemed to be, that Mr. Weiss understood and practised the water cure with greater safety and more undeviating success than any other of its professors, with the exception of Preissnitz himself."—A Prospectus, price 1*s.*, may be had of Simpkin & Co. Stationers'-court, and all Booksellers. Mr. Weiss may be consulted professionally, at 29, Sackville-street, every Wednesday, before three o'clock. A report having been circulated that Mr. Weiss has left, the public are informed it is unfounded.

PERFECTLY NEW AND UNIQUE PATENT BEDSTEADS.

H. PRATT respectfully solicits the particular attention of the Nobility and Gentry furnishing, and Officers joining their regiments, to the PATENTED TAPER METALLIC DOVETAIL JOINTED BEDSTEADS, which he has made arrangements with the Patentees to introduce to their notice. It is long since so necessary and useful an improvement has been invented, and one more especially deserving their notice. The facility with which they are fixed up and taken down in a few minutes, without the use of tools—the elegant and light appearance—the firmness of construction, and the utter impossibility of annoyance from insects,—all join to render them paramount to any other ever invented. The PATENT ELASTIC SPRING BEDS, &c. and complete Fittings, supplied in plain and decorative appointments. Now on view at H. Pratt's Trunk and Military Outfit Warehouse, 123, New Bond-street.

MOULD CANDLES to BURN WITHOUT SNUFFING.—KEMPTON'S PATENT.—These candles do not require snuffing; they burn longer and are cheaper than any other candle; the flame is steady and brilliant. No metallic or deleterious matter is used in the manufacture. Price 8*d.* per lb. Sold by G. E. Parish, agent for exportation, 21½, Bread-street, City, and by Slodden & Stocking, 42, High-street, Marylebone; W. Gethem, Broadley-terrace, Blandford-square; W. Evans, Italian warehouse, Greenwich; John Hawkins, grocer, High-street, Whitechapel; George Hawley, grocer, Pitfield-street, Hoxton; S. Game, Fish-street-hill; J. Pain, grocer, Bethnal-green-road; G. H. Hudson, 229, Blackfriars-road; C. H. Nicholas, 19, Bolingbroke-row, Walworth; and at the manufactory, Old Bargehouse, Christchurch, Surrey.

WATCHES by WEBSTER & SON, Chronometer Makers to the Lords of the Admiralty (Established 132 years), 3, BIRCHIN-LANE. The largest assortment of fine Second-hand Watches of any house in London, by the most eminent makers—many nearly equal to new, and at little above half their original cost, all of which W. & Son warrant. They consist of fine Repeaters, Duplex, Lever, and Horizontal Escapements, all of superior manufacture. New Watches of the most elegant patterns upon the principle of their Chronometers, to which the Government awarded the prizes three years in succession, with compensation balances to counteract the variations of temperature. Also a large assortment of Lever and elegant Horizontal Watches, for Ladies and Gentlemen, at considerably reduced prices. Old Watches taken in exchange. The most experienced workmen are employed on the premises in the repairing department.

Webster & Son, 3, Birchin-lane, Cornhill.

GROWTH OF PLANTS.

HUMPHREYS'S INODOROUS SOLUBLE COMPOUND, to PROMOTE the GROWTH of PLANTS.—Dissolved in water, this valuable preparation may be used with great advantage either in the drawing-room or in the conservatory. A single bottle is equal in fertilizing force to some hundred weight of rich compost; and by its use, not only common plants are improved by increased brilliancy of flower and deeper verdure, but valuable exotics are so strengthened, as to resist the usual alternations of temperature, and may be preserved without a greenhouse.—Sold in bottles, 1*s.* 9*d.* each, with full instructions for use, by the leading Chemists, Druggists, &c. in Town and Country. Wholesale Agents, DAVY, MACKMURDO & Co. 100, Thames-street, London.

MESSRS. BARRY & SON, Stationers and Engravers, beg to inform the Nobility and Gentry that they are now enabled to PRINT ARMS, CRESTS, &c., for book plates, in their proper heraldic colours, and at very moderate prices. Crests engraved on visiting cards in the first-rate style, 6*s.*; without the crest, 2*s.* 6*d.*; and 100 cards, 2*s.* 6*d.*: also every description of elegant engraving. Specimens of the above may be selected from a large and fashionable assortment, at their warehouses, Egyptian Hall, Piccadilly, and 122, Bishopsgate-street Within, or sent on application any distance free of expense. Superfine letter papers, 27*s.*, 22*s.*, 20*s.*, 18*s.*, 17*s.*, 14*s.*, 12*s.* and 8*s.* per ream; Note ditto, 18*s.*, 16*s.*, 12*s.*, 8*s.*, 6*s.* and 4*s.* per ream. An additional charge is made for stamping either of the above with arms, crest, coronet, or initials. Their miscellaneous stock, which is very large and particularly adapted for presents, consists of dressing cases, writing desks, inkstands, envelope cases, albums, blotting-books, bibles and prayers, gold and silver pencil cases, penholders, toilet and smelling bottles, souvenirs, ladies' companions, sachets, card and glove cases, pocket-books, papeterie, and envelopes suitable for invitations, complimentary notes, weddings, &c. Either of the above articles may be had plain, or of the most costly description, with every description of useful stationery. Postage stamps and envelopes at Government prices. Messrs. Barry & Son are also the West-end Agents for Mr. Robert Best Ede's Perfumery.

METCALFE'S NEW PATTERN TOOTH-BRUSH and SMYRNA SPONGES.—The Tooth-Brush has the important advantage of searching thoroughly into the divisions of the teeth, and cleaning them in the most effectual and extraordinary manner, and is famous for the hairs not coming loose—1*s.* An improved Clothes-Brush, that cleans in a third part of the usual time, and incapable of injuring the finest nap. Penetrating Hair-Brushes, with the durable unbleached Russian Bristles, which do not soften like common hair. Flesh-Brushes of improved graduated and powerful friction. Velvet-Brushes, which act in the most surprising and successful manner. The Genuine Smyrna Sponge, with its preserved valuable properties of absorption, vitality, and durability, by means of direct importations, dispensing with all intermediate parties' profits and destructive bleaching, and securing the luxury of a genuine Smyrna Sponge. Only at METCALFE'S Sole Establishment, Oxford-street, two doors from Holles-street.

CAUTION—Beware of the words "From Metcalfe's" adopted by some houses.

NORTON'S CAMOMILE PILLS are confidently recommended as a simple, but certain remedy, to all who suffer from Indigestion, Sick Headach, Bilious and Liver Complaints; they act as a powerful tonic and gentle aperient, imparting strength to the stomach, and composure to the nervous system. Sold in bottles, at 1*s.* 1½*d.* or 2*s.* 9*d.* each, by A. Willoughby & Co., late B. G. Windus, 61, Bishopsgate Without; and nearly all Medicine Venders.

Mr. Colburn's New Publications.

THE SIXTH VOLUME OF

AGNES STRICKLAND'S LIVES OF THE QUEENS OF ENGLAND:

QUEEN ELIZABETH.

Dedicated, by permission, to Her Majesty.

10*s.* 6*d.* bound, with Illustrations.

New and revised Editions of the First Five Volumes are also now ready.

"This volume of Miss Strickland's interesting work is devoted to the life of Queen Elizabeth. Miss Strickland has collected much valuable and hitherto inedited matter, and many curious particulars of Elizabeth's private conduct and character. She gives an air of verisimilitude to her pages by the mass of contemporary letters and documents which she adduces from the records and chronicles of the times, and which impart a clearer notion of Elizabeth, her character, and her position at various periods of her life, than could the most skilfully arranged retrospective narrative. There is a vast deal of curious and entertaining gossip relating to Elizabeth's court in these memoirs, which has been culled with no slight pains from the writings of those who had access to the Queen's person, and who naturally recorded every little incident which furnished table-talk to the court. Through this medium we are enabled to see Elizabeth as she really was; to view her as the woman as well as the Queen; to judge of her in her intercourse with her attendants and favourites, as well as in her negotiations with statesmen and sovereigns. As a whole the volume is interesting in the highest degree."—*Court Journal.*

LETTERS OF MARY, QUEEN OF SCOTS.

Edited, with an Historical Introduction and Notes, By AGNES STRICKLAND,

And comprising Letters from the Imperial Library at St. Petersburg, the Bibliothèque du Roi at Paris, and numerous other sources, private as well as public, now first published from the Originals.

New and Cheaper Edition, with numerous Additions, uniform with Miss Strickland's 'Lives of the Queens of England,' in 2 vols. with Portrait, &c. 21*s.* bound.

"Undoubtedly the most valuable and by far the most interesting work, illustrative of the life and character of Mary Stuart ever given to the world."—*Edinburgh Evening Post.*

THE

BARNABYS IN AMERICA,

BEING THE SEQUEL OF

The Adventures of the Widow Married.

By MRS. TROLLOPE.

3 vols. post 8vo. with Illustrations by Leech.

"Mrs. Trollope is, beyond a doubt, one of the cleverest and most remarkable writers of the day. With a quickness of observation which takes in the whole object at a glance, an insight into motives that seems instinctive, a keen perception of the ridiculous, and strong powers of humorous delineation, she is the person of all others to expose pretensions, or unmask hypocrisy."—*Quarterly Review.*

MARMADUKE WYVIL;

Or, The Maid's Revenge.

An Historical Romance. By H. W. HERBERT, Esq., Author of 'Oliver Cromwell.' 3 vols.

"A still better work than 'Oliver Cromwell.'"—*Athenæum.*
"The production of a man of genius."—*John Bull.*
"Decidedly one of the ablest novels that the present season has produced."—*Sun.*
"In this very clever story, the spirit of the time is sketched in a manner almost equal to the masterly 'Woodstock.'"
Weekly Chronicle.

BRITISH ASSOCIATION for the ADVANCEMENT of SCIENCE.

The THIRTEENTH MEETING of the BRITISH ASSOCIATION for the ADVANCEMENT of SCIENCE, will commence in CORK on THURSDAY MORNING, the 17th of AUGUST, 1843.

JOHN TAYLOR, F.R.S., General Treasurer.
2, Duke-street, Adelphi.

PRIVATE PUPIL.—A CLERGYMAN, for some years Tutor to a Nobleman, and subsequently receiving Six Pupils into his house, a moderate distance from London, would be glad to fill a VACANCY with a GENTLEMAN'S SON, whose education or health may require more than common care.—Letters addressed to the Rev. J. C. C., Post-office, Hampton Court, Middlesex, will be forwarded to him.

MILITARY COLLEGES.—At an Establishment in the neighbourhood of the Regent's Park, where nearly five hundred Gentlemen have been prepared for Woolwich, Sandhurst, Addiscombe, and direct appointments, about fifty of whom have been appointed to the Corps of Engineers, and nearly one hundred to that of the Artillery, there are a FEW VACANCIES. The number of Pupils is very limited. References given and required.—Further particulars may be had on application to Messrs. W. H. Allen & Co. Publishers to the Hon. East India Company, 7, Leadenhall-street.

THE VAUXHALL HOGARTHS.—The celebrated PICTURES, painted by WM. HOGARTH, in 1731, for Vauxhall Gardens, (lately Cleaned and Restored by T. GWENNAP, 21, Tichborne-street, Piccadilly,) will remain with him for the inspection of the curious but one week longer. Also the GOLD ADMISSION MEDAL presented to Hogarth, by Jonathan Tyers, Esq., then owner of the Gardens.

TO COUNTRY LIBRARIANS, BOOKSELLERS, AND BOOK CLUBS.

Now ready, Gratis and Post Free, a New List of

THE REDUNDANT COPIES of New Publications in History, Biography, Memoirs, Travels, Novels, &c. withdrawn from SAUNDERS & OTLEY'S extensive Library, Conduit-street, Hanover-square.

Saunders & Otley, Publishers, Conduit-street.

DERBY.—OPTICAL AND PHILOSOPHICAL INSTRUMENT REPOSITORY.

JOHN DAVIS, OPTICIAN, Derby (late Cheltenham), has the honour to inform his Patrons that he has centralized his extensive connexion in Derby, where, in future, he will be happy to receive orders. He begs to call attention to his celebrated Pocket Telescopes, measuring but 3¼ inches when closed, and are capable of defining clearly Jupiter's moons. Oberhäuser's Objectives supplied to the trade. Several second-hand Telescopes, by Dollond, on sale.—No connexion with any house in London.

Sales by Auction.

By JOHN HOOD, Esq., of Stoneridge, Berwickshire.

John Murray, Albemarle-street.

FOURTH EDITION, 3 vols. post 8vo. 27*s*.

THE BIBLE in SPAIN; or, the Journeys, Adventures, and Imprisonments of an Englishman in an Attempt to circulate the Scriptures in the Peninsula.

By GEORGE BORROW,
Author of 'The Gypsies of Spain.'

Sir Robert Peel in the House of Commons, April 11, 1843.

"Difficulties! were they to be deterred from proceeding on that account? Let them look at Mr. Borrow: why if he had suffered himself to be prevented from circulating the Bible in Spain by the difficulties he met with, he could never have spread such enlightenment and information through that country."

John Murray, Albemarle-street.

NEW WORK ON ARCHITECTURE.

In small 8vo. (with Illustrative Woodcuts), price 4*s*. 6*d*.

AUNT ELINOR'S LECTURES on ARCHITECTURE: addressed to the LADIES of ENGLAND.

The Foreign Library.

A SERIES OF TRANSLATIONS OF

POPULAR AND INTERESTING FOREIGN WORKS,

To be published as soon as possible after their appearance on the Continent.

"The project of a Foreign Library we thought in the first instance very highly of, and are particularly glad to observe its confirmed success. The books have been well chosen, and, without an exception, well translated."—*Examiner.*

VOLUMES COMPLETED.

In 6vo. price 11*s.* cloth,

AUSTRIA.

By J. G. Kohl.

COMPRISING

VIENNA, PRAGUE, HUNGARY, BOHEMIA, THE DANUBE, GALICIA, STYRIA, MORAVIA, BUKOVINO, And the Military Frontier.

In 8vo. price 11*s.* cloth,

LIFE IN MEXICO.

By Madame Calderon de la Barca.

With a PREFACE by W. H. PRESCOTT,

Author of 'The History of Ferdinand and Isabella of Spain.'

"Madame Calderon's book has all the natural liveliness and tact, and readiness of remark, which are sure to distinguish the first production of a clever woman. * * Never was traveller better qualified for such a task in such a country, as far as physical resources, courage, and curiosity could go.—A more genuine book, in air as well as reality, it would be difficult to find."
Edinburgh Review.

In 8vo. price 10*s.* cloth,

CELEBRATED CRIMES.

By Alexander Dumas.

CONTAINING

The BORGIAS—The COUNTESS of SAINT GERAN—JOAN of NAPLES—NISIDA—The MARCHIONESS of BRINVILLIERS—The CENCI—The MARCHIONESS DE GANGES—KARL LUDWIG SAND—VANINKA—URBAN GRANDIER.

"Dumas' book is very striking. The Tragedy of Truth—the serious side of what is called the Romance of Real Life—had never such startling illustration as this remarkable book affords. Its capital constructive art is only a less admirable feature than its perfect and close fidelity of detail. What a story is that of the Marchioness de Ganges!"—*Examiner.*

With a Map, in 8vo. price 11*s.* cloth,

RUSSIA.

By J. G. Kohl.

COMPRISING

ST. PETERSBURG, MOSCOW, KHARKOFF, RIGA, ODESSA, THE GERMAN PROVINCES ON THE BALTIC, THE STEPPES, THE CRIMEA, AND THE INTERIOR OF THE COUNTRY.

"This book gives the clearest insight into Russian habits, manners, and general statistics, of any work on the subject which we have hitherto consulted. Though sometimes minute, M. Kohl is never tedious, because he always manages to combine, with the most trifling matter, allusions or comparisons that make it interesting, from the vivid manner in which it is conveyed to the reader's mind. The English translator's task has also been most creditably executed."—*Chambers' Edinburgh Journal*, Jan. 28.

PART VIII., price 5*s.*

SCHLOSSER'S HISTORY OF THE EIGHTEENTH CENTURY,

PART THE FIRST.

Comprising every Thing Useful to the Farmer, the Country Gentleman, the Land Steward, and all interested in the Management of Land Horses, Cattle, Sheep, Swine, Poultry, &c., being a "Complete Body of British Husbandry," in its present improved Practice, in a thick vol. 8vo. of nearly 700 pages, with numerous Embellishments of Cattle, Horses, Sheep, Pigs, Farm Implements, &c. The 7th edition, edited, and nearly re-written, by the popular Author of 'The Horse.' Price 17*s.* cloth lettered.

2. CLATER'S EVERY MAN HIS OWN FARRIER; containing the Causes, Symptoms, and most approved Methods of Cure of the Diseases of Horses and Dogs. By FRANCIS CLATER, and his Son, JOHN CLATER. Twenty-eighth edition, 12mo. price 6*s.* cloth lettered.

3. CLATER'S EVERY MAN HIS OWN CATTLE DOCTOR; containing the Causes, Symptoms, and Treatment of all the Diseases incident to Oxen, Sheep, Swine, Poultry, and Rabbits. By FRANCIS CLATER. The Ninth edition, in 12mo., price 6*s.* cloth.

*** The above works of Clater have long been known and estimated for their valuable Receipts; these New Editions have now undergone a thorough revision by Mr. Youatt, Author of 'The Horse,' &c., with the assistance of Mr. Spooner; and they may be honestly said to embody the sentiments and practice of the best veterinary surgeons of the present day.

4. THE GARDENER'S MANUAL, containing Practical Instruction for the Cultivation and Management of the Flower, the Fruit, and the Kitchen Garden, with the Hothouse, the Greenhouse, and Conservatory, adapted to either small or large gardens. New edition, in fcap. 8vo. price 2*s.* cloth lettered.

5. THE BOTANIST'S MANUAL and WOODLAND COMPANION; containing a familiar introduction to the Science of Botany and Vegetable Physiology; with the Natural History and various uses of British Forest Trees. The whole intended to awaken a taste for rural scenery, and pave the way to a sound and accurate knowledge of Botany. Designed for the use of young people. In fcap. 8vo. price 2*s.* cloth lettered.

"It is admirably well calculated to be put into the hands of a novice, being divested of all useless technicalities."—*Metropolitan Magazine*, June.

6. THE HOUSEKEEPER'S MANUAL, containing Practical Directions in English Cookery, Preserving, Pickling, Confectionary, Pastry, Cakes, Jellies, and Bread Making; Domestic Brewing, and British Wine Making of every description; for the use of small or large Families. New edition, in fcap. 8vo. price 2*s.* cloth lettered.

For the Use of Travellers Overland to India.

A NEW GUIDE to the LEVANT, containing a Popular Description of the Antiquities, Arts, Sciences, Habits, and Manners of the People; Features of the Soil, &c., and every particular relative to Steamers, Hotels, Conveyances, Moneys, Prices of Provisions, &c., requisite for Travellers to Malta, the Ionian Islands, Greece, Egypt, Syria, Asia Minor, and Constantinople; together with a Tour through the Southern Provinces of Spain, and full particulars of the Overland Journey to India, the Voyage from Suez to Bombay, and the systems of Dawk Travelling in the three Presidencies. The whole written from Notes taken on the spot during a three years' tour. By T. H. USBORNE, Esq. In a thick vol. fcap. 8vo. price 9*s.* cloth extra.

A Superior Library Atlas.

AN ATLAS of MODERN and ANCIENT GEOGRAPHY COMBINED, containing 25 Modern, and 22 Ancient Maps, accurately engraved in royal 4to., and finely coloured. To which is added a separate Index to each Series of Maps, with the quantities marked of the Classical words, and the Modern Names also given. By J. C. RUSSELL, Geographer. A valuable feature in this Atlas is, that the Maps contain every name of historical, commercial, and political importance without being crowded, written in a bold beautiful letter, perfectly legible, and easy of reference. In a handsome royal 4to. vol. neatly half-bound, price only 1*l.* 4*s.*

MAPS and TABLES of CHRONOLOGY and GENEALOGY, illustrative of the History of Europe from its Division under the Western Empire to 1453; with 7 finely coloured Maps and Genealogical Tables of all the Royal Families of Europe. By Dr. LONGLEY, Bishop of Ripon. In a 4to. vol. price 8*s.* 6*d.* half-bound.

REVIEWS

Shakespeare's Plays and Poems. Edited by J. P. Collier, Esq. Vol. VIII. Whittaker & Co.
Pictorial Edition of Shakspere: Biography. Part VIII. C. Knight.

THE eighth volume (containing 'Antony and Cleopatra,' 'Cymbeline,' 'Pericles,' and the 'Poems') completes Mr. Collier's edition. We cannot take leave of the editor without acknowledging that he has faithfully discharged the duties which he imposed upon himself at the commencement of his undertaking. That he has brought the text, in general, to the utmost degree of accuracy of which it is susceptible, in the present state of our resources, we are willing to admit; at the same time, it strikes us forcibly, that for a popular edition of the works of our greatest poet there is something too much of mere verbal criticism in the notes, and of dry discussion about folios and quartos, and entries in Stationers' Registers in the introductions. It is impossible to cause one in a thousand of the true lovers of poetry to feel any concern in questions of dates and various readings, although we are far from denying that even these minutiæ have their proper place and their literary importance. It appears to us that a popular edition of Shakspeare ought, in its annotations and prefaces, to be limited to such critical observations as are of use to make the immortal poetry better understood and more profoundly felt. The object aimed at ought to be to encourage and heighten the rapturous mood of mind proper to the reading of these most glorious productions of human genius: we more than question whether the system of foot-notes ought not, upon this principle, to be exploded altogether; but we feel satisfied that the Shakspearian page ought not to be encumbered with little, not to say paltry, controversies between rival copies, or rival commentators, on microscopic points, utterly beneath the consideration of true criticism. Our conceptions of 'Antony and Cleopatra' ought not to be interrupted and impaired by the images of Theobald and Malone. Amongst the witcheries of 'A Midsummer Night's Dream,' we would willingly forget that such a man as Boswell ever existed, and would fain be allowed to saunter through the Forest of Arden with melancholy Jaques, without being bored with the company of Warburton, or in perpetual danger of being hurried back to Fleet Street by the sight of the name of Samuel Johnson at the bottom of the page.

The play of 'Antony and Cleopatra,' in the volume before us, said, by Coleridge, to be, "of all Shakspeare's historical plays, by far the most wonderful," will afford us specific instances of the kind of annotation, of which we are disposed to think that editions of Shakspeare for general use ought to be thoroughly and for ever purged.

Nothing can be bolder, more energetic, fiery, passionate, or truer to history and nature than the portraiture of Mark Antony in this drama. He learns the death of Fulvia—how characteristically does he break forth thus,—

> There's a great spirit gone. Thus did I desire it:
> What our contempts do often hurl from us,
> We wish it ours again; the present pleasure,
> By revolution lowering, does become
> The opposite of itself: she's good, being gone;
> The hand could pluck her back, that shov'd her on.
> I must from this enchanting queen break off;
> Ten thousand harms, more than the ills I know,
> My idleness doth hatch.

What can be finer than the line—

> I must from this enchanting queen break off?

Or what more exquisite word than "enchanting" could the poet have chosen to fill the verse? Why must there be a foot-note to distract the mind from the beauty of the passage by certifying, that the "second folio" omitted "enchanting," and that the omission was not corrected in the folios of 1664 or 1685?

The fifth scene of the first act is one of marvellous beauty. It commences thus,—

> *Cleo.* Charmian,—
> *Char.* Madam—
> *Cleo.* Ha, ha!—
> Give me to drink mandragora.

In a note, upon which the eye is invited to drop by an Arabic figure of eight, the reader is told that mandragora is an opiate! The knowledge of the meaning of so common a word might well have been presumed, but the note might more particularly have been dispensed with, since Cleopatra herself immediately explains the nature of mandragora, as if to anticipate Mr. Collier's good-nature,—

> *Char.* Why, madam?
> *Cleo.* That I might sleep out this great gap of time
> My Antony is away.

Yet there must be a note to instruct us that mandragora is an opiate! Suppose a reader ignorant enough to be in doubt whether mandragora is the name of an herb or a mineral, Mr. Collier's annotation would not enlighten him. It merely tells him that it is "a strong opiate," which he would have learned from Cleopatra, or Shakspeare, just as accurately, and with more propriety, though some tenth part of a second later.

Again, is not our feeling of the following romantic burst of passion and admiration, from the lips of the amorous and lovely queen, more injured than served by the note on the by no means unfamiliar term "burgonet"?—

> *Cleo.* O, Charmian!
> Where think'st thou he is now? Stands he, or sits he?
> Or does he walk? or is he on his horse?
> O happy horse to bear the weight of Antony!
> Do bravely, horse, for wot'st thou whom thou mov'st?
> The demi-Atlas of this earth, the arm
> And burgonet of men.—He's speaking now,
> Or murmuring, "Where's my serpent of old Nile?"
> For so he calls me. Now I feed myself
> With most delicious poison:—think on me,
> That am with Phœbus' amorous pinches black,
> And wrinkled deep in time? Broad-fronted Cæsar,
> When thou wast here above the ground, I was
> A morsel for a monarch; and great Pompey
> Would stand, and make his eyes grow in my brow:
> There would he anchor his aspect and die,
> With looking on his life.

If any annotation be wanting, it is to explain why Antony is called "the arm and burgonet of men;" but this Mr. Collier does not attempt; he merely tells us that "burgonet" was a kind of helmet: that by "arm" is probably to be understood "weapon," and that the ingenious Mr. Monck Mason proposed to read "termagant" for "burgonet"! For ourselves, we should have left the passage without note or comment, with the assurance that the broad poetic meaning would force its way into the mind of every reader but the dullest. At the same time, since the difficulty is started, we may be allowed in this place to offer what appears to be some elucidation of it, by reference to another passage in the same play, where Cleopatra, again pouring forth her soul in praise of Antony, uses the striking figure borrowed from a well-known heraldic device,—

> —— His reared arm
> Created the world.

Between this image and that of—

> —— the arm
> And burgonet of men,

there appears a sufficiently close analogy to indicate the poet's meaning in the employment of the latter. The powerfully affecting death-scene that closes the fourth act is fortunately permitted to produce its effect on the imagination, with but little distraction resulting from over-anxious editorship:—

> *Ant.* The miserable change now at my end
> Lament nor sorrow at, but please your thoughts,
> In feeding them with those my former fortunes
> Wherein I liv'd, the greatest prince o' the world,
> The noblest; and do now not basely die,
> Not cowardly put off my helmet to
> My countryman, a Roman by a Roman
> Valiantly vanquish'd. Now, my spirit is going;
> I can no more. [*Dies.*
> *Cleo.* Noblest of men, woo't die?
> Hast thou no care of me? shall I abide
> In this dull world, which in thy absence is
> No better than a sty?—O! see, my women,
> The crown o' the earth doth melt.—My lord!—
> O! wither'd is the garland of the war,
> The soldier's pole is fallen: young boys and girls
> Are level now with men; the odds is gone,
> And there is nothing left remarkable
> Beneath the visiting moon.
> *Char.* O, quietness, lady!
> *Iras.* She is dead too, our sovereign.
> *Char.* Lady!—
> *Iras.* Madam!—
> *Char.* O madam, madam, madam!
> *Iras.* Royal Egypt!
> Empress!
> *Char.* Peace, peace, Iras!
> *Cleo.* No more, but e'en a woman; and commanded
> By such poor passion as the maid that milks,
> And does the meanest chares.

Can anything be more intelligibly beautiful than—

> No more, but e'en a woman, &c.

in reply to the exclamations of Iras,—

> Royal Egypt!
> Empress!

What need is there of a note with an "*i. e.* I am *no more* an empress, but a mere woman"? The old reading, "but *in* a woman," being utterly meaningless, might well have been suffered to drop into oblivion without a remark. Another note to explain the word "chares" might also have been retrenched with advantage. Mr. Collier himself admits, that "the sense sufficiently explains its meaning." Then why divert our attention from the eloquent sorrows of Cleopatra to a subject so irrelevant and discordant as the etymology of the word "charwoman"? In the fifth act those eloquent sorrows break forth afresh in this sublime description of the fallen triumvir:—

> *Cleo.* His legs bestrid the ocean; his rear'd arm
> Crested the world; his voice was propertied
> As all the tuned spheres, and that to friends;
> But when he meant to quail and shake the orb,
> He was as rattling thunder. For his bounty,
> There was no winter in't; an autumn 'twas,
> That grew the more by reaping: his delights
> Were dolphin-like; they show'd his back above
> The element they liv'd in: in his livery
> Walk'd crowns, and crownets; realms and islands were
> As plates dropp'd from his pocket.

There is some excuse for explaining that "plates" signify pieces of silver money, from the Spanish *plata;* but there is none for a note on the word "autumn," which Theobald, with his usual felicity, substituted for the ancient but nonsensical reading, "Antony." We can see no more reason for perpetuating, in modern editions of Shakspeare, the minute history of every verbal emendation that has been made from time to time by the sagacity or happy conjectures of a swarm of critics and commentators, than there would be for maintaining around some stately edifice, which has received the architect's last embellishments, each individual pole of the scaffolding by the aid of which it was erected.

We now turn to Mr. Knight's edition; and we cannot disguise our apprehension that the Life of Shakspeare, by this inventive biographer, may be as endless as his poetic fame. Mr. Knight has discovered in literature something analogous to the endless screw in mechanics: indeed, according to his method of writing, we do not see any natural termination to the 'Life of William Shakspere.' How many parts would Mr. Knight have written had he possessed ample materials, when he has already produced eight with scarcely any materials at all to work upon? It is evident that it is not true in literature, that nothing begets nothing. Hitherto biographers have thought themselves under some particular engagement to adhere to the perfect tense, and the formula was—Shakspeare *did* such a thing, *went* to such a place, *lived* in

Digitized by Google

such a house, *wrote* such and such plays and poems: now a life takes a wide range, indeed, through the moods and tenses; the biographer having little to tell us of what his hero did, expatiates immensely through the imaginary void of all that he might, would, could, or should have done. Here is evidently prodigious scope for writing, if the author has only fancy enough to make the abyss pregnant; and Mr. Knight has shown a productive energy capable of writing a life of Cheops in twenty folios. "Did Shakspere visit Scotland?" Three-fourths of the part before us is occupied with this question, which Mr. Knight "inclines" to answer in the affirmative. He does not assert that Shakspeare ever actually crossed the Tweed, but he might have crossed the Tweed; it was not unlikely that he did cross the Tweed: and if he did not cross the Tweed, he *ought* to have done so; and are we to say that Shakspeare did not do "his duty"?—

"*If* it can be shown that the company to which Shakspere belonged was performing in Scotland in October, 1601, there is every *probability* that Shakspere himself was *not absent*. He buried his father, at Stratford, on the 8th of September of that year. The summer season of the Globe would be ended; the winter season at the Blackfriars not begun. He had a large interest as a shareholder in his company: he is *supposed* to have been the owner of its properties, or stage equipments. *His duty would call him to Scotland.* The journey and his sojourn *would* present some relief to the gloomy thoughts which the events of 1601 must have cast upon him."

We are then informed, that "*if* Shakspere visited Perth in the autumn of 1601, he was in that city within fourteen months of the period when one of the most extraordinary tragedies in the tragic history of Scotland had been acted within its walls." The event alluded to is the celebrated "Raide of Ruthven." But Mr. Knight is, unfortunately, obliged in candour to add, "With the details of this real tragedy Shakspere *might have been familiar without a visit to Perth.*" However, he goes gallantly forward, and observes, "*Place* the poet in the High Gate of Perth, looking upon the Castle of Gowrie; *let* the window be pointed out to him from which the King cried out, 'I am murdered!' *let* him enter the Blak Turnpike, the secret stair which led to the gallery chalmer from which the cries proceeded; *let* him, surrounded with the courtiers of James, listen to the details of terror which would be crowded into the description of such an event; and Scottish history *might* then be searched for some parallel of a king murdered by an ambitious subject!"

All this is to entice us gently into a belief that the play of Macbeth was suggested by the scenery and incidents which Shakspeare might, would, or could have witnessed, or heard accounts of, during a possible visit to Perth, in the October of 1601. Then some minute descriptive details in Macbeth are advanced by the way of buttresses, not to the Castle of Gowrie, but Mr. Knight's castle in the air. At the same time, he remarks, with amusing *naïveté*, "These passages in the play might have been written without any local knowledge, but they certainly *do not exhibit any local ignorance*"!

But Ben Jonson visited Scotland in 1618. He walked from London to Edinburgh and back again, showing that his poetic feet were not more vigorous than his natural. Mr. Knight makes an odd use of this Jonsonian expedition; he does not argue from analogy, that because one poet of that age visited Scotland, therefore another may be presumed to have done so likewise; but his reasoning is this, that "we find nothing in Jonson's poetry that gives us an impression that he had caught any inspiration from the country of mountains and lakes. We have no internal evidence at all that he had been in Scotland. We have no token of the impress of its mountain scenery upon his mind, at all approaching to the distinctness of a famous passage in Shakspere—a solitary passage in a poet who rarely describes any scenery, but one which could scarcely have been written without accurate knowledge of *the realities*," &c.

The reader will share our astonishment when he finds that the following is the passage referred to by Mr. Knight. It occurs, be it remarked, not in Macbeth, but in Antony and Cleopatra:

> Sometime we see a cloud that's dragonish;
> A vapour, sometime, like a bear or lion,
> A towered citadel, a pendant rock,
> A forked mountain, or blue promontory,
> With trees upon't, that nod unto the world,
> And mock our eyes with air.

We are gravely told that this could scarcely have been written—by Shakspeare!—"without an accurate knowledge of the realities;" that is to say, without the poet having travelled through Perthshire and seen Ben Lomond! For our part, we think Shakspeare might, would, and could have thus described "black vesper's pageants" had he passed all his days in the flat fens of Lincolnshire. But, at any rate, a trip to Wales would have shown him "forked mountains and blue promontories" as well as an excursion to North Britain; and does Mr. Knight maintain that Shakspeare was never in Wales? On the contrary, we confidently expect a chapter entitled "Shakspere in Carnarvonshire," to be followed, probably, by "Shakspere at Ephesus," or in Athens. When the Part lately appeared with the title of 'Shakspere in Germany,' we were under the impression, for some time, that it was a narrative of some continental tour which the Bard of Stratford *might* have taken, just as he *might* have walked to Edinburgh; it was a disappointment to our romantic expectations, to find that it was only Shakspeare in the hands of the German critics.

Memorial of the Royal Progress in Scotland. By Sir Thomas Dick Lauder, Bart. 4to. Edinburgh, Black: London, Parker.

THE literary value of this gorgeous volume will be best appreciated a hundred years hence: now it is mainly noticeable as a splendid boudoir book, thickly set with superfine line engravings, delicate wood-cuts and grotesque initial letters. Posterity will discover that the Baronet of Fountainhall has played Master Laneham's part "with emphasis and discretion"—been sufficiently minute as to the ceremonial observed on the occasion of a most interesting Royal progress, and sufficiently busy in collecting those minor traits of character and anecdote which give life to dreary details of banquets, addresses, and presentations. There must be a certain amount of "effusion" in the most temperate of such records as these; and if a Scott, despite his keen sense of the ludicrous, could be driven "beside himself" with the extravagance of his loyalty on the occasion of a visit from—

> The best wigged Prince in Christendom,

—who shall wonder if Sir Thomas Dick Lauder becomes sometimes solemnly triumphant, or sentimentally enthusiastic, with so young an Oriana for his theme? The boundaries of good taste, however, are rarely overpassed.

The History of Literature. By Sir W. Boyd, A.M., M.D. 4 vols. Vol. I. Longman & Co.

A question might be raised how far works published by subscription are *coram judice* in our critical courts. For the most part they are mere private transactions with the subscribers, and if the parties are content to buy 'pigs in pokes,' they have no one to blame but themselves. Criticism, indeed, comes all too late to their assistance. On the other hand, it might be urged, that subscription lists are unlawful weapons, constructural blunderbusses, with a decided stand-and-deliver look about them, which requires that they should be branded, as a precautionary measure for the protection of the lieges. But whatever claims to immunity works thus published may possess, the author before us seems little desirous to benefit by them; for he throws down his gauntlet to the critics; and tells us to our faces, that in these days, "abuse is often mistaken for criticism" (which is as much as to say, "touch me at your peril!") and that "it is easier to criticize than to imitate." He moreover is "fearless of fair and free opinion"; well knowing that in that quarter he is impregnable; nay, "in presenting his volume to the public, he rejoices that there is now a prospect of an important chasm in History being filled up."

There is something provoking in this tone, that might tempt men of more forbearance than we of the ungentle craft, to try such a writer on the high ground he has himself selected. We shall not, however, affect an anger that we do not feel, but content ourselves by reminding Sir W. Boyd, that the fashion of substituting abuse for criticism has gone by. There never was much to be gained by it. Party efforts to crush obnoxious writers turned out to be terrible promoters of second editions; and as for private malice, journals have characters, and their editors cannot afford to indulge their own or other people's tempers, or maintain waywardness at the expense of truth.

We must however take leave to say, that Sir W. Boyd has fallen into a double mistake,—first, in supposing that the history of literature was still to be written; and secondly, that his own work is in any degree better than many which have preceded it. This first volume, which treats principally of the literature of ancient Greece, is, indeed, a fair enough compendium of what may be picked out of any gentleman's classical reading—the prevailing surface of opinion,—the outline of his subject, handled with common sense, and not without poetic feeling; but it is neither the work of a philosopher nor of one whose reading has extended far beyond the high roads of classical literature. But though the volume will not supersede existing works, nor close the door upon subsequent research, it is, in its kind and degree, not unworthy of perusal. To those who know little of Greek literature, it will afford a sufficient first glance at the subject; to those better acquainted with the language and its authors, it will offer pleasant recollections, and it brings the reader into good company, where he will breathe a pure refreshing atmosphere.

Personal Observations on Sindh. By Capt. T. Postans. Longman & Co.

History of the War in Affghanistan. Edited by C. Nash, Esq. Brooks & Co.

Scenes and Adventures in Affghanistan. By W. Taylor, Sergeant-Major of the 4th Light Dragoons. Newby.

Letters of Colonel Dennie, &c. Dublin, Curry & Co.

ALL the works before us relate to but one subject—the course of policy pursued towards the states on the north-western frontier of British India, for it is impossible to view the occupation of Sindh as a subject distinct from the Afghan war, or to examine either without a reference to the kingdom of Lahore. Ever since the final occupation of Cutch, in 1819, the British government was brought into close connexion with

Digitized by Google

that of Sindh, and several efforts were made to form friendly relations with its rulers. The Ameers, or rulers of Sindh, were four brothers of mean origin, whose authority was subdivided amongst their children, so that the form of government might be described as a family oligarchy, which it needs no laboured argument to show is about the worst that could possibly be invented:—

"As a whole, this court presented a curious anomaly; for each individual composing this strange form of government lived as if deeply jealous or suspicious of the other, and each appeared to be only meditating how he might readily compass the downfall or engross the possessions of his fellow-chieftain; caution against mutual treachery, indeed, went so far as to show alarm even for personal safety. Large bodies of the armed retainers of each prince were always in attendance; and when the Amirs quitted their capital to partake of the sports of the field, each was accompanied by an enormous force, with the view of guarding against surprise. Yet, notwithstanding all this appearance of enmity and actual distrust, internally a common bond of union kept the Sindhian chiefs together; and when the safety or honour, even of individuals was assailed from without, it became a common cause, and they stood forward as one man to defend it."

Dr. James Burnes (brother of the late Sir Alexander Burnes), who visited the court of Hyderabad in 1827, to give medical aid to one of the Ameers, in a Memoir on the state of Sindh at that period, privately printed, has thus described the appearance of the reigning family:—

"The *coup d'œil* was splendid. I had an opportunity of seeing the whole reigning family at a glance, and I have certainly never witnessed any spectacle which was more gratifying, or approaching nearer to the fancies we indulge in childhood, of eastern grandeur. The group formed a semicircle of elegantly attired figures, at the end of a lofty hall spread with Persian carpeting. In the centre were seated the two principal Ameers on their musnud, a slightly elevated cushion of French white satin, beautifully worked with flowers of silk and gold, the corners of which were secured by four massive and highly-chased golden ornaments, resembling pine-apples, and, together with a large velvet pillow behind, covered with rich embroidery, presenting a very grand appearance. On each side their Highnesses were supported by the members of their family, consisting of their nephews, Meer Sobdar and Mahommed, and the sons of Mourad Ali, Meers Noor Mahommed, and Nusseer Khan. Farther off sat their more distant relations, among whom were Meer Mahmood, their uncle, and his sons Ahmed Khan, and Juhan Khan. Behind stood a crowd of well-dressed attendants, sword and shield bearers to the different princes."

One of the most marked features in the conduct of the Ameers, and one of the most injurious to Sindh, was their extraordinary passion for the chase, which had induced them to turn large tracts of productive districts into hunting forest. Mr. Crow, who was sent as an envoy to Sindh (and to whom, it may be incidentally remarked, Capt. Postans is under many unacknowledged obligations), relates the following characteristic anecdote: "Meer Futteh Ali has depopulated, at a loss to his own revenue of between two and three lacs of rupees annually, one of the most fertile spots in the neighbourhood of Hyderabad, because frequented by a species of antelope called Kotapacha, which he has most pleasure in hunting. A short time ago the youngest brother of the family unrelentingly banished the inhabitants of an ancient village, and razed it to the ground, because the crowing of the cocks and the grazing of the cattle disturbed the game in his brother's hunting park, which was contiguous." We need scarcely remind our readers, that the first English monarchs of the Norman line are said to have pursued a similar course of impolicy. When Colonel Pottinger was negotiating a treaty with the court of Hyderabad, the article on which the Ameers most strongly insisted, was the inviolability of their *shikargahs* or hunting-grounds; and they informed him, that every head of deer killed in Sindh was valued at 800 rupees, or about 80*l.* sterling. Dr. Burnes gives us the following description of a royal hunt:—

"The shikargahs are large tracts of jungle so carefully inclosed as to prevent the egress of all quadrupeds; and when their Highnesses proceed to them, all the wells, except the one in front of their tents, or bungaloes, are closed up, and the game is hunted till dire necessity obliges it to seek for water, at the risk of life. Sometimes they station themselves in temporary buildings, between two shikargahs nearly adjoining, in one of which several hundred matchlockmen are posted to expel the frightened animal, which, in endeavouring to escape through a passage made for the purpose into the neighbouring preserve, is intercepted and killed by the Ameers. They never hunt on horseback, but sometimes, though rarely, go out a deer shooting on camels; none, except themselves, are permitted to fire at any game; and there is scarcely a sporting excursion which does not cost them the lives of two or three of their subjects, either from false aiming on their own part, or the fury of boars, &c. driven desperate. All the grandees in Sinde, when they appear in public, are attended by their bazbans, or falconers, with hawks, some of which are of great value. I saw a bird which had cost Kurm Ali two thousand rupees; and his Highness presented me with one of a scarcely inferior price. The best are, I understand, brought from Turkistan, and the northern parts of Cabul."

To this account we may add some additional particulars supplied by Capt. Postans:—

"Their method of pursuing these sports is, among the inferior classes, with dogs and spears; but with the princes and chiefs it is a very systematic and luxurious affair. The Amirs, seated in temporary huts erected for the occasion at the termination of one of the enclosed preserves, have the game driven towards them by an immense crowd of men, the inhabitants of the country being collected from every direction for this purpose. Thus the Hindú is forced from his shop and the Mahommedan husbandman from his plough, and detained for several days without food, or a farthing of remuneration for their services, but too often losing their lives, or sustaining serious injuries, merely to contribute to the sport of their rulers. Thus driven from their covert by the yells and shrieks of the beaters, who, surrounding the sporting grounds armed with staves, and loudly beating drums, gradually close towards the centre, the poor frightened brutes in the preserves make towards the only path of escape left to them, which is an opening leading directly under the muzzles of the matchlocks of the sportsmen, who pour upon them a destructive fire. The mass and variety of game that is forced from the shelter of the jungle by this means is most surprising, for not only does it include numerous hogs and black buck, the nobler sport, but great varieties of smaller game, the beautiful cotah-pacha, with foxes, hares, &c. in abundance. Hawking is also a very general sport throughout the country, for the capture of the beautiful black partridge, very similar in plumage to that of Cutch, abounding both in the interior and on the banks of the Indus."

As the territory of Sindh occupies the lower valley of the Indus, no attempt could be made to open the navigation of that river and render it a channel for British commerce without the consent of the Ameers, and that they were reluctant to give, partly from jealousy of the English power, partly from their fanatical hatred of Christianity, but partly also from a fear that their beloved shikargahs, on the banks of the river, would not be respected by strangers. In 1830, when Lieutenant (afterwards Sir Alexander) Burnes sailed up the Indus, with presents from the King of England to Runjeet Singh, the Sindhian Durbar exhibited the strongest jealousy and distrust of the English designs; and it was only after vexatious delays, threatenings, and entreaties, that the expedition was allowed to proceed through the territories of the Ameers and up the river.

The report made by Burnes, which is embodied in his published Travels, led the British government to form a high, and perhaps exaggerated, estimate of the commercial advantages which might result from opening the navigation of the Indus. Indeed, a company for the purpose was formed in England under high auspices. But though a commercial treaty was concluded with the Ameers in 1834, the promised extension of trade did not follow. It was found that the mouths of the Indus were dangerously barred, their channels of entrance shallow and beset with moving sands, the stream violently rapid one half of the year, and inconveniently shallow during the remainder. The territory of Sindh, though naturally fertile, was so impoverished by ages of bad government, that its inhabitants had little or nothing to give in exchange for British goods. It has been sometimes forgotten, in commercial diplomacy, that to open a profitable market in any country it is necessary that the inhabitants should have, not only a desire for British manufactures, but also the means of paying for them.

Shikarpúr, near the Afghan passes, has a very extensive banking influence throughout Central Asia, and it is possible that houses of agency might have been profitably established in that city, but it was generally believed, that in order to render the steam navigation of the Indus profitable, markets should be opened higher up the stream, in the kingdoms of Cabúl and Lahore. In fact, the mission of Sir Alexander Burnes to Dost Mohammed, in 1836, was designed to establish such commercial relations as might enable the English to open trade with the various marts of Central Asia.

We have no wish to enter into the change of this mission from a commercial to a political character, for that would lead us to investigate the entire policy of the Afghan war, and the circumstances in which it originated; we are, however, bound to state, that Dost Mohammed's first demand, the possession of Peshawer, or at least its restitution to an Afghan chief, was essential to the objects which the British originally had in view, for the line of the Indus formed a definite boundary, admitting of no dispute, between the kingdoms of Cabúl and Lahore, while the possessions of Runjeet Singh, on the right bank of the river, were worthless to himself, and a source of constant alarm to the Afghans. In fact, it appears evident, from the Parliamentary Papers, that Runjeet would have been glad of a decent pretext to relinquish Peshawer as a very inconvenient conquest.

Stripped of official phraseology, the cause of declaring war against Dost Mohammed, stated in Lord Auckland's manifesto, is, that the Chief of Cabúl preferred the alliance of Persia to that of India, and that Persia being wholly at the disposal of Russia, such a preference must bring the influence of the great European rival of Britain to the very frontiers of her Indian empire. In plain terms, Cabúl was likely to become dangerous if influenced by Persia, and Persia was actually dangerous because its councils were directed by Russia. If all this were true, the root of the matter lay manifestly in St. Petersburgh, and a complete settlement of the question would have been more speedily obtained by a fleet in the Baltic than by an army in Afghanistan; but the people of England would not hear of a European war, and so "measures for arresting the rapid progress of foreign intrigue and aggression towards our own territories" were taken against the possible instrument, whilst professions of friendship were lavished on the suspected moving power.

As Sindh commanded the access to Afghan-

Digitized by Google

istan from the Bombay side, its rulers at once became involved in all the strange complications of our north-western policy. The Ameers stipulated with Colonel Pottinger to allow the British army a free passage through Sindh, to furnish supplies of corn, cattle, and camels at stipulated prices, and to assist the invaders of Afghanistan by all the means in their power. That they were insincere in this treaty is unquestionable; but as Capt. Postans well observes,—

"It should, in justice to the Amirs, be observed, that they did not seek our alliance, though we did theirs; and that any promises or professions which a weaker power may make to a stronger must be held as the result of an influence which does not admit of candid opinion. It is true we asked for little, and as professed friends they could have no just cause to deny our requests; but as possessors of a country, they had as much *right* to refuse us a passage through it as an individual would have to refuse a thoroughfare through his estate: they were open to punishment for breach of promise; but the question may yet arise how far that promise was binding, under the peculiar circumstances of the case. At last they openly declared that they did not want our connection, and that, so far from considering it an advantage, they looked upon us 'as a pestilence in the land.' This was, in short, their *candid* opinion, when it could no longer be concealed."

During the troubled period which followed so rapidly our first successes in Afghanistan, the Ameers of Sindh behaved with unquestioned fidelity; they seemed to have become reconciled to the English and their presence, who, in fact, had greatly increased their revenues by the large expenditure rendered necessary by the preparations for remedying the disasters of the Afghan war:—

"However, on the return of the British troops from beyond the Affghan passes, the affairs of Sindh and the whole Indus frontier appear to have attracted the particular attention of government; for certain conditions were soon after proposed to the Amirs, which were unexpected, and to which they could not readily acquiesce. The new treaty thus presented to the Talpúr chiefs, generally including both the Khyrpúr and Hyderabad families, was considered to have for its leading features as an *ultimatum*, and in supersession of all former arrangements, though why does not yet appear, the cession in perpetuity of the towns of Karrachi, Tattah, Sukkur, Bukkur, and Rorí, with a strip of land on each bank of the river;—the abolition of all tolls and transit duties of every kind throughout the Sindhian territories, and the giving over to the neighbouring chief of Bhawalpúr the whole of the Khyrpúr territory eastward of the river, from Rorí to Subzutkót, including those places, on condition of his also annulling all imposts on trade by the river through his territories. It will be seen that these measures were not calculated to be palatable to the Sindhian chiefs; for independent of the loss of revenue which the cession of such important territories as these must have occasioned, a portion being made over to a foreign and inferior power, the dignity of the whole Bilúch faction was most vitally assailed; whilst a most important point to the Amirs was at length decided against them in the infringement of their game preserves, an immediate result of our taking territory on both banks of the river. The abolition of the transit duties was an inferior question, and would have come in probably with others which it is supposed were to be mooted, for the still further advancement of trade, and other alterations, which were required to improve our relations with Sindh generally, before alluded to."

We have not yet seen any justification of these new demands; but the Ameers of Lower Sindh showed a readiness to acquiesce in them, provided some extra demands on the Ameers of Upper Sindh were withdrawn, or modified, and means provided for satisfying the Belooche mercenaries, nominally the servants, but really the masters, of the Ameers. When this was refused, the Belooches, who formed the strength of the Sindh army, and whose interests were compromised by the British demands, insisted that the treaty should be abandoned. Surrounded by thirty thousand of these fierce warriors, the Ameers were no longer free agents, but they creditably exerted themselves to insure the safety of the British Residency:—

"On the same day [that the result of the conference with the English representatives was promulgated], a formal deputation, and subsequently up to the 14th, repeated messages were sent by the Amirs to the British representative, intreating him to give them the means of dispersing their intractable followers by a slight promise, or failing it, to provide for the safety of himself and party, as they could not prevent the Bilúchis from attacking him. Of course no promise could be given, though the British representative still deferred to depart, as his doing so would close the door against accommodation, and at once bring on hostilities, which he was most anxious to avoid. At the latter date confidential servants were sent from the chiefs individually to warn Major Outram of his danger in delaying his departure, as they would be forced by their followers to accompany them in an attack on the agency."

The brilliant defence of the Residency, Major Outram's retreat, the bold advance of Sir Charles Napier, the battles of Miani and Duppa, the surrender of the Ameers, and their removal as prisoners to Bombay, are known to every reader of newspapers:—

"A local journal describes their condition thus:—'The Amirs, being prisoners of state, are retained in strict seclusion; they are described as broken-hearted and miserable men, maintaining much of the dignity of fallen greatness, and without any querulous or angry complainings at this unalleviable source of sorrow, refusing to be comforted.' It would be superfluous to add to this description. The Amirs of Sindh merit deep sympathy; and those even who were opposed to them in the stern shock of arms will yet acknowledge that their fate has been indeed a melancholy one."

Sindh is now declared an integral part of the British empire; but the questions arise whether we can retain it, and whether such a conquest is worth preservation. On the first point it is to be observed, that Sindh is everywhere open to the incursions of the fierce mountaineers of Beloochistan; that the Belooches are a set of desperate marauders, unanimous in their religion, animated by the wildest fanaticism, and united by the ties of clanship and intermarriage; that the sons, brothers, and families of the imprisoned Ameers, and the Belooche chiefs who instigated them to resistance, have found shelter in the mountains; and that the long grass and tamarisks, on the banks of the Indus, afford signal opportunities for guerilla attacks, and for the formation of stockades similar to those which proved so fatal to our forces in the Burmese War. Furthermore, Sindh is remarkable for excessive heat and malaria, and its communication with Bombay is cut off during three months of the year by the south-west monsoon; service in such a country is not likely to be popular with the sepoys, and must entail an expenditure of money and of life which will draw heavily on the resources of India.

Will this expense be in any way remunerated by opening the Indus to British commerce? We doubt it; and Captain Postans shall state our reasons:—

"Before our troops made their first campaign into Affghanistan, the merchants of Bokhara, Hirat, Caubúl, and Candahar, brought down to Sindh by the pass of the Bolan and the plains of Cutch kafilas laden with rich goods of all denominations; and their safety of person and merchandise was secured by the payment of a species of black mail to the chiefs of the tribes who held these deserts and mountains in possession: a child might then lead the camels, and not a Bilúch would attempt to molest them; but after our entrance to the country these passes, filled with wild and desperate men, were no longer safe for the peaceful merchant; commerce was stopped, kafilas were robbed, and their owners murdered. The passes were thronged with warriors, and bloodshed and violence made the land a scene of unmixed evil. As it was upon the plains and mountains, so may it now be on the river; and the terrors of the merchant may do more to oppose the free commerce of the Indus than even the vexatious imposts of the Amirs; while a similar evil may extend also to the agriculturists, who will fear the descent of the Bilúchi bands upon their fields, now that the exiled chiefs are thirsting for revenge on all who sought our protection, far more than they did the billetting of the Amirs' followers, when the crops were ripe for harvest."

We do not wish to enter into the question of the Afghan War; its disasters are beyond remedy; but we must say, that Mr. Nash's history brings charges against several of the authorities, and particularly Lord Keane, which ought not to be lightly hazarded, but which, if supported by *primâ facie* evidence, should form the subject of parliamentary inquiry. The compiler has not brought forward any tangible proofs; but the published letters of the late Colonel Dennie go far to show that there were errors in the advance to Cabúl scarcely less flagrant than those which led to our calamitous retreat.

Taylor's 'Scenes and Adventures' have little interest; he describes vividly enough what came immediately under his notice, but his sphere of observation was necessarily limited by the round of his regimental duties.

The Juryman's Legal Hand-Book; and Manual of Common Law, &c. By T. H. Cornish, Esq. Barrister-at-law. Longman & Co.

This is an eccentric book, in which there is a sprinkling of useful information over a mass of the most heterogeneous and irrelevant materials. It commences with a quotation from the Hebrew Bible, in proof of the antiquity of the practice of judges going circuit, and then there comes an introduction consisting of a sketch of the life and doctrines of Confucius,—for the edification of English jurymen! Next in place, we are treated by Mr. Cornish to a chapter on "The Homes of England," and this is followed by an omnium-gatherum of maxims of law, "for the use of petty jurors and others." Some of these are new to us; for instance, the maxim that "theft cannot be punished by theft." Although we are not prepared to dispute the truth of the position, it is not a little droll to state it as "a maxim of law." After the dry information that every agreement for the purchase of goods above 10*l.* must be reduced to writing, the author refreshes his readers in the box by turning to Macrobius and quoting the Dream of Scipio! The juryman is then introduced to Torquato Tasso, and thence gently conducted to the painful subject of assassination, which Mr. Cornish assures him is not a British crime. We suppose it is an Italian, or a Spanish crime; if so, it is an Italian crime committed by Britons oftener than could be wished, as none know better than British jurymen. That Mr. Cornish is well read in the slang literature of the day, he satisfies us by a chapter on the "number of crimes," in which he gives us in parallel columns the proper names of a great variety of offences, and the flash appellations of the same atrocities, in the language of the worshipful corporation of the thieves and vagabonds of London. The juryman is then presented with a chapter on French criminal statistics, but it is not suggested what use he is to make of this stock of erudition in the box.

The chapters on the origin of juries, their constitution, and the mode of summoning them, on the challenges of jurors, and their duties when sworn, may contain some useful matter; but the way in which these legitimate subjects are in-

Digitized by Google

terspersed with incongruous remarks, entitled *memoranda*, is absolutely ridiculous. Thus at the end of a discussion on municipal law, agreeably diversified by references to Cicero, Jacob, and King Alfred, we are informed with the utmost gravity, that "imitation" is punishable by the laws of England! This startling proposition is given upon the authority of a decision of some justices of Leicestershire, reported in the *Times* newspaper!

"Five paupers were sentenced to fourteen days hard labour at Leicester lately, for laughing, braying, and making a noise, as if they were driving cattle."

This is probably quite true, but it is amusing to see such a case and sentence quoted as law, and by an author who writes himself down a lawyer, and not one of the animals imitated by the Leicester paupers. The *Times* candidly added—"Such amusements are practised by legislators in the House of Commons with impunity." If therefore Mr. Cornish's law be law indeed, it is a comfort to think that it is only the law for paupers. It is a misdemeanour for a pauper to imitate an ass, but a legislator may actually *be* one, without committing any offence, or incurring any penalty.

Would the reader like to have *a definitive idea* of Equity? Mr. Cornish will gratify him:—

"Of this dignified and comely daughter of even-handed justice, I shall say, that she, like her mother, is of heavenly origin. Equity has her courts, to which the injured resort; at whose petition she condescends to detect latent frauds and concealments; she takes cognizance of matters of trust and confidence; she delivers her conscientious suitors from the perils into which unavoidable calamity or oversight has plunged them; she grants the boon of a specific relief adapted to their several fortuitous exigencies; she throws her shield around the person and property of the adult who shall be deemed incapable of acting—*non compos mentis;* she makes a fair division between equal claimants, rendering the haste and clamour of the greedy vain; she is the widow's friend; the benevolent guardian of fatherless innocents."

This is what the author calls a "definitive idea of Equity"! The fine sayings about "the widow's friend" and the "fatherless innocents," remind us of an incident said to have occurred in the Rolls Court. A rule was about to be made in a certain cause, the operation of which would be seriously injurious to one of the parties, who was a widow with a large family. "Will your Honour," urged the counsel for the unfortunate lady, "pronounce a sentence which will consign my unhappy client to utter ruin? Will you make a rule which will doom this poor widow and her seven helpless little ones to actual starvation? Will you—" "It is the practice of the Court, Mr. Smith,"—interrupted the Judge, Mr. Cornish's "benevolent guardian of fatherless innocents."

Memoir of the Life of the Right Hon. Charles Lord Sydenham: with a Narrative of his Administration in Canada. Edited by his brother, G. Poulett Scrope, Esq., M.P.

[Second Notice.]

An instructive and amusing portion of this volume is comprised in the extracts from Mr. Thomson's letters and journals, which ever contain his whole thought. In one of the latter he thus predicts the downfall of the Whig government and the fate of the in-coming ministry:—

"I have a better chance of settling things in Canada than any one they could have found to go; and if I had not taken it then, as I could not well have got out of the government, I should have shared in the disgrace next session. It is a *great field*, too, if I bring about the union, and stay for a year to meet the United Assembly, and set them to work. On the other hand, in England there is little to be done by me. At the Exchequer all that can be hoped is to get through some BAD tax. There is no chance of carrying the House with one for any great commercial reforms, *timber*, *corn*, *sugar*, &c.; party and private interests will prevent it. If Peel were in, he might do this, as he could muzzle or keep away his Tory allies, and we should support him. If he got in and had courage, what a field for him! But he has *not!*"

The following contains Mr. Thomson's estimate of a great contemporary; and it cannot fail to be perused with interest:—

"Read Life of Sir James Mackintosh. It is a melancholy picture of talents—not misapplied, for he did good—but failing to produce the effect they ought, either for the public or their possessor. With all his powers he never achieved eminence—for want of perseverance. What a lesson! My recollection of him certainly does not justify the high reputation which he seems to have had among distinguished men who were his immediate contemporaries. But life, and especially the life of public men, has been far more active of late years; and his character was not that of an active man. He was more fitted to embellish society at Holland House, when there was *time* for literary and philosophical discussion, than for the duties of an active statesman in these later days, or even for the conversation of those who now form society in the political circles in which I move, and which he then moved in. It is strange, though, that I, who never had half his recommendations to the Whig aristocracy, and not a tithe of his talent, nor a hundredth part of his information, should have been in office with him as his superior, and for five years a Cabinet Minister. I believe that the cause of this is to be found in the dependence of the one and the independence of the other. The knowledge that I wanted not office for the sake of money, nor patronage to procure me a seat, has done for me that which his superior talents and knowledge, wanting both, could not do."

Here is a pleasant description, from a private letter, of his opening the first session of the United Provincial Parliament:—

"I opened my Parliament to-day; and really the matter was very creditably conducted. The Toronto dragoons are not quite equal to the Life-guards, and Arthur's coach (for I did not bring my equipages up here) not quite so smart as her Majesty's. But I flatter myself that I looked very regal on the throne with my cocked hat on; and the hall of the Legislative Council beat the House of Lords hollow. We had all the Toronto ladies, and heaps of fair Americaners, who came over for the sight; and the commons made as much noise, and looked as dirty as they do in Westminster. So upon the whole I think my Provincial Parliament quite as good as the old one. The worst part of the thing to me, individually, is the ceremonial. The *bore* of this is unspeakable. Fancy having to stand for an hour and a half bowing, and then to sit with one's cocked hat on to receive addresses. Poor royalty! I learn to feel for it. Then the misery of always being on parade! When I get over the first blush, however, I hope to remedy this a little."

In another letter, written while on a visit to the Falls of the Niagara, he says:—

"Here I am on my road to the West, and with the windows and balcony of my rooms facing the most magnificent sight on earth, with beautiful weather; and, if they would only give me a minute's respite from business and show, very much disposed to enjoy myself. I arrived on Sunday, and mean to complete my week nearly. As for attempting to describe the Falls, it is impossible to convey any idea of them. Vulgarly they are only two great milldams, and in painting they can only appear so; but the effect they produce on the mind from their magnitude is indescribable. We have a host of Yankees, either in the house or arriving daily from the opposite shore, a gun-shot off, to see Mr. Governor Thomson. You never saw or can imagine such a set of people; but they are great fun. I gave them a review yesterday of the 93rd, a Highland regiment in *kilts*, which delighted them not a little I guess. I overheard one of them say, 'I guess these Britishers do it a'most as handsome as the Buffalo Citizen Militia!' Another said to me to-day, meaning, I presume, to pay me the highest compliment, 'I opinionate that you are very like our old Hickory' (Jackson)—'you *downs* them everlasting locusts of place-goers, and wo'nt stand no *up* but your own;'—pretty true, by-the-by. Yesterday, on the balcony, a Yankee lady was walking with her little girl; the child said, 'Mamma, I can't bear this.' Upon which mamma looked daggers at her, and said, 'How can you talk so before the Governor? You should say, I can't tolerate this.' Such is their delicacy of language. What it is, practically, you may imagine from the circumstance of my bed-room opening on a balcony that is common to the house; and there is not a young lady in the hotel who does not walk up and down staring into the window of the room, which is about eight feet square, every morning whilst I am going through all the processes of my toilet."

It is fair to add, that this description applies only to a sight-seeing mob of a frontier province. Mr. Thomson's opinions, however, of the Americans and their institutions were not favourable; probably on account of the difficulties which the Sympathizers, aided by a feeble central government, gave to him as Governor of Canada.

Of the native tribes he seems to have had still less hopes:—

"Catlin is probably correct enough in his description of the Indians in their prairie, or forest life. But I wish he had exhibited them in their demi-civilized state, in which I have the honour to be 'their Great Father,' as you probably have seen in the newspapers. They are ten times worse than when wholly savage. It has been a great mistake to attempt to settle or Christianise them. Whether baptism alone will save their souls and send them to Paradise instead of their own traditional hunting grounds, I cannot determine, but certainly their works will not. They have acquired the most disgusting vices of civilized life, and none of its refinements or advantages. They should be amalgamated with white men, and not separated, if they are not to remain in their wild state. I have a village of them eight miles from here, a perfect pest, and the most debauched, idle, and quarrelsome set of men and women in the country. The attempt has failed everywhere."

We have lingered over this volume with a regret proportioned to our sense of the value of Lord Sydenham's labours, and to our desire that his teachings should be as widely profitable as they are pressingly wanting, in the unformed state of public opinion.

OUR LIBRARY TABLE.

On Spasm, Languor, and Palsy, &c., by J. A. Wilson, M.D.—This volume moots a professional question, but one within the competence and reading of the general scholar, namely, whether, certain so-called nervous diseases have not their seats in the muscular system. These questions form a part of the newly revived humoral pathology, which has latterly acquired some considerable vogue with professional writers. Medicine is a conjectural science,—in other words, a science of opinion; and opinion is essentially within the domain of fashion. Every doctrine which appears under such an influence, must be taken *cum grano;* but we also think that the pathological dispute here brought into discussion, is more a question of words than of things. True theory cannot be either solidist or humoralist exclusively; but must be subordinated to observation in each specific case. Every one must admit that the blood may be morbidly surcharged with certain principles or elements, or that it may be deficient in them; that its constitution may be otherwise abnormal; or that blood in itself healthy, may circulate a poison accidentally introduced into the veins. In these conditions, disease may arise, either from the fluid being so changed as to unfit it for exciting the living fibre, and thus putting a stop to all action: or its powers as a stimulant may be affected only so as to alter the rhythm of the resulting action. In the former case, the disease may be said to begin and to end in the fluids, the functions of the solids not being deranged, but absolutely suspended. It is only, then, in the latter position, that a debateable question can be raised; and that question turns on the point whether the blood is or is not alive; for if the blood is not alive, it cannot be diseased. What then is life? Every organ and tissue has a life of its

Digitized by Google

own, manifested in each, by its own specific laws. The life of a muscle is not that of a nerve, nor the life of a bone that of a cartilage. But the only ground for predicating life of the blood, is its faculty of spontaneous coagulation, which offers some striking analogies with muscular contraction. The *plus* or *minus* condition of this power, may be conceived to influence the fitness of the fluid for living purposes, either as an active or passive agent; though whether this condition be self-engendered, or derived from derangement of the solids, is a matter, in many cases, difficult to ascertain, and not perhaps of much importance to the practice of the physician. As far, however, as we understand Dr. Wilson, he attaches to the word *life* a more mysterious and transcendental meaning, assigning to the blood a wider and vaguer part in the phenomena of life. If so, he has failed to give that meaning an intelligible expression. Exclusive, however, of all theory, an important consideration of a more positive nature has been brought forward by the author, and placed in a prominent point of view. The muscular apparatus, mass for mass, and weight for weight, bears a high ratio to all other parts of the body; its constitutional and functional variations must therefore exercise a proportional influence on the health of the whole complex. Muscle, moreover, has been with some justice considered as solidified blood, and blood as fluid muscle; the elements of these two substances being very closely allied. This opens a new and a wide field for physiological and pathological conclusion, which may occasion considerable changes in the doctrine of disease. Dr. Wilson is further right in being dissatisfied with the existing theory of spasmodic diseases, which attributes everything to the nerves—a theory obscure, indecisive, and open to enormous abuses. He must, however, forgive us if we put him on his guard against conclusions too absolute and exclusive, and suggest the old maxim of Ovid for his guidance, *in medio tutissimus ibis.*

Primitive Tradition, by Archdeacon Williams.—We were in error, it appears, when (No. 747) we prophesied that no one would take up the glove which Archdeacon Williams threw down so boldly in his 'Homerus,' for here we find him in the heat of a battle with the *Edinburgh Review*, and enjoying the fun. We do not intend to enter into the controversy, but that the Archdeacon is not easily to be put out of good humour with himself or his work, is shown in his new manifesto, where he says:—"You will pardon me for complacently expressing my own opinion, that the publication of my 'Homerus' was a movement in advance of the scholarship of the age," &c.

The Parents' High Commission.—We are never disposed to be critical when we meet with a work written in earnest, by one who admits that he "cannot be silent"—but we must intreat of this writer, if he ever again contemplates publication, that he will do himself the justice to sober down his style, which is at times downright rampant and rhapsodical. We do so the more earnestly because there is matter in his little volume worth attending to, but not worth hunting for in his bottle of hay. It is pleasant, in this age of uncharitable polemics, to listen to an exhortation to "love one another"; and a recommendation to begin reforms at home, in the education and moral training of our children, is more useful than all the expansive theories which, striving to embrace the universe, leave us clasping "the empty air."

Sketches and Extracts from a Travelling Journal, by Madame La Vicomtesse de Satge St. Jean.—The authoress says that in times gone by she little dreamed she should—

> —sunt by Nature's charms, dare to portray
> Her awful beauties.

It is to be regretted that she was ever so smitten. We cannot say much for her prose; and much that we could say of her poetry were better unsaid—as we have no wish to be classed among those dreadful critics "who frown darkly o'er her book."

The True Enjoyment of Angling, by Henry Phillips, Esq.—This is a foolish book; though of sufficient pretension to justify its being deliberately *put on the hook*, were we disposed for sport. Enough, however, to state, that Mr. Phillips conceives himself a second Christopher North, and has, therefore, essayed poetical prose—another Barry Cornwall, and given us English songs, which are neither songs nor English;—equal to Barnett, Balfe, or Bishop, and ventured music, which, we dare assert, none of them could have written! How an excellent vocalist could have been so seduced by vanity out of his proper calling, it is difficult to imagine,—a well known apothegm might have warned him of the result.

Endeavours after the Christian Life, by J. Martineau.—Setting aside the peculiar religious opinions of Mr. Martineau, who is a Unitarian, this work may be said to contain many noble truths, and to recall in parts the impassioned eloquence of Channing. It has also the faults of Channing's writings—a glowing vagueness and poetical unreality. We could not enter into more elaborate criticism without trenching on the field of controversial theology.

Nelson Reminiscences, by G. S. Parsons.—These Reminiscences appeared originally in the *Metropolitan Magazine*, and are now collected "at the urgent request of several of the author's friends, who desired to possess them in a permanent form." We hope the author's friends are sufficiently numerous to take off the whole edition, for there are so many faults, both of matter and manner, in the work, that we cannot recommend it to the public.

The Claims of the Christian Aborigines of the Turkish Empire, by W. F. Ainsworth.—In our notice of Mr. Ainsworth's Travels in Asia Minor, &c. (No. 762) we expressed an opinion that the Christian Knowledge Society ought to redeem the promise made by their delegates to the Chaldean Christians, &c. The present pamphlet is a renewed advocacy of their claims.

An Appeal to the British Nation in behalf of the Spanish Moderate Liberals, by a Spaniard.—There is no mistaking the writer of this pamphlet, which is an able exposition of the views and intentions of the Spanish Moderado party, and may be read with particular interest at this time. Whether the writer has successfully vindicated their conduct must be left to the public to determine.

New Embossed Alphabet for the Blind, by G. A. Hughes.—Mr. Hughes was formerly a schoolmaster, but became totally blind; and he now calls attention to a system of embossing which will enable the blind to record their thoughts, and any one who can read to correspond with them by post. His work, called the Punctiuncula Stenographic System of Embossing, together with the instrument, cushion and formula, are now to be had at No. 408 in the Strand: but as the expense of the publication has fallen heavily on him, subscriptions in aid are received by Messrs. Duncan & Malcolm, of Paternoster Row, and Mr. Miller, of Newgate Street.

Some Agricultural and Political Irish Questions calmly discussed, by J. G. Porter.—A well though somewhat irregularly written pamphlet about Ireland's grievances, and the remedies that might be tried. It is written, says the author, "for Ireland, and not against England," and is temperate in manner—a great merit now-a-days in discussing Irish affairs. We cannot, of course, enter into the questions here discussed.

The Poetical Works of Geoffrey Chaucer.—A neat, clear, and careful reprint of Tyrwhitt's edition, in one volume, (for which we are indebted to Mr. Moxon,) of the works of—

> Him that left half-told
> The story of Cambuscan bold,
> Of Camball, and of Algersife,
> And who had Canace to wife,
> That own'd the virtuous ring and glass;
> And of the wondrous horn of brass,
> On which the Tartar King did ride—

to be welcomed by all who love his "English undefiled;" with the Essay on his language and versification, and the copious Glossary, to aid the people of the nineteenth century to understand the language of their forefathers, which sounds "so swete upon his tongue."

The World of Waters, by Rosina M. Zornlin.—The 'World of Waters,' as Miss Zornlin somewhat quaintly styles her little volume, is not open to the objections which we made to her explanation of the voltaic battery (No. 778). The object of the work is to combine the consideration of the laws of hydrostatics and hydraulics with the description of the most remarkable hydrographical features displayed in the natural world, in such a manner that they may mutually explain each other. It is illustrated by several explanatory woodcuts.

Knight's Cabinet Edition of Shakspere.—The third and fourth volumes of this pretty and cheap edition are now published. The third volume contains "The Merry Wives of Windsor: Twelfth Night: As you like it: Measure for Measure." The fourth comprises "A Winter's Tale: The Tempest: King John: King Richard II."

Class Instruction, or Practical Methods of Teaching in Ladies' Schools, by Rachel Evans.—The order of studies here set forth—beginning with "a knowledge of natural objects"—and the general courses recommended, are on the whole judicious. There are, too, some few sensible words of advice to parents, recommending them not to set too high a value on accomplishments, and to remember that all the essentials of education, with two or three languages, music, dancing, singing, drawing, "knitting, netting, and crochet," cannot all be going on profitably at the same time.

Who should educate the Prince of Wales?—As this is a point already settled, we presume it is scarcely worth arguing. The author quotes Montaigne largely, and wishes the young Prince to become a miracle of virtue and talent, in which wish we doubt not all his readers will concur.

Piety and Intellect relatively estimated, by H. Edwards.—We suspect that Mr. Edwards overestimated his intellectual powers, when he published 480 closely printed pages on a subject worn almost threadbare, which yet he seems to consider quite a virgin path in literature. There is nothing to complain of in the matter of the book.

Chart of the British Empire.—This chart contains a general account of the Statistics of Great Britain and its dependencies, showing their extent, population, climate, productions, exports, religion, &c. It appears to have been carefully compiled.

A Geological Chart of the Oolitic Strata of the Cotswold Hills, and the Lias of the Vale of Gloucester, by J. Buckman. Useful to the geological student.

The Banker's Clerk; comprising the Principles and Practice of Banking.—One of Mr. Knight's 'Guides to Service.' A useful little Manual to put into the hand of any young person about to enter a banker's office, or who wishes to understand the principles of one of the most useful contrivances of modern society. It is written in a plain straightforward manner, and enters into all the minutiæ of business.

A View of Cheltenham in its Past and Present State, by H. Davies.—We have already noticed this work in its earlier form of 'The Stranger's Guide to Cheltenham,' and have now only to add, that this edition is much enlarged, neatly got up, and accompanied by numerous lithographs and wood engravings.

List of New Books.—Tales and Legends of the Isle of Wight, by Abraham Elder, Esq., 2nd edit. with illustrations, 12mo. 5*s.* cl.—Geology and Geologists, or Visions of Philosophers in the Nineteenth Century, by the Author of the 'Goodness of Divine Providence,' 8vo. 2*s.* 6*d.* cl.—The Bankrupt Directory, from December 1820 to April 1843, alphabetically arranged, by George Elwick, 8vo. 12*s.* cl.—Reid's English Composition, and Key, 1 vol. 12mo. 5*s.* 6*d.* cl.—Reid's Key to English Composition, 12mo. 3*s.* 6*d.* cl.—Fraser's Key to Walkingame, new edit. 12mo. 3*s.* sheep.—Rabenhorst's German Dictionary, pearl, 18mo. 7*s.* roan.—Anderson's (Rev. James) Discourses on the Cloud of Witnesses, Vol. II., 8vo. 10*s.* 6*d.* cl.—Office of the Holy Spirit, by James Buchanan, 4th edit. 12mo. 6*s.* 6*d.* cl.—Hades, or the Place of Departed Spirits, by Rev. R. Govett, 12mo. 1*s.* 6*d.* cl.—The Papa and Hierarchical System compared with the Religion of the New Testament, 2nd edit. 12mo. 4*s.* 6*d.* cl.—The Book of Private Devotions, by Rev. E. FOREIGN CORRESPONDENCE.

Archæological Researches in Greece.

July, 1843.

THE interest you have always taken in keeping the public accurately informed concerning the progress of Archaiological Research in Greece, induces me to send you an account of all that has been done in the Hellenic kingdom since the establishment of the German government. One object of this statement is to call the attention of the friends of Greek art in England to the importance of lending some aid towards furthering these researches, which, it will be seen from the following summary, have not been without important results both to art and literature. The artists and antiquaries at Athens have had quite as great difficulties to encounter from the supineness and illiberality of the Greek government as the mercantile and agricultural classes; yet I venture to refer to the essays of Professor Ross, on various questions of Greek topography,—to the splendid work on the Temple of Victory Apteros in the Acropolis of Athens, which he published in conjunction with the architects Hausen and Schaubert,—to the learned travels of Professor Ulrichs, in Bœotia and Phocis,—to the dissertation of the late General Gordon on the pass of Thermopylæ, with his map,—to the large Greek map of the Hellenic kingdom, by the engineer Aldenhoven, and to the extensive collection of unedited inscriptions, by Messrs. Rangavé and Pittakis, published periodically, under the title of the 'Archaiological Journal,'—to these works I refer as proofs of the services which the inhabitants of modern Athens have already rendered to the cause of ancient art and literature.*

It may not be superfluous to recapitulate the various attempts made at different times to excite the attention of King Otho's government to the importance of forming a society for the purpose of pursuing a regular system of excavation. The first attempt was made by four strangers residing at Athens, as soon as it was known that the son of a monarch so devoted to the cultivation of ancient art as King Louis of Bavaria was elected sovereign of Greece. The beautiful choragic monument of Lysicrates, vulgarly called the Lantern of Demosthenes, was chosen, and the whole of this interesting building was laid open to public view, its basement having been previously concealed by an accumulation of earth to the depth of 12 to 15 feet. The intention of the excavators was to inculcate, by a practical illustration, the necessity of an excavation round most of the ancient buildings, in order to display, as far as possible, the peculiarities of their original sites. This excavation led to nothing further at the time, as the excavators were not allowed to extend their researches, and it excited the jealousy of the royal government, which has permitted the little square formed round the monument of Lysicrates to be ruined, and almost filled with rubbish, for the purpose, as it is maliciously asserted, of clearing it out again, and making such improvements as will give a specious claim to say the excavation is a government work.

Some time after this first attempt, a second was made, and the foundation of an Archaiological Society was laid. Most of the Greeks of wealth at Athens subscribed, and it was determined to make a considerable excavation in the Acropolis, in order to greet King Otho on his first arrival at his future capital, with matter to excite his enthusiasm. As Count Armansperg, Mr. Maurer, and General Heideck, the members of the regency, were also to visit Athens for the first time in his Majesty's company, it was expected that they would all join the Society as patrons and subscribers. Very liberal subscriptions were collected among the Greeks and Philhellenes; Mr. Gropius, the patriarch of Attic Archaiologists, was requested to select the ground to be examined, and Mr. Pittakis, the present conservator of antiquities in Greece, undertook to direct the operations of the workmen in person. The success of the undertaking was most encouraging, as might have been anticipated, under such able superintendence. Five portions of the frieze of the Parthenon were discovered, four of which are in an exquisite state of preservation; one belongs to the assembly of the gods at the east end, and the others to the festal procession on the north side of the temple. Several other fragments of minor interest were also found, but all the exertions of this Society met with no encouragement from the Regency,—indeed, quite the contrary; it was met with the most distinct declaration that all further exertions would be dispensed with. I had exerted myself a good deal in persuading the Greeks that their new rulers would view their liberality as a proof of great merit, and that their patriotic conduct would be highly applauded. I own I was utterly confounded, when I laid the matter before Mr. Maurer and General Heideck, who were my guests on their royal visit to Athens. I had made sure of their support at least, as the one was an accomplished artist and the other a learned scholar, and I prepared them for the sight at the Acropolis by recounting the formation of the Society and its achievements: all this was met by a very cool observation on the part of their Excellencies, that the Society need give itself no further trouble, nor incur any additional expense, as the royal government had resolved to take the antiquities under its especial care, and would appoint its own agents for excavating.

For two years the Bavarian government did not appear to consider that the antiquities required much care. Antiquaries are, however, a persevering, obstinate race, and the regency was not allowed to rest, until at length Professor Ross was charged to make

* I may mention as a proof of my own anxiety to aid the exertions of abler men and better scholars, a map of the northern part of Attica, and an Essay printed at Athens in English, on the topography of Diacria and Oropia, as they have been adopted as authority for laying down that district in the new Topographisch-historischer Atlas of Greece and its colonies, by Kiepert.

Digitized by Google

excavations in the Acropolis of Athens, in order to continue the researches commenced by the advice of Mr. Gropius. The results of these excavations were also of the greatest importance to the history of ancient art. The beautiful temple of Victory at the entrance of the Acropolis, was found to have been thrown down without its materials having been destroyed, and almost every stone of the building, with the exception of the portion of the frieze in the British Museum, was discovered. The restoration of this elegant little treasure of Grecian art was almost completed when Professor Ross was removed from his office of conservator of antiquities, and Mr. Pittakis appointed in his place. From that day to this, the temple remains incomplete, in consequence of the jealousy which, in Greece, invariably induces every new official to adopt a totally opposite line of conduct from that pursued by his predecessor. One of the most valuable discoveries was an exquisite figure of a winged victory tying on her sandal to fly forth in attendance on the armies of the republic, which formed the last in a series of winged figures disposed in front of the temple, as a substitute for a balustrade. Many portions of the other figures have likewise been found; but all is left huddled together in a dusty magazine, or exposed carelessly in the ruined temple.

As soon as the Bavarian Regency awoke from its lethargy, it was seized with a fever for earth-scratching. The soil of almost every ancient site was rendered in turns, though for a very short space of time, the scene of a little digging. But as the object of this activity was only to supply a pretext for a series of articles in the German newspapers, by which it was thought glory and popularity would be gained in Europe, and very little reference was made to the service likely to accrue to art or literature, these excavations were without any important results. Some ground was, however, turned over at Olympia, at Tegea, at Sparta, at Megalopolis, at Tenea, near Corinth, at Thera, at Anaphé, and at Delos. It would certainly have been wiser to have pursued these researches on a more regular and intelligible system; but they deserve praise, as activity is always preferable to idleness, if the cause be in itself a good one.

In 1837 a new era dawned on Greece. Public opinion extended its influence everywhere, and the government was compelled to abandon all the outworks of its anti-hellenic system, in order to defend Bavarianism in the central departments of public business. An Archaiological Society was then formed by the Greeks themselves, and it exists to this day, though its funds are not very large, as the annual subscription of the members is only about 10*s.* 6*d.*, and from the Report drawn up and published by the president and secretary, it appears that a large proportion have allowed even this small subscription to fall into arrear during the last two years. This Society has nevertheless rendered great service to art and literature, and its affairs have been conducted in the most popular and prudent manner. One general meeting has been held annually in the Parthenon, in the open air, and all the world has been free to attend; nor have the meetings failed to attract some of the fair dames from distant lands, who have chanced to visit Athens at the time. Indeed it must be owned, that such sights can never fail to leave agreeable reminiscences. The unrivalled splendour of the setting sun, seen from the Acropolis, has excited many a noble verse: an assembly of Greeks discussing in their own language the affairs of their ancestors—the venerable president, Mr. Rizos, eloquently expounding the new light thrown on some point of ancient history, in which he shines far more than in penning dispatches as Minister of Foreign Affairs—all this makes a stranger proud on such an occasion to be a member of this Society, or even to have attended one of its meetings. At this annual meeting a committee of management is elected, the report of the proceedings of the previous year is read, and any question concerning the administration and application of the funds determined. The excavations already made have been very successful, and reflect great credit on the committee of management.

The entrance to the Acropolis has been cleared, and all the ruins and rubbish which encumbered the centre of the propylæum have been removed. All the modern buildings have been taken down which blocked up the northern wing, and the pinakotheke is now completely laid open. A considerable portion of the cella of the Erechtheium has been re-constructed, by replacing the ancient blocks which had fallen, and a sixth caryatide has been found, so that the little portico might be restored, except for the one in the British Museum.

But the most important labour of the Society is the clearing the basement of the Parthenon, and the restoration of those parts of the building which were uninjured, to the original places. The northern side has been completely cleared from the earth and rubbish which covered the fragments of the temple, which now remain exposed to view in ruined majesty. A well preserved metope, three more pieces of the frieze, and several fragments of sculpture from different parts of the temple have been found—amongst the rest a colossal owl, about whose position the Athenian antiquaries have expressed a multitude of opinions. The old mosque in the centre of the Parthenon has disappeared, but it was not removed until the fall of its portico warned the conservator of antiquities to remove all the fragments of sculpture it contained, and destroy it, lest it should destroy something valuable, by the fall of its heavy dome. The centre of the Parthenon would have presented a very meagre appearance after the removal of the mosque, and even the general appearance of the Acropolis would have lost something of its picturesque beauty, had nothing been done to enable the eye to connect the two masses of building which formed the eastern and western fronts, and which were left almost entirely unconnected by the explosion of the Turkish powder magazine, during the last siege of Athens by the Venetians. Several columns in this interval have been almost restored from the fragments found merely overturned by the explosion; 34 drums of columns on the northern side have been replaced in their original positions, and 12 on the south side. Part of the wall of the cella, and several of the large marble flags of the pavement have likewise been replaced.

These excavations have not been made on the principle adopted by Klenze, the celebrated Bavarian architect, who visited Greece in 1834, in order to propose a plan for the restoration of the Parthenon, and choose a site for the palace of King Otho. He seems to have been equally unfortunate in his opinions on both subjects, though his hurried visit may afford some apology, if his orders were not to exceed the time he devoted to the subject. In this work, published after his return,† he expresses some alarm lest the actual palace should be flooded by the Ilyssus, and with regard to the restoration of the Parthenon, he considered it sufficient to take any drum of any column at hand, the diameter of which nearly corresponded with the spot it was to occupy, and replace it on the column to be restored. In this way he replaced one of the drums of a column on the northern side of the temple, where it still remains, as a specimen of the unsightly figure which the Parthenon would have been rendered had his plan been adopted. I cannot, myself, understand how a learned scholar and an architect of the classic school, like Klenze, could have entertained the idea of defacing a work of the purest architectural taste in this manner. It is well known that no two columns of the Parthenon correspond exactly. The axis of no column being exactly through its centre, every column has likewise an inclination towards the centre of the building, and the basement on which they stand, and the architrave which they support rises in the middle of the side. Since the time of Verres nothing so unclassical has been done in the way of restoration, and one would almost fancy Mr. Klenze appreciated so little the true principles of Hellenic art, that he considered it sufficient to make a column perpendicular. Cicero seems to have held that a man must have been an utter barbarian who could so utterly fail to admire one of the most distinctive beauties of the Grecian peristyle, and we subjoin the whole passage as possessing especial interest, for it has not yet been sufficiently attended to in illustrating this peculiarity of Doric architecture.‡

† Aphoristische Bemerkungen.

‡ Venit ipse in ædem Castoris: considerat templum: videt undique tectum pulcherrime laqueatum, præterea cætera nova atque integra: versat se, quærit quid agat. Dicit ei quidem ex illis canibus, quos iste Liguri dixerat esse circa se multos. *Tu Verres! hic quod moliare nihil habes, nisi forte vis ad perpendiculum columnas exigere.* Homo omnium imperitus, quærit quid sit ad perpendiculum. Dicunt ei, *fere nullam esse columnam, quæ ad perpendiculum esse possit.* Jam, mehercule, inquit, sic agamus: columnæ ad perpendiculum exigantur.—In Verr. I. 'De Signis Tectis exigendi,' pars ultima.

The Society adopted a very different principle, as they considered the plan of Mr. Klenze implied a re-making, not a restoration, of the Parthenon. No piece of marble has been replaced, unless in the position it occupied before the explosion removed it. The Athenian antiquaries consider that it will be time enough to discuss the question, how far restoration ought to be carried, when all the fragments in the Acropolis still prostrate have been reinstated in their original positions.

Numerous interesting discoveries have likewise been made, but they appertain too exclusively to the domain of the antiquary and topographer to be interesting to general readers. Part of a sculptured frieze of black Eleusinian marble belonging to the Erechtheium was found near that building. An excavation behind the propylæum has exposed to view a beautiful specimen of a building destroyed to make way for the magnificent gateway to the Acropolis, built by Pericles. Many of the sites of temples and monuments mentioned by Pausanias, have been ascertained, and the inscription on the Trojan horse has been found on a vase in the position he mentions that he read it. Much, it is to be hoped, will be found, when it is in the power of the Society to clear out the southern side of the Parthenon, as they have done the northern. Only about the half of the metopes of this side are in the British Museum, and one is in the Museum of the Louvre, so that there seems every probability that many may be found covered with the rubbish, which, from the lowness of the level of the soil on this side, has accumulated in a greater degree than on the north.

In the town, a considerable space has been cleared out round the tower of Andronicus Kyrrhestes, or the Temple of the Winds, as it was formerly called. In common conversation it is now called the Temple of Eolus, and forms an appropriate termination to one of the new streets, of course Eolus Street. An excavation was also made by the Society in the Theatre of Bacchus, and near it a curious statue of Silenus, with a young Bacchus sitting on his shoulder, and holding a mask in his hand, was found.

As a contrast to the labours of the Society, I shall now mention a proof of the archaiological zeal and judgment of the central government. For some years no one was allowed to build, nay, the houses half built, were ordered to be left unfinished, within a certain limit, and government determined to purchase all the ground for excavation. Many individuals remained ill-lodged, with half-finished houses, and paying enormous rents for upwards of eighteen months. Suddenly the government plans were changed, and orders were given to build a large barrack within the sacred inclosure; and in order to remove any respect to Hellenic ruins, part of the building was erected on one of the existing walls of the gymnasium of Hadrian, near the old Turkish bazaar, while the rest of the area was filled up with a layer of rubbish seven feet deep.

The services which the Archaiological Society of Athens has rendered to Europe, may be appreciated from this fact. It could not, however, have accomplished as much as it has already executed, had it not received several donations from Western Europe; and its labours would have been interrupted last year if his Majesty the King of the Netherlands had not sent a donation of 300 drachmas. A request was lately transmitted to Mr. Bracebridge, who has been a liberal promoter of the cause of education in Greece, to attempt the formation of a society, or the establishment of a branch of the Athenian Archaiological Society in London; but from no official authority to act having been forwarded by the committee of management, this was found to be difficult. The state of the Athenian Society was, however, communicated to Colonel Leake, who, with his usual promptness and liberality in aiding the cause of Greece, immediately sent the Society a subscription of 500 drs., (18*l.*) As it is probable that many admirers of ancient Art may be inclined to support this useful institution, I have ventured to send you this long statement of its affairs and proceedings.

Digitized by Google

It must be observed that the archaiological commission, charged with the publication of the *Ephemeris Archæologiké*, in which the ancient inscriptions are printed, is not a part of this Society. It consists of persons employed by government, though several members of the commission have been elected also members of the committee of management of the Society, from possessing the requisite qualification for the office in the highest degree. All members of the Archaiological Society are, however, entitled to receive the journal of the commission at a moderate price.

I shall now recapitulate the most remarkable discoveries which have been made in the Greek provinces. An excavation made by the late General Gordon at the Heræum, near Argos, at which I was present, brought to light two interesting fragments—a portion of a marble peacock and a large fragment of a præfix of terra cotta, painted as a peacock's tail. Several trifles in terra cotta and bronzes were likewise found, and an extended excavation at this place would probably yield important results. At Delphi several fragments of the great temple, which it was supposed had entirely disappeared, were accidentally discovered; a small temple was also found, and the late Professor Müller made an excavation into the ancient treasury under the cella of the great temple.

A considerable collection of ancient statues from all parts of Greece has been assembled in the Temple of Theseus, several of them belonging to the first school of art, and rendering this little museum of great interest to antiquaries, and worthy of a visit from all admirers of classic sculpture.

One of the most curious monuments in the collection is the figure of a warrior in low relief, rather above the natural size, and executed with a degree of stiffness, which shows far more affinity to the style of the Egina marbles than to the Attic school of Phidias. Its antiquity, and the visible traces of the painting with which it was adorned, give it great value. This curious piece of sculpture was found at a place called Velanideza, on the coast of Attica, two or three miles to the south of Araphen (Rafina), between Halæ and Prasiæ, in the year 1839. An ancient demos existed in this plain, and near it there were forty or fifty unopened tumuli, which had excited the attention of several antiquaries. It is said that a society of excavators received permission to open these tumuli, but I have never been able to obtain any exact information on the subject, though I have applied directly to Mr. Pittakis; and Professor Ross was also as unsuccessful as I was. Much mystery attended the whole proceedings, for the Greek government has generally been extremely averse to all private excavations, and General Gordon was requested to discontinue his at the Heræum; I suppose that many of the vases offered to travellers for sale, in 1839, were from Velanideza. Mr. Pittakis has published no account of these excavations, and the Archaiological Society took no notice of them, as it is dangerous for a body wishing to live in peace with all men to attempt penetrating where there is mystery. No account of these excavations has appeared in the Annals of the Archaiological Institute at Rome; and the only knowledge the world possesses of them, is the singular work of Aristocles, which we have noticed; this, however, is the best preserved monument of the most ancient style of Greek art when it began to rise towards perfection.

I hope that this letter will call the attention of some one in England to this subject, capable of rendering it more effectual service than lies in my power.

GEORGE FINLAY.

DAYS' EXCURSIONS OUT OF LONDON.

Stoke Pogeis—Burnham—Maidenhead.

IT is with pleasure that we resume this series of papers; for we have reason to know that our "Excursions" of last year tempted many to quit, for a time, the turmoil of London, to become quiet pilgrims under our guidance; and that some of the friendly hints which we offered, for the promotion of the public advantage, have been adopted. Thus, at the seat of the Darnleys, at Cobham Hall, in Kent, it was suggested (see *Athen.* No. 777) that some reduction in the price of the tickets to view the picture gallery might be beneficially made, not only as placing the access within the means of greater numbers of visitors, but as likely to increase the charitable funds to which the produce of the tickets was appropriated. A few weeks since, we were informed at Cadell's Library, at Gravesend (the depôt for the purchase of tickets), that the price of them had been lately reduced from two shillings to a shilling—the sum we suggested. The librarian added, that he believed it had been done by the advice of the *Athenæum* journal; that the immediate effect of the reduction—as far as his experience went—had been to double the numbers of visitors, and that the numbers were increasing each week. All honour and thanks, say we, to the Lady Darnley and her co-trustees. Having thus paid our debt of gratitude, we will proceed on our present day's excursion, the principal object of which shall be a visit to the peaceful and beautiful churchyard of Stoke, in which repose the mortal remains of one of England's classical and educated poets—Thomas Gray.

The village of Stoke Pogeis, in Buckinghamshire, stands little more than two miles northward of the Slough Station, on the Great Western Railway; so that if the excursion be extended no further than this spot, a journey thither and back from the metropolis might be accomplished easily after the hours of business, during the lengthened daylight at this season. But, for our parts, we have a whole day before us, and shall extend our walk through the villages westward of Stoke, until the Thames arrests our further progress. To accomplish thus much, and to allow plenty of time for loitering in pleasant shady spots, throughout the walk, and for a return to Town before dusk, the hour of departure from the Paddington Terminus should not be later than half-past ten, A.M. The nine o'clock train is rather to be preferred. In less than forty-five minutes from the time of starting, we glide along safely to the Slough Station, where there is generally an abundance of carriages of various kinds, which may be hired by those who eschew walking. If you are prudent, you will effect a bargain before starting; for though there is no want of carriages, they belong chiefly to one establishment, and there is not sufficient competition to suppress a tendency to extortion. The road to Stoke is across the viaduct, close to the station, and the spire of the church, rising above the trees, forms a conspicuous beacon during the whole walk. Proceeding onwards for about two miles, at the first turning to the west is a road which skirts Stoke Park, and which will be found somewhat the shortest way to the church. But if you would see the house which the poet inhabited, and which is near the green, then keep the high road until you reach the village of Stoke. So very gradual and imperceptible has been the ascent of the ground since leaving the station, that the extensive views over Eton and Windsor which the breaks in the hedges reveal, appear with a grateful unexpectedness. Some estimate of the comparative elevation is afforded by the fact, that the terrace of the house in Stoke Park is on a level with the top of the Keep of Windsor Castle. The tourist will here call to mind Gray's 'Ode on a Distant Prospect of Eton College,' inspired, perhaps, by the same impressions which he himself is actually receiving:—

> Ye distant spires, ye antique towers,
> That crown the wat'ry glade,
> Where grateful science still adores
> Her Henry's holy shade;
> And ye that from the stately brow
> Of Windsor's heights th' expanse below
> Of grove, of lawn, of mead survey,
> Whose turf, whose shade, whose flowers among
> Wanders the hoary Thames along
> His silver-winding way.

This ode was Gray's first publication in English, and was not printed until the poet was more than thirty years of age. Its reflective melancholy, and the careful and refined art of its composition, make it a very characteristic specimen of Gray's muse. The ode proceeds:—

> Ah, happy hills! ah, pleasing shade!
> Ah, fields belov'd in vain!
> Where once my careless childhood stray'd,
> A stranger yet to pain!

Gray was educated at Eton, maintained there solely by his mother, for his father had ungenerously refused to assist in bearing the charges of his son's education. And it was at Eton that Gray's friendship with Horace Walpole and Richard West was first contracted.

The grounds of Stoke Park, with their shaded dells and the bounding deer make the entrance tempting—but there is none for strangers, notwithstanding the estate is held by a grandson of William Penn. *This* place is no free Pennsylvania. The present house—a mixed brick and stone erection, with little architectural pretensions about it—holds a few good paintings, by Sir Joshua Reynolds, and others; among them, West's original picture of Penn's Treaty with the Indians. Some few ancient chimneys, belonging to the old mansion, are still existing, and the ivyed substantial walls which divide the churchyard from the park, as well as the noble yews, and other evergreens, modify the modern aspect which the house itself gives to the park and grounds. Stoke Park has existed for centuries, and the old mansion, which was supplanted by the present structure, belonged to the Earls of Huntingdon, and afterwards to the family of Hatton, to which was allied Queen Elizabeth's elegant partner in the dance, and Lord Chancellor, Sir Christopher. The seat afterwards became the possession of Sir Edmund Coke, and is made the scene of Gray's 'Long Story:'—

> In Britain's Isle, no matter where,
> An ancient pile of buildings stands:
> The Huntingdons and Hattons there
> Employ'd the power of fairy hands
>
> To raise the ceiling's fretted height,
> Each panel in achievements clothing,
> Rich windows that exclude the light,
> And passages that lead to nothing.
>
> Full oft within the spacious walls,
> When he had fifty winters o'er him,
> My grave Lord-Keeper led the brawls,
> The seals and maces danced before him.
>
> His bushy beard, and shoe-strings green,
> His high-crown'd hat, and satin doublet,
> Mov'd the stout heart of England's Queen,
> Though Pope and Spaniard could not trouble it.

The purpose of the said 'Long Story' is to make a romance out of the acquaintance which my Lady Cobham, who then inhabited the old mansion at Stoke, sought with Gray. His 'Elegy in a Churchyard,' handed about in manuscript, had captivated my Lady. The 'Long Story' tells us how—

> A brace of warriors, not in buff,
> But rustling in their silks and tissues,

issued from the house, "with bonnets blue and capuchine," to discover Gray, "a wicked imp they call a poet"—

> Who prowl'd the country far and near,
> Bewitch'd the children of the peasants,
> Dried up the cows, and lam'd the deer,
> And suck'd the eggs, and kill'd the pheasants;

how the ladies sought his aunt Antrobus's solitary house—

> Thro' lanes unknown, o'er stiles they ventur'd,
> Rapp'd at the door, nor stay'd to ask,
> But bounce into the parlour enter'd.

The poet is not to be found.

The Muses, "hopeless of his pardon, conveyed him underneath their hoops to a small closet in the garden." So the missionaries leave a summons for him from my Lady Cobham, to answer for his magical doings. The culprit attends the court—his rhetoric forsakes him—he stands mute.

> Yet something he was heard to mutter,
> How in the park, beneath an old tree,
> (Without design to hurt the butter,
> Or any malice to the poultry,)
>
> He once or twice had penn'd a sonnet,
> Yet hop'd that he might save his bacon;
> Numbers would give their oaths upon it,
> He ne'er was for a conj'rer taken.
>
> The ghostly prudes, with haggard face,
> Already had condemned the sinner,
> My Lady rose, and with a grace
> She smil'd, and bid him come to dinner!

Is it not cruel that we too have not the opportunity of reading such sonnets, under the same old trees in the park where Gray penned them?

Until our remonstrance against exclusion has effected a remedy, we must be content to wander only in the churchyard of Stoke. Content! Either in the park or in the churchyard, had we to choose a seat to keep company with the poet, we should certainly select one in the latter. Of all churchyards that we can call to mind, it claims our preference for its deep and perfect solitude, and varied picturesqueness. Excepting at the east end, which is open to meadows, it is sheltered on all sides by lofty old deciduous trees, interspersed with evergreens, in luxuriant maturity. So close, indeed, is the foliage to the church, that the whitewashed walls of the interior of

Digitized by Google

the chancel assume the brilliancy of emerald green from its reflected light. Not a few of our painters might receive a lesson here on the effect of reflected colours, which is too commonly forgotten by them. So scarce is a painter's remembrance of this most essential feature of colouring, which is never absent from Nature, that when Turner, or Mulready, attempts to represent it, all the world protests, as if it were an exaggerated affectation. What an outcry of derision was made years ago at the yellow back of one of Etty's nymphs receiving the full reflection of a bright crocus-coloured scarf, in his picture of the 'Golden Age,' of which the Duke of Sutherland is the fortunate possessor. The critics who deny or forget the effects of reflected lights, might learn sound doctrine from the child that holds a butter-cup to its chin, or the pale-faced lady who wears a bonnet lined with pink. But if they would see them on a singularly extensive scale, let them journey to view the interior of Stoke Church, to which we proceed, having first obtained the key of the porch door, upon application, at a little cottage which stands in sight at the east end of the church, and is close on the south side of the monument erected to Gray's memory in the adjoining meadow.

What a ready text for a sermon on Ecclesiastical proprieties do most village churches—nay, even town churches and cathedrals—furnish. Stoke Church, as well as others which fall within our present day's walk, are all highly suggestive in this direction—but our office is not that of a rural Dean, and we do not wish to usurp the functions of the *Ecclesiologist* more than can be helped; yet we cannot avoid noticing that the only complete arrangement in this church seems to be the great pew of the Penn family—complete for the purpose of making the duty of going to church most easy. On the north of the nave is a large room, opening only on one side into the church; on all others it is just like an ordinary domestic apartment, the chairs arrayed on all sides, and a *fire-place* in one corner. To the belief that you are a common miserable sinner, whilst walled off from the rest of the church, out of sight of the parson, seated on an easy chair, with your feet comfortably warmed at a fire of your own, there must be insuperable difficulties. You do not enter under a plebeian porch, but have a private inclosed entrance, without passing into the church at all: and whilst the windows of the church are bare of decoration, those of the corridor to this room are filled with stained glass of Saints, &c. Can any one help wondering whether that same stained glass may not once upon a time have been in the church itself? If not, would it not be more fitly there than in a passage to the church? The church can make little boast of architectural character or decoration; but what can be detected here and there tells its history, and the transformation it has sustained. It consists of a nave, chancel, and two aisles. On the south side of the chancel there was probably a chapel, which still holds an old square font, whose office appears, by a new one recently placed in the nave, to have been made a sinecure. On the north side of the chancel is a rather handsome crocketted canopy, let into the wall, and to the east are some small arches of an early English character, which probably formed the ambry for the sacred utensils. On the south side, the piscina has been left unmutilated. The altar is a miserable discrepancy of painted wainscot. Close to it, on the south side, is a brass to the memory of Lady Eleanor Mullens, first married to Robert Lord Hungerford, without date, and destitute of effigies. On the north side there is a more perfect brass, with the effigies of a knight and lady, recording the death of Williel-mus Molyns, A.D. 1525, and his wife Margery. The collector of brass impressions must come prepared with his paper and heelball, for he will not get any hereabouts. A circular archway stands between the chancel and the nave, which perhaps may be called "Norman," and if it were cleared of the incrustations of whitewash which have choked up its mouldings, now barely discoverable, it would probably appear as the most ornamental feature of the church. But if the interior be not particularly interesting, the same cannot be said of the exterior. On all sides it presents a picture ready grouped for the painter; whether on the east, with its triple frontage,—of the gables of the south chapel, of the chancel, and the tower and spire, all sides clothed with luxuriant ivy in a greater or less degree, and mixed up with varieties of foliage;—or on the north, with its carved porch and long and irregular lines of the roof;—or on the west, with its gable rising high, till it seems united with the spire, and the eaves reaching low to the ground. Constable, Varley, and other artists, have drawn the church in several views: a woodcut, of Constable's drawing, of the west, is the frontispiece of Van Voorst's edition of the Elegy; but it will not bear the test of comparison with the spot. Apparently in order to introduce a distant view of Gray's monument, which is far away and hardly visible, it omits the two magnificent and characteristic yew trees,—with branches enough to furnish bows for all Robin Hood's merry men,—which almost touch the porch of the church—and unless the porch has been altered since Constable's time, his drawing of that feature is by no means a correct portrait. At the east end of the church are two brick altar tombs. Under one of these, Gray's aunt, Mary Antrobus, is buried, the aunt with whom he was staying when Lady Cobham sought his acquaintance. Here, too, rest both the poet and his mother. Over his mother's remains Gray placed the inscription, which immediately succeeds that of his aunt.

"In the vault beneath are deposited, in hope of a joyful resurrection, the remains of Mary Antrobus. She died unmarried, Nov. 5, 1749, aged 66.

"In the same pious confidence, beside her friend and sister, here sleep the remains of Dorothy Gray, widow, the careful tender mother of many children, one of whom had the misfortune to survive her. She died March, 1753, aged 67."

The Poet was her fifth child, born in Cornhill, 26th December, 1716, and the only one who survived a family of twelve. Mr. Mitford, in his Life of Gray, tells us, "The rest died in their infancy, from suffocation, produced by a fulness of blood, and he owed his life to a memorable instance of the love and courage of his mother, who removed the paroxysm which attacked him by opening a vein with her own hand: an instance of affection that seems to have been most tenderly preserved by him through his after life, repaid with care and attention, and remembered when the object of his filial solicitudes could no longer claim them." Mason informs us, that "Gray seldom mentioned his mother without a sigh:" and one of the last wishes he expressed was, to lie by her side in Stoke churchyard. On the outside of the east wall of the chapel, adjoining the chancel, is a tablet thus inscribed—"Opposite this stone, in the same tomb upon which he has so feelingly recorded his grief at the loss of a beloved parent, are deposited the remains of Thomas Gray, the author of the 'Elegy written in a Country Churchyard.' He was buried August 6th, 1771." Gray has a monument, too, in Westminster Abbey—a profile medallion, executed by the elder Bacon—with an inscription, which, as Mr. Mitford remarks, "seems to have this defect, that it is as much applicable to a monument to Milton as to Gray:"

> No more the Grecian muse unrivall'd reigns;
> To Britain let the nations homage pay,
> She felt a Homer's fire in Milton's strains,
> A Pindar's rapture in the lyre of Gray.

In the field adjoining to and within sight of the church, is a sarcophagus, standing on a pedestal, which owes its existence to the Penns, and creditably intended by them to show their pride at his association with their locality. But, however well meant, we are compelled to pronounce the monument to be a thing quite destitute of beauty or propriety of form. "This monument, in honour of Thomas Gray, was erected A.D. 1799, among the scenes celebrated by that great lyric and elegiac poet."—Passages from the Elegy are engraved on the other sides of the monument. Stoke churchyard has been said to be the scene of his Elegy, and we like to believe it to be so, yet it must be confessed that the poem is also said, by Mr. Mitford, to have been written "within the precincts of the church of Grantchester, about two miles from Cambridge," at which University Gray resided, "chiefly for the convenience which its libraries afforded." Wherever it may have been written, many parts of the Elegy certainly seem to have an especial reference to this spot, where "the air a solemn stillness holds"—"the ivy-mantled tower"—"the rugged elms, and yew-tree's shade"—"the frail memorial still erected high"—

> With uncouth rhymes and shapeless sculpture deck'd,
> Implores the passing tribute of a sigh—

seem all to have peculiar application. It is not likely that the Elegy can have been written by Gray in one spot, for it was begun in 1742, and not finished till after the death of his aunt Antrobus, which happened in 1749, and which event is thought to have hastened its completion.

But we must say farewell to Stoke churchyard, as we have a walk of seven miles before us. Across the west end of the meadow, which is the site of Gray's monument, is a footpath, which we must follow until we reach the road. For about a mile it skirts Stoke Park, and from it a full view of the north side of the modern house may be seen. Less than a mile westward, the straight road takes us to the village of Farnham. Its church has been utterly spoiled of any architectural character it may once have possessed, by the barbarous patchings of plaster and brick, which have contorted the original into perfectly nondescript forms. It consists of nave and chancel, and the only remnants of its antiquity are a piscina and ambry, save that in the centre there is a fragment of a brass inscription, which unexpectedly brings Wolsey and some of his existing works before us. It perpetuates the memory of one Eustace [name gone] "sometime clerke of the workes of the college in Oxford for Cardinall Woolsey," and likewise "chefe clarke of accompts for xvii. yeres" touching the "buildings of Kinge Henry ye VIII., within xx myles of London, and departed this life in Winsor Castell 1568." Warmer sympathies than those for state and station must have brought King Henry's clerk from Windsor Castle to be laid in this little mean spot. The church stands out of the road to Burnham, and, except to the enthusiastic in ecclesiastical investigation, we can hardly recommend a visit to it. The keys are kept at a cottage on the road descending to Slough. The views from this spot over "the vale of Thames, fair winding up," and "majestic Windsor lifting his princely prow" on the wooded heights of the forests, and Bagshot, are grand and expansive. Another mile and a half, along quiet shaded lanes, brings us to the extensive and picturesque village of Burnham. There are many parts of the village and remnants of old houses and chimney shafts, which will tempt the sketcher to loiter here. It is a rich spot to collect materials for backgrounds of pictures. The church is of most attractive irregularity, almost impossible to describe. Every kind of material is used, either in its construction or reparation. Substantially, it is built of chalk and flint; the drip-stones and some ornaments are of stone. The buttresses have been patched with brick, and the tower has been capped with a wooden summit something after the style and fashion of a brewhouse. Notwithstanding its discrepancies, the whole makes a picturesque composition with an ancient venerable air. It is a large structure, which has certainly seen nearly five centuries pass by. It has a nave, chancel, and two aisles, with a large transept on the north. Four arches divide the aisles from the nave. On the south, the pillars upholding the arches are *octangular*, with their mouldings plain and uncut, but on the north they are *round*, with the mouldings worked. The roof of the nave is plain and coved. In the aisles the oak beams are left bare. The windows in the chancel and its transept are "decorated," whilst those elsewhere in the church are "perpendicular." There are numerous brasses, but we did not notice any of a period earlier than the sixteenth century. The visitor would make a serious omission if he does not visit the aged and remarkable beech trees in this neighbourhood, the account of which we shall give from a contemporary.

"We know of no forest scenery equal to Burnham beeches. There are no spots approaching to it in wild grandeur to be found in Windsor Forest; Sherwood, we have been told, has trees as ancient, but few so entirely untouched in modern times. When at the village of Burnham, which is about a mile and a half from the railway station at Maidenhead, the beeches may be reached by several roads, each very beautiful in its seclusion. We ascend a hill and find a sort of table-land, forming a rude common with a few scattered houses. Gradually the common grows less open. We see large masses of wood in clumps, and now and then a gigantic tree close by the road. The trunks of these scattered trees are of amazing size.

Digitized by Google

They are for the most part pollards, but not having been lopped for very many years, they have thrown out mighty arms, which give us a notion of some deformed son of Anak, noble, as well as fearful, in his grotesque proportions. As we advance, the wood thickens, and, as the road leads us into a deep dell, we are at length completely embosomed in a leafy wilderness. This dell is a most romantic spot. It extends for some quarter of a mile between overhanging banks, covered with the graceful forms of the ash and the birch, while the contorted beeches show their fantastic roots and unwieldly trunks upon the edge of the glen in singular contrast. If we walk up this valley we may emerge into the plain of beeches, from which the place derives its name. It is not easy to make scenes such as these interesting in description. The great charm of this spot may be readily conceived when it is known, that its characteristic is an entire absence of human care. The property has been carefully preserved in its ancient state, and the axe of the woodman, for many a day, has not been heard within its precincts. The sheep wander through the tender grass as if they were the rightful lords of the domain. We asked a solitary old man, who was sitting on a stump, whether there was any account who planted this ancient wood: 'Planted!' he replied, 'it was never planted; those trees are as old as the world.'"

Burnham Common lies to the north of the village. In the walk from Burnham you pass Hitcham Church, a little flint and chalk structure with an unusual quantity of stained glass. If you wish for entrance you must seek the key at the cottage in the hollow at the foot of the hill, on the summit of which stands the church. Let us here observe, that these alternations of blocks of chalk and flints seem to amalgamate most durably. The surface of the chalk appears even less worn than it would have been had it been stone. The appearance, too, of the dark grey and white checkers is rather ornamental. Yet this mode of construction, which must obviously be a cheap and a most natural one in a chalk district, seems quite abandoned; for when part of the old church at Taplow fell down some years ago, the ruins were deserted, and a shabby substitute of yellow brick and stucco erected in another part of the village. When we reach Taplow, being on one of the arms of the Chiltern Hills, the character of the scenery becomes more bold and diversified by hill and dale. We should pass on to the edge of the hill, which presents an expansive view of Maidenhead and the Thames valley, full of all the elements of English scenery in luxuriant abundance. At this point is the site of Taplow old church, with only its east and west gables in existence, and close to it is the mansion of the Earl of Orkney. The descent to the railway station of Maidenhead from this point is a short quarter of an hour's walk. If time does not press, we recommend the tourist to take the footpath, which leads across the meadows to Maidenhead Bridge, and ascend the towing-path of the river, for the sake of some of the most beautiful scenery which is to be met with in the whole course of the Thames.

OUR WEEKLY GOSSIP.

Our men of science are now, it may be presumed, preparing for the great meeting at Cork—our artists have received a hint, by the closing of the exhibitions, to start on their sketching tours—our publishers are issuing 'Guide Books,' in place of literary productions, which demand rest and leisure for their enjoyment. In short "the season" may be said to have closed; since, after a few nights more of the Italian Opera, the musicians will be scattered over the continent or the English provinces: those excepted who remain to take part in Mr. Balfe's 'Puits d'Amour,' which is "just ready" at the Princess's Theatre.—A very pleasant *matinée* was given yesterday week by M. Rousselot, a clever violoncello player, and, we may add, a clever composer; for a septett was performed—M. Moscheles taking the piano, and M. Sivori the violin parts—which entitles him to that character: its *scherzo* to something more. By way of vocal attractions, we had Grisi, Mario, and the Lablaches—now rarities at concerts. On the same morning Herr Beerhalter exhibited his skill on the clarinet and *corno di bassetto*. Had this artist but arrived earlier in the season, his beauty of tone and brilliancy of execution must have commanded the greatest success attainable by a *solo* performer on a wind instrument. On Monday, Signor Sivori, who is about to undertake an extensive provincial tour, gave his last concert. A benefit or two more, and all will be over; and our country towns may profit by the dispersion of "the stars." Here, by the way, we may announce that Handel's 'Deborah'—an oratorio containing some of his very finest choruses—is to be performed at the Birmingham Festival.

The musical festival of North Germany has this summer been held at Rostock, under the direction of Herrn Marschner and Pott. No particular novelty was brought forward. At the *Männergesang-Fest*, at Dresden, the 'Requiem' of Cherubini was performed: psalms by M. Frederic Schneider and Reissiger; and an oratorio, written by Herr Wagner, *Kapellmeister* to the King of Saxony, entitled, 'The Supper of the Apostles,' in which a great effect is said to have been produced by the employment of a second chorus of three hundred singers, placed in the cupola of the Frauen-Kirche, where the performances took place.

Mr. Alfred Bunn, it is stated, has again become the lessee of Drury Lane Theatre, and Mr. Henry Wallack has taken Covent Garden, which latter is promised to open in September. What the plans of the two new managers of the patent houses may be is not mentioned; perhaps they hardly know themselves, and trust to the chapter of accidents to determine.—Free benefits have been granted this week in aid of the subscriptions for the orphan children of the late Mr. Elton, at the Haymarket, Surrey, and City of London Theatres. At the Haymarket an Address, written by Mr. Thomas Hood, was feelingly spoken by Mrs. Warner.

Respecting the Shakspeare's autograph, and the deed to which it was attached, lately purchased for the City of London Library, a correspondent thus writes to us:—

"I have read so much about the only known autographs of the great Bard, that I think it right to inform you, that thirty years ago I saw his signature to a Fine, in Queen Elizabeth's reign, then deposited in the Chapter-house, Westminster. It was shown to me by a Mr. Ellis."

This is probably the deed referred to by a former correspondent—Mr. Devon (No. 709)—from which the autograph has been cut off, and purloined. If so, there can be no difficulty in fixing the responsibility. Here we have proof that the deed was unmutilated only thirty years ago—in whose official custody has it since been?

We learn from *Galignani*, that letters from Dr. Lepsius have been received at Berlin, which give some further particulars of the researches among the ruins of the ancient Labyrinth and Pyramid of Mœris (see *ante*, p. 672). He states that former descriptions, particularly of Messrs. Jomard and Coutelle, by no means agree with the real localities, and that the drawing of Mr. Perring, Colonel Wyse's clever architect, gives but a poor idea of the existing ruins. There are some hundreds of chambers standing, with walls of from 15 to 20 feet high, and the name of Mœris has been frequently found amongst the inscriptions. Dr. Lepsius says that the supposition of Manethan, that this monarch belonged to the twelfth dynasty, is confirmed. That the ancient lake of Mœris was at Birke-el-Kernn, as our readers know, is found to be incorrect, the immense embankments, 160 feet wide, of the real lake having been discovered by M. Linant, a French architect in the service of the Pasha.

The Archæological Society lately formed at Berlin has held two meetings, both numerously attended, at which several papers of antiquarian interest were read. The arrangements of the ancient theatres, and various questions relating to Greek Art, were discussed: and Herr Curtius announced his intention of shortly publishing a work on Delphic inscriptions.

It is stated, in the daily papers, that Mr. Washington Irving has come into possession of a large fortune, bequeathed to him by one of the Society of Friends—to whom, as the story runs, the distinguished author was personally unknown; and from whom this legacy is a homage to his character and literary fame. Mr. Irving, it is added, intends to resign his appointment as American minister at the court of Madrid, his health having suffered materially in the Spanish capital.

The German papers announce the death, at the age of seventy-four, of one of the most voluminous of German writers, Madame Caroline Pichler. Her works occupy more than sixty volumes, and are principally historical romances—some of which have obtained great celebrity, and the honours of translation.

BRITISH INSTITUTION, PALL MALL.
The Gallery is OPEN DAILY, from Ten in the Morning until Six in the Evening, with one Room containing the Works of Sir Joshua Reynolds, the next those of Ancient Masters, and the third with those of Deceased British Artists.—Admission, 1s.; Catalogue, 1s.
WILLIAM BARNARD, Keeper.

DIORAMA, REGENT'S PARK.
NOW OPEN, with a NEW EXHIBITION, representing the CATHEDRAL of NOTRE DAME at Paris, with effects of Sunset and Moonlight, painted by M. REMOUX, and the BASILICA of ST. PAUL, near Rome, before and after its destruction by Fire, painted by M. BOUTON. Open from Ten till Six.—N.B. A GRAND MACHINE ORGAN has been constructed expressly for this Exhibition, by Messrs. Gray and Davison, of the New-road, and will perform the Gloria, from Haydn's Service, No. 1, during the midnight effect of the Cathedral of Notre Dame.

JUST OPENED, PANORAMA, LEICESTER SQUARE.
A beautiful VIEW from the RHINE, of COBLENTZ, and EHRENBREITSTEIN, the Gibraltar of the Rhine; Forts Alexander and Constantine, the Bridge of Boats, the Moselle, and its ancient Bridge; Fort Francis, and all the surrounding objects of celebrity in this most splendid, romantic, and historically interesting portion of Europe. The Views of EDINBURGH, as at the time of Her Majesty's visit, and BADEN BADEN still continue open.

ROYAL POLYTECHNIC INSTITUTION.
CARTOONS of RAPHAEL.—The Series of ORIGINAL CRAYON DRAWINGS (by Holloway) which were executed for the well-known ENGRAVINGS of these CARTOONS, are now exhibiting, with other additions to the numerous works, both in Art and Science, in this Institution. The LECTURES of Dr. RYAN, Professor BACHHOFFNER, and Mr. GODDARD, are at Twelve, Two, a Quarter to Three, and Five, daily, and at Eight o'Clock in the Evenings. In these Lectures AGRICULTURAL CHEMISTRY and every recent Scientific Discovery is explained in a most popular manner. The COLOSSAL ELECTRICAL MACHINE, NEW MICROSCOPE (by Cary), DISSOLVING VIEWS, DIVER and DIVING BELL, &c. &c. Open Mornings and Evenings, except Saturday Evening. Admission, One Shilling. Schools, Half-price.

MUSIC AND THE DRAMA

Her Majesty's Theatre.—Of all Rossini's operas there is hardly one so well worth the trouble of care in production as 'La Cenerentola.' There is a charm in the story past the power of the librettist to destroy, though it be far better rendered in the English version; the character of the heroine has a simple grace and delicacy calculated to display the finest powers of an actress; the music is delicious, containing hardly a dull or feeble bar from first to last, save the *stretto* to the first *finale*. Yet the effect produced by the present revival of the opera, and, indeed, by every other we recollect, is agreeable, and nothing more. One reason is the absurd manner in which the parts of the spiteful sisters are habitually sacrificed: by this, the elegance and the sparkle of the introduction are destroyed,—and the contrast between the rich *mezzo soprano* burden of the ballad, 'Una volta,' and the shrill tones *à due* of poor Cinderella's tormentors, and the spirit and motion of the *stretto*, in which the heroine has to plead against the exactions of their vanity, are never even touched. So, likewise, the brilliant quartett 'Zitto, zitto,' which opens the first *finale*, and, yet worse, the unique *sestetto*, 'Questo è nodo,' suffer from the inefficiency of the gentlewoman to whom the leading voice is intrusted. Were *Clorinda's* air before the second *finale* restored, or replaced by another—a measure almost necessary to the stage-business of the opera—we can see no reason why the part should be scouted by any *soprano* short of a *prima donna assolutissima*; and, in the present state of the *corps*, had we been intending "to hit" with 'Cenerentola,' we would have persuaded Mdlle. Moltini to undertake it. Then a little new scenery—a little pageantry, or so, would do the work no harm; but on these points, when musical revivals are in question, managers are proverbially "penny-wise." Now to speak of the present performance—Madame Grisi leaves us nothing to wish for, as far as brilliant execution goes; the middle and lower notes of her voice are gaining in richness and solidity, and her cadences and changes are more triumphantly executed than ever. But so buxom and prosperous a lady is not our Cinderella: far more able she "to quail, crush, conclude, and quell," the personages of the story *en masse*, than likely to shrink for one instant before the most tyrannous stage father, or the most wicked pair of stage sisters, that could be picked out for her! The innocence, pathos, and elegance of the part, in short, are wanting. Sig. Mario makes a beautifully-dressed walking Prince, but will he always remain *near* singing well, and never accomplish the feat? or does he wait, like Rubini and Brambilla, till his voice begins to leave him, to call in the aid of Art? Signor For-

Digitized by Google

nasari, as *Dandini*, is violent and bustling, but not comical. This was one of Tamburini's best parts—*Belcore* in 'L'Elisir' another. We must praise, however, the new *basso*, for executing Rossini's flourishes with more neatness and finish than usual; let us hope, for his sake, that the good company he has kept since the season came in has had its influences. A fiery ordeal awaits him in the coming Parisian winter, and one which will go far towards deciding his position on the Italian stage. As for Lablache, as usual, he makes us believe that the part he personates is the best in his repertory—"May his shadow never be less!"

The performances on Thursday, for Signor Costa's benefit, consisted *only* of the longest acts from 'Cosi fan tutti,' from 'Guillaume Tell,' and from 'Don Pasquale';—with the *pas de deux* between Elssler and Cerito;—a new *ballet* for the former; and 'Alma' for the latter!!—Of course, under such "a press of matter," nothing could be carefully executed. Mozart's music was generally driven too fast, and Mario obviously saved himself for the *trio* in 'Guillaume Tell.' But the act, from the latter opera, went badly. The *soprano* part does not suit Persiani; Fornasari is still less at home as principal *basso*:—the orchestra was perversely inexact in accompanying this difficult music, and the chorus too anxious to count its bars, to have any time for action, or spirit, or energy. It is vexatious to witness the sacrifice of so noble a work. All the disposable care and pains of the evening had been lavished on the dancing, and not in vain. 'Le Délire d'un Peintre' exhibits Mdlle. Elssler in her highest perfection and greatest variety of power. The pantomimic attitudes in her first scene are the "poetry of repose" (to adapt a well-worn commendation)—her *grand pas* at the *festa*, an exhibition of such graces and brilliancies as belong now to no feet but her own; while the 'Castillana,' danced with Perrot, is a new character dance, full of animation and piquancy.

HAYMARKET.—A full and fashionable audience was attracted to this theatre on Thursday, to witness the first performance of a "new and original comedy," in five acts, entitled 'Moonshine,' which was so industriously announced as being written by Lady Emmeline Stuart Wortley, that we cannot avoid recognizing its authorship, more especially as this constitutes its chief attraction. This comedy should have been performed by a party of aristocratic amateurs at a country house, for the amusement of the guests, by whom its pleasantries would have been better appreciated, and its moral application more strongly felt, than either are likely to be by the miscellaneous audiences of a public theatre. That it will not be a favourite with the public at large, is pretty evident from the disapprobation which it met with from that portion of the audience who were not influenced by a consideration of the circumstances under which it was produced; while the fervour with which it was applauded by the friends and admirers of the authoress, and their readiness to perceive the point of jokes that failed of effect with less impressible people, proves that it requires an "audience fit, and few." The story of 'Moonshine' is neither new nor intricate. The *Marquis of Ravendale*, a paragon of nobility, changes titles with his younger brother, in order that he may find a woman who loves him for himself, and not for his rank and fortune; which device enables both him and his brother to avoid and expose the schemes of a manœuvring mother, the *Countess of Clanarlington*, to detect the heartlessness of her two daughters, and test the sincerity and devotion of two young ladies, to whom they are respectively attached. Had such a simple plot been wrought out in a skilful and natural manner, with clever and sprightly dialogue, and characters having some semblance of reality, a pleasant, if not a very striking, play might have been the result; but the persons are mere puppets; their talk is forced when they attempt to be smart, and trite when they become sentimental; the incidents are devoid of interest and probability, and withal ill-contrived; and the impression produced is wearisome and disagreeable. The two principal personages, *Lady Clanarlington*, who has a horror of younger brothers, and *Mr. De Batenbille*, the M.P., who is for ever making speeches and using parliamentary phrases, are exaggerated; and over-acting, therefore, was excusable in Mrs. Glover and Mr. Farren, who played these parts. Mr. Farren dressed the M.P. at "Young England," and the compound of juvenile wig and elderly phiz was droll enough, without the grimace superadded. The cast of the comedy included Madame Vestris, Mrs. Edwin Yarnold, Miss Julia Bennett, and Mr. C. Mathews, Mr. Holl, and other performers, but they are mere walking ladies and gentlemen. Mr. Webster, as a French marquis, angling for a rich wife, with his title for a bait, and Mrs. W. Clifford as a lady traveller, are standing jokes in modern comedy. The piece is put on the stage in the best style, and the peeps of Rome, where the scene is laid, are nicely painted. It was announced for repetition by Mr. Farren, but the noise rendered him almost inaudible. There was considerable opposition throughout, though not of such a kind as to justify the manager's imputation of unfairness;—indeed, the partisanship was all on the other side.

MISCELLANEA

Paris Academy of Sciences.—July 24.—Dr. Donné read a paper 'On milk considered with reference to domestic economy and health.' After having shown the nature and character of this essential article of food, M. Donné proceeded to state that there is a striking analogy between this fluid and animal blood, and added that he had injected pure milk into the veins of many animals without causing any injury.—M. Flandin read in his own name and that of M. Danger, a paper on the means of detecting the existence of poison in the human body. It has been laid down as a general rule that metallic poisons, administered for some time previously to death, are carried out of the system in the urinary secretions. MM. Flandin and Danger have ascertained that this is not the case with poisoning by copper. The poison is taken into the lungs, and discharged in the perspiration from the chest, in which secretion, when put to the test, it is discovered.

Progress of Lotteries.—To the Nobility, Clergy, Gentry, &c. in the counties of Lincoln, Cambridge, Huntingdon, &c. &c., the proprietor of the celebrated Painting, &c., offers it for public disposal on the plan of the Art-Union of London, the subscription to be One Guinea, the number of subscribers to be limited to 600; the head prize being ——; in addition to which the proprietor has introduced nine prizes of pictures, valued at 10*l.* each, to which nine other holders will be entitled.

—"Smithers, a police-sergeant, stated, that on searching the youngest prisoner he found a letter from a girl, addressed to her dear Jack, and dated Newgate, July 17, and a flash song-book called the 'Slap up rummy plummy Chaunter.' On another he found a note, 'from young Pip, in trouble in the Well' (Clerkenwell prison), and upon all of them printed cards, announcing 'a raffle for young Pip, the game un, and no mistake.'—Mr. Broderip. Will you be so kind, Mr. Symons, as to read aloud the invitation to the raffle? Mr. Symons, the chief clerk, with much gravity read as follows:—'A raffle for young Pip, the game 'un. To be raffled for, a silk fogle (handkerchief), the property of young Pip, who is in trouble, at the —— Keate Street, on Monday, July 31, 1843, at 3*d.* each member. Recollect, it's for young Pip.'"—*Times*, Friday.

Prize Picture. Art-Union of London. A valuable Prize of the above Society will be sold a bargain. To be seen, &c. —*Times.*

The Temple Church is again to be closed after next Sunday for two months, for further beautifications. The marble pillars are to be polished in a superior manner, and the entire wood-work is to be stained dark and polished. The pulpit will also be finished, as well as the new seats for the choristers. There is also a building in progress attached to the church, for the choir.

Cast-iron Buildings.—Letters from M. Gutzlaff state that the art of constructing buildings in cast-iron has been known for centuries in China. He has found a pagoda entirely composed of cast-iron. It is covered with bas-reliefs and inscriptions, which, from their forms, characters, and dates, show that they are as old as the dynasty of Tang, which was upon the throne as far back as from the fifth to the tenth century of the Christian era. It is in the shape of an octagonal pyramid, is forty feet in height, and eight feet in diameter at the base. It has seven stories, each containing extremely curious historical pictures. M. Gutzlaff represents this monument as being strikingly elegant, and surpassing in this respect everything of the kind he had previously seen in China.

TO CORRESPONDENTS.—W. S. M.—A Rambling Artist—T. W. H.—received.

J. F. H. obliged, but the authorities relied on have been before referred to.—M. (Bath), yes.

Next Friday, price 5*s.*

PULMONARY CONSUMPTION SUCCESSFULLY TREATED WITH NAPHTHA.
By JOHN HASTINGS, M.D.
Senior Physician to the Blenheim-street Free Dispensary.
London: John Churchill, Princes-street, Soho.

USEFUL TO TOURISTS.

THE GERMAN PHRASE-BOOK; or, Key to German Conversation, on the plan of the late M. L'ABBÉ BOSSUT. By M. BLANCHARD, Teacher of Languages. Intended as a Sequel or Companion to the German Word Book. Both forming compact Manuals for Tourists. Price 1*s.* each.
Souter & Law, School Library, 131, Fleet-street.

LAST WORK OF THE LATE REV. H. BLUNT.

A FAMILY EXPOSITION of the PENTATEUCH. By the late Rev. HENRY BLUNT, M.A., Rector of Streatham, &c. Complete in 3 vols. which may be had separately, price 6*s.* each.
It has been suggested that Mr. Blunt's Commentary on the Old Testament should be read as a companion to that of Bishop Sumner on the New.
London: J. Hatchard & Son, 187, Piccadilly; of whom may be had all the former Works by the same Author.

Now ready, illustrated by upwards of 100 Engravings, 5*s.* cloth.

STURGEON'S COURSE of ELEMENTARY LECTURES on GALVANISM; including Animal Galvanism, the principles of Electro-Chemistry, Electrotyping, Silvering and Gilding, and the application of Galvanism to Engineering. By WILLIAM STURGEON,
Lecturer to the Victoria Gallery of Science, Manchester.
Also, Sturgeon's Course of Elementary Lectures on Electricity. 5*s.* cloth.
Sturgeon's Annals of Philosophical Discovery, No. 2. price 1*s.*, was published on the 1st of August.
London: Sherwood, Gilbert & Piper, Paternoster-row.

SECOND PART OF MR. ARNOLD'S LATIN PROSE COMPOSITION.
In 8vo. price 8*s.*

A PRACTICAL INTRODUCTION to LATIN PROSE COMPOSITION. PART II. Containing the Doctrine of LATIN PARTICLES, with Vocabulary, an Antibarbarus, &c.
By the Rev. THOMAS KERCHEVER ARNOLD, M.A.
Rector of Lyndon, and late Fellow of Trinity College, Cambridge.
Rivingtons, St. Paul's Churchyard, and Waterloo-place.
Of whom may be had, by the same Author,
The Fifth Edition of the First Part. In 8vo. 6*s.* 6*d.*

Now ready, 7th edition, carefully revised and enlarged.

STEWART'S COMPENDIUM of MODERN GEOGRAPHY; with Remarks on the Physical Peculiarities, Productions, Commerce, and Government of the various Countries; Questions for Examination at the end of each Division; and Descriptive Tables, in which are given the Pronunciation, and a concise Account of every place of importance throughout the World. Illustrated by Ten new Maps constructed for the Work, and an Engraving showing the Heights of the principal Mountains on the Globe. 18mo. 3*s.* 6*d.* richly embossed.
"This excellent school book contains as much accurate and valuable information as many volumes of twice its size and price. Indeed, in the latter respect, it is matched by few productions of the press, even in this age of cheap books. A handsome volume of upwards of three hundred very closely-printed pages, strongly bound, and containing ten well-executed maps, has never before, we think, been offered to the public for so small a sum. It is a work, moreover, which, while its explanations are well adapted to the capacity of youth, bears throughout the marks of patient and careful research in a very superior degree to most school books. We would particularly recommend to attention the descriptive tables appended to the general account of every country, which are drawn up with extraordinary neatness, and in such a manner as to comprehend really a wonderful quantity of information in a very small space. Taken altogether, they serve the purpose of a Gazetteer of all the principal places in the world, with a short description of each, and, what is extremely useful and important, the correct or customary pronunciation in all cases in which any doubt or difficulty can be felt. Teachers as well as pupils will feel grateful to the author for this part of his labours."—*Athenæum.*
Oliver & Boyd, Edinburgh; Simpkin, Marshall & Co. London.

RECREATION HAND-BOOK GUIDES.
By FELIX SUMMERLY.
[See more explanatory Advertisement in last *Athenæum.*]

HAND-BOOK for HAMPTON COURT PALACE; or, Guide to the Architecture, Tapestries, Paintings, Gardens and Grounds of Hampton Court: with numerous Embellishments on Wood, engraved by Ladies, Maps and Plans from Official Sources, and bound in a Cover designed by Holbein for Cardinal Wolsey. Price 5*s.* in cloth, and Holbein's cover in gold, with Maps and Plans; and 2*s.* 6*d.* not gilt, and without Maps.
"Decidedly the best Popular Guide to the Picturesque Beauties of Hampton Court."—*Spectator.*
Hand-Books for the National Gallery. Price 6*d.*, 3*d.*, and 1*d.*
Also, now ready,
An Illustrated Edition, with Reminiscences of the most celebrated Pictures, drawn expressly from the Originals by Messrs. John James and William Linnell.

COMPLETION of TYAS' ILLUSTRATED SHAKSPERE.—This beautiful Edition of the entire WORKS of SHAKSPERE, profusely illustrated with Engravings on Wood, designed by Kenny Meadows, is this day (July 31st) completed, by the publication of Part 55, containing A Life of the Author, by Barry Cornwall; Titles, Contents, and full directions for binding, price Half-a-Crown.

The Publisher will bind any sets sent to him, in the richly ornamented cloth cases expressly provided, for 1s. the set of three volumes. Single volumes 2s. 6d.

*** Subscribers are recommended to make up their sets immediately, many of the Parts being nearly out of print.

R. Tyas, 8, Paternoster-row.

FREEMASONS' and GENERAL LIFE ASSURANCE COMPANY, 11, Waterloo-place, Pall Mall, London.

Business transacted in all the branches and for all objects of LIFE ASSURANCE, ENDOWMENTS and ANNUITIES, and to secure CONTINGENT REVERSIONS, &c. Loans granted. Information and Prospectuses furnished by

JOSEPH BERRIDGE, Secretary.

THE SINGULAR SUCCESS which has attended the proceedings of the SCOTTISH WIDOWS' FUND AND LIFE ASSURANCE SOCIETY, is to be mainly attributed—

To the judicious selection of the Lives insured.

To the careful investment of the Funds.

To the equitable principles upon which the division of the Surplus Profits is made.

To the freedom from all burden in the way of Dividends to Proprietors.

To the promptitude and liberality of its dealings.

To the strict adherence to the utmost Economy, so far as consistent with the Efficient Conduct and Management of the Business.

Copies of the Prospectus, Forms of Proposal, and every necessary information, may be obtained at the Head Office, Edinburgh, or at any of the Society's Agencies.

JOHN MACKENZIE, Manager.

LONDON OFFICE, 7, Pall Mall,
HUGH M'KEAN, Agent.

NATIONAL LOAN FUND LIFE ASSURANCE, ANNUITY, and DEFERRED ANNUITY SOCIETY, 26, Cornhill, London.—Capital, 500,000*l.*—Empowered by Parliament.

Directors—T. LAMIE MURRAY, Esq. *Chairman*.

John Elliotson, M.D. F.R.S.	George Lungley, Esq.
John Griffith Frith, Esq.	John Rawson, Esq.
H. Gordon, Esq.	Clement Tabor, Esq.

Joseph Thompson, Esq.

Auditors—Prof. Wheatstone, F.R.S.; Prof. Graves, A.M. F.R.S.
Actuary—W. S. B. Woolhouse, Esq. F.R.A.S.

The superior advantages to those Assured with this Society will be best understood by a comparison of its principles and a reference to the last Annual Bonus declared on Policies of five years' standing, viz.:

Entry	Policy No.	Age	Sum	Annual Premium.	Bonus added.	Cash Bonus.	Premium reduced.
			£	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1837	39	50	1000	67 8 4	133 14 6	58 19 9	8 19 4
1838	114	56	3000	175 15 0	396 9 7	123 0 6	16 9 7

Policies now entered upon entitled to participation in next Annual Division. Two-thirds of all premiums paid can be borrowed by the assured without loss of Policy.

F. FERGUSON CAMROUX, Secretary.

PROMOTER LIFE ASSURANCE and ANNUITY COMPANY, 9, Chatham-place, Blackfriars, London. Established in 1826.

This Society is supported by an ample subscribed capital, and by a considerable accumulated premium fund.

Assurances are effected at a low rate of premium, without profits, or at an increased premium, with participation in the profits of the Office.

A Bonus in ready money, at the rate of 15 per cent. on the premiums received (equivalent to a reversionary bonus of about 30 per cent.) was declared in May last, on all beneficial policies on which three annual premiums had been paid in December, 1841.

A division of the profits takes place every five years, and the holders of beneficial policies can receive their bonuses in ready money, or have them applied in augmentation of their policies, or in reduction of their future premiums.

Assurers may contract to pay their Premiums either in one sum, in a given number of payments, in annual, half-yearly, or quarterly payments, *or on the ascending or descending scale*.

Officers in the Army and Navy on active service, persons afflicted with chronic and other diseases, and such as are going beyond the limits of Europe, are also assured at moderate rates.

Prospectuses and all necessary information may be obtained at the Office. MICHAEL SAWARD, Secretary.

ARGUS LIFE ASSURANCE COMPANY, 39, Throgmorton-street, Bank.

Empowered by special Act of Parliament, 5 & 6 Will. IV. c. 76.

Thomas Farncomb, Esq. Alderman, *Chairman*.
William Leaf, Esq. *Deputy-Chairman*.

William Banbury, Esq.	Rupert Ingleby, Esq.
Edward Bates, Esq.	Thomas Kelly, Esq. Ald.
Thomas Camplin, Esq.	Jeremiah Pilcher, Esq. Sheriff
James Clift, Esq.	of London and Middlesex
Rt. Hon. J. Humphery, M.P.	Lewis Pocock, Esq.
Lord Mayor of London	

Physician—Dr. Jeaffreson, 2, Finsbury-square.
Surgeon—W. Coulson, Esq. 8, Frederick's-place, Old Jewry.
Consulting Actuary—Professor Hall, of King's College.

Advantages of the Argus Life Assurance Company.
Low Rates of Premiums.

In addition to the subscribed Capital of 300,000*l.* the assured have the security of the Company's Income of nearly 60,000*l.* per annum, yearly increasing, and unaccumulating Assurance Fund invested in Government and other available Securities, of considerably larger amount than the estimated liabilities of the Company.

The Rates of Premium are reduced to the lowest scale compatible with the safety of the Assured and the stability of the Company, thereby, in effect, giving to every policy-holder an immediate and certain bonus without risk, in lieu of the deferred and frequently delusive prospect of a periodical division of profits.

Annual Premium to Assure £100.

Age.	For One Year.	For Seven Years.	Whole Term.
20	£0 17 8	£0 19 1	£1 11 10
30	1 1 8	1 3 7	2 0 7
40	1 5 0	1 6 9	2 14 10
50	1 14 1	1 19 10	4 0 11
60	3 2 4	3 17 0	6 0 10

One-third of whole-term Premiums may remain unpaid at 5 per cent. comp. int. as a debt upon the Policy for life, or may be paid off at any time without notice.

In Assurances for advances of money, as security for debts, or as a provision for a family, when the least present outlay is desirable, the varied and comprehensive Tables of the Argus Office will be found to be particularly favourable to the assured.

A Board of Directors, with the Medical Officers, attend daily, at a quarter before 2 o'clock.

EDWARD BATES, Resident Director.

A Liberal Commission to Solicitors and Agents.

ECONOMIC LIFE ASSURANCE SOCIETY, No. 24, Bridge-street, Blackfriars, London: established 1823.

Empowered by Act of Parliament, 3 William IV.

Lower Rates of Premium than those of any other office that entitle the assured to participate in the profits.

The bonus declared in 1834 amounted upon an average to 16*l.* per cent. on the premiums then paid; and in 1839 a second bonus was awarded, amounting on the average to 31*l.* per cent. on the premiums paid during the preceding five years.

Prospectuses and other particulars may be obtained at the Office, between the hours of ten and four, or will be forwarded to persons resident in the country, on application.

CAMPBELL JAMES DOWNER, Sec.

VICTORIA LIFE ASSURANCE COMPANY.

Trustees.

Sir Jas. Duke, Ald. M.P. *Chairman*	Benj. Hawes, Esq. *Dep. Chairman*
Benj. Barnard, Esq.	Charles Baldwin, Esq.

Peculiar advantages are offered by this Company. Thus:—

Parties assuring the lives of others may make their policies secure, notwithstanding the life assured may go out of the limits of Europe, without the necessary permission of the Directors having been previously obtained.

Credit of half the premiums for the first five years allowed on policies effected for the whole term of life.

Assurances may be effected *with* or *without* profits—on an ascending or descending scale, or for short periods.

Advances made to Assurers on real or undoubted personal security, for terms not exceeding three years, repayable by instalments.

Attention is particularly requested to the detailed prospectuses of the Company, which may be obtained at the Office, 18, King William-street, City, or by letter, addressed to the Secretary. WILLIAM RATRAY, Actuary and Secretary.

BRITANNIA LIFE ASSURANCE COMPANY, 1, Princes-street, Bank, London.

This Institution is empowered by *Special Act of Parliament*, (4 Vict. cap. 9), and is so constituted as to afford the benefits of Life Assurance in their fullest extent to Policy-Holders, and to present greater facilities and accommodation than are usually offered by other Companies. The decided superiority of its plan, and its claim to public preference and support, have been proved incontestibly, by its extraordinary and unprecedented success.

Assurances may either be effected by Parties on their own Lives, or by Parties interested therein on the Lives of others.

The effect of an Assurance on a person's own life is to create at once a property in reversion, which can by no other means be realized. Take, for instance, the case of a person at the age of thirty, who by the payment of 5*l.* 3*s.* 4*d.* to the Britannia Life Assurance Company, can become at once possessed of a bequeathable property, amounting to 1000*l.*, subject only to the condition of his continuing the same payment quarterly during the remainder of his life,—a condition which may be fulfilled by the mere saving of EIGHT SHILLINGS weekly in his expenditure. Thus, by the exertion of a very slight degree of economy—such, indeed, as can scarcely be felt as an inconvenience, he may at once realize a capital of 1000*l.*, which he can bequeath or dispose of in any way he may think proper.

Detailed Prospectuses, and every requisite information as to the mode of effecting Assurances, may be obtained at the Office.

PETER MORRISON, Resident Director.

A Board of Directors attend daily at 2 o'clock, for the dispatch of business.

STONE-COLOURED CEMENT.

FELIX AUSTIN, of the New Road, Regent's Park, begs to inform Architects, Builders, Plasterers, &c. that during the process of manufacturing a very superior composition which has greatly improved his well-known Artificial Stone Ornaments, he has succeeded in making an excellent STONE-COLOURED CEMENT, adapted to building, more especially for facing brick walls and repairing decayed stone work, which he can supply at 2*s.* 6*d.* per bushel, at his Manufactory, near the Thames Tunnel, Rotherhithe.

GROWTH OF PLANTS.

HUMPHREYS'S INODOROUS SOLUBLE COMPOUND, to PROMOTE the GROWTH of PLANTS.—Dissolved in water, this valuable preparation may be used with great advantage either in the drawing-room or in the conservatory. A single bottle is equal in fertilizing force to some hundred weight of rich compost; and by its use, not only common plants are improved by increased brilliancy of flower and deeper verdure, but valuable exotics are so strengthened, as to resist the usual alternations of temperature, and may be preserved without a greenhouse.—Sold in bottles, 1*s.* 9*d.* each, with full instructions for use, by the leading Chemists, Druggists, &c. in Town and Country. Wholesale Agents, DAVY, MACKMURDO & Co. 100, Upper Thames-street, London.

LEA & PERRIN'S 'WORCESTERSHIRE SAUCE.' Prepared from the Recipe of a Nobleman in the County.—The above celebrated Sauce has, from the time of its introduction, been steadily progressing in public favour. Its peculiar piquancy, combined with exquisite flavour, establish it of a character unequalled in sauces. Noblemen and others, of acknowledged gout, pronounce it to be 'the only good sauce;' and for enriching gravies, or as a zest for fish, curries, steaks, game, cold meat, &c., especially unrivalled. As a rapidly-increasing inquiry is now made for it in all parts of the kingdom, the Proprietors beg to state that druggists, grocers, and others may be supplied by their agents—Messrs. Barclay & Sons, Farringdon-street; Mr. J. Harding, 59, King-street, Stepney; Messrs. Metcalfe & Co. 16, Southampton-row; and by the Wholesale Oil and Italian Warehousemen in London, upon the same terms as at their Warehouse at Worcester.—Sold retail, in half-pint bottles, at 1*s.* 6*d.*; pints, 2*s.* 6*d.*; and quarts, 5*s.* each, with the Proprietors' stamp over the cork of every bottle.

COMPOSITION FOR WRITING WITH STEEL PENS.
STEPHENS' WRITING FLUID.

THESE COMPOSITIONS, which have so remarkably extended the use of the STEEL PEN, are brought to very great perfection, being more easy to write with, more durable, and in every respect preferable to the ordinary Ink. In warm climates they have become essential. They consist of—An INSTANTANEOUS BLACK INK—A BLUE FLUID, changing to an intense Black colour—PATENT UNCHANGEABLE BLUE FLUIDS, remaining a deep Blue colour—A SUPERIOR BLACK INK, of the common character, but more fluid—A SUPERIOR CARMINE RED for Contrast Writing—A CARBONACEOUS RECORD INK, unchangeable by any Chemical Agent—Also, a new kind of MARKING INK for Linen; and Inkholders, adapted for preserving Ink from Evaporation and Dust. Bottles at 3*d.* each, convenient for writing from, are prepared, which will enable those who may wish to try either of these articles to do so at a small expense. Prepared by HENRY STEPHENS, the Inventor, 54, Stamford-street, Blackfriars-road, London; and sold by Stationers and Booksellers.—N.B. These unchangeable Blue Fluids are Patent Articles; the public are therefore cautioned against imitations, which are infringements; to sell or use which is illegal.

STEPHENS' SELECT STEEL PENS.—The utmost possible care having been bestowed upon the manufacture of these articles so as to procure the highest finish, they can be confidently recommended both for flexibility and durability.

WARM WEATHER.—Ease and Comfort for the Feet.—HALL & CO. Wellington-street, Strand, London, sole Patentees of the PANNUS CORIUM, or Leather Cloth Boots and Shoes. These articles have borne the test and received the approbation of all who have worn them. Such as are troubled with corns, bunions, gout, or tenderness of feet from any other cause, will find them the softest and most comfortable ever invented; they never draw the feet or get hard, and for warm climates they are found easier and more durable than any other kind of shoes; they resemble the finest leather, and are cleaned with common blacking. Their Elastic Spring Boots are worthy attention; they supersede lacing and buttoning, and effectually support the ankle. The material sold by the yard in any quantity. Any respectable boot and shoe maker may be appointed agent.—The much-improved PATENT INDIA-RUBBER GOLOSHES are light, durable, and perfectly waterproof.—HALL & CO.'S PORTABLE WATERPROOF DRESSES claim the attention of all who are exposed to the wet. Ladies' Cardinal Cloaks, with hoods, from 18*s.* Gentlemen's Dresses, comprising Cape, Overalls, and Hood, 21*s.* The whole can be carried with convenience in the pocket.

WATCHES by WEBSTER & SON, Chronometer Makers to the Lords of the Admiralty (Established 132 years), 3, BIRCHIN-LANE. The largest assortment of fine Second-hand Watches of any house in London, by the most eminent makers—many nearly equal to new, and at little above half their original cost, all of which W. & Son warrant. They consist of fine Repeaters, Duplex, Lever, and Horizontal Escapements, all of superior manufacture. New Watches of the most elegant patterns upon the principle of their Chronometers, to which the Government awarded the prizes three years in succession, with compensation balances to counteract the variations of temperature. Also a large assortment of Lever and elegant Horizontal Watches, for Ladies and Gentlemen, at considerably reduced prices. Old Watches taken in exchange. The most experienced workmen are employed on the premises in the repairing department.

Webster & Son, 3, Birchin-lane, Cornhill.

MESSRS. BARRY & SON, Stationers and Engravers, beg to inform the Nobility and Gentry that they are now enabled to PRINT ARMS, CRESTS, &c., for book plates, in their proper heraldic colours, and at very moderate prices. Crests engraved on visiting cards in the first-rate style, 5*s.*; without the crest, 2*s.* 6*d.*; and 100 cards, 2*s.* 6*d.*; also every description of elegant engraving. Specimens of the above may be selected from a large and fashionable assortment, at their warehouses, Egyptian Hall, Piccadilly, and 132, Bishopsgate-street Within, or sent on application any distance free of expense. Superfine letter papers, 27*s.*, 22*s.*, 20*s.*, 18*s.*, 17*s.*, 14*s.*, 12*s.* and 8*s.* per ream; Note ditto, 18*s.*, 16*s.*, 12*s.*, 8*s.*, 6*s.* and 4*s.* per ream. An additional charge is made for stamping either of the above with arms, crest, coronet, or initials. Their miscellaneous stock, which is very large and particularly adapted for presents, consists of dressing cases, writing desks, inkstands, envelope cases, albums, blotting-books, bibles and prayers, gold and silver pencil cases, penholders, toilet and smelling bottles, souvenirs, ladies' companions, sachets, card and glove cases, pocket-books, papeterie, and envelopes suitable for invitations, complimentary notes, weddings, &c. Either of the above articles may be had plain, or of the most costly description, with every description of useful stationery. Postage stamps and envelopes at Government prices. Messrs. Barry & Son are also the West-end Agents for Mr. Robert Best Ede's Perfumery.

METCALFE'S NEW PATTERN TOOTH-BRUSH and SMYRNA SPONGES.—The Tooth-Brush has the important advantage of searching thoroughly into the divisions of the teeth, and cleaning them in the most effectual and extraordinary manner, and is famous for the hairs not coming loose—1*s.* An improved Clothes-Brush, that cleans in a third part of the usual time, and incapable of injuring the finest nap. Penetrating Hair-Brushes, with the durable unbleached Russian Bristles, which do not soften like common hair. Flesh-Brushes of improved graduated and powerful friction. Velvet-Brushes, which act in the most surprising and successful manner. The Genuine Smyrna Sponge, with its preserved valuable properties of absorption, vitality, and durability, by means of direct importations, dispensing with all intermediate parties' profits and destructive bleaching, and securing the luxury of a genuine Smyrna Sponge. Only at METCALFE'S Sole Establishment, Oxford-street, two doors from Holles-street.

CAUTION—Beware of the words "From Metcalfe's" adopted by some houses.

MOULD CANDLES to BURN WITHOUT SNUFFING.—KEMPTON'S PATENT.—These candles do not require snuffing; they burn longer and are cheaper than any other candle; the flame is steady and brilliant. No metallic or deleterious matter is used in the manufacture. Price 8*d.* per lb. Sold by Parish, agent for exportation, 81*b*, Bread-street, City, and by Slodden & Stocking, 42, High-street, Marylebone; W. Gethem, Broadley-terrace, Blandford-square; W. Evans, Italian warehouse, Greenwich; John Hawkins, grocer, High-street, Whitechapel; George Hawley, grocer, Pitfield-street, Hoxton; S. Game, Fish-street-hill; J. Pain, grocer, Bethnal-green-road; G. H. Hudson, 229, Blackfriars-road; C. H. Nicholas, 19, Bolingbroke-row, Walworth; and at the manufactory, Old Bargehouse, Christchurch, Surrey.

PERFECTLY NEW AND UNIQUE PATENT BEDSTEADS.

H. PRATT respectfully solicits the particular attention of the Nobility and Gentry furnishing, and Officers joining their regiments, to the PATENTED TAPER METALLIC DOVETAIL JOINTED BEDSTEADS, which he has made arrangements with the Patentees to introduce to their notice. It is long since so necessary and useful an improvement has been invented, and one more especially deserving their notice. The facility with which they are fixed up and taken down in a few minutes, without the use of tools—the elegant and light appearance—the firmness of construction, and the utter impossibility of annoyance from insects,—all join to render them paramount to any other ever invented. The PATENT ELASTIC SPRING BEDS, &c. and complete Fittings, supplied in plain and decorative appointments. Now on view at H. Pratt's Trunk and Military Outfit Warehouse, 123, New Bond-street.

FOR BEAUTIFYING THE SKIN.—GODFREY'S EXTRACT of ELDER FLOWERS, a most fragrant perfume, and delightful cosmetic. It speedily and completely removes tan, redness, &c., and by its cooling, balsamic, and healing qualities, renders the skin soft, pliable, and free from dryness, scurf, &c., and clears it from every humour, pimple, or eruption. By its use the skin becomes, and continues, delicately clear and soft, and the complexion fair and beautiful. In shaving, it is invaluable, rendering the skin smooth and firm, and protects it from the effects of sun and dust. It is beyond all praise as a general family lotion. Sold in bottles, price 2*s.* 9*d.*, by all respectable Medicine Venders and Perfumers.

FOR GOUT, RHEUMATISM, AND RHEUMATIC GOUT.

SIMCO'S GOUT and RHEUMATIC PILLS are a certain and safe remedy; they restore tranquillity to the nerves, give tone to the stomach and strength to the whole system. No other medicine can be compared to these excellent pills, as they prevent the disorder from attacking the Stomach or Head, and have restored thousands from pain and misery, to health and comfort. Sold by A. Willoughby & Co., late B. G. Windus, 61, Bishopsgate Without, and nearly all Medicine Venders, at 1*s.* 1½*d.* or 2*s.* 9*d.* per box.

Subscriptions for the Stamped Edition for the Continent, for not less than Three Months, and in advance, are received by M. BAUDRY, 3, Quai Malaquais, Paris, or at the Athenæum Office, London. For France, and other Countries not requiring the postage to be paid in London, 28 fr. or 1l. 2s. the year. To other Countries, the postage in addition.

[JAMES HOLMES, Took's Court, CHANCERY LANE.]

UNIVERSITY COLLEGE, LONDON.—The PROSPECTUSES of the several Departments of the College for the Session 1843-44, may be had on application at the Office of the College, as follows:—

FACULTY of MEDICINE—Session commencing Oct. 2, 1843.
FACULTY of ARTS and LAWS—Session commencing October 16, 1843.
CIVIL ENGINEERING and ARCHITECTURE—Session commencing October 16.
SCHOOL MASTERS' COURSES—Session commencing October 16.
JUNIOR SCHOOL—Session commencing 25th September.

CHARLES C. ATKINSON, Secretary to the Council.

8th August, 1843.

BRITISH ASSOCIATION for the ADVANCEMENT of SCIENCE.

The THIRTEENTH MEETING of the BRITISH ASSOCIATION for the ADVANCEMENT of SCIENCE, will commence in CORK on THURSDAY MORNING, the 17th of AUGUST, 1843.

JOHN TAYLOR, F.R.S., General Treasurer.

2, Duke-street, Adelphi.

ACADEMICAL DEGREES.—Gentlemen of LITERARY or SCIENTIFIC PURSUITS, MINISTERS, or Others properly qualified, desirous of GRADUATING, may RECEIVE EFFICIENT ASSISTANCE from the Advertiser.—Address (pre-paid), stating qualifications, to M. D., 15, Tottenham-court New-road.

LOWER SCHOOL OF THE LIVERPOOL COLLEGIATE INSTITUTION.

WANTED, an ASSISTANT ENGLISH MASTER. No one not a native of England need apply.—Also, WANTED an ASSISTANT ARITHMETICAL MASTER. Candidates to forward their applications to the Principal of the Collegiate Institution.

MEDICAL PUPIL.—A General Practitioner, having the sole charge of an Infirmary in London, containing 200 beds, and being Surgeon to a Workhouse containing on an average 1200 inmates, has a VACANCY for an APPRENTICE or a PUPIL in his house. His residence being within a short distance of one of the best Medical Schools, would afford the opportunity of attending lectures, as well as seeing extensive medical and surgical practice at the Infirmary and Workhouse.—Apply to Mr. Cooper, 47, Camden-street, Camden Town, London.

ARCHÆOLOGICAL SOCIETY—ATHENS.

THE Archæological Society of Athens has been in active operation since 1837, and great credit is due to it for clearing the Temple of the Winds, the Propylæa, and the Temples on the Acropolis, as well as for the discovery of numerous inscriptions. The funds of this Society, which were chiefly supplied by Greeks, are entirely exhausted, and its useful and interesting labours must cease, unless foreign aid be now given, for the Greek Government is incapable of affording assistance. Col. Leake and Mr. Bracebridge (Athenæum Club, London,) and Mr. Finlay (of Athens), have formed themselves into a Provisional Committee for receiving donations in England, and will hold themselves responsible for their due transmission to Athens.

The sum of 2l. and upwards will entitle the donor to be a member of the Archæological Society of Athens, and to purchase its annual Transactions, entitled 'Ephemeris Archæologike,' at a very low price. Those interested in the subject, are requested to refer to an article in the *Athenæum*, of the 5th of August, 1843.

Messrs. Bossange, Barthès & Lowell, Foreign Booksellers, Great Marlborough-street, have kindly consented to receive donations in behalf of the above-named Gentlemen.

BRITISH and FOREIGN INSTITUTE.

President—Right Hon. the Earl of DEVON.

The first enrolment of 250 members having now been filled up, the Entrance Fee for Town Members has been raised from five guineas to six, and for Country Members, from two guineas to three.

The annual subscription of three guineas for town members, of two guineas for country members, living ten miles from London, and one guinea only for those living twenty miles from town, will remain unchanged till the next 250 members are entered.

After this, a further increase in the entrance fees will take place, to the same extent as before; and to those not entering as members until the Institute is opened, the annual subscription will be also increased, as it is neither just nor reasonable that those who wait till all difficulties are conquered, should be admitted to the same privileges, and on the same terms, as those who have been earlier in the field, and assisted to establish the success of the undertaking.

Members of the First Enrolment are requested to pay in their entrance fees, or commutation, to the Bankers of the Institute, Messrs. Smith, Payne & Smiths, and Messrs. Ransom & Co., to the account of "The British and Foreign Institute." And members neglecting to make such payments before the 1st of September next, will lose their privilege of priority, and be transferred to the second enrolment, at the increased rates.

To meet the wishes of the members, there will now be three classes for town, namely, a single gentleman, a gentleman and lady, and an entire family, at proportionate rates of charge; the ladies in all such cases being the actual resident members of the family, and no other.

With country members the same rule will be observed; and in order to preserve the selectness of the society, this rule will be most rigidly enforced.

Prospectuses of this new Association, which is to be placed under the management of J. S. Buckingham, Esq., as Resident Director, and which will unite the conveniences of a club with the pleasures of a literary institute, under the careful protection of the hallot, and with perfect freedom from any liability beyond the amount of each individual's subscription, may be had of the principal booksellers in town and country, and at the Committee Rooms, No. 4, Hanover-square, and 25, Cockspur-street, where the committee sit daily from twelve to two at the former, and from three to five at the latter, to receive the personal applications of candidates for membership, and to answer any written applications addressed to the undersigned.

L. STANHOPE P. BUCKINGHAM, Sec.

4, Hanover-square, August 8.

MR. AUG. KRANTZ, of Berlin, respectfully informs his Customers and Friends that he will be prevented from attending (this year) the Meeting of the British Association at Cork, but requests the favour of their commands to be addressed to him as usual, to the care of Mr. Pamplin, 45, Frith-street, Soho-square.

A. K. also takes the present opportunity of mentioning that his new priced CATALOGUE of Mineral and Geological Specimens is now ready, and may be had, as above, by a pre-paid application, enclosing two penny stamps.

Berlin, Aug. 5, 1843.

GOVERNESS INSTITUTION, 30, Soho-square.—Mrs. HINTON respectfully informs the Nobility, Gentry, and Principals of Schools, that she can introduce highly-respectable Ladies, properly qualified to fill every department in Education. Mrs. H. is much accustomed to tuition, and having resided many years on the Continent, is familiar with the French, Italian, and German Languages.—Schools transferred and recommended in England and on the Continent.—Letters must be free.

PICTURES.—J. VAN HUYSUM—P. (not Anthony) PALEMEDES.—TWO PICTURES, beautiful specimens by these most rare and costly masters, to be DISPOSED OF; together with a few other genuine works by the first-rate masters—Ruysdael, Rubens, Houdekoetter, Gerardo della Notte, B. Peters, Cuyp, &c.; all the property of a private Gentleman, who may be referred to. To be seen at Mr. Barry's, House Agent, 1, Charles-street, Grosvenor-square.

PHOTOGRAPHY—CLAUDET'S DAGUERREOTYPE PORTRAITS taken daily at the Royal Adelaide Gallery. This wonderful art has lately received very important improvements. Price of a single Portrait One Guinea. As the operation must be done in the shade when the sun shines, cloudy weather is no impediment.

N.B.—Mr. Claudet supplies Artists with Plates of his own manufacture, object glasses, back grounds, and all the chemicals, including his instantaneous solution.

TO LET, in REGENT-STREET, THREE ROOMS on the Second Floor, Unfurnished, with the use of a Large Meeting-Room. They are suited for the purposes of a SOCIETY, and have for some years past been so occupied.—Apply to the Porter, 21, Regent-street.

THE FRIENDS' RETREAT, YORK.—In consequence of recent alterations in this Establishment, there are at present several VACANCIES FOR PATIENTS of the higher class, without limitation to the Society of Friends, at from two to five guineas a week.—Applications may be addressed to the Superintendent of the Retreat, York.

Sales by Auction.

THE Subscribers to Mr. M'CULLOCH'S GEOGRAPHICAL DICTIONARY are requested to complete their Copies, as the Publishers cannot undertake to complete after the 1st October next.

39, Paternoster-row, Aug. 12, 1843.

RECONNOITERING TELESCOPES.—These beautiful Instruments, measuring but 3½ inches when closed, possess sufficient power to show clearly Jupiter's moons, price 35s., securely packed and sent through the post for 1s. To be had only of the maker, JOHN DAVIS, Optician, Derby; or at the establishment of his brother, Legh-street, Shrewsbury.

MARINE SOCIETY'S OFFICE, 64, Bishopsgate-street, July 24, 1843.

The Marine Society has provided for 85,000 individuals, and sent them to sea, since its institution in the year 1756. One hundred and seventy-four boys were sent to sea last quarter, and one hundred now remain on board this Society's ship, the *Iphigenia*, off Greenwich, where they are trained up for the Royal Navy, the Indian navy, the merchants' service, and the fisheries. The Committee trust that objects of such great national importance will be liberally supported. The public are invited to visit the Society's ship, when they will be much gratified by the attention paid to these poor boys, and will feel the necessity of this institution to the welfare and prosperity of the country, and for the relief of distressed boys who are rescued from destitution and misery, by the humane and generous Subscribers to this Institution.

Subscriptions will be thankfully received by W. Astell, Esq. M.P., the treasurer; by the Secretary, at the office; by the Navy Agents; and at the following Bankers:—Messrs. Williams & Co.; Goslings; Childs; Hoares; Coutts; Drummond; and Martin.

GROWTH OF PLANTS.

HUMPHREYS'S INODOROUS SOLUBLE COMPOUND, to PROMOTE the GROWTH of PLANTS.—Dissolved in water, this valuable preparation may be used with great advantage either in the drawing-room or in the conservatory. A single bottle is equal in fertilizing force to some hundred weight of rich compost; and by its use, not only common plants are improved by increased brilliancy of flower and deeper verdure, but valuable exotics are so strengthened, as to resist the usual alternations of temperature, and may be preserved without a greenhouse.—Sold in bottles, 1s. 9d. each, with full instructions for use, by the leading Chemists, Druggists, &c. in Town and Country. Wholesale Agents, DAVY, MACKMURDO & Co. 100, Upper Thames-street, London.

Now ready, price 4s. 6d.

RURAL CHEMISTRY.

By EDWARD SOLLY, Esq. Jun., F.R.S.

Experimental Chemist to the Horticultural Society of London, Hon. Mem. of the Royal Agricultural Society, and Lecturer on Chemistry, at the Royal Institution, &c. &c.

Extracts from the Introduction:—

"A knowledge of the chemical composition of soils and the various substances employed as manures enables us to comprehend the mode in which the latter act; and a knowledge of the nature of those substances which plants require, points out the best and most economical methods of restoring to the soil, by manures, those substances which plants remove from it."

"If the farmer knows what it is that gives the fertilizing powers to manure, and is aware of the nature of those substances, he will soon learn the best method of preserving and using them; he will then understand how to make the most of the various sources of manure at his disposal, and he will be enabled readily to save much, that, for the want of such knowledge, would otherwise be lost."

London: 3, Charles-street, Covent-garden; and may be ordered of all Booksellers.

The Fourth Edition, in 12mo. price 5*s.* bound,

A PRACTICAL SYSTEM OF ALGEBRA, designed for the use of Schools and Private Tuition. By PETER NICHOLSON and J. ROWBOTHAM.

*** In this edition the authors have not only introduced some important original matter, particularly on proportion, imaginary quantities, binomial theorem, series, &c., but have also endeavoured to illustrate many parts of the work by such alterations as will make it still more acceptable to the public.

London: printed for Robert Baldwin, 47, Paternoster-row.

Also, price 8*s.* bound,

A Key to the above Work, containing the Solutions of more than 900 problems, by use of which, and the Algebra, a person may acquire a knowledge of this valuable science without the assistance of a Master.

THE YOUNG MOTHER.

In 12mo. price 6*s.* cloth, a New Edition of

A GRANDMOTHER'S ADVICE to YOUNG MOTHERS, on the Physical Education of Children. By M. J. late Countess of MOUNTCASHELL.

London: Robert Baldwin, 47, Paternoster-row.

*** "This book is the production of many years' experience, and much reflection; and the Author trusts that it will be of use to those for whom it is designed—the anxious mother, the attentive governess, and the careful nurse."—*Preface.*

In 12mo. price 5*s.* cloth lettered,

GUIDE TO THE CONSERVATORY; being a concise Treatise on the Management of the Hothouse and Greenhouse; the Forcing of Bulbs, Shrubs, &c.; and the best mode of keeping a succession of Bloom through every month of the year; exemplified in a select list of the most admirable plants of the present day, under the arrangements both of Jussieu and Linnæus—including their native country, propagation, and the soil adapted to each.

By RICHARD BAINBRIDGE,

Flower Gardener to the Right Hon. Lord Wenlock.

From Notes of the Author's daily practice, and communications furnished by liberal eminent Floriculturists.

*** The peculiar characteristic of this work is the means of obtaining a constant and large supply of flowers. It includes a very extensive list of Orchidaceæ, with their cultivation as pursued by the most eminent practitioners.

London: Robert Baldwin, 47, Paternoster-row.

NAVIGATION AND NAUTICAL ASTRONOMY.

The Fourth Edition, corrected, in a large vol. 8vo. price 10*s.* 6*d.* boards, or 12*s.* bound,

A TREATISE ON NAVIGATION AND NAUTICAL ASTRONOMY, adapted to the purposes of Elementary Instruction; with an extensive series of Examples for Exercise, and all the Tables requisite for Nautical Computations; with Rules and Examples adapted to the 'Nautical Almanac' in its new and improved form.

By EDWARD RIDDLE, F.R.A.S.,

Master of the Nautical School, Greenwich Hospital.

London: Robert Baldwin, 47, Paternoster-row.

Also, extracted from the above work, price only 2*s.* 6*d.*

Tables of the Logarithms of Numbers, and of Sines, Tangents, and Secants, to six places of decimals.

FRENCH GRAMMAR FOR PRIVATE TUITION.

In 8vo, price 12*s.* in cloth, the Eighth Edition, of

A GUIDE to the FRENCH LANGUAGE, especially devised for persons who wish to study the Elements of that Language without the assistance of a Teacher.

By J. J. P. LE BRETHON.

London: Robert Baldwin, 47, Paternoster-row.

A Key to the Exercises in the above Work, by means of which any person of a mature understanding may acquire the elements of the French Language practically, as surely as if a professed Teacher were sitting by his side; and, with a very superficial knowledge of it may teach it to others. Directions are given in the Key to parents not accustomed to teach languages, who wish to instruct their children, with the assistance of this book, how they must proceed. Price 8*s.*

THE CROTON AQUEDUCT.

In 1 vol. royal 4to. with 21 Engravings, 25*s.*

ILLUSTRATIONS of the CROTON AQUEDUCT, being a Historical Description of this celebrated undertaking, with an Account of other similar Works, Ancient and Modern.

By F. B. TOWER, of the Engineer Department.

The Croton Aqueduct, forty miles in length, and supplying the City of New York with pure water, is, perhaps, unsurpassed by any similar undertaking in any age or country. Its cost was nearly two millions sterling.

Also, in 1 vol. 4to. price 14*s.*

Plans and Sections of the Obelisk at Bunkers Hill, by S. Willard, Superintendent of the Works.

Wiley & Putnam, Stationers'-court, London.

PARLEY'S TALES ABOUT ANIMALS.

In one very large vol. square 16mo. price 7s. 6d. bound in cloth,

TALES ABOUT ANIMALS, by PETER PARLEY. The Ninth Edition greatly enlarged, with upwards of 500 Woodcuts, many portraits of animals drawn from life.

Advantages of this Edition:

"The number of articles is nearly doubled: the quantity of letter-press is more than doubled, and Two Hundred new cuts have been added. Care has also been taken to make the volume accord as much as possible with its title, Tales about Animals, and to give it a tendency to inspire in the minds of the young a spirit of mercy and kindness towards the brute creation."

London: printed for Thomas Tegg, Cheapside, and may be procured of all other booksellers in the United Kingdom.

BISHOP BERKELEY'S WORKS, BY WRIGHT.

In 2 handsome vols. 8vo. price 16s. in cloth boards,

THE WORKS of GEORGE BERKELEY, D.D., Bishop of Cloyne, including his Letters to Thomas Prior, Esq., Dean Gervais, Mr. Pope, &c., to which is prefixed an account of his Life and Writings. In this edition the Latin Essays are rendered into English, and the 'Introduction to Human Knowledge' annotated, by the Rev. G. N. WRIGHT, M.A., Editor of the Works of Reid and Stewart.

London: printed for Thomas Tegg, Cheapside, and may be procured by order of all other booksellers.

FELIX SUMMERLY'S

RECREATION HAND-BOOK GUIDES,

Corrected for the Season of 1843.

"Recreation is a second creation, when weariness hath almost annihilated one's spirits. It is the breathing of the soul, which otherwise would be stifled with continual business.... As for those that will not take lawful pleasure, I am afraid they will take unlawful pleasure, and by lacing themselves too hard grow awry on one side."

FULLER'S HOLY AND PROFANE STATE.

"All work and no play makes Jack a dull boy."

OLD ENGLISH PROVERB.

Now ready, price 3s. 6d.

In an Ornamental Cover of the 16th Century,

HAND-BOOK FOR THE NATIONAL GALLERY,

WITH FIFTY REMINISCENCES OF THE MOST CELEBRATED PICTURES, DRAWN EXPRESSLY FROM THE ORIGINALS, BY MESSRS. JOHN JAMES AND WILLIAM LINNELL.

(Open daily, from Ten to Four, except Friday and Saturday.)

Other Editions, price 6d., 3d., and 1d. Also,

Catalogue des Tableaux qui se trouvent dans la GALERIE NATIONALE, suivi par la Chronologie des Peintres. Prix 6d.

HAMPTON COURT PALACE.

(OPEN DAILY, EXCEPT FRIDAYS.)

Being a Guide to the Architecture, Tapestries, Paintings, Gardens and Grounds of Hampton Court: with numerous Embellishments on Wood, engraved by Ladies; and Plans of the Palace and Grounds from Official Surveys. The Illuminated Cover is taken from a design for a book-cover produced by Hans Holbein for Cardinal Wolsey. Second edition, price 5s. in cloth, and Holbein's cover in gold, with Maps and Plans; and 3s. 6d. not gilt, and with plan only.

"Decidedly the best popular guide to the picturesque beauties of Hampton Court of any extant."—*Spectator.*

"A charming specimen of a Hand-book, literally crammed with information."—*Atlas.*

FREE PICTURE GALLERIES;

Being a GUIDE to all the PICTURES in the NATIONAL GALLERY, the DULWICH GALLERY, the SOANE MUSEUM, the SOCIETY of ARTS, and the BRITISH MUSEUM. Price 1s. 6d.

"These Catalogues are more raisonnés and correct than the correspondent official ones; are more portable, and to their limits every way commodious, whilst they cost together much less than several of the latter cost separate."—*Athenæum.*

HOLIDAYS; or, a Guide to London Sights.

Giving details of the Locality—Means of Access—Nature of Admission—Time when Open—Principal Objects, and Descriptive Catalogues of all the Permanent Sights. Notes for Days' Excursions out of the Metropolis. Price 6d.

WESTMINSTER ABBEY.

(The Abbey opens at 9 A.M., and closes, in the Summer, at 6 P.M. The Tombs are shown until half-an-hour before, and about an hour after, Divine Service, which commences at 10 A.M. and 3 P.M. Entrance to Poets' Corner, free; to the Nave, alone, 3d.; with the Chapels, 6d.)

A Guide to the Architecture, Sculptures, Tombs, and Decorations, with 56 Embellishments on Wood, engraved by Ladies, 4 Etchings, a Specimen of Encaustic Tiles in the Chapter House, and an Illumination. Price 7s. Cheaper Editions, 3s., 1s. 6d.

"Its pages are not disfigured by the usual Guide-book sentimentality, rambling on without method, and mixing inaccurate if not false information with indiscriminate and nauseating praise, but it gives a well arranged and correct description, neither too popular nor too pedantic, of the Sacred Edifice."—*Ecclesiologist*, published by the Cambridge Camden Society.

"A volume got up in excellent taste, and written in a right spirit; critical so far as criticism could be allowed, but always suggestive, and testing opinions by reference to principles. As if to perfect the interest of the work, its fifty-six illustrative engravings have all been executed by women; and some amateurs, Lady Callcott and Lady Palgrave, amongst others, have gracefully contributed drawings, and thus associated their names with their sister artists."—*Athenæum.*

Also, for Foreigners, GUIDE A L'ABBAYE DE WESTMINSTER. Par Félix Summerly. Prix 1sh.

TEMPLE CHURCH.

With Eight Illustrations. Printed in three colours, in novel combinations of lithography and type, with Ornamental Cover of the pattern of the Encaustic Tiles. Second Edition. Price 1s.

A HAND-BOOK for CANTERBURY; with 35 Illustrations, 3s. 6d.; cloth extra, 5s. 6d.

Just published,

21. THE RURAL LIFE of ENGLAND. By WILLIAM HOWITT. New Edition, with Woodcuts by Bewick and Williams. 1*l.* 1*s.*

22. DORA MELDER: a Story of Alsace. Translated from META SANDER. Edited by the Rev. C. B. TAYLER, Author of 'Records of a Good Man's Life,' &c. 7*s.*

23. MASTERMAN READY; or, the Wreck of the Pacific. By CAPT. MARRYAT. With numerous Engravings. 3 vols. 22*s.* 6*d.*

24. SIR EDWARD SEAWARD'S NARRATIVE of HIS SHIPWRECK, and Discovery of certain Islands in the Caribbean Sea. Edited by MISS JANE PORTER. Third Edition, with New Introduction, 2 vols. 1*l.* 1*s.*

25. A SCRIPTURE HERBAL. By LADY CALLCOTT. With 120 Wood Engravings. 1*l.* 5*s.*

26. POPULAR CONCHOLOGY; or, the SHELL CABINET ARRANGED: an Introduction to the Modern System of Conchology. By AGNES CATLOW. With 312 Woodcuts. 10*s.* 6*d.*

27. A TREATISE on FOOD and DIET; with Observations on the Dietetical Regimen suited for Disordered States of the Digestive Organs. By DR. PEREIRA. 16*s.*

28. LECTURES on the COMPARATIVE ANATOMY and PHYSIOLOGY of INVERTEBRATE ANIMALS, delivered at the Royal College of Surgeons in 1843. By Professor RICHARD OWEN, F.R.S. From Notes by W. W. COOPER; revised by the Author. With 140 Woodcuts. 14*s.*

29. AN ENCYCLOPÆDIA of ARCHITECTURE. By JOSEPH GWILT. With more than 1,000 Woodcuts, from Drawings by J. S. GWILT. 2*l.* 12*s.* 6*d.*

NEXT WEEK will be published, by

JOHN W. PARKER, West Strand,

Printed in various Styles and Sizes,

FOUR EDITIONS of

The Psalter;

Or, PSALMS OF DAVID, IN METRE;

FROM THE AUTHORIZED VERSION OF TATE AND BRADY.

Set to Appropriate Tunes, arranged for four Voices, with and without Accompaniments.

Together with the necessary Indices, and Tables showing the Psalms applicable to the Morning and Evening Services of the Sundays, and other Holy-Days, throughout the Year, according to the Form and Order of the Book of Common Prayer.

Edited by JOHN HULLAH.

EDITION I.

The Psalter, with the Tunes in Score, set for Four Voices, with Accompaniments for the Organ or Pianoforte.

This Edition is printed in Folio, being adapted for the Organ Desk, the Drawing Room, or the Study. Bound in cloth and lettered.

EDITION II.

The Psalter, with the Tunes in Score, for Four Voices.

An Edition of the Psalter in Score, without Instrumental Accompaniments, for use in Church, and for practice in Families. Super-royal 8vo. bound in cloth and lettered.

EDITION III.

The Psalter, with the separate Voice Parts,—SOPRANO, ALTO, TENOR, and BASS, each in a distinct Volume.

These Volumes of separate Voice Parts are elegantly printed in foolscap 8vo., uniformly in size with some of the most approved editions of the Common Prayer, Church Services, &c.

EDITION IV.

The Psalter, with the separate Voice Parts, each in a Volume, as above.

In the same size as the Nonpareil Twenty-fours Editions of the Prayer Book, and adapted by its cheapness to general use and gratuitous distribution.

In these Editions of the Psalter, each, or one or more portions of each, of the Psalms is set to an appropriate Tune; and every word of each verse is placed under the note to which it is to be sung. The work, therefore, forms a complete Psalm Book for those who do not, as well as for those who do, join in congregational singing.

The Four Editions, of Scores and Voice Parts, extend to Ten Volumes, each Volume containing Three Hundred and Fifty Pages of Music, besides the Indices and Tables. But as all the volumes are printed page for page with each other, the most perfect uniformity extends throughout the whole series.

NEW BOOKS.

CHORAL SERVICE of the UNITED CHURCH of ENGLAND and IRELAND; being an Enquiry into the Liturgical System of the Cathedral and Collegiate Foundations of the Anglican Communion. By the Rev. JOHN JEBB, A.M., Rector of Peterstow, Herefordshire; late Prebendary of Limerick. 8vo. 16*s.*

SPECULUM ECCLESIÆ ANGLICANÆ, or Some ACCOUNT of the PRINCIPLES and RESULTS of the REFORMATION of the CHURCH of ENGLAND. By JOHN HARTLAND WORGAN, M.A. Curate of Calthorpe, Leicestershire, and late of Pembroke Coll. Oxford. 8vo. 10*s.* 6*d.*

ECCLESIÆ ANGLICANÆ VINDEX CATHOLICUS; being a Collection of more than One Hundred Treatises, Epistles, and Homilies, by the Fathers; Synodal Letters, Canons of Councils, &c., in the Original Languages, with Latin Translations, and copious Indexes; arranged according to the subject of the Articles of the Church of England. By the Rev. W. W. HARVEY, M.A., Fellow of King's College, Cambridge. Complete in 3 thick vols. price 2*l.* 15*s.*

*** A List of the Opuscula contained in this Work may be had on application.

THE LITURGY AS IT IS, illustrated in a Series of Practical Sermons. By HENRY HOWARTH, B.D., Rector of Meppershall, Bedfordshire, and late Fellow of St. John's College, Cambridge. 4*s.* 6*d.*

London: JOHN W. PARKER, West Strand.

LONDON, SATURDAY, AUGUST 12, 1843.

REVIEWS

Narrative of the Discoveries on the North Coast of America; effected by the Officers of the Hudson's Bay Company during the Years 1836-39. By Thomas Simpson, Esq. Bentley.

THIS modest, unpretending volume contains the lively history of one of the most remarkable expeditions, or rather series of expeditions, on record;—remarkable, as filling up and giving continuity to our knowledge of the northern circumpolar coasts of America, through seventy-four degrees of longitude, or, following the windings of the shore, above 2,000 miles, all explored by British enterprise; remarkable as an example of bold and comprehensive plans, carried into execution with a rare union of consummate prudence and indomitable courage, and completely successful, without a serious accident or mishap, during three trying campaigns. Without accident or mishap, we say; but alas! in the train of so signal a triumph there followed at no great distance a sad disaster, to which we shall return in the sequel. Owing to the untimely fate of the author of this narrative, the task of vindicating his share in the expedition has devolved on his brother, who says,—

"Although Mr. Simpson's name appears only as second or junior officer of the expedition,—the senior being Mr. Peter Warren Dease, an old and experienced officer of the Hudson's Bay Company, who co-operated with Sir John Franklin on his last expedition,—yet a glance at the narrative in the following pages will prove that Mr. Simpson was really the main-spring of the expedition. He alone was at all conversant with science: and the most arduous parts of the service performed by the expedition—the completion of the survey between Mackenzie River and Point Barrow; the exploration of the country between Great Slave Lake and the Coppermine River—essential to the transport across that rugged and sterile country (well called the *Barren Grounds*) of the boats and provisions of the expedition; and the pedestrian journey along the coast, of the summer of 1838, which opened the prospect of a clear sea to the eastward, securing the success of the expedition in summer 1839,—were performed by him alone."

On the failure of Sir G. Back's attempt to reach the Polar Sea by Wager Inlet, or Repulse Bay, the Hudson's Bay Company determined to lend its aid in completing the geography of that nearly inaccessible region. It had often smiled at the expeditions fitted out by Government for Arctic discovery at an enormous expense, and composed of individuals having plenty of zeal, but who, possessing very little experience of the polar climate, necessarily found difficulty and danger in journeys which, to the practised fur-trader, would have been safe and easy. In July 1836, Messrs. Dease and Simpson received the commands of the Company to conduct an expedition northwards in the following year, and, in the first place, descending Mackenzie River, and proceeding westwards to Return Reef, the furthest point reached by Sir J. Franklin in 1826, to explore the coast onwards from that point to Point Barrow, which had been reached by Mr. Elson in Beechy's voyage. Returning from this western exploration, the expedition was to winter at the north-eastern angle of the Great Bear Lake; thence to descend, in the following summer, the Coppermine River, and to follow the coast eastwards, as far as the mouth of the Great Fish River, discovered by Back in 1834. This eastern survey eventually proved to be the work of two summers.

Mr. Simpson started to join the expedition at its first winter quarters, near Lake Athabasca, from the Red River settlement, which is situate in the heart of the North American continent, about 300 miles W.N.W. from the remotest borders of Canada, above Lake Superior. This colony lies so far from the ordinary track of tourists, and is in itself of so interesting a character, that we cannot refuse to glean from our author's pages some information respecting it:

"Situated under the 50th degree of north latitude, and 97th of west longitude, at an elevation of eight or nine hundred feet above the sea, and stretching for upwards of fifty miles along the wooded borders of the Red and Assiniboine rivers, which flow through a level country of vast extent, it possesses a salubrious climate and a fertile soil; but summer frosts, generated by undrained marshes, sometimes blast the hopes of the husbandman, and the extremes of abundance and want are experienced by an improvident people. Horses, horned cattle, hogs, and poultry, are exceedingly numerous. Sheep have been brought by the Company, at great expense, from England and the United States, and are reared with success. Wheat, barley, oats, potatoes, turnips, and most of the ordinary culinary vegetables, thrive well. Pumpkins, melons, and cucumbers come to maturity in the open air in favourable seasons. Maize, pease, and beans, have not been extensively cultivated; hops grow luxuriantly; flax and hemp are poor and stunted; orchards are as yet unknown. The banks of the rivers are cultivated to the width of from a quarter to half a mile. All the back level country remains in its original state—a vast natural pasture, covered for the greater part of the year with cattle, and also furnishing the inhabitants with a sufficiency of coarse hay for the support of their herds during the winter. The length of this severe season exceeds five months, the rivers usually freezing in November and opening in April, when there is a fine sturgeon-fishery; but Lake Winipeg, the grand receptacle of the river waters, does not break up till the close of May. The most common sorts of wood are oak, elm, poplar, and maple; pines are likewise found towards Lake Winipeg. * * The generality of the settlers dwell in frame or loghouses, roofed with wooden slabs, bark, or shingles, and, for the most part, white-washed or painted externally. Not a man, however mean or idle, but possesses a horse; and they vie in gay carioles, harness, saddles, and fine clothes. A great abundance of English goods is imported, both by the Company and by individuals, in the Company's annual ships to York Factory, and disposed of in the colony at moderate prices. Labour is dear, and produce of all kinds sells at a higher rate than could be expected in such a secluded place."

The land at the Red River colony is, in general, given gratuitously to the Hudson's Bay Company's retired servants. These traders, scattered over the country in their early years, and far removed from civilized society, usually marry Indian women, and consequently, the population of the Red River settlement, which now amounts to five thousand souls, consists, in a great degree, of half-breeds. The restless, turbulent passions of this race, have gradually driven from the Red River the original Scotch settlers, who have, for the most part, migrated to the United States; and there now remain, in the vicinity of Lake Winipeg, less persevering industry, and more wild recklessness, than might be expected in a British colony of thirty years standing. At the same time, the Red River colonists are elevated far above savage life, and as the fur-traders now take their wives from that settlement, rather than from the hut of the wild Indian, a steady improvement in the character of the half-breed population, may be looked forward to as a certain result.

On the 1st of December our author started on his journey northward. There was not yet any snow on the ground. The dogs were allowed, therefore, to draw empty sledges, while the travellers amused themselves with a wolf-hunt, a favourite pastime in the plains around the colony, where the horses are trained to the pursuit of the buffalo and wolf, and to stand fire at full speed. On the ice of the Lake of Manitobah, or the Evil Spirit, the labour of the dogs commenced. A little further on the region of oak terminated; but fine woods of elm are found much further northward, when these in turn give way to pine, poplar, and willow. Much of the country now lying desert on the western side of the Manitobah and Winipegoos lakes, is capable of producing wheat and other grains. The cold now became intense. On the 23rd, a strong westerly wind, at a temperature of at least 40° below zero, seriously threatened the safety of the party, and notwithstanding every precaution, two men were injured by the cold. After two months' toil, our author arrived at Fort Chipewyan, on Lake Athabasca, and concludes this part of his narrative with the following observation:—

"Thus happily terminated a winter journey of 1277 statute miles. In the wilderness time and space seem equally a blank, and for the same reason—the paucity of objects to mark or diversify their passage; but, in my opinion, the real secret of the little account which is made of distance in these North American wilds is, that there is *nothing to pay*. Every assistance is promptly rendered to the traveller without fee or reward, while health and high spirits smile at the fatigues of the way."

The forts or trading establishments of the Company, constitute so many fixed points of Indian resort. The Indian finds in them a market for the produce of the chase, a refuge in case of war, and at all times relief and instruction. It requires all the eloquence and personal influence of the trader to persuade the Indian to spare the young of the beaver, and other valuable fur animals. So obstinate are the red men in their improvident habits, so deeply seated their destructive propensities, that our author does not hesitate to pronounce them irreclaimable. He gives the following curious illustration of their innate love of slaughtering game:

"Near York Factory, in 1831, this propensity, contrary to all the remonstrances of the gentlemen of that place, led to the indiscriminate destruction of a countless herd of reindeer, while crossing the broad stream of Haye's River, in the height of summer. The natives took some of the meat for present use, but thousands of carcases were abandoned to the current, and infected the river banks, or floated out into Hudson's Bay, there to feed the sea fowl and the Polar bear. As if it were a judgment for this barbarous slaughter, in which women and even children participated, the deer have never since visited that part of the country in similar numbers."

On the shore of Athabasca lake, were built two sea boats, each twenty-four feet long, so much alike, and, in the eyes of the travellers, so handsome, as to obtain the classical appellations of Castor and Pollux. On the 1st of June, the boats being finished, the expedition commenced the descent. We shall say nothing of the ice still lingering in Great Slave Lake, nor of the cheerful verdant scenery of Mackenzie River. Barley is cultivated at Fort Simpson, in latitude 62°; and even at Fort Norman, 200 miles lower down, European perseverance is exhibited in the cultivation of the ground; "At this northerly spot, in latitude 64° 40′, a small quantity of green barley, and of potatoes, almost as big as pigeons' eggs, is now annually raised." The wood coal, on the banks of the Mackenzie, is, for several miles, in a state of ignition, and these natural fires appear to have extended since the time of Dr. Richardson's visit. They locally affect the climate; a richer herbage and riper berries being found in the vicinity of the fires. Near Fort Good Hope, in latitude 66° 16′, our author writes—"The majestic river, and its high banks, were steeped in a flood of light, and except the diminutive size of the wood, there was nothing in the landscape to suggest the thought that we had penetrated so far into the regions of the North."

Let us hasten now from Mackenzie River, to the unexplored sea shores towards the west.

With great exertions the boats were forced through the ice about 150 miles beyond the Return Reef of Sir J. Franklin; but the progress being so slow, and the obstructions so formidable, it was thought advisable to prosecute the remainder of the required exploration on foot: with this view, therefore, Mr. Simpson set forth with five companions. The sequel of his story shall be told, as much as possible, in his own words:—

"After travelling about ten miles, and wading through many a salt creek, the waters of which were at the freezing temperature, the land, to our dismay, turned off to the eastward of south, and a boundless inlet lay before us. Almost at the same instant, to our inexpressible joy, we descried four Esquimaux tents, at no great distance, with figures running about. We immediately directed our steps towards them; but, on our approach, the women and children threw themselves into their canoes, and pushed off from the shore. I shouted 'Kabloonan teyma Inueet,' meaning 'We are white men, friendly to the Esquimaux;' upon which glad news the whole party hurried ashore, and almost overpowered us with caresses. The men were absent, hunting, with the exception of one infirm individual, who, sitting under a reversed canoe, was tranquilly engaged in weaving a fine whalebone net. Being unable to make his escape with the rest, he was in an agony of fear; and, when I first went up to him, with impotent hand he made a thrust at me with his long knife. He was, however, soon convinced of our good intentions; and his first request was for tobacco, of which we found men, women, and even children inordinately fond. * * Confidence being now fully established, I told them that I required one of their oomiaks, or large family canoes, to take us two or three days' journey—or sleeps, as they term it—to the westward; after which we should return. These skin boats float in half a foot of water. No ice was visible from the tents; and, from the trending of the coast, it was more than doubtful that our journey could have been accomplished in any reasonable time on foot. They acceded to my demand, without a scruple. We selected the best of three oomiaks; obtained four of their slender oars, which they used as tent-poles, besides a couple of paddles; fitted the oars with lashings; and arranged our strange vessel so well that the ladies were in raptures, declaring us to be genuine Esquimaux, and not poor white men. Whilst my companions were thus employed, I procured, from the most intelligent of the women, a sketch of the inlet before us, and of the coast to the westward, as far as her knowledge extended. She represented the inlet as very deep; that they make many encampments in travelling round it; but that it receives no river. She also drew a bay of some size to the west-ward; and the old man added a long and very narrow projection, covered with tents, which I could not doubt to mean Point Barrow."

The wind blew violently and the sea ran high, but the Esquimaux boat rode gallantly over the waves. At night, propped on the paddles, it formed a shelter on the shore, which is here formed of frozen mud. A fine deep river, named the Bellevue, was discovered further on, and, immediately after, our author descried, with unfeigned joy, the object of his search. He thus describes his arrival at Point Barrow:—

"We had now only to pass Elson Bay, which is for the most part shallow. It was covered with a tough coat of young ice, through which we broke a passage; and then forced our way amid a heavy pack, nearly half a mile broad, that rested upon the shore. On reaching it, and seeing the ocean spreading far and wide to the south-west, we unfurled our flag, and with three enthusiastic cheers took possession of our discoveries in His Majesty's name. Point Barrow is a long low spit, composed of gravel and coarse sand, forced up by the pressure of the ice into numerous mounds, that, viewed from a distance, might be mistaken for gigantic boulders. At the spot where we landed it is only a quarter of a mile across, but is considerably wider towards its termination, where it subsides into a reef running for some distance in an easterly direction, and partly covered by the sea. One of the first objects that presented itself, on looking around, was an immense cemetery. There the miserable remnants of humanity lay on the ground, in the seal-skin dresses worn while alive. A few were covered with an old sledge or some pieces of wood, but far the greater number were entirely exposed to the voracity of dogs and wild animals."

Among the remarkable features of the line of coast discovered by the expedition is the River Colvile, apparently of great magnitude, for the sea opposite to its mouth was quite fresh three leagues from the shore. This river is supposed by our author to flow from the western side of the Rocky Mountains. It appears that our fur traders on the western side of those mountains, not far from the Russian lines, have heard of a great river a little farther north, the description of which suits well with the Colvile. With a glad heart, and during a gleam of fair weather, our author saw and relished whatever agreeable scenery these desolate shores possess. He thus paints the view from a hill near Demarcation Point:—

"I ascended the nearest hill, six or seven miles distant, whence I enjoyed a truly sublime prospect. On either hand arose the British and Buckland mountains, exhibiting an infinite diversity of shade and form; in front lay the blue boundless ocean strongly contrasted with its broad glittering girdle of ice; beneath yawned ravines a thousand feet in depth, through which brawled and sparkled the clear alpine streams; while the sun, still high in the west, shed his softened beams through a rich veil of saffron-coloured clouds that over-canopied the gorgeous scene. Bands of reindeer, browsing on the rich pasture in the valleys and along the brooks, imparted life and animation to the picture. Reluctantly I returned to the camp at sunset."

The mouth of the Mackenzie was regained without accident, and the wearied crews at length enjoyed repose. "The night was serene, and not a sound broke upon the solemn stillness, save the occasional notes of swans and geese calling to their mates, and the early crowing of the willow partridge, as the soft twilight melted into the blush of dawn."

From the return of the expedition to the Mackenzie, to its arrival in winter quarters at the north-eastern angle of Great Bear Lake, a month elapsed; and, in that month, the glow and serenity of autumn had given way to the immitigable severity of a northern winter. Various accidents had prevented the completion of the buildings and the accumulation of provisions, and if the whole party—men and leaders—had not been expert hunters and backwoodsmen, it is probable that the expedition would have experienced the extremities of famine. The intense cold was of unusual duration. The average temperature of the latter half of December was −33½°, that of all January −30°. In March, when the average temperature was −20°, the thermometer on one occasion sank so low as −60°, or even −66° (66 degrees below zero!). Our author had the curiosity, when the thermometer was standing at −49°, to cast a pistol-bullet of quicksilver, which at ten paces passed through an inch plank, but flattened and broke against the wall a few paces beyond it. This chilling temperature, however, did not repress the gaiety nor subdue the appetites of the party, as will be manifest from what follows:—

"On Christmas and New-Year's days we entertained our assembled people with a dance, followed by a supper, consisting of the best fare we could command. By this time we had, through our indefatigable exertions, accumulated two or three weeks' provisions in advance, and no scarcity was experienced during the remainder of the season. The daily ration served out to each man was increased from eight to ten, and to some individuals twelve pounds of venison; or, when they could be got, four or five white-fish weighing from fifteen to twenty pounds. This quantity of solid food, immoderate as it may appear, does not exceed the average standard of the country; and ought certainly to appease even the inordinate appetite of a French Canadian."

The barren grounds or country immediately to the east of the Great Bear Lake have been explored during the winter, and, all the preparations being complete, the expedition started again in June, 1838, as soon as the ice broke up. The boats ascended the River Dease for some miles; they were then carried over a short portage to the Dismal Lakes, by means of which, and the River Kendall, they descended into the Coppermine River. This communication between the Coppermine River and Great Bear Lake was frequently examined, and four times crossed by the expedition with all their luggage: our author must, therefore, be regarded as a competent authority, when he asserts that the descent is equal on both sides. The consequence is, that the Coppermine River, from the mouth of the Kendall River to the sea, or in a course of seventy miles, has as great a fall as the Great Bear Lake, the Great Bear River, and the Mackenzie altogether, in a line of 700 miles. The dangers of so impetuous a torrent were fully experienced by our author and his companions; their boats, however, were fortunately steered by expert Canadians well used to shoot the rapids, and thus they reached the sea in safety. A little to the west of the Coppermine River another large stream, named after Dr. Richardson, was found to discharge its waters into the same inlet.

The prosperity of this campaign may be said to have ended here. The winter had been unusually severe, the summer late. The sea was compact ice; thick fogs darkened the heavens. On the 19th of August the boats had only reached within a league of Franklin's farthest encampment in 1821. The lateness of the season, and the appearance of new ice, forbade the attempt to navigate any further. Mr. Simpson therefore, with a few chosen companions, volunteered to explore some distance on foot, so that their exertions hitherto might not be wholly fruitless. He had not proceeded far beyond Franklin's limit, when he descried, over the sea, land about twenty-five miles distant. On the third day an appearance of land extending round the horizon, disheartened the explorers: but here we shall have recourse to our author's description:—

"As we drew near in the evening to an elevated cape, land appeared all around, and our worst fears seemed confirmed. With bitter disappointment I ascended the height, from whence a vast and splendid prospect burst suddenly upon me. The sea, as if transformed by enchantment, rolled its free waves at my feet, and beyond the reach of vision to the eastward. Islands of various shape and size overspread its surface; and the northern land terminated to the eye in a bold and lofty cape, bearing east-north-east, thirty or forty miles distant, while the continental coast trended away south-east. I stood, in fact, on a remarkable headland, at the eastern outlet of an ice-obstructed strait. On the extensive land to the northward I bestowed the name of our most gracious sovereign Queen Victoria. * * Our present discoveries were in themselves not unimportant; but their value was much enhanced by the disclosure of an open sea to the eastward, and the suggestion of a new route—along the southern coast of Victoria Land—by which that open sea might be attained, while the shores of the continent were yet environed by an impenetrable barrier of ice, as they were this season. Our portable canoe, which we had not had occasion to use, was buried in the sand at the foot of a huge round rock on the beach, and with lighter burdens we commenced retracing our steps."

In returning to the Coppermine River much hardship was endured, and the ascent of the bold rapids of that river with a fallen stream, which former travellers had pronounced impracticable, proved the consummate skill of our author's Canadian followers. The boats and

Digitized by Google

part of the stores were buried in a convenient spot on the banks of the river, and the party returned once more to their old quarters at Fort Confidence, on the Great Bear Lake.

The incidents of the winter of 1838-9 exhibit the usual vicissitudes of the backwoodsman's life. There was much feasting on venison and much fear of famine. Hordes of begging Indians poured in, and numerous expert hunters brought supplies of meat to the fort, and ate more than they brought. Particulars such as these, however, cannot detain us. The manners of the native tribes will be found sharply sketched, though with no flattering lines, in our author's pages. Yet the following bold attempt to discriminate the native races of North America, may, from its brevity, be admitted here:—

"The Esquimaux inhabiting all the Arctic shores of America have doubtless originally spread from Greenland, which was peopled from northern Europe; but their neighbours, the Loucheux of Mackenzie River, have a clear tradition that their ancestors migrated from the westward, and crossed an arm of the sea. The language of the latter is entirely different from that of the other known tribes who possess the vast region to the northward of a line drawn from Churchill, on Hudson's Bay, across the Rocky Mountains, to New Caledonia. These, comprehending the Chipewyans, the Copper Indians, the Beaver Indians of Peace River, the Dog-ribs and Hare Indians of Mackenzie River and Great Bear Lake, the Thœcanies, Nahanies, and Dahadinnehs of the Mountains, and the Carriers of New Caledonia, all speak dialects of the same original tongue. Next to them succeed the Crees, speaking another distinct language, and occupying another great section of the continent, extending from Lesser Slave Lake through the woody country on the north side of the Saskatchewan River, by Lake Winipeg to York Factory, and from thence round the shores of Hudson and James bays. South of the fiftieth parallel, the circles of affinity contract, but are still easily traced. The Carriers of New Caledonia, like the people of Hindostan, used till lately to burn their dead; a ceremony in which the widow of the deceased, though not sacrificed as in the latter country, was compelled to continue beating with her hands upon the breast of the corpse while it slowly consumed on the funeral pile, in which cruel duty she was often severely scorched."

The Loucheux differ, it appears, from every other tribe of red Indians, by their bold, open, and perfectly frank demeanour. They are as free as savages can be from treacherous cunning and dissimulation, and have never yet shed the blood of white men. The Esquimaux seen by our author are not the stunted race hitherto described. Among those met with on the Circumpolar shores, there were many robust men, six feet high. He considers the Esquimaux as much superior to the Indian in intelligence, provident habits, and mechanical skill. He had the good fortune to procure, this winter, an Esquimaux interpreter from the missionary settlement of Ungava, in Labrador.

Passing over the reiterated toils of descending to the coast, it will be sufficient for us to state, that in July, 1839, the expedition found the sea, at the mouth of the Coppermine River, tolerably free from ice. The voyage eastward, therefore, was successful, though it furnished no incidents calling for especial notice. A river, larger than the Coppermine, and named the Ellice, was discovered in longitude 104° 15′ west. In his Journal of the 15th August, our author observes:

"All the objects for which the expedition was so generously instituted were now accomplished, but Mr. Dease and myself were not quite satisfied. We had determined the northern limits of America to the *westward* of the Great Fish River; it still remained a question whether Boothia Felix might not be united to the continent, on the other side of the estuary. The men, who had never dreamed of going any further, were therefore summoned, and the importance of proceeding some distance to the eastward explained to them; when, to their honour, all assented without a murmur."

After an interval of five days, the narrative of discovery is continued in these words:—

"It was now quite evident to us, even in our most sanguine mood, that the time was come for commencing our return to the distant Coppermine River, and that any further foolhardy perseverance could only lead to the loss of the whole party, and also of the great object which we had so successfully achieved. The men were therefore directed to construct another monument in commemoration of our visit; while Mr. Dease and I walked to an eminence three miles off, to see the farther trending of the coast. Our view of the low main-shore was limited to about five miles, when it seemed to turn off more to the right. Far without, lay several lofty islands; and in the north-east, more distant still, appeared some high blue land: this, which we designated Cape Sir John Ross, is in all probability one of the south-eastern promontories of Boothia. We could therefore hardly doubt being now arrived at that large gulph, uniformly described by the Esquimaux as containing many islands, and, with numerous indentations, running down to the southward, till it approaches within forty miles of Repulse and Wager bays. The exploration of such a gulph, to the Strait of the Fury and Hecla, would necessarily demand the whole time and energies of another expedition, having some point of retreat much nearer to the scene of operations than Great Bear Lake; and we felt assured that the Honourable Company, who had already done so much in the cause of discovery, would not abandon their munificent work till the precise limits of this great continent were fully and finally established."

When we add that the southern shores of the great island named Victoria-land were traced through an extent of 156 geographical miles, we shall have stated all the chief results of the expedition, which, if we consider that it comprises the navigation of a tempestuous ocean, beset with ice, for a distance exceeding 1400 geographical, or 1600 statute miles, in open boats, together with all the fatigues of long land journeys and the perils of the climate, was certainly a wonderful achievement. Nor must we omit to state, that science was not neglected; good astronomical observations were made, and a list of the plants collected by Mr. Dease is appended to our author's volume. Let us add, too, that the men appear to have done their duty well and cheerfully, which reflects as much credit on their leaders as on themselves.

The merits of Mr. Simpson were at once recognized by his employers and the Government. The Hudson's Bay Company accepted his offer to conduct another expedition to the Straits of the Fury and Hecla; the Royal Geographical Society awarded him its medal; and the Government intimated its intention of bestowing on him a pension of 100*l.* a-year. But, alas! all this cheering news arrived too late to satisfy and calm his impatient spirit. The letter of the Company was written on the 3rd of June: on the 6th of that month Mr. Simpson left the Red River Colony to proceed by the way of the Missouri to Europe. He hurried on before the rest of his party, with four men. Two of these were shot by him on the evening of the 13th or 14th of June; the other two fled, but returned with their friends on the following morning, when our author's death took place. All the circumstances of this painful tragedy are involved in deep mystery; and we feel no desire to hazard conjectures on such a matter. But one thing is certain, and will be acknowledged by all attentive readers of this volume, that in Thomas Simpson the world lost no common man.

Religious and Moral Sentences culled from the Works of Shakespeare, compared with Sacred Passages drawn from Holy Writ. Calkin & Budd.

THE object of this collection of extracts, is to prove that our great bard lived and died an orthodox Protestant of the Church as by law established in England. There would have been more propriety in dedicating the work to the Protestant Association than to the Shakespeare Society. But, however staunch a Protestant Shakspeare may have been, there is certainly no trace of what is commonly called Protestant politics in his plays and poems; yet we should not be surprised, after the essay before us, if an attempt were made to show that he was Orange as well as orthodox.

The compiler thus states the occasion and motive which suggested his publication:—

"Upon visiting Stratford-upon-Avon, the compiler observed in the room where 'Shakespeare's Relicks' are exhibited, a large written paper, in a gilt frame, (designedly presented to the view) termed 'a copy of Shakespeare's Will,' but drawn up in the Roman Catholic form; representing itself as a faithful copy of the real Will, deposited at Doctors' Commons. Having repeatedly seen printed copies of his genuine Will, fraud was immediately apparent; and as it was manifestly placed there for the purpose of deceiving the world, by the insidious attempt to prove him a Papist, the compiler resolved—in justice to Shakespeare's memory, in justice to the Reformed Religion, and in justice to the divinity of Truth—to expose the fraudulent design, by proving, from Shakespeare's own writings, that he lived and died a true Protestant."

He then gives the preamble to Shakspeare's will, extracted from the registry of the See of Canterbury, and sets forth in juxta-position with it the preamble to a manuscript will exhibited at the house in Stratford-upon-Avon. The former document is as untinged with Popery as the Protestant Association itself could wish; but the latter is so intensely Popish, that were its genuineness capable of being established, Shakspeare would be infallibly expelled from many an orthodox library with as little ceremony as the works of Dens, or the pamphlets of J. K. L. The Popish testament begins thus:—

"In the name of God, the Father, Son, and Holy Ghost; the most holy and blessed Virgin Mary Mother of God; the Holy Ghost of Arc-Angels, Angels, Patriarchs, Prophets, Evangelists, Apostles, Saints, Martyrs, and all the Celestial Courts and Companies of Heaven."

And then it proceeds—"I, William Shakspeare, an unworthy member of the Holy Catholic Religion," &c.

We do not believe, any more than the compiler, that the great poet was "a Papist;" but we have no doubt that his religion was as catholic as his genius, for a mind so august was never yet tenanted by the sour spirit of sectarianism.

A string of passages is given, which are termed "anti-Papistical," but many of which would be perfectly consistent with the notion that Shakspeare was as good a Roman Catholic as any priest in Maynooth College. What can be more ridiculous than to quote the speeches of King John, addressed to Cardinal Pandolph, to prove what the author proposes? or to cite from Henry the Sixth—

> This cardinal is more haughty than the devil.?

As to passages like the following, it requires a sharp eye to detect anything peculiarly anti-Papistical in them:—

> Who would be pitiful, if you are not?
> Or who should study to prefer a peace,
> If holy churchmen take delight in broils? 1 HEN. VI.

> Name not religion, for thou lov'st the flesh;
> And ne'er throughout the year, to church thou go'st,
> Except it be to pray against thy foes. 1 HEN. VI.

The compiler, we shrewdly suspect, is devoutly of opinion that churchmen of the Church of Rome are the only churchmen capable of "delighting in broils," "loving the flesh," or going seldom to church, and only to "pray against their foes."

We are told that "no Papist would have been inclined, or would have dared to have put into the mouths of his *dramatis personæ* such expressions, counter to Papacy, as are presented

Digitized by Google

in these extracts." Surely an English Roman Catholic, animated with the free religious spirit of the days of Magna Charta, would not only have not been disinclined to use expressions "counter to Papacy," but would naturally and necessarily have used such expressions, to give vent to his own feelings and principles in matters of religion and church-government. There is, therefore, not a grain of sound reasoning in all the extracts accumulated from the historical plays. The only quotation worth a farthing for the compiler's frivolous object is from the play of Titus Andronicus—

> I know that thou art religious,
> And hast a thing within thee called a conscience,
> With twenty Popish tricks and ceremonies,
> Which I have seen thee careful to observe, &c.

Having established, in this sort of way, the position that "our Will" was not a Papist, he proceeds "to show, by demonstration similar to the preceding—viz., his own writings—that he was *a true and worthy member of the church of England!*"

"This we do by placing, in juxtaposition with his own religious sentences, corresponding passages from Holy Writ; thereby proving how versed he was in the Scriptures, as exemplified by the similitude of his religious sentences to the passages drawn from the Bible, and the Liturgy of the Church of England."

These parallelisms (many of them trifling, and many imaginary) occupy one hundred and forty pages! but we are unable to discover by what process of logic Shakspeare's unquestionable familiarity with the Bible demonstrates that he was a member of the Reformed Church of England. Thomas-à-Kempis, or Sir Thomas More, might be proved a Protestant by a similar line of argument. The great number of passages here collected, certainly "present incontestible proofs that Shakespeare was fully read in Holy Writ, and that his mind was most sensibly imbued with the sublimity and hallowed character of the sacred writings," which nobody could doubt who had studied his works.

Correspondence of John, Fourth Duke of Bedford. Vol. II. Longman & Co.

The correspondence contained in this volume embraces the period between the Peace of Aix-la-Chapelle and the death of George II. As it approaches nearer to our own, or rather to our fathers' times, it increases in interest, through the occurrence of names and circumstances of more frequent mention in literary and social gossip. On the contemporary history of the country, it, however, throws few novel lights, such as the public will care to receive; for there is little in the men who were then strutting their hour on the stage calculated to awaken the attention of philosophy, or to beget sympathy,—little to make a more accurate estimate of characters worth the labour of further weighing. The one exception was Pitt,—the great Pitt and little Earl of Chatham,—the one minister of those days, who seems to have possessed heart, purpose, or energy, or was equal to controlling and compelling the jobbing corruption of parliaments into some reluctant obedience to one will; and in the letters of Pitt, the correspondence affords nothing as yet of major importance. But small as may be its contributions to critical history, the volume is not deficient in matter to point a moral for the use of the politician and philosopher; a moral which may be studied with advantage by the general public, in its application to the times in which we live. It contains, also, frequent and edifying illustrations of the working of that aristocratic oligarchy, which, up to the period of the Reform Bill, was considered as a *beau ideal* of representative government under the facetious appellation of the British Constitution. This combination is pithily set forth by Lord John Russell in his explanatory note, on the state of affairs following the death of Pelham, and the difficulties attendant on replacing him in the ministry. We prefer, therefore, adopting his Lordship's words:—

"According to the abominable system of those days, the secret-service money was employed in buying members of parliament. As a part of the same system, the treasury boroughs were filled by the nomination of the friends of the minister. It was naturally expected by Mr. Fox that he should share in the confidence of the Prime Minister respecting these secret means of government, as well as in the preparation and defence of public measures. But the power of Newcastle was founded on the purchase of boroughs and members of parliament. Others could write as good despatches; others could make more eloquent speeches: it was in jobbing and bargaining that he stood unrivalled. Perhaps he struggled with himself to permit a share of this foul influence to Mr. Fox, but however that may be, after promising one day to communicate every thing, he positively declared the next day that he would keep bribes and boroughs entirely in his own hand, and that Mr. Fox need give himself no concern in the matter. Fox now held himself insulted, and, much to the displeasure of the King, declined the seals. Pitt was in bad health, and was obnoxious; Murray looked to the security of the Bench, and had no wish to encounter Fox and Pitt as the deputy of Newcastle. * * For a time all was apparently easy. Sir Thomas Robinson, who knew the routine of foreign affairs, was made Secretary of State, and with Legge, Chancellor of the Exchequer, was appointed to lead the House of Commons. Pitt felt the affront, and said openly that Mr. Fox should have been made leader. Neither he nor Fox resigned their offices, but both thought themselves at liberty to treat with contempt, and expose to laughter, the Secretary of State. On the occasion of an election petition, Sir Thomas Robinson happened to say that the next would be a short case, for it presented no difficulty. Pitt fiercely blamed this light and ignorant way of speaking, and Fox, ironically excusing Robinson on the ground of his inexperience, said he hoped he would be the last great man, as he had been the first to use the influence of his high station to prejudge a case that was unheard. Pitt had said in private, 'he lead us! the Duke might as well send his jackboot to lead us!' And so indeed it appeared."

The main difficulty of those days in forming a ministry, was the division of the spoil. Every great depositary of parliamentary power had in his train a set of petty intriguers ("followers of his own"), all of whom were to be provided for; and the premier, in selecting among the eminencies of his day, had to take them with all their incumbrances. In the embarrassments this created, the pension list afforded the principle of adjustment; but already that lever had been overstrained, and threatened to break beneath the burdens imposed on it. Sacrifices, therefore, of individual ambition and of private gratitude to the expediency of the day, were becoming more and more necessary. The Duke of Bedford himself gave his support to a ministry from which he consented to be excluded, contenting himself with a provision for his friends and followers. In the management of these delicate distresses, Newcastle was pre-eminent; and his sinister dexterity gave him an influence with the king, which enabled him to exclude Pitt, or any other wiser or better man than himself, whose independence was to be feared. In what way the family compact between the aristocracy, Whig and Tory, was broken through by the force of circumstances, and the increasing power of public opinion, is the great historical problem of the reign of the Georges. For the particular occasion now before us, we again refer to Lord John:—

"Stormy times were approaching, and arrangements which excluded Pitt from an office of power, were ill suited to the wants of a country which was about to meet France and Austria combined in a war of prodigious exertion. In October 1756, Fox, disgusted by the treatment he received from the Duke of Newcastle, tendered his resignation to the King. The King was angry, but sought in vain for help. The office of Chief Justice was vacant, and Murray declared that he would accept no other. Pitt alone could supply the vacancy made by the resignation of Fox. But he refused to serve either with Newcastle or with Fox. Even in this he was indulged, and, in order to gratify him, the Duke of Devonshire accepted the post of First Lord of the Treasury. To make matters easy, Fox offered to take the office of Paymaster, without a seat in the Cabinet. Even this was denied. It was at this time that the Duke of Bedford accepted the office of Lord Lieutenant of Ireland, which the Duke of Devonshire quitted for the Treasury. This combination was not made to be lasting. Mr. Pitt, with all his great qualities, was ill fitted to influence the votes of the House of Commons. It was not only that he could not stoop to dishonest arts; he did not possess, or would not exert, the honest qualities of conciliation and forbearance. * * When he came to form a ministry himself, he produced that curious mixture of which Mr. Burke says, 'He made an administration so chequered and speckled; he put together a piece of joinery so crossly indented and whimsically dovetailed; a cabinet so variously inlaid; such a piece of diversified mosaic; such a tesselated pavement without cement; here a bit of black stone, and there a bit of white; patriots and courtiers; King's friends and republicans; whigs and tories; treacherous friends and open enemies; that it was indeed a very curious show, but utterly unsafe to touch, and unsure to stand on.' This strange jumble of parties was no accident, but was the natural result of his character. He had no party attachments, and no fixed principles. He cared as little for the employment of Hanover troops, and the engagements of subsidiary treaties, as he cared for the Walpole connexion, or the so-styled patriots: he was ready to be for or against any measure, or any man, as his temper and judgment inclined him at the moment. What he really possessed, and what others wanted, was a high sense of personal honour and national independence—a resolute heart in council, and a powerful understanding for great emergencies. These qualities fitted him exactly for a colleague of Newcastle, who had the qualities which Pitt wanted—a knowledge of the characters of public men, and a sense of the necessity of a party standard to which they could rally. After a long interval of suspense, the interests of the nation prevailed; the Duke of Newcastle became First Lord of the Treasury, and Mr. Pitt Secretary of State, and, according to the phrase of Horace Walpole, all the men who had been declaring for months that they never would join united in forming an administration. 'The Duke of Newcastle lent me his majority to carry on the Government,' said Mr. Pitt some years afterwards. Mr. Pitt made war, Mr. Pitt subsidized Prussia, Mr. Pitt sent forth glorious expeditions, Mr. Pitt conquered Canada: the Duke of Newcastle gave away places, and filled the Whig boroughs with sure dependents."

In such a condition of affairs, everything must turn on personality and egotism; and the present correspondence teems with the minutest traits of such influence, more especially the letters of Rigby, a principal correspondent of the Duke's, and one to whom intrigue seems to have been a natural element.

A more important moral, and one more immediately applicable to pending contingencies, is that which may be collected from the Duke's correspondence as Lord Lieutenant of Ireland. It is replete with matter of edification applicable to the passing hour. Even so long ago as his days, we find the bitter fruits of the ancient misgovernment of that country ripening in teeming abundance; and the difficulty in carrying on affairs was even then as great, if not as embarrassing to English ministers, as at the present moment. The Irish parliament, or rather the shadow of a representation, required to be watched, crippled, and misled by an English party in the house, bought "to do the king's business there." "The Parlia-

Digitized by Google

ment," says Lord John, "of that country was a jobbing aristocracy, banded into different parties, without much, if any, distinction of principle. The English government used their patronage to purchase a majority. But the mouths of one party were no sooner stopped by pensions and places, than another rose to complain of profusion, in the name of their country, and to ask for new extravagance in their own. A fresh purchase only led to fresh pretensions, and the very pensioners themselves had the effrontery to exclaim against the burthens of which their own faction and corruption had been the cause."

This settled finally in the formation of two or three great families, which, by placing themselves at the service of the British minister, on terms of their own making, monopolized the distribution of patronage, and were too powerful to be thwarted or discountenanced. These are the men of whom it was said, that "if they had all Ireland given to them for an estate, they would ask for the Isle of Man also, as a cabbage garden." As early as this time, the necessity for ruling the Catholic population through their clergy, was urged by Lord Clanbrassill on the government; and the policy was defeated, perhaps as much by the jealousy of the family interest, which could bear no rivals near the throne, as by their bigotry or that of the English parliament.

"Now, my Lord," writes Lord Clanbrassill, "I cannot but think it is highly advisable to attempt to dissolve this close connection between Popery and Jacobitism, and that the most probable method to this effect would be to take their priests under the protection of the government, and oblige them in order to obtain that protection to give security for their good behaviour. One advantage would immediately flow from this plan;—the persons, the number, and the place of abode of all the priests in Ireland would be publicly known, which would be a great check upon them; and when they have tasted the comfort of a legal protection, which would give them a kind of property in their parishes, they will be ready enough to give private informations against the itinerant friars (those restless emissaries of France and the Pretender) who swarm in this country, and devour many little emoluments that would otherwise fall to the share of the parish priests. And I make no doubt but that the Irish *parish* priests, finding themselves thus indulged, would in time be as good subjects to the King of Great Britain, as the German priests in the Electorate are to the Elector of Hanover."

But it will be said, that the effects did not answer to these anticipations; that conciliation has failed to produce gratitude. Why? because in conceding each particular measure, the principle on which its value depended, was set at nought and abandoned; because in every concession, while bigotry has held the bread in one hand, it has not concealed the stick in the other. Thus, on the passing of the Emancipation Bill, the leaving the education of the priest unprovided for, the niggardly grants for Maynooth, have developed a generation of clerical democrats, looking forward with exultation to separation and a theocratic republic. Other causes of evil, indeed, are behind these: the Catholic disabilities were not all in all; but it is not their least evil, that they have too long excluded other considerations from the public view.

Among the grosser items of mal-administration, incidental to Irish affairs, was the custom of saddling its then separate Exchequer with pensions for non-Irish and jobbing purposes. A curious instance of this abuse occurs in the proposal to pension the King's daughter, the Princess of Hesse; and we wish we could exhibit the Duke of Bedford's hostility to that measure, as founded on loftier principles than his correspondence offers. His objections, timidly put forth, and readily abandoned, are offered in the shape of Exchequer statistics—the overladen state of the list, and the danger of parliamentary discontents—considerations of expediency, which smack distastefully of fraud. The winding up of this business is curious, and deserves to be quoted at length, not only on its own account, but for the light it throws on parts of the family history of the Irish peerage. The passage exists in a note made by the Duke, of "heads of business" to be laid before the King:

"May 24th.—As things are circumstanced business may be easily carried on the next sessions; but the leading people must have *douceurs*, a great many of which I must at a proper time lay before his Majesty, by these means he may do what he pleases with that country. The Princess of Hesse may have her pension of 5000*l.*; but other things of the like nature must be given in Ireland. Pensions to the amount of above 5000*l.* per annum have been extinguished since my going to Ireland. * *

"To propose the following persons to be made peers:—The Chancellor, if his Majesty shall please to make an augmentation of 500*l.* per annum to his salary, to be created a Baron.[1]—Sir Arthur Gore, a Viscount.[2]—Sir Maurice Crosbie, a Baron.[3]—John Lysaght Sen, a Baron.[4]—William Annesley, Esq., a Baron.[5]—James Stopford, Esq., a Baron.[6] (Agreed to.)—Lord Viscount Castlecomer to be made an Earl.[7]—Lord Tullamore to be made an Earl.[8] [Not the present family.]—Lady Athenry to be made a Countess.[9] (Agreed to.)—Likewise Mr. Cole[10] and Mr. Mason's[11] request to be made Barons. (Not at present.)—And Lord Rusborough to be made a Viscount.[12] (Not agreed to.) * *

"The following persons to have pensions during pleasure, for the sums set against their respective names:—

	£.
Countess of Drogheda	200
Mrs. Gore and her daughters	200
Guy More, Esq.	200
John Blennerhassett, Esq.	200
James Hussey, Esq.	200
The Honourable Mrs. Walsingham ..	200
Honourable William Molesworth and Anne his wife, in addition to their pension ..	100"

To complete the picture offered by this document, the memorandum laid before the King, in connexion with its contents, should be taken into account:—

"His Majesty having been pleased to signify his pleasure to the Duke of Bedford, lord-lieutenant of Ireland, that whenever the circumstances of affairs would permit it to be done without prejudice to his service, or discontent to his good subjects of that kingdom, that it be intended to grant a pension upon that establishment of 5000*l.* per annum to H.R.H. the Princess of Hesse Cassel, for her life, and the lives of the princes her children; the Duke of Bedford thinks it is his duty to represent to his Majesty that it is his opinion, that in consideration of the present tranquil state of that kingdom, and the great decrease of the pension list, occasioned by the death of several persons, who had very considerable charges upon it, that the present time is the properest for his Majesty to carry into execution his gracious intentions to his royal daughter and her family, provided his Majesty will be pleased to consent that the following pensions during pleasure, may be likewise placed on that establishment, which, as they are entirely intended for persons resident in that kingdom, and calculated solely to enable me to carry on with success his Majesty's service there, will be the likeliest means to quiet people's minds, who might otherwise be uneasy to see such a great annual sum carried out of their country *without having any share of it themselves*. This seems likewise the more necessary in order to quiet people's minds there, as his Grace the Duke of Newcastle informs me, that it is for his Majesty's service in this kingdom that Mr. Charlton should have a pension of 1500*l.* per annum for his life on the establishment of Ireland, which I think likewise may be done, without detriment to his service. His Majesty is likewise most humbly desired to approve of the inclosed list of peers proposed to be promoted to higher honours; and of commoners to the peerage; as likewise of persons proposed to be put into the Privy Council: and to permit me humbly to assure him, that considering the difficulties I had to struggle with, the favours now asked for his subjects there, (who are either very considerable in themselves, or by their connections with others,) are far less than what has been usually granted upon the recommendation of former lord-lieutenants, though in times of infinite less difficulty than I had to struggle with."

Whole volumes written on "virtual representation" in general, and the Irish parliaments in particular, could not throw a stronger light on the past and present condition of Ireland, than this little episode. But this is not all. Shortly afterwards Prince Ferdinand was, with the like cool indifference, placed on the Irish pension list for 2,000*l.* per annum. Yet the Duke of Bedford was, for those times, an enlightened and an honest man, let Junius say what he pleases. The system was too powerful to contend against; and everything bent before it.

Passing, however, from great considerations to smaller particulars, we find, here and there, an anecdote of less general import, worth commemoration. These are principally found in the correspondence of Rigby. We shall quote one or two only, and that without much method, and after the "French Falconer" manner, as the matter comes to hand:—

"Nobody is yet returned from the play; and being alone, I think I cannot do better than inform your Grace that to-day has been productive of no events, except that I hear from all hands of those who were at court, that the King appears much easier and happier than he has done for some time past. One circumstance with relation to this tranquillity I have heard from very good authority. I cannot forbear telling you Lord Temple pressed him some days ago very strongly for a pardon for Mr. Byng: his Majesty persevered, and told his lordship flatly he thought him guilty of cowardice in the action, and therefore could not break his word they had forced him to give to his people,—to pardon no delinquents. His lordship walked up to his nose, and, sans autre cérémonie, said, What shall you think if he dies courageously? His Majesty stifled his anger, and made him no reply. I think I never heard of such insolence.*"

What follows is in pregnant contrast with our own times of gas-lighting and regimental policemen:—

"Though it is eleven o'clock, I must tell you of the most curious of all robberies that was committed last night. A Mrs. Hodges of Hanover Square got into her coach at the playhouse, and from under the seat of the coach, as it was going along, up jumps a thief, and with a pistol in his hand demands her money and jewels, and orders her, upon pain of instant death, to stop her coach at a certain place and let him out, and wish him good night, all which she complied with, and he carried off a thousand pounds' worth of her jewels."

(1) Created Baron Bowes of Clonlyon.

(2) Member of parliament for the borough Donegal, created Baron Saunders and Viscount Sudley of Castle Gore, in the county of Mayo, and in 1762, Earl of Arran, in the county of Galway, on the recommendation of the Earl of Kildare.

(3) Member for the county of Kerry, created Baron of Branden, county of Kerry; on the recommendation of the Earl of Shannon.

(4) Member for the borough of Charleville, created Baron Lisle of Mountnorth.

(5) Member for the borough of Middleton, created Baron Annesley of Castle Wellan.

(6) Member for the borough of Lethard, created Baron of Courtown, county of Wexford.

(7) John Wandesford, Viscount Castlecomer, created Earl of Wandesford.

(8) Charles Moore, second Lord Tullamore, advanced to the dignity of Earl of Charleville.

(9) Dowager Baroness, created Countess of Brandon, county of Kilkenny.

(10) John Cole, Esq., member for Inniskillen. In the Duke's private Diary this note: "Mr. Cole, member for L, was with me to lay in his pretensions for the title of Ranelagh, which he said was promised to be recommended to the King by the Duke of Devonshire." "I gave no promise but to lay his pretensions before the King,"—created in 1760, Baron Mount Florence of Fermanagh.

(11) Most probably Aland Mason, Esq., member for the county of Waterford.

(12) Joseph Leeson, First Earl of Miltown; advanced to the Viscounty of Rusborough, 1760.

* 'On the affair of Mr. Byng, he (Lord Temple) had even gone so far as to sketch out some parallel between the monarch himself and the admiral, in which the advantage did not lie on the side of the battle of Oudenarde.'—*Walpole's Memoirs*, vol. ii. p. 198."

Digitized by Google

At the present moment, when Ireland is distressed by the sudden failure of the English market for Irish cattle, an extract from a letter of Rigby's is curious:—

"Here Mr. Hely Hutchinson continues his daily attack; and neither Primate, Speaker, or Lord Shannon, dared to oppose resolving that the exportation of live cattle from hence was prejudicial to this country; so I was left alone to speak for it, which I did in the best and strongest terms I was able. He then wanted to bring his resolution to my Lord-Lieutenant, but upon a division he could get but *six* to proceed to such extremities against 104. His Grace is not satisfied, nor am I much pleased, that they would not show spirit enough not to suffer that matter to be at all stirred."

The letters of Rigby are generally of a light gossipping character; but it is difficult to extract with effect, from his slight and sketchy pencillings, or to make them intelligible without further explanatory details than comport with our space.

In conclusion, they who were not displeased with the contents of the first volume will not dislike the second; and if these letters are less illustrative of leading transactions than might be wished, as contributions to the history of manners, as replete with suggestive details and involuntary exposures, they will repay the trouble of perusal. After all, perhaps, it is by such traits and developements that the history of the Georges will be best understood by posterity.

Hand-book for Travellers in Central Italy, including the Papal States, Rome, and the Cities of Etruria: with a Travelling Map. Murray.

The 'Hand-book for Northern Italy' conducted the Italian traveller as far south as Florence, and bounded his route on the west by a triangle, of which Venice, Mantua, and Bologna formed the three points. The present work begins its guidance at Mantua, which place, strange to say, is not included in the map accompanying the book; it also takes the traveller by the canal to Venice, and describes a route from Padua to Ferrara, but a search on the map after Venice and Padua will also be fruitless. Here it may be suggested that a small skeleton map of the whole of Italy, no matter how small, would be a very welcome addition to all the hand-books for Italy. Travellers like to see at a glance the whole extent of their proposed journeys, and the relative position of each object. Comparatively few travellers will adhere to the precise boundaries which a hand-book sets to itself for its own convenience. An outline of the whole country, covering a few inches, might easily be inserted in any of the blank corners of each map.

This hand-book is chiefly a guide to Rome and its environs: out of 540 pages, 300 are devoted to Rome, whilst the remainder refer to the country intermediate between Bologna and Rome. In order to form a just estimate of the value of this or any other such work, nothing less than a survey of the places and objects themselves, with the *book in hand*, will suffice. We do not pretend to have crossed the Apennines for the express purpose of writing this notice, and are, therefore, so far disqualified; but we have given to the work a careful perusal, and, notwithstanding some few details which want correction, it may be justly pronounced to be a careful and laborious compilation, and worthy to take rank with Mr. Murray's other hand-books. More matter of fact and precise in its information than the 'Hand-book of Northern Italy,' the production of a different writer, it takes a somewhat less extensive grasp of general objects, and its descriptions are, perhaps, rather less animated and picturesque. But for the very reasons that it is inferior as a narrative, it may be better as a guide book: the object of "guiding" is not the same as "describing" or portraying; and it strikes us that the 'Hand-book of Central Italy' is a more complete *guide* book, so far as it goes, than its Northern companion. In respect of one of the most important classes of objects—Painting—we have no doubts at all that it is so. On this subject, however, we would suggest that the writer should make himself acquainted with Buchanan's 'Memoirs of Paintings' and other modern works, and especially the Catalogues of the sales of pictures which took place about the period of the French Revolution, and thus trace the present owners of the pictures mentioned in his Hand-book. Ascertaining at the places themselves the legend of the early existence of a particular work of art, it would be pleasant for the traveller, when he returns home, to know where such a work is still to be seen. Without this information, the history and interest of the work is but half developed, and the picture itself is but an abstraction. Thus, the visitor at Città di Castello is informed that the Palazzo Bufalini was "designed by Vignola, during his mission to the city from Gregory XIII. for the settlement of the confines between Rome and Tuscany. It was injured by the earthquake of 1789; great part of it was destroyed, and little of its grandeur now remains. Previous to that event, Cardinal Bufalini, while bishop of Ancona, added a gallery which contained the St. John Baptist of Parmigiano, and other fine pictures." Is not this very St. John Baptist the picture called the 'Vision of St. Jerome' in our own National Gallery? Assuming the fact, how much increased interest would the tourist take both in the Bufalini Palace and his own National Gallery, in being reminded that this picture was purchased out of the ruins by Mr. Douro, an English artist, and that it passed successively from him through the hands of the Marquess of Abercorn—of Mr. Hart Davis—of Mr. Watson Taylor, into the British Institution, and is now finally located in Trafalgar Square. This appears to us a point worthy consideration. So also would be the amplification and improvement of his Index. Why is this picture omitted from the index? Why, under the head of frescoes, are omitted those of Giotto, at p. 93, and of Masaccio, at p. 236, among the most interesting of all for the history of early art? We have glanced at these omissions with no thought of depreciating the worth of the book, but rather in the desire to see it made more perfect. We are fully aware of the great labour involved in the compilation of such works, and of the risks of inaccuracy and incompleteness, and, therefore, we offer these friendly suggestions.

There is much historical anecdote happily and pointedly introduced into this volume. When the reader pays his next visit to the National Gallery, he may, whilst contemplating the portrait of Pope Julius II., ascribed to Raffaelle, recall to mind the following:—

"Immediately before the great door of this church (San Petronio, at Bologna) stood that famous colossal bronze statue of Pope Julius II., executed by Michael Angelo, after the reconciliation of their quarrel on the subject of the Moses. The Pope, at his own request, was represented with a sword in his left hand, and in the act of reprimanding the Bolognese with his right. But this great masterpiece lasted only five years. In 1511, on the return of Bentivoglio, it was broken up by the people, and the bronze, said to have weighed 17,300 lbs., was sold to the Duke of Ferrara, who converted it into a piece of ordnance, under the appropriate name of the Julian. It is recorded of this statue, the loss of which will ever be deplored by the lovers of art, that when Michael Angelo asked the warlike pontiff whether he should put a book in his left hand, he replied, 'A book! no; let me grasp a sword: I know nothing of letters.'"

It was in connexion with the Church of S. Procolo, at Bologna, that the well-known lines of running alliterations originated:—

"On a wall adjoining the church, the following inscription to the memory of a person called Procolo, buried in the church, who was killed by one of the bells falling on him as he was passing under the campanile, was much admired in the last century, when this kind of play upon words was more in fashion than it is now:—

Si procul a Proculo Proculi campana fuisset
Jam procul a Proculo Proculus ipse foret."

The handbook does not forget to notice the *mortadella*, or famous Bologna sausage; nor the *cervellato*, or pudding of raisins and fine kernels; but is apparently oblivious of the famous street cries of Bologna—

Thy thousand cries
So well pourtrayed, and by a son of thine,
Whose voice had swelled the hubbub in his youth—

oblivious both of the actual sonorous cries themselves, and of Annibale Caracci's drawings of them.

We should like to quote at length the passage relating to the Pineta, or Pine Forest of Ravenna—"Ravenna's immemorial wood"—the scene of Boccaccio's 'Nastagio degli Onesti,' the incidents of which Dryden appropriated in his 'Theodore and Honoria;' the scene, too, which made Lord Byron exclaim, "How, raising our eyes to heaven, or directing them to the earth, can we doubt of the existence of God? or how, turning them to what is within us, can we doubt that there is something more noble and durable than the clay of which we are formed?" As more than half this handbook belongs to Rome, it seems to us to have a good title to the possession of a map of the city, which is, in fact, indispensable.

The notices of the paintings in Rome are good and ample. In the remarks on the Sistine Chapel, it is stated that the painting of the roof engaged Michael Angelo for upwards of four years, and not twenty months, according to the traditional belief. We have understood that not long since some papers of accounts, belonging to the period when the frescoes were painted, were found, which satisfactorily proved, by a sequence of payments, that the great artist must have been employed on these miraculous works at least for a period exceeding three years and a half. Indeed, bearing in mind the colossal proportions of the figures, an attentive study of the designs conclusively proves that the amount of bodily labour was such, that the painting of this roof must have occupied very considerably more than twenty months. Our attention was called to this subject by an artist who made a careful calculation of the extent of the work. Bearing in mind, too, that being in fresco, the pictures must of necessity have been executed in small portions, his conclusion was, that it must have been a work of at least three years and a half; and this estimate has since been substantiated by the accounts before mentioned. An anecdote or two of the 'Last Judgment' may be acceptable:—

"It is a remarkable fact in the history of the picture, that it narrowly escaped destruction in the lifetime of the great artist. Paul IV. took offence at the nudity of the figures, and wished the whole to be destroyed. On hearing of the Pope's objection, Michael Angelo said, 'Tell the Pope that this is but a small affair, and easily to be remedied; let him reform the world, and the pictures will reform themselves.' The Pope, however, employed Daniele da Volterra to cover the most prominent figures with drapery, an office which procured for him the epithet *Brachettone*, or the breeches-maker. Michael Angelo submitted to the Pope's will, but revenged himself on Messer Biagio, of Siena, the master of the ceremonies, who first suggested the indelicacy of the figures. He introduced him in the right angle of the picture, standing in hell, as Midas, with ass's ears, and his body surrounded by a serpent. Biagio complained to the

Digitized by Google

Pope, who requested that it might be altered: but M. Angelo declared that it was impossible; for though his holiness was able to effect his release from purgatory, he had no power over hell. In the last century, Clement XII. thought that the process of Daniele da Volterra had not been carried far enough, and in his fastidious scruples did serious injury to the painting by employing Stephano Pozzi to add a more general covering to the figures. We see it, therefore, under many disadvantages: the damp of two centuries and a half, the smoke of the candles and incense, and the neglect which it has evidently experienced, have obscured its effect, and impaired the brightness of its original colouring. The accidental explosion of the powder magazine in the Castle of St. Angelo, in 1797, which shook the buildings to their foundations, is said to have seriously injured all the frescoes in the Vatican."

With the following, relative to Domenichino's master-piece, the 'Communion of St. Jerome'—a worthy companion to Raffaelle's 'Transfiguration'—we shall conclude:—

"It was painted for the church of Ara Cœli, but the monks quarrelled with Domenichino and put the picture out of sight. They afterwards commissioned Poussin to paint an altarpiece for the church, and instead of supplying him with new canvas, they sent him the St. Jerome to be painted over. He not only refused to commit such sacrilege, but threw up his engagement, and made known the existence of the picture, declaring that he knew only two painters in the world, Raphael and Domenichino."

Hand-Book for Travellers in France: with Five Travelling Maps. Murray.

Though Mrs. Bray, Mr. Dawson Turner, Mr. Hughes, the Strutts, Professor Whewell, Mrs. Boddington, Miss Costello, Mrs. Ellis, Mr. Trollope, Mr. Clifton Paris, Monsieur Emile Souvestre, and numberless others have all done well in laying open the provinces of France to the tourist, a Guide-Book of condensed information has long been eminently needed. The editor of this series has collected his stores no less carefully than usual; although, owing to the immense number of objects embraced, there are fewer extractable passages than usual in the present Hand-Book. It is to be hoped that this volume will invite many to the districts it describes: not the class of our established summer tourists whose name is Legion, but our poets and our thinkers. Their presence, by habituating Breton, Norman, Limousin, or Basque to the courtesies of an intimate and peaceful intercourse with the English, must strengthen the—

bond divine,
Which bindeth land to land in golden chain,

on both sides of the channel. If our neighbours are slow in going forth to gather a cosmopolitan spirit, all well-wishers of peace and civilization should be proportionately earnest and careful in carrying it amongst them.

Railway Reform: its Expediency and Practicability considered. Pelham Richardson.

The apathy of the government to that astonishing revolution in the interests, customs, and fortunes of the English people, which the creation of a new power and the introduction of a new element in civilization has been rapidly accomplishing, and which the last ten years have nearly achieved,—the apathy with which it has regarded the public interests and public well-being during a period so pregnant with the fortunes of futurity, forms only one of many proofs, which thinking men are every day able to reckon, of the growing imbecility for good to the commonwealth of a government in which the interests of party, the honours or emoluments of place, and the conventionalities and precedents included within four walls of a house of parliament, are conceived to comprise all the duties, ambitions, and functions of the rulers of a great empire. The *laissez faire* system, so grateful to the indolence of red-tape officiality, so soothing to the pomposity of green cloth boards,—this system, as far as railways are concerned, has resolved itself into the do-nothingness of official incompetency; and to reign without governing seems the only principle which presides over the great mercantile and commercial interests of an intelligent people. Why, what a folly does it seem, that such matters of fact, of finance, and almost of personal freedom, as railways, in which the most intelligent, industrious, and wealthy part of the community daily, deeply and so extensively suffer or enjoy,—that such matters which now form a third class in the great necessaries of life—food, raiment, and *locomotion*,—that such gigantic public works, forming the greatest of the possessions of an empire, are allowed to grow, to prosper, or to perish, to spread misfortune or create wealth, to repress industry or to urge it forward under the legislation of chance or the guidance of accident, the direction of personal whim or caprice. Yet this *laissez faire* system is that which truly expresses the principles of the British government with reference to British railways.

"This should not be"—is a verdict easily obtained from intelligent men, but unhappily our complaint against the system of non-interference is an evil to be at once met by the anticipation of the greater evils of unwise interference. To let alone, is, it must be granted, the best maxim for unwise rulers. When we shall have arrived at Mr. Carlyle's Millennium, the wisest and the best men in highest place and power, then, indeed, we may begin to desire, in all things, the guidance, and direction, and active co-operation of the fathers of the people in our affairs; till then, we are better, perhaps, let alone. Such specimens as the railway public have already had of the wisdom and practical tact of the railway department of the Board of Trade, have not hitherto tended to raise any very high expectations of the benefit that would result from extending its functions and power.

Yet such is the object of the publication at the head of this notice; and such certainly has been the apparent tendency of some of our own remarks on the British railway system. We have shown the irretrievable losses that have been sustained by the neglect of government, by its having failed to direct and systematize the efforts of opposing lines, so that while some portions of the kingdom are intersected with rival, redundant, profitless railways, others of great importance are left wholly without the necessary means of communication, as is especially shown in the want of any great lines, passing directly towards Ireland, for the rapid transmission of mails, and of any great northern line into Scotland. We have shown, in detail, (see *ante*, pp. 325, 433) how a wise and well-timed direction of our energies would have saved to the country many millions of profitless capital, and have extended far and wide the blessings of the railway system. We have only one comfort—that while a hypothetical wise interference would have achieved much good, the actual foolish interference would have done incalculable mischief.

Certain it is, however, that the centralized management of all the railways of Great Britain as one great system, might, if wisely conducted, be rendered most beneficial not only to the users of the railway transport, but equally to the holders of railway stock. Certain it is that the enormous profits of many lines, applied to cover the losses of others less profitable but still most important, would tend to diminish the risks and equalize the gains, and, of course, to enhance the value of railway stock. We have shown at how much less interest the Belgian government has raised its capital than our railway companies have done; and we have seen how much the public have in that kingdom benefited by the consequent low fares and extensive traffic. The same centralization of system, absence of fluctuation, uniformity and economy of construction, continuity and cheapness of conveyance, as on the Belgian lines, would be of incalculable benefit to railway property if adopted in this country.

This pamphlet is designed to advocate the adoption in this country of one central system of railway management and the consolidation of railway stock, along with a cheap and uniform tariff. We welcome it as a laudable effort in what we conceive to be the right direction. It is a book on which great care and much labour have been bestowed. As an analysis of the value of railway property, it deserves the perusal of the holders of railway stock. Its general views coincide entirely with those we have been accustomed to advocate, and if the precise plan which it proposes be not the best possible practical scheme, it is at least one which deserves careful examination. Its full and accurate tables are valuable as statistical documents, and are convenient for reference, even independent of the reasoning they are adduced to sustain.

We shall best serve the interests of the cause of railway reform, by submitting to our readers the following *résumé* of the arguments and facts adduced in the work itself. The first part of the paper examines the evils of the present system as follows:—

"The necessity of an examination into the principles on which our railway system is founded, and the practice by which it is carried out, is attempted to be proved, from the existence of manifold evils and abuses, which it is contended are of such notoriety, that little more is necessary than to point them out. The following are especially referred to:—1st. The exorbitantly high fares charged on most of the great lines of railways in this country, compared with those on the continental lines, especially in Belgium, the fares in that country being *two thirds less* than what they are with us. 2nd. The illegal and extortionate charges which some companies are in the habit of making, with the certainty of being able to do so with impunity. 3rd. Depriving the community of the few privileges which the legislature intended they should possess. * * 4th. The injury and annoyance which the public suffer when hostile companies possess different lines of railway connected with each other. 5th. The prejudicial effects to the public interests, when companies so situated enter into a secret combination for keeping up high prices. 6th. The ruinous effects of our system on the poorer classes in this country, and their deprivation to a great extent of the manifold advantages which the establishment of railways is calculated to confer on them."

The second part examines the causes and origin of the present evils. Here the author has omitted to notice the material evils arising from the past neglect of the legislature and the executive, in having permitted the existence of extravagance and expense in the construction of works, allowed competing lines, and failed to prescribe some sound systematic arrangement of the great lines of the country. The evils he notices are, however, sufficiently real.

"It being thus proved, or assumed to be so, that a great change is wanted—that the country is not deriving those benefits from the establishment of railways which they are capable of yielding, the evil is traced to its original source; viz., the state having granted to private parties, for their individual gain, the complete control and management of these great channels of social communication. The total improbability of any change in railway management, by which the public would be benefited, is deduced from the two important facts, which were proved before a Committee of the House of Commons a few years since, without any attempt made to contradict them. 1st. The railway companies *in general* find it dis-

Digitized by Google

advantageous to convey passengers at *very* low rates; for although a great increase of numbers is the result, yet it is not sufficiently great to counterbalance the deficiency in reduced fares. 2nd. The railway companies, when they drive their competitors off the road, and are thus freed from opposition, raise the fares to the highest rate. The London and Brighton Company is the last instance of this system, but they have so far exceeded due limits that several coaches are daily running now. It is therefore contended, that as comparatively high fares are found to pay best, and are charged on the most profitable railways, there is no likelihood of their being reduced, or any practices discontinued that tend to increase the receipts of the respective companies."

The author finally expounds and advocates the great doctrines of low fares, large trains, a centralization of management, and a consolidation of stock.

"The difficulty of dealing with the subject is then noticed: it is observed that as a contract has been entered into between the legislature and railway proprietors, no step could be taken to the prejudice of the latter—no measures could be adopted by Parliament respecting their property, that would have the effect of reducing their profits, without due compensation being made, but at the same time it is contended that the legislature have a perfect right to deal with railway property in the same manner as any other that the welfare of the state may require. The manner in which railways are conducted in this country is noticed at considerable length, and contrasted with what it might be under a different system—one which would render their usefulness *entirely* subservient to the public good. It is contended that under the present system, as the greatest gain to the shareholders is the *only* object of those who have the management of railways, the convenience of the public is only so far consulted as it may conduce to that end. In proof of the extent of usefulness which railways are capable of conferring on the community, especial attention is directed to two points. 1st. The almost unlimited capabilities of railways for all purposes of transit. 2nd. The great *waste* of locomotive power in the conveyance of passengers and merchandize. The truth of the first proposition is so well known, that little more is done than direct attention to it as an acknowledged fact, but the second is discussed at considerable length, and a great variety of statistical and documentary evidence is adduced to prove that the locomotive power at present in daily use is fully sufficient to do *three times its present work*,—that consequently *two thirds of it are going to waste*. It is endeavoured to be shown that if fares were reduced so low that the number of passengers would be trebled, that the aggregate expense would be but slightly increased, and reference is made to some railway companies which have reduced their fares very low, and in consequence have nearly trebled their former number of passengers *without the slightest increase in expense*; to avoid, however, any dispute on that point, 25 per cent. for extra expenditure has been assumed would be incurred by such a large increase of passengers. * * After noticing the difficulties and disadvantages attending the first and second plans, the third is suggested as being the most feasible, and the manner in which it is proposed to carry it out is explained at considerable length. The outline is as follows:—The estimated value of railway property is about 63,000,000 sterling; the value of the first class is 48,000,000, paying 5 per cent. per annum at the present current prices of shares, and the second class 15,000,000, paying in round numbers not more than 4 per cent. on their quotations of shares, the prices of which are in many cases merely nominal; it being obvious that *bad* property would not be purchased to pay only 4 per cent., when *good* property could be obtained that would pay 5 per cent. It is proposed that the state should purchase the whole of this property at the current price of shares, paying the present holders in 3 per cent. consols, on such liberal terms as would not only be a bonus to the present holders, but prevent the Government from having recourse to a loan."

"It is proposed that when Government should thus have got possession of all the railway property in the kingdom, a uniform rate of fares and charges should be made, which should not on an average exceed *one third* of the present charges. The proposed scale is as follows:—

Mail passengers, 2*d*. per mile, travelling at the rate of 35 miles per hour.				
1st class 1*d*.	do.	do.	25	do.
2nd do. ¾*d*.	do.			
3rd do. ½*d*.	do.	do.	15	do.
4th do. ¼*d*.	do.			

Merchandize, cattle, &c., at one third of the present charges.

"Some of the good effects of this proposed change are then pointed out. 1st. The great stimulus to trade and commerce by such a great reduction in the charges of transit. 2nd. Reduction in price of the necessaries of life. 3rd. The saving to the public of three millions sterling, in *direct* taxation, to say nothing of what would be saved in indirect taxation. 4th. The Government being enabled to carry out fully Mr. Rowland Hill's plan of Post Office reform, as the transmission of mails would be free. 5th. The saving to parishes by the removal of paupers free. 6th. The saving to the country in the conveyance of troops, military and naval stores, bullion, &c. 7th. The universal good to all classes, rich and poor, by their being enabled for any purpose, whether of health, business, or pleasure, to derive all the advantages which a comparatively free intercourse throughout the country can afford. Statistical calculations are then entered on to show what might be the results in a financial point of view. It is proved from the returns of two railways, the Glasgow and Greenock and Dublin and Kingstown, the proprietors of which have adopted a *very* low scale of fares, that the increase of passengers has more than made up for the reduction in charges. The Glasgow and Greenock Railway is 22¼ miles in length, and the fares last year were reduced *two thirds*, or what amounts to nearly the same thing, passengers were enabled to travel at *one third* of the previous *lowest* charge,—the result was, that the number of passengers increased in the course of a few weeks from 12,000 to 33,000, and the company gained considerably by the change:—the fare for the entire distance is only 6*d*. The effects of the system adopted on the Dublin and Kingstown Railway is adduced as a strong proof of the safety with which Government might, in a financial point of view, make a great reduction in the charges. The directors of that company, about two years since, reduced their fares to such a low scale, that one class of passengers is actually carried at the rate of *half a farthing per mile*, and the affairs of the company have improved so much by the change, that the shares, which were previously at 18 per cent. *discount*, are now at 7 per cent. *premium*. Attention has been particularly directed to the important fact, that in both these companies—the only two in the kingdom which have adopted very low fares—*no increase whatever* in the expenditure has resulted from the change, although on the Dublin and Kingstown Railway the number of passengers had increased for the last year upwards of 400,000. It is, however, freely admitted, that the adoption of the proposed scale of charges would, on the great majority of railways, cause a great diminution in the gross receipts, on some railways, perhaps, not less than a third; but it is endeavoured to be shown, that the profit which the Government would otherwise have, that is to say, the *difference between the amount now received by railway proprietors and the sum which would be paid by Government in dividends*, would fully make up the deficiency."

Vigils—[*Vigilien, &c.*] By Leopold Schefer. Guben, Berger.

A review of Leopold Schefer's Breviary for Laics was given in the *Athenæum* a few years ago (No. 437). The same seriousness and strength of moral purport which we noticed in that work characterize the 'Vigils' lately published; and the same defect of abstraction, and direct didactic teaching, belong to the blank verse of the 'Vigils,' and the versified lessons of the Breviary. The argumentative and didactic purport of these verses has prevented their writer from attending duly to the attributes of Poetry, which should convey its implied principles in a style less direct and abstract. But any genuine poetry is welcome in the present day, when many are still persisting in the dream of acquiring Fame by epics of the *past* and names bearing no relation to actual society and living interest. With slow steps, the genius of Poetry is passing on through its meditative to its lyrical developement: but the time for *pure song* does not seem to have yet arrived.

The doctrines of the Vigils may remind some of the Bhagavad Gita, while their ethical purport accords, in many respects, with the meditations of Marcus Antoninus. We shall not attempt any criticism, but content ourselves with extracting a few specimens of the 'Vigils.' Our second paraphrase is very applicable to a time when many are in danger, amid controversies about sacred things, of forgetting the substance in the sign, and making a religion of mere names. We could say many things of the false notion of piety, confined to *topics* of discourse rather than guiding the whole *spirit* of it, and of the wide contrast between our so-called religious and our profane literature produced by such a mistake; but these are thoughts that must suggest themselves to every meditative mind upon such a theme.

The Blessed.

Blessed are they who see and yet believe not!
Yea, blest are they who look on graves, and still
Believe none dead; who see proud tyrants ruling,
And yet believe not in the strength of Evil;
Who see vast temples standing, yet believe not
That they are shrines of many gods; who see
Priests, yet believe them not wiser than men.
And blest are they who see the evil-doer
In wealth and honour, yet will not believe
That he is otherwise than poor and wretched!
Blessed are they who see the wandering poor,
And yet believe not that their God forsakes them;
Who see the blind worm creeping, yet believe not
That even *that* is left without a path;
Who see the sun down-going and up-rising,
And yet believe not in his changefulness;
Who see the flowers up-springing from the ground,
And yet believe not they were dead before;
Who see the countless children of mankind,
Believing only in the power of God.
Blessed are they who see and yet believe not;
For they who as they see believe are wretched.

Signs and Substances.

You tell us nought of God, nor of the Sun,
Nor of the life of men all o'er the world.
Nought? nought? I tell you all things of them all.
Even when I talk but of a violet,
A leaf, or mark a single footstep well,
Say I not clearly something of the earth?
Can I say *rain*, and not point out the clouds?
Or speak of clouds, and not point out the heavens?
As in the *child* you see the mother too,
And in a single word the spirit feel
Who speaks and lives and *is* in it so near you?
And when I point you to the glowing rose,
The snowy lily or the mountain blue,
Or silver-shining stream, then show I not
The Sun, and in those colours speak of light?
And when I mark a child, a beam of light,
Or moonlight rainbow gleaming on the earth,
Tell I not then the glory of the sun?
And cannot he who sees *you* see your father?

Thanksgiving for Sorrows.

To care for others that they may not suffer
What we have suffer'd is divine well-doing,
The noblest vote of thanks for all our sorrows!
And only thus the good man giveth thanks
To God, and also to humanity,
Which hourly is in need of aid and guidance.
And who has not known misery? dear soul!
Who would not thank God for his sorrows all
When, in their working, they become so sweet!
Good for ourselves and for humanity!
'Tis thus the roots of the aloe-tree are bitter,
But cast upon the glowing coals, how sweet,
How lasting and diffusive is their fragrance!
Yea, I have seen a lame and halting child
Prop up most tenderly a broken plant;
And a poor mother whose own child was burnt
Snatch from the flame the children of another.
So, generous man, return thou constant thanks
For all thy griefs to God and to mankind,
And ending grief will make amending joy!
Or, if it end not, it will be pure blessing
While, in the trying furnace, thou dost good.
And if from woe released and happy, spread
Thy happiness all round thee. So doth God.
Suffering or happy, man! be always thankful.

Plain Answer.

This dull, dark strife with unillumined souls,
Ending not with the day, but every morning
A fresh returning for another day—
Such warfare makes, at last, the noblest mind
Heavy and hopeless—earnestly I wish
Twere done, that I might rest and silent be!
So speak you. But distinguish well the truth.
The conflict is not gloomy. Griev'd, you see
Around you but a dull, distracted house,
The old, false world, with evil deeds, wrong words,
Heavily pressing on all noble minds.

Digitized by Google

Unreasonable minds are always gloomy:
The conflict is right clear, in daylight waged,
With brightness ever pressing on the gloom!
Nor is your conflict with irrationals:
(For all would wiser be, and every one
Has faculties for better—wiser—growing.)
See, then! your only conflict is with men,
And your sole strife is to defend and teach
The unillumined, who without such care,
Must perish. Every unenlightened man
Commends himself to you, ev'n as your child.
How easily for him and for yourself
Life's burden may be lighten'd! by your words
Opening the spring of truth in his own breast,
And cleansing out the roots of all his errors,
Destroying, ev'n with a single word,
A coming harvest of injurious weeds!
If, then, the Better never must grow weary
But always think of better and fulfil it,
How shall the wiser weary of his task
To show the right and for the truth contend?
How shall the heart of the good man grow weary,
Though hand and tongue are worn out in his work?
And how can gentleness be ever weary?
(For all true love is gentle, falling on
Men's souls as gentle rains upon the earth.)
How can you e'er grow weary of the truth?
Weary of gentleness and genuine love?
Be well and happy therefore in the strife!
And keep love in your heart all life's day long,
Till like the eternal stars its beams are spread.

The Fountain.

What one can never do for me again,
That I'll not do for him. To none I owe
What he ne'er did for me and ne'er can do.
And *thus* will you live justly, well and calmly?
No; not even so; say nought of useful, noble,
Divine and human life (the two are *one*).
Then first of all, grant not your child a grave;
For sure your child can never bury you!
Follow no friend to his last resting-place;
For he can never rise to follow you!
Give no poor wanderer even a crust of bread,
Lest he should never meet you and return it!
Clothe not the poor till he can so clothe you!
And bind not up your house-dog's broken limb;
He'll ne'er return that self-same benefit—
The hound can only bark and keep your door.
The beggar only prays, "reward you God!"
But I say: *whatsoever thing you do*
None other can do that for you again.
Either that same thing you may never need,
Or if you need it, it may not be found.
Humanity will always be around you,
Hear then my counsel, hear the word divine—
To every man give that which most he *needs*,
Do that which he can never do for you!
Thus live you like the spring that gives you water,
And like the grape that sheds *for you* its blood,
And like the rose that perfume sheds for you,
And like the bread that satisfies your need,
And like the clouds that pour their rains for you,
And like the sun that shines so gladly for you,
And like the earth that bears you on her bosom,
And like the dead who left their care for you!
You cannot teach the dead, nor bless the heavens,
Nor bear the earth, nor give the sun more glory,
Nor clouds more rain; you cannot nourish bread,
Nor give the rose its fragrance, nor the vine
Its sap, nor can you feed the water-springs.
And now, what were you if none did for you
What you ne'er did and ne'er can do for him?
For what can you return to God for all?
Your very spirit means His spirit—*given*—
Then, like that spirit, freely, purely, truly,
Divinely, do for every one your best.
Thus only can you live in righteousness,
In heavenly peace, joyful and free from care,
Thus you will live even as *His* spirit lives,
Thus you will in this very kingdom dwell.
Do all for men that they do *not* for you!

These are very pure and good lessons, and at least simply and clearly inculcated. Would that attention to such clear and comprehensible matters could take the place of the fashionable topics of controversy among us!

There is wisdom drawn from the example of a child in our next extract. As the child, unconsciously, lives in the enjoyment of the *whole* truth, so the man is called to bring his conscience and his science to the same simplicity and perfection.

Children's Laughter.

How soon and easily a little child
Acquainted grows with father, mother, sister,
With day and night, with sunshine and with moonlight,
With spring and harvest, and with birth and death!
"Thus is it in my Father's house," thinks he,
And never wonders at the *already done*,
But only at the new that comes to pass—
Easier to him seems life than A. B. C.
So *willingly* he sees funereal trains,
Admires the garland laid upon the coffin,
Beholds the narrow, still, last house of man,
Looks in the grave and hears, without a fear,
The dust fall down upon the coffin-lid.
With joy he stands beside his new-born sister,
Admires the snowy dress, her first array,
And sees her placed upon the mother's breast.
It grieves him not when, in pale harvest-time,
The meadows cease to put forth gentle flowers.
He gladdens when the flowers return again,
And learns the name of the all-beauteous season,
The name of Spring—he learns the name of day,
When the bright sun is up, and names the night,
When hosts of stars array themselves in heaven,
While softly at his mother's side he sleeps,
And early in the morn awakens her.
Thus lives the child unbounded and immortal,
Lives in the work and blessing of the Power
From whom proceed home, father, mother, sister,
Flowers, fruits, and sun, and moon, and every hair
On his own head—the child believes in all.
Thus let the man this holy bond of union
Behold in constant gladsomeness of heart,
In which the tenderest blossoms of the spring,
The earth with men full-crowded, and the sun
That sheds on all his glory, live together.
He *least* lives with the greatest in this bond:
The springing grass points to the highest heavens!
The tiniest sand-grain to Eternity!
The dew drops tell us of serenest love,
The shade a flower casts tells of holy light,
A child's glad laughter tells Heaven's happiness,
And a poor beggar with her tatter'd child
May point the mind to God for rest and quiet.
To learn of life, however humble, *true*,
The cheerful and divine interpretation,
Perform the *little* as you would the *great*,
The transitory as the ever-during,
And in the mind of God your life-day spend.

With one more extract we conclude; and here an universal but undeveloped and unrealized thought is exhibited in a very beautiful style:—

The Sick Child.

Your child was seized with sickness in the night,
And now all possible expedients,
All careful thoughts, arise within your breast;
Yet bow you not before an idol's shrine,
Nor promise you an offering to the Priest:
You seek but insight, counsel, strength and quiet.
Nor bend you down 'neath dread necessity,
Nor of predestination vainly dream.
How find you now security and rest?
Who helps you now? How shall your child recover?
Be calm, dear soul, remember—God is here!
In every moment and in every man,
In every power, in every atom yonder,—
And "God is here"—what mean the words, dear soul?
But constant power is here, all might and love!
And wisdom and all-penetrating skill,
The tenderest, surest, and most perfect art!
As He the all-perfect Builder is of all
These blossoms and these tenderest seeds of flowers,
And yon bright glories of the firmament,
So is He their indwelling healer too
Do what you can—let all do what they can
Upon this earth, in yonder starry sphere,
Wound or destroy blooms, moving things and men;
Yea, if you can, put out the light of suns—
Still God is there—immediately there—
Asserts Himself in every drop of blood;
There as the sap in the rose's root he moves;
There in the warmth-and-life-diffusing fire,
The life-power and the healing-power of all;
All that he owns he constantly is healing,
Quietly, gently, softly but most surely;—
He helps the loveliest herb with wounded stalk
To rise again—see! from the heavens fly down
All gentle powers to cure the blinded lamb!
Deep in the treasure-house of wealthy Nature
A ready secret instinct wakes and moves
To clothe the naked sparrow in the nest,
Or trim the plumage of an aged raven;—
Yea, in the slow decaying of a rose
God works as well as in the unfolding bud;
He works with gentleness unspeakable
In death itself, a thousand times more careful
Than ev'n the mother by her sick child watching.
Now!—God is here—in this afflicted child,
In every vein throughout his heavenly form.
'Tis He who wakes beside him in the mother;
'Tis He that gives good counsel by the father;
In the physician's hand He brings the help;
Through all the means He lives—through all the buds,
And all the roots of the medicinal herb—
Lives in this morning light—this morning breath,
Lives in the lark that sings his song up yonder,
To cheer the child who hears and faintly smiles;
Lives in the sun that yonder shines, and here
Lives in this spring-green and yon heavenly blue;
Lives everywhere with all might, perfect love.
I do believe in the all-present God—
The everliving—therefore speak I not
Of his *pre*destination, nor *fore*-seeing,
But of his being and his seeing NOW!
With Him no yesterday—eternal NOW!
In no cold fate believe I, but in Life,
The glowing love of the all-present God.

Therefore whatever happen to your child,
Whether to-morrow mid the flowers he plays,
Or in a few days we must bear this form,
Decked with fresh violets, to the cold grave,
There to repose beside his ancestors—
This wonder of all wonders we'll remember—
All things the living, loving God can do.
Thus, come what will, we honour still our Father
And this child's Father—the all-present God.

Next morning mid the flowers the child was *playing*.

On the Nature of Thunder Storms, and on the Means of protecting Buildings and Shipping against the Destructive Effects of Lightning. By W. Snow Harris, F.R.S. Parker.

THIS is the work of a man who is master of his subject, and who has only to consider how he may most clearly convey his knowledge to his reader. It is written with all the freshness of actual knowledge and experience; in short, it is just the book that ought to have been written on this subject, because it is written by the individual who has studied the subject in all its bearings more than any other person. It is a mixed subject, theoretical and practical, and furnishes a valuable illustration of the importance of scientific truth to the practical uses of mankind.

The injury done to St. Martin's spire by lightning, in 1842, is the motto of this treatise, and it is, we admit, a disgrace either to the national intelligence, or to science—we know not which—that lightning should ever damage any building whatever; for a small application of purse and of head would prevent these catastrophes; and yet this very week the papers are filled with accounts of damage done in many of our large towns by thunder-storms. Prejudice and ignorance are, however, still greater obstructions to the true interests of mankind even than parsimony, and the object of the present book is to eradicate these, by diffusing, in a popular form, sound scientific and practical information on the subject of securing life and property from destruction by lightning. We cannot better introduce the subject than by an account of the case we have already alluded to, as most familiar to our metropolitan readers.

St. Martin's church was struck by lightning on the 28th of July, 1842. The spire is a light hollow structure, forty-four feet high, standing on an open cupola, and surrounded by ornamental columns and arches. The floor of this cupola is covered with lead, and there is a massive frame-work of wood and iron resting on it; the spire terminates in an iron rod formed into a spindle at its extreme point for the support of the vane, four to five inches square and twenty-seven feet long; its extreme point being about two hundred feet from the ground. Beneath the cupola is the dial room, containing the iron spindles of the clock faces, and these are connected by an upright spindle with the clock itself, which is in an apartment forty-six feet below. Under the dial room are the bells, and beneath the clock room is the ringers' chamber, on a level with the roof of the church itself.

The first point struck was the vane-spindle, and the electric discharge passed into the spire by the long iron rod already described, and so far as this rod continued no damage was done to the building, but at the bottom of the rod there existed no metallic conductor to carry the fluid further, and it had to force its way through the masonry, starting an angle stone, and thence downwards, and so shattered the spire as to leave it in a tottering state. Two blocks of stone were thrown completely out of their places, and fell through the roof into the church; the joints of the spire were all loosened, and its general surface contorted. Two other stones were dislocated, and if these had also been thrown out, the whole of the upper portion of the spire must have fallen. Arrived at the floor of the cupola, the discharge forced a passage into a metal clamp within the masonry, where it tore up and fractured a large stone, and turned it completely over. Thus it came to the dials, at a point intermediate between the north and west dials, where it *divided*, and fell upon the gold letters XI. and XII., which, especially on the west dial, it burnt up and blackened; thence it ex-

Digitized by Google

ploded on the minute hands, blackening the gold and injuring their points. But it had now reached a new metallic conductor, and proceeded without further damage; for by the hands of the clock it reached the spindles of the dial room, and so passed along to the top of the upright spindle, along which it descended forty-six feet downwards with perfect safety to the clock. On reaching the works of the clock the discharge melted a small copper wire, by which the lever handle key was suspended on the iron frame, and spread over the wheels and other parts, magnetized the steel pivots, blackened the silver face of the regulator, and burst open the door of the outer wooden casing, but did not stop the clock! Here once more the metallic conductors ceased, and the discharge had to force a passage through the floor of the clock room, leaving it as if blown up by gunpowder, and, coming out just over one of the iron window frames in the ringers' room, shattered all the glass, and left marks of fusion on small streaks of lead in the joints of the stones. By this course it reached the lead of the roof, and, through the pipes connected with the roof, was carried into the ground without further damage.

On this Mr. Harris remarks:—

"It is impossible to conceive a case giving a better insight into the nature of disruptive discharges, through a fortuitous arrangement of good and imperfect conductors, than this now before us. In the first place, it may be observed, that all the damage has occurred in points where good conducting matter (*i. e.* metal) ceases to be continued: and again, passing along the upright rods and spindles of iron, without even injuring the slender wooden case in which one of these (the clock spindle, forty-six feet long and one inch in diameter) was enclosed."

The conclusion to be deduced from all this is plain: had the iron rod, one inch in diameter, been carried, without interruption, throughout the whole height, from the vane of the spire to the lead of the roof, the damage to that building would have been averted. And yet public bodies, and private individuals, equally neglect the simple precaution necessary to avert such evils.

While London has afforded so satisfactory an illustration of the neglect of simple precaution, as in this case, it also affords us one of the best examples of a successful provision for averting calamity. *The Monument*, erected in commemoration of the Great Fire of London, has (by accident?) a metallic conductor of the best description. "The column," says Mr. Harris, "is terminated by a metallic vase, four or five feet in diameter, surrounded by pointed metallic plates, representing flames of fire: between this and the floor of the gallery are four thick bars of iron, supporting a set of iron steps; one of these bars, an inch thick, and five inches wide, is connected with the *iron rail of the staircase*, which reaches to the bottom of the building. The whole height of this structure, including the blazing urn at its summit, is 202 feet: it has never yet been damaged by lightning.

The greater part of a century has now elapsed since Franklin first developed the theory of the thunder cloud, and showed how the laws of electrical discharges apply to the discharge of the electricity of the clouds. He proved that when the electric condition of the atmosphere is deranged, and a cloud suspended over the earth becomes in a condition of electric charge opposite to that induced in the corresponding part of the surface of the earth, the cloud may be regarded as the inside of the electric jar, and the earth as the outside;—that powerful forces tend to produce the discharge of the jar. And in this state if any conducting body be interposed, the jar will be discharged with the flash and loud report which we recognize as types of the lightning flash and the thunder peal; and, on the large scale as on the small, the metals form the best conductors, and will be traversed by the discharge in preference to stone or wood, the ordinary materials of building. It is only when forced to pass through *bad* conductors, as wood or stone, that the electric fluid is injurious; along the metals it will pass without injury, provided they are in sufficient quantity to be preserved without melting under the discharge. It is proved that a rod or pipe of metal an inch in diameter is ample for all uses of this kind.

Is it not then surprising that this simple precaution has not long ago been everywhere attended to? The facts are well known, yet the precautions, which might be so easily taken, are neglected, as indeed the long list of casualties, recently given by Arago in the 'Annuaire' and this work of Mr. Harris, abundantly testify.

When the British Association visited Plymouth in 1841, there was pointed out a beautiful and costly property, containing the far-famed machinery of the Victualling Yard. A fine granite column above a hundred feet high, serving as a chimney, crowns the buildings; yet here our rulers, although compelled by urgent necessity to place conductors on the masts of ships, which these very stores supplied, most sagely omitted to place them on this tower, and this handsome column was shattered by lightning,—*it was without a conductor;* and the scaffolding which we saw erected for inspecting the damage, and getting a report on the said damage, cost more money than the most perfect conductor would have done! After "the steed was stolen" their worships set about "fastening the stable door;" and we have no doubt that "the Report of the Inspector having been read, the Board unanimously resolved that the column be thoroughly repaired; and that to prevent a like accident for the future, estimates be received for the erection of a suitable lightning rod to the building." We are not sure, however, that this was done, and it is just possible the Board might have decided that as the chimney had already got its turn, it was not so likely to be struck again (see Harris, page 168).

Of all the places where a lightning stroke could fall, the solitary ship, in the wide ocean, is that which it would visit with the most sure and terrible destruction. There is no doubt that many of our finest ships have perished in thunder storms. The slightest accident which usually occurs is the destruction of masts or spars; next, the damage done to decks and planks by tearing them up and breaking them; then there is the not unfrequent case in which the ship is set on fire; and, finally, the most awful of all, where it fires the magazine, and explodes the ship.

So lately as 1839, the Lords of the Admiralty appointed a commission, at the instance of scientific individuals, to examine into the question of the efficacy of metallic lightning conductors, especially of those which had been constructed on the plans of Mr. Snow Harris. The Report of the Commission, printed by the House of Commons, bears testimony to the obstruction which the introduction of so simple and obvious an improvement encountered in the subordinate departments. The results of the conductors as applied, are, however, satisfactory and incontrovertible. It was ascertained that "every search had been made for cases of injury sustained by ships fitted with conductors, and though several statements to that effect have been brought under our notice, not one has been substantiated."

Again, Mr. Harris informs us that "since the year 1829, above thirty of Her Majesty's ships have had pointed conductors fixed in all their masts. These vessels have been at sea and exposed to severe thunderstorms in all parts of the world, and although heavy electrical discharges have fallen upon them, yet in no instance has any damage or inconvenience been experienced. On the other hand, *about forty-one vessels, not fitted with them*, (more than one-fourth of the average number of ships at sea or on foreign stations,) are known to have been struck and damaged during this period.

OUR LIBRARY TABLE.

The Amnesty; or the Duke of Alba in Flanders, a historical novel of the sixteenth century, by Charles F. Ellerman, 2 vols.—A "hysterical" novel would have been nearer the truth; since we have spasm for energy, whine for pathos, and the characters dance after the fashion of Saint Vitus, instead of moving to and fro, like rational beings. Mr. Ellerman pleads that this is a first work, written in the intervals of business, by "a cosmopolite, who has *spent the greater part* of his life in foreign climes, and who has associated with the sons of both temperate and torrid zones."—Further he thus preludes with respect to his hero: "My hero, to some of my readers, may not be quite the 'beau ideal' of their thoughts. I ask of such, why should I create what does not exist? Why should I exalt the hero of a romance, who after all is but a man, into an angel—perfect, when we all of us know, that man is as weak as a reed, and *bows* to the caprice of Zephyr, when it emanates from a woman's smile, but *bends doubled* to the earth, when the gales and blasts of Circumstance rage upon him?" It was necessary to prove the justice of our epithet; or we should hardly have troubled the reader with so magnificent a description of a character, with whom, after all, he is not likely to make acquaintance. The names of Egmont, Alba, and Vargas, are to be found in 'The Amnesty,'—but nothing more which lawfully belongs to them.

A Dream of a Queen's Reign.—The writer of this strange production might say with Bottom, "I have had a dream,—past the wit of man to say what dream it was: Man is but an ass if he go about to expound this dream."

Mens Corporis; a Treatise on the Operations of the Mind during Sleep, by F. H. Elwin, Esq.—Another of those unfortunate attempts to investigate mind, in which scanty, imperfect, and ill understood experience, is made the basis of general reasonings; and in which undefined or ill-defined terms are shuffled, cut, and dealt, till they lose all meaning. The book, however, is not the less the production of an inquiring and apprehensive intellect,—an intellect not indeed sufficiently drilled in the art of thinking, but confined too exclusively within the channels of literary and university tuition; and therefore still below the subject it has attempted to illustrate.

Suggestions for the Improvement of our Towns and Houses, by T. J. Maslen.—These suggestions would indeed make our cities very delightful places to live in—almost, if not quite, equal to the country. But Thames Embankments, a Square near Clare Market, a Circus at Temple Bar, Public Gardens at the Mansion House, and so forth, are but minor and local affairs; it is further recommended, that we should have ten new cities, each capable of containing 300,000 souls, and that two millions a year should be granted by Parliament as a building fund. Perhaps the reader has had enough of explanation.

A Comparative View of the Constitutions of Great Britain and the United States, by B. T. Aiken.—A series of lectures delivered originally before a literary society at Bristol, gave rise to this unpretending volume. It contains a concise view of the constitutions of the two countries, fairly and impartially written, without any attempt to disparage either.

Ancient History, remodelled from Rollin, by Mary Shoolbred, 3 vols.—An abridgment of Rollin, professedly "with copious notes and extracts from modern authors:" but the chief authority seems to be "Bell's Geography," and we looked in vain for the contributions of those scholars whose labours we supposed would have so greatly assisted in the "remodelling" of Rollin.

Marriage, a Poem, in Four Cantos, by the Rev. Dr. Henry Edwards.—The Rev. Dr. Edwards's rhymed discourse upon the honourable estate of matrimony,

Digitized by Google

with its dedication (concealing, doubtless, some joke, were we keen enough to understand it,) and its notes, containing anecdotes of broken-hearted Prides of Villages and scandalous old maids, has, it appears, found sympathizers, and reached a third edition; while Wordsworth, for his eighth volume, is compelled to rest content with fit audience, but fewer. The reader, we think, will echo our surprise, when he has been treated to a glimpse of the Rev. Dr. Henry Edwards singing, after the fashion of Florimel, to—

Selina of the Vale.

I've welcomed oft morn's orient gem,
And eke the balmy gale;
Yet would I prize far more than them
Selina of the Vale!

The damask rose has charms, 'tis true,
The pink, the violet pale;
But ah, my heart! I'd rather view
Selina of the Vale!

In silent evening groves I'd greet
The warbling nightingale;
But, ah! thy voice is still more sweet,
Selina of the Vale!

There must be a mistake in the title-page; our mellifluous Doctor cannot really belong to Dover! He must be a Munster melodist, by his courtly love for the sex, and the grand words in which he makes the same known.

The Columbiad, a Poem, by A. T. Ritchie.—This volume contains only the first Canto, about 4,000 lines, of a poem, having for its subject the incidents of a sea-voyage eastward from Bengal to South America:—and those of our readers who, after that plain statement on our parts, choose to refer to it, will, of course, do so on their own responsibility. Mr. Ritchie has some reason to complain of the proceedings of the poet Falconer; who, in his *Shipwreck*, has anticipated the plan and some of the details of that gentleman's poem. The pleasant terms, however, on which the latter is with himself, lead him to treat all others with forbearance; and his manner of stating the case between himself and Falconer, constitutes one of the most ingenuous and candid forms of the ancient complaint against those who have "said our good things before us," which it has been our fortune to fall in with. Mr. Ritchie, it appears, read '*The Shipwreck*,' on board, at the commencement of the voyage which he has here undertaken to narrate; and observes, naturally—"the remarkable coincidence of our fate, and perhaps the facility of finding a plan already laid down, so easy of adoption, induced me to model the commencement of the first canto somewhat after it." Having laid aside his poem in an unfinished state, and taken it up for completion in after life, our author, it appears, "forgot how near he had adhered to the plan laid down by Falconer"; and, on looking into a copy of '*The Shipwreck*,' appears to have been both surprised and shocked at the unhandsome manner in which that sailor-poet had taken the wind out of *his* sails. Several passages, however, where the coincidence was "too bad," our author suppressed; but "others," he says, "giving a description of the ship, those on board, and the disasters we suffered, I allowed to remain, from the self-satisfying palliative, that *as all ships have the same essential requisites in common, and gales of wind deal pretty much in the same way with vessels which they overtake on a lea shore*, there was no more reason why I should not attempt to describe these circumstances poetically, *than that actual occurrences should have been suppressed on the log-book, because log-books are kept on board of other vessels where their proceedings are likewise recorded.*" Under cover of a slight confusion in the logic, this, it must be admitted, is a triumphant argument in favour of plagiarism; and shows that, if our author chooses to be a copyist, at times, it is not because he cannot be very original when he pleases. Thus, following out his ratiocination, because all men have the same essential limbs and features, and inasmuch as the gales of the passions deal pretty much in the same way with the human vessels which they assail under identical conditions, there is no reason whatever why *we* should not describe some of the great and striking effects of these moral tempests *merely because Shakspeare had previously noted down the same in his log-book* in somewhat similar terms, and obliged us with a sight of it! But the author has other claims to originality than such as are derived from his plagiarisms. He has made a grand theoretic discovery; which is to reconcile, at once and for ever, the apparent discrepancies between the Mosaic narrative of the Creation, and the evidence furnished by geological inquiry—without altering or limiting the literal characters of either. This new cosmogony of our author's is announced and expounded, with all the solemnity and circumstance of a most sublime Ευρηκα; and cannot be appropriately introduced to our readers without the flourish of trumpets which Mr. Ritchie blows before it. Those who may feel disposed, in spite of all they have heard, to venture for the long dull voyage, in the good ship *Columbiad*, will find it on board as we did; and, in case they should take a fancy to appropriate it, they may, there, make further acquaintance with the arguments by which such appropriation is to be defended.

Poems, by Mrs. Pratt, late H. A. Lethbridge.—This volume contains so many painful and personal revelations which ought to have been sacred, that we hold silence respecting it to be charity.

Parnassian Climbers; or Modern Helicon.—A thing calling itself a satire—which even Satire would not touch. It has two good lines; and they are valuable rather for their meaning than their form:—

But (I) shall no more the pen attempt to wield,
So make my parting bow, and—quit the field.

A promising couplet this.

A Plea for Christian Peace and Unity, by Rev. R. Jenkins.—The author promises to avoid the crowded ways of controversy, and to devote his little work "to the more general diffusion of that spirit of charity and forbearance which controversy unfortunately tends rather to impair than to invigorate." As far as we have observed, he has redeemed his promise. His cause is certainly a good one, and it is most desirable that in these days of religious excitement it should be steadily kept before the public mind.

Dodd's Church History, Vol. V., by the Rev. M. A. Tierney,—consists almost entirely of a supplement to Dodd's account of the appointment of Dr. Bishop, and the disputes regarding the well known Dr. Worthington, and the Arch-priests Birkhead and Harrison. In our notice of Vol. IV. (No. 729) we adverted to the confusion in this work, respecting the catholic seminaries on the continent, resulting from Mr. Tierney having encumbered himself with Dodd. The want of a clear and continuous history is only made more apparent by the volume before us. The work, however, is important for the mass of private and official documents contained in the appendix.

The Papal and Hierarchical System.—It is a rare occurrence to meet one of the Society of Friends in the field of religious controversy: we do not regret their abstinence, and wish that this volume had not formed an exception to the general rule.

A Voice from the Holy Land.—This is an attempt to found something like a romance on the Gospel History! The folly of the plan is obvious, and, we may add, the work is feebly executed.

Sketches of the Reformers of the Sixteenth Century, by E. Tagart.—These sketches are too slight and superficial to merit critical examination.

A Manual of Devotions for the Holy Communion.—This professedly Anglican manual would, we are sure, pass current and without comment at Rome.

A Historico-Geographical Account of Palestine, by D. J. F. Röhr, translated by the Rev. D. Esdaile.—A volume of that useful series, called the Biblical Cabinet, not unworthy of its predecessors. It is free from most of the faults of German religious writers, and contains much valuable information. In the same volume we have "Researches in Palestine, compiled by Dr. Robinson, from various communications received at various times from the Rev. E. Smith and the Rev. J. Wolcott."

The Law of Distress for Rent on Property not the Tenant's.—This is the report of a case tried in the Summer Assizes, 1840, as to whether some casks, the property of a brewer, were liable to be distrained on the premises of a publican, to whom they had been delivered in the way of trade. Verdict was given for the brewer, the plaintiff, but a rule against the verdict was applied for, and obtained. The work before us contains an argument in support of the original verdict. The question opens a wide field for discussion; for though the case is special, the principle of exemption, if established, must include all property found on the premises and lent in the way of trade; we leave it, therefore, to the consideration of the lawyers and the legislature.

Facts in Chemistry for Schools, by W. Lover.—A useful collection explained in plain language, and apparently well explained.

Ethnographic Map of Europe, by Dr. Kombst.—The author's principles of Ethnography are not supported by much proof,—in fact, the space allowed is wholly insufficient for discussion. We doubt the utility of such bald charts. The subject demands investigation and criticism—and a chart seems to assume admitted facts, where, after the most diligent research, much remains conjectural and uncertain.

The Modern Child's Atlas.—A Celestial Atlas, by J. Middleton.—The first of these Atlases seems to be a useful little work.—Mr. Middleton gives maps of the constellations with the figures filled in on one page, and blank maps of the stars on the other. Both works are neatly executed.

Philosophical Diagrams, by F. T. Minasi, Parts I. and II. *Mechanics.*—These diagrams are designed for the use of lecturers, and philosophical classes and schools. The question of their merit must be left, therefore, to those who require such diagrams, and who are quite able to decide how far they will answer their purpose. It is enough for us to announce the publication.

Historical Sketch of the Progress of British Pharmacy, by Jacob Bell.—This is strictly an historical sketch, not of the progress of art, but of the institutions connected with the profession. It has a close reference to the contests now going forward respecting medical reform, and will be interesting chiefly to those who are engaged on that much mooted question.

The Penny Cyclopædia.—This work is now drawing fast towards a close. The 26th volume includes from *Ungulata* to *Wales*.

Encyclopædia of Anatomy and Physiology, Part XXIV., by R. T. Todd.—*Dictionary of Practical Medicine*, Part VIII., by James Copeland.—We have received these issues, the former containing highly interesting papers on the structure and functions of muscles, and on the anatomy of the Myriapoda; the other extending alphabetically from "Kidneys" to "Lungs," and consequently embracing the diseases of the biliary and respiratory organs.

List of New Books.—Eton Greek Grammar, translated into English, by Rev. H. J. Taylor, new edit. 12mo. 4*s.* cl.—The Cambrian Mirror, or North Wales Tourist, by E. Parry, with plates and map, 18mo. 3*s.* cl.—The Art of Questioning and Answering in French, by A. C. G. Jobert, 12mo. 4*s.* cl.—Das Kalte Herz (the Cold Heart), by W. Hauff, with explanation and idiomatic peculiarities, &c., by H. Apel, 12mo. 3*s.* cl.—Allen's New Greek Delectus, 2nd edit. 12mo. 4*s.* cl.—The Teacher's Companion, designed to exhibit the principles of Sunday School instruction, &c., by R. N. Collins, 12mo. 4*s.* cl.—Davy's (Bishop) Plain and Short History of England, new edit. 18mo. 2*s.* 6*d.* bf-bd.—Simes's Sacred Geography, 2nd edit. fc. 8vo. 5*s.* cl.—The Art of Land Surveying, by John Quested, 12mo. 3*s.* cl.—Experimental Education, by the Author of 'A Sponsor's Gift,' 12mo. 7*s.* cl.—Pocket Guide to Commercial Book-Keeping, by Single and Double Entry, by R. TREES.

Like the latest left of the battle-spears,
In their ancient strength they stand;
And they tell us still of the sylvan years
When the forests filled the land;
Ere ever a hunter tracked the wood,
Or mariner plough'd the seas,
But the isles were green in the solitude
Of their old primeval Trees.

They have survived the Druid's faith,
And the Roman eagle's fall,
And the thrilling blast of the bugle's breath
From the Norman's knightly hall;
But the sun shines bright, and the showers descend,
And the wild bird's home is made,
Where the ancient giants still extend
The green of their summer shade.

We have seen our early winters hang
Their pearls on each leafless bough,
And greeted the buds of the waking Spring
With a joy we know not now;
For Life hath its winters cold and hoar,
But their frosts can form no gem;
And the Spring may breathe on our hearts no more,
But it still returns to them.

They are waving o'er our hamlet roofs,
They are bending o'er our dead,
And the odours breathed from his native groves,
On the exile's heart they shed;
Like him who gazed on his country's palm,
By the palace-circled Seine,
Till the Pagod rose in the wanderer's dream,
And the Ganges rolled again.

How sweet in our childhood's ear they spoke,
For we knew their voices well,
When far in our western hills they woke,
Of the coming Spring to tell;
But now they send us a sadder sound,
On the winds of Autumn eves,
For it murmurs of wisdom more profound,
But it tells of withered leaves.

O, such were the Dryad tones that rose
In the Grecian woods of old,
And the voice from the Indian wilderness,
That the conqueror's fate foretold;
For many a minstrel's dream had birth
In the sounds of leaf and breeze,
And the early oracles of earth
Were the old complaining Trees!

Frances Brown.

DAYS' EXCURSIONS OUT OF LONDON.

Malmesbury Abbey.

Thanks to the marvellous facilities afforded by railroads in the present day, there is no reason why any of the treasures of antiquity long concealed in distance and obscurity, should remain covered with a veil; and the traveller who imagines it necessary to cross the channel in order to view old towns and towers, will discover that in the course of a few hours he may find places as singular as Normandy itself can present to him. The owl and bat are fast disappearing; their retreats are invaded, their ruins are explored, and sketched, and made known, and become a sight; and oblivion is, or will be soon, unknown.

Few persons, a short time since, at least before the opening of the Great Western, would have ever thought of going in search of the fine old Abbey of Malmesbury, situate in that stony, dreary-looking town, which may have been occasionally passed through by a small body of travellers, on their way to Bristol, but which, being out of the great road and removed from commerce or gaiety, is as much forgotten and unasked for, as if one of the most majestic and beautiful ruins in England were not to be found there; as if it had never been a place of importance in our history, the favourite city of King Athelstan, who lies there in effigy, and where he defeated those daring invaders the Danes; as if it had never yielded pin-money to the beautiful wife of Edward IV., though in fact she derived no less a sum than 20*l.* a year from the monastery, which the rich monks were well able to pay; as if bluff King Hal and his merry foresters had never feasted there with the great clothier, or the melancholy Charles ridden into the town as a place of refuge, seated behind Prince Rupert; or his merry son had not spent some gay hours within its walls: yet all these things happened in Malmesbury, and many are the recollections attached to the spot.

If the curious traveller be set down by the train at Chippenham, and if he be a good walker, as all explorers ought to be, he can, in little more than a couple of hours, reach the antique borough in question. The best approach, however, is on the side of Tetbury, as from that road he at once obtains a view of the fine buildings and single majestic arch of the Abbey, rising on the brow of the grassy hill on which it stands.

The town is on a rising ground, bathed at its foot by two streams, which, uniting, form the silver little river called by the classical name of Avon. At the entrance from Chippenham, the waters turn several mills, and, foaming over the impediments in their way, as they pass the bridge, murmur their welcome as they did in the days when the saintly Abbot Aldhelm was accustomed to seat himself on that spot, and there, harp in hand, await the approach of passengers to sing lays so light and gay that they drew round him a crowd of eager listeners. It was then that, when he found their attention fully awakened, and himself looked upon with an eye of favour, he would suddenly change his theme, and lead their minds to subjects of higher importance.

St. Aldhelm was a great light in the dark age of the seventh century; he was of royal birth, but devoted himself to the Church, and became a distinguished member of the already established brotherhood, whose learning had given a high name to the Abbey of Malmesbury. He was a proficient in languages, a poet and musician, and he hesitated not to assume the popular character of a Troubadour, in order to entice stray sheep into his fold. He was, although attractive in his person and manners, severe to himself, mortifying his body by rigorous fasts and penances; and a fountain in the valley of the convent, called Holy Well, is still pointed out as the place where, in the most inclement season, the future saint would plunge himself into the chilling waters, and remain immersed to the shoulders, pouring forth his soul in prayer, and lamenting his sins. When he became Abbot of Sherbourne, near Malmesbury, and his power had increased with his will to do good, he became a great benefactor to the order. His learning was known throughout Europe; his advice and instruction were sought: he visited Rome, and admonished the Pope himself; he brought back relics and altars, and enriched and beautified his holy retreat, and the Abbey, which he had illustrated by his acquirements. Many of his writings are extant; he appears to have been the first Englishman who introduced Latin poetry to his countrymen; he translated part of the Bible, and laboured hard to introduce civilization and Christian virtues into a benighted region of ignorance. Although apparently above the superstitions of the age in which he lived, for which reason his works have been censured by the literary inquisitors of Rome, yet he could not escape the injudicious fame bestowed on him by "those Babylonish masons, the lying monks," as Fuller calls them, who recount numerous miracles as having happened to him in his lifetime; amongst others, a *chesyble*, or cassock, used to be shown in the treasure-house of Malmesbury, which was said to have been hung by him on a sunbeam, which entered the glass window, on a day when mass being ended, he found no one to take the robe from him. Besides this relic were preserved his psalter and the great bell of the steeple, called St. Aldhelm's bell, on which was the following inscription, in Latin—

In Heaven's blest mansions he ne'er sets his feet,
Who steals this bell from Aldhelm's sacred seat.

Aldhelm was buried at Malmesbury, with singular pomp, but, alas! his tomb is no longer to be found.

After passing the bridge of the Troubadour Saint, a building is before you, one dedicated to St. John of Jerusalem, and still preserving some arches of the antique construction: the black habit marked with a white cross, has given place to a simpler costume, though the house is still dedicated, as at that period, to charitable purposes. On each side of the steep and somewhat rugged street, which you now mount, are habitations, of architecture more solid than graceful, whose low portals and long dark passages, leading through the houses and opening to the country behind, have a mysterious and strange effect. A gloom, almost monastic, seems to reign in the apparently deserted street, at the further extremity of which is the beautiful market cross, the boast of Malmesbury.

This cross is a very fine specimen of the style: it is of octangular form, and much ornamented with sculpture. On a turret in the centre, supported by eight flying buttresses, are a crucifix and several statues. This piece of antiquity is kept up with care, and is still used for its original purpose, as a shelter to the market people.

Passing through the low arch of the belfry tower, of what was once St. Paul's Church, the churchyard is entered, and there suddenly bursts upon the view the venerable remains of the once famous abbey, which tradition says occupied a space of forty-five acres. It is used as the parish church, and is in a high state of preservation. That part which now exists, may be considered as about one-fourth of the original edifice. An enormous arch is still entire, and rises in great majesty at the extremity of the building, another is partially destroyed, and is clothed with a rich drapery of ivy. Nothing can be grander or more imposing than the appearance of this splendid arch, which is about fifty-six feet high and twenty-one wide: it is one of the four which supported the transept and the lofty spire, long since fallen, which was said to be seven yards higher than that of Salisbury. It is a remarkable object, and as it stands detached from the main building, it looks like a gigantic phantom of former days, placed there as a sentinel to watch the fate of the rest of the temple.

The abbot's house, now used as a modern dwelling, is close by; and curious and mysterious are the vaults and passages beneath it, which tradition, as usual, connects with those of a far distant convent on the other side of the abbey moat.

Next to this glorious arch, the most interesting part of the exterior is the singularly beautiful Saxon porch, of rare and remarkable workmanship, measuring from the centre of its front to an inner porch eleven feet; its width is twenty, and height about eighteen. The elaborate sculpture of this magnificent erection is unrivalled for boldness of execution and design. The inner porch leading from this is equally grand, it is seventeen feet long, twelve wide, and sixteen high, encrusted with figures in niches, apostles, angels, and foliage of extraordinary richness.

The church, as it stands, consists only of a part of the nave and aisles; ornamented pinnacles spring from flying buttresses throughout its length of 110 feet; its parapet is beautifully carved, and the whole effect is peculiarly venerable and fine. Within, a range of stupendous, massive, round columns, with plain capitals, separate the nave from the aisles. These support three rows of arches, the lowest and highest somewhat pointed, and the central circular.

A curious little stone structure, which has puzzled antiquaries, projects from the upper wall in the centre. Tradition names it the prison where the offending monks did penance by being exposed to the gaze of the multitude, but it was probably a place appropriated to the abbot's household from whence to view processions, as it is placed too high to have been a pulpit.

The carving of heads and foliage round the arches, some of the cornices, &c. are extremely rich and admirable, but the great attraction is a tomb on which lies a figure in royal robes, with a lion at the feet, said to be the effigy of King Athelstan himself. It is a fine statue, and in tolerable preservation, though it appears to have suffered considerably by time and violence. This was not its original position, and all but the slab of the tomb on which it lies is gone.

All traces of the castle, once attached to this celebrated monastery, have disappeared; it probably stood on the spot where a range of pretty houses, with gardens, called the Abbey Row, exists, looking over what must once have been the moat, to a dell, called Burvivale, where in days of old the spires of a nunnery gleamed amongst the trees.

The *hospitium* of the Abbey may be traced in the inn called the "White Lion," which, it appears, was formerly the Banqueting House, where Stumpe, the great clothier of Malmesbury, when its trade was flourishing, entertained Henry VIII., under the following circumstances:—The King, with a large party

Digitized by Google

of gentlemen and followers, after a hard day's hunting in the neighbouring forest of Bradon, rode into Malmesbury, to seek for what they could find at the hospitable abode of the burly clothier. There was a large company, and, to judge by their appearance, a small supply of provisions would scarcely satisfy them. However, the worthy Stumpe was not to be disconcerted; he gave his unexpected guests a hearty welcome, and ordering his train of workmen to abstain from eating till night, he had the food which had been prepared for them served up before his Majesty and his followers. This supplied them with a plentiful, though not a dainty meal, and they went away well pleased with their entertainment.

England, at the present day, does not supply many traditions, but at Malmesbury a superstition still obtains amongst the peasantry, which is probably a relic of some antique belief. A spirit is said to be occasionally seen in moonlight nights flitting across the path of the belated; it usually comes in the form of a white rabbit, and, while you look upon it, vanishes from sight. Woe to the maiden who passes Daniel's Well at night; the holy abbot who gave his name to the spring no longer protects heretics; woe to the hind who returns late across "the Worthies," as the fields are called beyond the Abbey; the White monks are no longer there to say a prayer against the evil spirit, for their Carthusian convent is no more. The shadowy animal bodes no good, and sickness and ill-fortune follow in its train. It is singular that one of the conspicuous ornaments on the medallion mouldings in the church is the figure of *a rabbit*, but what it may indicate, or how the superstition originated, does not seem easy to discover.

Amongst many learned men which Malmesbury has produced, one of the most remarkable is the celebrated historian William Somerset, usually called by the name of his native town. He was librarian to the monastery, and his worth and erudition are fully acknowledged; he says of himself: "I am not anxious about the praise or censure of my contemporaries, but I hope that when partiality and malevolence are no more, I shall receive from posterity the character of an industrious, though not an elegant historian." Thomas Hobbes, the philosopher, is another of her sons of whom Malmesbury may boast: his own opinion of his abilities was rather in contrast to that of the modest chronicler, his townsman.

After having passed "some hours of a summer's day" amongst the melancholy and reverend remains of the fine abbey, it would be well if the traveller bent his course in the direction of a more amusing object, and followed the deep hollow road, bordered by the tottering ruins of the ancient wall, only kept from toppling down by the strong arms of the luxuriant ivy which embrace them; he will then find himself in a cheerful open spot, and enter the high road, which will conduct him to Charlton Park, the great lion of the neighbourhood, and one well worthy a visit for its pictorial treasures. The house stands in a level park, with but little beauty of scenery near; there is, however, a calm tranquillity about the spot which has its charm, and would seem to indicate that there once stood a mansion dedicated to holy musings, where no profane foot might fright the studious monks from their hallowed haunt. The place belongs to the Earl of Suffolk, who generally resides there with his large family. It was built by Inigo Jones, and is a good specimen of his powers. The principal front is grand, and the design of the whole is fine; but, unfortunately, it has never been completed. If it ever become so, the hall of entrance and the rest of the unfinished parts, will make it as handsome a mansion as can well be met with. The library is a peculiarly well-built room, of excellent form and construction, as a place appropriated to study and retirement: the outer busy world seems here shut out; a solemn light is thrown from above, and all around is quiet and seclusion. The fine suite of drawing-rooms is filled with pictures, some of them the rarest specimens of the greatest masters: particularly a Carracci, a Domenichino, and a Leonardo da Vinci, no other than the famous Madonna della Rocca itself! Here are some fine Guidos, Claudes, and Albanos, and in the whole collection, which is very extensive, not a picture but is good of its kind. But the most interesting and remarkable part of the house is a magnificent gallery, which runs along one front of the building to its fullest extent, from whose bold expansive oriel windows the park and gardens have a charming effect. The roof of this gorgeous chamber is fretted with pendant ornaments beautifully carved: every article of furniture within it is in the most perfect taste, according with the style of the architecture. Ebony and oak chairs and tables and cabinets of superior workmanship are placed along the sides, but the chief attraction is the two ranges of full length Howards, which in all the glory of unrivalled portraiture, and exhibiting marvels of Art from Holbein to Lely, keep their proud station on the walls. The minute details of costume which some of these display are very curious, and the exquisite state of preservation in which they appear makes the collection perhaps one of the most valuable, in an historical point of view, in the kingdom. The immense length of this splendid gallery, filled from end to end with majestic figures, all fresh as if speaking and breathing—

"in their habits, as they lived,"

has a magnificent effect, and the sun streaming through it, the trees waving through the large windows, the gay groups which generally occupy it, (for it is used as a general room, and is one of the most agreeable in the house,) altogether give it features, peculiar to itself, of great attraction.

Malmesbury is worth visiting were it only for the sake of Charlton, and Charlton were it only for its vicinity to the magnificent ruined abbey, the boast of Wiltshire. ×

THE DECORATIONS AT THE TRAVELLERS CLUB.

EXTENSIVE decorations, costing, it is said, some thousands of pounds, have recently been completed at this very happy adaptation of the Bufalini Palace. It is a satisfactory sign for the progress of Art to find a growing attention paid to architectural decorations, and, in so far as those lately executed at the Travellers Club are likely to promote that desirable result, we are disposed to welcome them; but, in proportion to their probable influence, it is the more necessary to protest against that absence of all principles, which is manifest throughout—on floors, on walls, on ceilings, in passages, and in rooms. Tasteless and chilling as may be the universal white paint of Queen Anne's days—of which the Library at Blenheim affords a cool specimen—monotonous and depressing as are the drab and slate colours patronized by George the Fourth, which abound in Windsor Castle, and are, unhappily, conspicuous in Buckingham House, (the pictures in the Long Gallery are hung against a drab-coloured wall,)—it may be a question whether they are not preferable—exciting, as they do, no interest whatever—to bright colouring so misemployed that the eye cannot turn without detecting some false principle of taste.

The greatest offences in the decorations of the Travellers Club arise from the employment of affectations and unrealities, which abound everywhere—sham granite walls, sham marbled columns and dados, sham bronze doors, sham bas-reliefs. As soon as you have passed the hall of entrance into the corridor, the fictions begin, and you traverse a passage of universal granites—pink, grey, green, &c. Besides being an affectation itself, this is the affectation of an unfit thing. Suppose the thing for an instant to be all real—would a *granite* passage be right in such a place? We are not entering an Egyptian temple, or the basement of a castle, but the light, cheerful passage of a sort of democratic modern palace, free from all fear of outward violence, and with a portal no more capable of resisting attack than polished mahogany and plate glass. Granite surely is not a material to be used here. But if you *will* use the hardest of stones for such a purpose, then ought not the forms in which you employ it to be somewhat analogous to the material itself? Here you have mock granite adapting itself to Italian mouldings—so light and elegant that you would select the softest oolite out of which to chisel them. The *ceiling*, too, is painted to affect granite. Do not all analogies drawn from Nature, as well as all good architectural precedents, tell us that the upper part of a building should be in all respects of material, form, and colour, lighter than the lower part? Let us forget this affectation of a thing out of place, and look at this passage simply for its colouring, which indeed begets the first general impression. Banish from recollection that the colouring is grained, and look at it as a surface of pink and grey—which is its aspect to most eyes. It may be a right principle to keep the passages and halls duly subordinate to the rooms, in respect of their decorative characteristics, but surely a passage that faces the *north* needs to be a little warmer and more cheerful in colouring than one which looks south. Yet here, in a due north aspect, we have shades of cool colours. The materials employed in the building of this hall, and its ornamental parts, are chiefly wood and plaster, made to be coloured. Would not correct taste, then, simply colour them, producing the best effects out of the unlimited range of colours?

The wainscot staircase of the club remains substantially as it was before these recent decorations. Being chiefly of oak, its very reality protected it from change. The ceiling here has been richly painted in various bright colours, displayed in arabesque forms and panels, generally resembling those we also find in the drawing-room—for which very reason we think that these decorations cannot be altogether consistent—certainly they do not accord with the oak stairs and banisters. The walls here, as in the upper corridor, have been divided into panels by arabesque borders and lines. The effect is light and tasteful; but the carpet, which is a mass of unbroken crimson, is much too full-toned and positive to accord well with the delicate pale hues of the walls. The figures in the arabesque painting do not rise beyond second-rate decorative art, and the human figures which are sometimes introduced, are by no means well drawn or well proportioned. The highest academical excellence in drawing ought not perhaps to be demanded under such circumstances, but in this case, as it was thought necessary to send out of England for a decorative painter, we might fairly have anticipated something better than what we could have produced ourselves. In the present case, the work—both in design and execution—is certainly not beyond the mark of many of the London decorative painters. If our school of design has produced any fruits at all, it must by this time have educated a score of pupils quite up to the standard of these decorations.

Through a mock bronze door—of which a few words presently—we enter the drawing-rooms. What is the first general impression, without examining the details? The tone of the colouring is neither warm nor cold—though parts are of both characters, and there is no lack of many varieties of colour. The aspect of the room is a north one, and being such, the prevailing arrangement of colour should be warm. Modify it as you please to suit the particular character of the apartment—but do not forget that the room receives hardly a ray of direct sunshine throughout the year. In these drawing-rooms the greater part of the surface of the walls is of a pale, cool-looking colour, something between a lemon and cream colour, arranged in panels, which are bordered by strong and rather dark contrasts. The lower part of the walls, the dado, and its mouldings, are coloured imitations of marbles, in which a blueish green predominates. Then the doors and window shutters are coloured dark green, to imitate bronze—a violent contrast to the walls—and made the more positive by the deep crimsoned draperies of the curtains. The ceiling is richly coloured and gilt, whilst the walls are comparatively plain. The character of both ought surely to be more consonant,—or, if there were any difference, ought not the more attractive features to be on the walls, where they are most easily seen? Look from the ceiling to the carpet, and in the latter there is the same absence of concordance and propriety. It has no leading key-note of colour—so to speak—but is a sort of helter-skelter of many colours. These rooms cannot be said to have any general effect, or any one strong point to which all others are subordinate. There is nothing positive—nothing consistent—one part is warm, another cold. Richness in the ceilings, poverty on the walls;—deep-toned colours brought into violent contrasts with others of a very low tone. As for harmony and due subordination of parts one with another, they cannot be met with. The whole gives an impression as if it had been the work of a committee, where there had been a compromise to suit every one's taste, and each member had undertaken the independent arrangement of different parts—one superintending the floor, another the ceiling, a third the walls, a fourth the

Digitized by Google

doors and shutters, a fifth the draperies, and so on. Having looked at the rooms thus generally, we proceed to glance at some of the details, which, in their want of principle, deserve severer criticism.

The ornaments are inconsistent with each other. Some are early Grecian, some Pompeian, some of the age of Louis Quatorze! as in the cornices of the window curtains. There is no objection perhaps to a combination of different styles,—but it can only be realized successfully by a principle which, depriving each of its distinctive and independent character, succeeds in making all integral and harmonious parts of a novel creation. In architectural forms Palladio and Wren succeeded in accomplishing this, when they took those of ancient Rome and adapted them to the buildings of modern Europe. But the decorations at the Travellers Club are very wide of the application of such a principle. Each different part—said cornices especially—looks like an independent impertinence, and to have been brought together by chance or caprice. It has been noticed that the doors and window-shutters are painted in imitation of bronze, of a dark bluish bottle-green hue. The same question suggests itself here as below in the granite corridor. What want could there be even for real bronze under such circumstances? The doors are subjected to no violences; not even exposed to corrosion in the open air. At best, they are unsightly mockeries. On the panels of the doors are painted imitations of bas-relief metal work. Imitations are tolerable in proportion to their successful approximation to realities. When it was decided so to ornament these panels, the use of real metal, iron, if bronze was too costly, would not have been an impossibility: A few shillings' worth of Mr. Bielefeld's *papier maché* ornaments would at least have given an actually raised surface, and insured natural shadows whenever the door was opened. Now under fixed painted shadows, every time the door is opened a positive untruth is told in the face of the light. What can be said of the drawing-room carpet?—a thing in which the cost of pattern is hardly a consideration: certainly not to such a Club as this. It is just the carpet you would chance to find adorning the drawing-room of a flourishing cheesemonger in Aldgate or the Minories: flowers of every hue displayed in shaded golden scrolls. It belongs to no recognized style, ancient or modern; even that lowest of styles, the Louis Quatorze, would not own it. Is it not a mistake to attempt any imitations which cannot succeed? If we want the representations of flowers, let them be executed by means which insure something like a correct representation. Employ colours and brushes in the production of pictures of them if you will, but surely not worsted threads. The Greeks took the beautiful forms of nature and used them not as affectations to recall feebly the remembrance of the originals, but adapted them in new methods to new purposes,—which suggested new views of their intrinsic beauty. Even the artists of the middle ages exercised a better taste than ourselves. A bunch of flowers or group of animals worked in worsted, with its angular shapes affecting to imitate the flowing lines of Nature's original, with its crude colouring and hard-marked blotches meant for brilliant hues and soft graduated shadows, merely reminds you how signally it is unlike what it has copied. How different is the effect produced by the pattern of the Grecian honeysuckle or the acanthus leaf on the Corinthian capital! We look on both as works intrinsically beautiful in themselves, as new creations and not as imitations. The Arabs have taught us how we may have a beautiful arrangement of colours almost independent of pattern. But we do not now intend to write an essay on carpets; and we can only dispatch that of the Travellers drawing-room by saying that it has both pattern and abundance of colours—but combined on such false principles that the meanest of Grecian ornaments or Arab combinations of colours rise very far above it.

We have thought it worth while to enter somewhat at length into this matter, because the members of the Travellers Club belong to a class who will probably exercise some influence in those decorations of our national buildings which seem to be likely to be realized at no distant day. Should the parties who are responsible for the taste of the decorations in this Club, have any voice in directing those of the Palace of Westminster, we hope our remarks may induce them to reflect that there are principles in such matters, which cannot be neglected. If it be true that some thousands of pounds have been spent on these works, we do not scruple to say that a more satisfactory result might have been produced at a much less cost, had a more correct knowledge of the principles of decoration been applied.

OUR WEEKLY GOSSIP.

About two years ago we cursorily mentioned the sale at Vauxhall Gardens of "half a dozen" *Hogarths*, which brought prices more proportioned to their ruinous state than real merits. Certain of them have since been restored, carefully and conscientiously, by Mr. Gwennap, of Titchborne Street, and the result is, that from averaging between four and five pounds per head, they now aspire together to double as many hundreds! Their present possessor, Mr. Parkes, of Westminster, purchased them, we are informed, for the sums and under the denominations following: 'A Moonlight,' 100*l.*; 'The Bird's Nest,' 200*l.*; 'The Bonfire,' 100*l.*; 'The Dyer,' 100*l.* Other names, or rather misnomers, have been given them; but the said 'Bonfire' and 'Dyer' turn out to be nothing else than Hogarth's first-painted pictures called 'Night' and 'Evening,' for the famous series entitled 'Four Times of the Day.' Another and later series was painted, of which Sir William Heathcote obtained the two pictures so designated. These first thoughts, or finished sketches, are rough rude things, dashed off, we should say, at once without any groundwork, yet pregnant with the rich humour and genial satire distinguishing the prints. It is known, that Hogarth presented Jonathan Tyers, the proprietor of Vauxhall, some such gifts, as suitable to embellish his wainscot bowers and bacchanalian alcoves, nor could any decorations be more appropriate; they were besides, perhaps, of less value to the artist after his prints and second series had been founded upon them. When about two years married he took a summer residence at Lambeth Terrace, where Mr. Cunningham says, "he drew 'The Four Parts of the Day,' which Hayman copied; the two scenes of Evening and Night, with portraits of Henry the Eighth and Anna Boleyne." This passage, however, apparently needs correction, the "portraits" having been a historical piece, and the scenes, distinguished from 'The Four Parts of the Day,' making, in fact, two of them. On 'the Night' his name occurs, and we think also a date, MDCCXXX, may be detected. Both it and 'Evening' are low oblongs, while the prints are tall uprights, and exhibit various alterations, new traits, or abler developement of character, fuller backgrounds, denser and better general composition. Not a glimpse of Hogarth's genius is afforded by the 'Moonlight;' nothing about it is like him, though a good deal unlike, for example, the group of dancers who betray an Italian *grazia* at once beyond and beneath him. But *vice versâ*, 'The Bird's Nest,' is manifestly Hogarthian, though quite out of his usual style both as to subject and execution. With less piquancy than a Watteau, and powerful effect than a Gainsborough, it has not the mannerism of either; its luxuriant woodland beauties, enhanced by such lustrous freshness of tint, will surprise amateurs who take Hogarth for a mere town painter—no approach to caricature or burlesque in the figures, yet a strength of expression and spirit of rustic merriment most opposed to the pastoral in Syria. Ireland etched a Poussinesque scene, which he calls the only landscape Hogarth ever painted: here we have a pendant to it, rather perhaps a superior. His name is subscribed, superfluously, when his mind appears so evident all over the canvas. These four productions are of large size—much larger than 'Marriage à-la Mode,' the most familiar standard. It would seem that for three among them—'Moonlight' (if this be his), 'The Bonfire,' and 'The Bird's Nest,'—besides three others, 'The Maypole,' 'Henry the Eighth,' and 'Angling,' (*qu.*, his frontispiece to 'Kirby's Perspective'?) Mr. Tyers gave him a bequeathable Gold Ticket, which admitted the possessor and six friends. It is to be seen at the same place, and ought never to be separated from the paintings: price demanded, 50*l.* On the face two female figures, one having a helmet and shield, join hands; round them VIRTUS VOLUPTAS, below FELICES UNA. On the reverse—HOGARTH IN PERPETUAM BENEFICII MEMORIAM. The word "beneficii" here, should it refer (as is probable) to these pictures, determines that they were of some consideration. Along with them are several Hogarthian portraits: Dr. Pellet, M.D., four of the Hoadley family, an unknown gentleman, and one inscribed 'Miss Peggy Woffington.' This last has no resemblance to Colonel Wyndham's 'Charming Peggy,' now at the British Institution, nor much either to Hogarth's general portrait manner. Yet he sometimes adopted its solid style, and always a good deal of its tone and garniture: price 150 guineas. We much prefer Mrs. Bishop Hoadley, who has all Hogarth's individualizing spirit about her expression, and all his free, light, frill-work pencilling about her drapery. A 'Judgment of Paris' is also attributed to Hogarth—on what grounds we know not other than its correspondence in style with 'The Bird's Nest,' and its humour, quite akin to his satirical genius: the goddesses are depicted, showing off their *Louis Quinze* dresses and graces like three *Précieuses Ridicules*, while Paris and Mercury are clad like French clodpoles: it looks a kind of double satire, against the Historic School and the Watteau taste: 150 guineas demanded. Idolators of Hogarth (as we own ourselves to be,) will find another small work—'The Student'—worth notice, though it has suffered irremediable disfigurement: an ambitious tyro is exhibited painting from a female bust, which seems to sneer at his efforts, and a bubble which drops from his face, neglected for the model's, may perhaps typify the emptiness of his hopes, and slightness of his pretensions. Further to augment this chance-medley collection of Hogarth's, Sir William de Bath has contributed, on loan, one that outweighs them all—Scene III. of the *Harlot's Progress*. It claims to be the single original saved when the other five perished in the Fonthill conflagration, 1755; but it has a value quite unadventitious, falling little short of the painter's works most famed for careful workmanship and agreeable colour. Portions, such as Justice Gonson and his alguazils, are weak; on the other hand, unfortunate Mary Hackabout's head and bust display a beauty of treatment that might become Dian's own portrait. We could enlarge, but must have done. Finally, then, there was still another specimen to attract us, though it would repel less enthusiastic Hogarthians—'The Debauchee,' a very curious but coarse production, representing the disagreeable results of intemperance with terrible faithfulness, and force enough to make Drunken Barnaby himself a teetotaller for life.

The premium of 300*l.*, awarded to Mr. Armitage for his Cartoon, representing "Cæsar's Invasion of Britain," was, as our readers are aware, withheld in consequence of the drawing having been executed in Paris; and, agreeably to the conditions originally laid down by the Commissioners, Mr. Armitage was required to execute another drawing, the subject 'An Ancient Briton defending his wounded Son from the attack of a Roman Soldier.' This he has done to the entire satisfaction of the Commissioners, who have now declared that he is entitled to receive the premium. Respecting the Cartoons themselves, the appetite seems to grow by what it feeds on; more persons than ever have visited the Exhibition this week; and on Saturday last, on which day payment is received, nearly 3,000 were admitted. The Commissioners have also issued a public invitation to artists, in various departments, to send in specimens of works that may aid in the decoration of the Houses of Parliament—statues in bronze and marble of British Sovereigns and other illustrious personages—stained glass windows, with figures or heraldic devices relating to the Royal Families of England—carved wood, consisting of designs for doors and panels—specimens of fresco painting, and of paintings executed in any other method free from a shining surface—arabesque paintings, and heraldic decorations in gold and colour, the designs to be executed in water colour, tempera, oil, or encaustic—ornamental metal work for screens, railings, grates, and ornamental pavements. The whole to be delivered by the first week in March next year.

A Society has been projected, to be called "The Institute of the Fine Arts," for the purpose, as stated in the address, of "uniting, by intellectual and social means, the interests of artists, and attempting to establish a free and liberal intercourse between the patrons, the lovers of art, and its professors." More than one meeting has already taken place, and Mr. Wyse, who presided, argued in favour of artistic

Digitized by Google

associations, from what he had seen in his travels through Germany and France, where, according to his report, a sort of Paradisiac state of art exists. He observed that, "in the whole history of art, a mutual good feeling existed among the professors of every branch. If we look to Egypt, we find that this feeling prevailed to such an extent that the artists lived together, almost apart from any other class of persons, forming themselves into species of castes or coteries, in which they pursued their various studies. In early Greece, artists formed themselves into societies, which mutually bound one with another. The architect, the painter, and the sculptor, united to carry out the developement and form of art in every particular. The same principle was adopted so soon as ancient art became an object of interest to the Christian nations of Europe. In Germany it was well known that the artists formed a society almost exclusive, and were bound by mutual affections, interests, and passions." This Institute, in Mr. Wyse's opinion, will produce the same magnificent results which he has observed on the Continent, and produce British compositions equal to the "Loggie of Cornelius, or the works of Raphael and Michael Angelo." All this may be, as Mr. Wyse reports and anticipates, but we doubt it, and should be inclined to tell the whole story "with a difference," and a wide difference too, were we called upon so to do. Assuredly it could be no benefit to artists "to live apart from other persons, forming themselves into castes and coteries:" it would tend rather to the degradation of artists and the ruin of Art. No such thing, however, appears to be contemplated by the lawgivers of the Institute, and Mr. Wyse's examples have thus no relevancy to the question under consideration. The Institute is to be established for the purpose of facilitating a general intercourse between artists and friends of Art, men eminent in station and acquirement in literature, science and art. The only question then is, whether the new Institute will produce this very desirable result. For our part, we do not see wherein, as regards its principles, this new Society differs from the Graphic Society, the Artists' and Amateurs' Society, and many others of a similar character, which have been heretofore established, and have failed in attaining their object. The funds of the Institute too, to be derived from subscriptions of one guinea a year, are wholly inadequate to the purpose. In brief, the project appears to us to be crude, undigested, and even aimless.

A correspondent thus writes to us:—

Dr. Waagen, in his 'Art and Artists in England' (vol. i. p. 223) has satisfactorily proved the celebrated portrait by Vandyck in the National Gallery, known by the name of Gevartius, not to be a representation of that individual; and Mrs. Jameson, in a note to her translation of Waagen's Rubens, acquiesces in the judgment of that distinguished connoisseur. The accomplished authoress remarks:—"It would be pleasant to be assured that Vandyck's inimitable portrait in our National Gallery, known as that of Gavaerts, or Gevartius, represented this distinguished friend of Rubens; but in the opinion of Dr. Waagen, it not only is not this Gevartius, but the name is altogether suppositious, and his reasoning appears conclusive." The portrait in question is that of Cornelius Vander Geest, a great patron of the Arts, at Antwerp, and for whom Rubens painted the celebrated 'Battle of the Amazons,' now in the Munich Gallery. Any one comparing the print of this individual, engraved by Paul Pontius, after Vandyck, with the picture in the National Gallery, will at once perceive both the print and the painting to be representations of the same individual. The head, in the print, is very slightly turned towards the right shoulder: were it not for this, it would present an exact copy of the head in the painting—the same features; the same "definite marking of the bones and the surfaces," which, Dr. Waagen remarks, "gives the picture a very energetic effect, resembling sculpture;" the same hair, the same frill. As the print is not very rare, it is surprising the resemblance has never been traced before; perhaps the subject is sufficiently interesting to stimulate some lover of art to verify these remarks.

We quite agree with our correspondent as to the near resemblance between Paul Pontius's engraving of Cornelius Vander Geest's portrait after Vandyck, and the portrait called, or rather miscalled, 'Gevartius,' in the National Collection. Of this fact we have long been aware, but have withheld it from a doubt about its interest and importance to the public; and, also, for a second reason—the possibility that *Cornelius* had a brother or relative who still more resembled the above pseudonymous portrait. Besides some difference of feature—less aquiline nose, larger eyes, &c.—it has a mild, benignant, meditative look, humanely philosophic, and even mournful; which is the direct reverse of that bold, sharp, worldly-minded expression so prominent in the visage engraved. Again, though two portraits of the same person, at almost the same age, may be cited, they are rare from such a great painter's hand—unless a sovereign, or very illustrious subject, employed it. We would, however, without any scruple, replace the name *Gevartius* by *Vander Geest* (leaving the Christian name undetermined), and thus far improve a miserable official catalogue, published, it might seem, less to impart knowledge than to propagate or perpetuate errors.

In addition to the elections of foreign members by the Austrian Academy of Fine Arts at Vienna, which we recently announced, we find, that at its meeting on the 12th of May last, that body elected Professor Donaldson an Honorary Member.

We learn from the *Times* that an interesting discovery has recently been made, of the correspondence and despatches of the great Duke of Marlborough. Some boxes, which were supposed to be filled with deeds and papers relating to the Marlborough estates, were lately examined, and have been found to contain the whole of the correspondence and despatches of the Duke, during the eventful period of the war of succession. A large portion of them—the letters to Prince Eugene and all the foreign sovereigns, princes, and generals,—are in the French language. They form a collection resembling the compilation of Colonel Gurwood, and the partial examination which there has been time to bestow on them has been just enough to prove the interest which attaches to them. They have been confided by the present Duke of Marlborough to the custody and inspection of Sir George Murray.

We alluded, in a recent number, to an association which had been formed to counteract "the sinful and irrational" practice of duelling, and expressed a hope that such an association might tend to the suppression of this murderous nuisance. A public meeting has since been held, attended by Viscount Lifford, Lord R. Grosvenor, Sir R. H. Inglis, Hon. W. Cowper, Admiral Sir F. Austen, Admiral Oliver, Sir E. Parry, R.N., Captain Robertson, R.N., and others, to prepare a memorial to her Majesty, praying her to exercise her royal prerogative towards the suppression of duelling. Sir E. Parry spoke strongly on the subject, and gave in the adhesion of Sir N. Willoughby, a man covered with wounds received in the service of his country, to the cause. Letters were also received, expressive of approbation, from Lord Teignmouth, Mr. J. P. Plumptre, M.P., and Mr. J. Finch, M.P. We have already expressed our approval of the Society, and its object; and are sure that nothing can serve the purpose better than the hearty co-operation of men of rank and known bravery in both services. We do not, however, see what end the address to the Queen is intended to serve, or how her Majesty can interfere.

Some time since we announced, and we believe correctly, that Government had decided on sending another expedition to Lycia, under the command of Mr. Fellows. What progress has been made towards fulfilling this intention, we have not lately heard; but unless there be some little energy and exertion on our part, we shall probably be anticipated, as we hear from Paris that the success of Mr. Fellows, and the antiquities lately brought by M. Texier from Magnesia, have encouraged the French government to prepare an expedition, which is about immediately to proceed to Lycia, and which, if there be much further delay on our part, will probably be found quietly located on the Xanthus when we arrive.

The French papers state that M. Paul Delacroix, generally known as Bibliophile Jacob, in making out, recently, the catalogue of the books of M. de Soleinne, which are about to be brought to sale by order of his representatives, found bills and bank notes to the amount of 242,000 francs, inserted in some of the works which their deceased owner most admired.

The Rev. Mr. Mahoney, better known as Father Prout, has received from Government an appointment in the University of Valetta at Malta.

Letters from Cork announce that preparations are being actively made for the reception of the members of the Association, and that there is reason to believe that the present Meeting will in no respect fall short of its predecessors. Several of the most distinguished members have signified their intention of being present, and Prof. Phillips, the Assistant General Secretary, has announced that several papers of great interest will be communicated. Several meetings of the Local Council have already been held, and the rooms and buildings placed at the disposal of the Association have been found to be ample for the purpose.

Closing of the present Exhibition.

BRITISH INSTITUTION, PALL MALL.

The Gallery is OPEN DAILY, from Ten in the Morning until Six in the Evening, with one Room containing the Works of Sir Joshua Reynolds, the next those of Ancient Masters, and the third with those of Deceased British Artists, and will be CLOSED on Saturday, the 26th inst.—Admission, 1*s.*; Catalogue, 1*s.*

WILLIAM BARNARD, Keeper.

DIORAMA, REGENT'S PARK.

NOW OPEN, with a NEW EXHIBITION, representing the CATHEDRAL of NOTRE DAME at Paris, with effects of Sunset and Moonlight, painted by M. Renoux, and the BASILICA of ST. PAUL, near Rome, before and after its destruction by Fire, painted by M. Bouton. Open from Ten till Six.—N.B. A GRAND MACHINE ORGAN has been constructed expressly for this Exhibition, by Messrs. Gray and Davison, of the New-road, and will perform the Gloria, from Haydn's Service, No. 1, during the midnight effect of the Cathedral of Notre Dame.

ROYAL POLYTECHNIC INSTITUTION.

CARTOONS of RAPHAEL.—The Series of ORIGINAL CRAYON DRAWINGS (by Holloway) which were executed for the well-known ENGRAVINGS of these CARTOONS, are now exhibiting, with other additions to the numerous works, both in Art and Science, in this Institution. The LECTURES of Dr. RYAN, Professor BACHHOFFNER, and Mr. GODDARD, are at Twelve, Two, a Quarter to Three, and Five, daily, and at Eight o'Clock in the Evenings. In these Lectures AGRICULTURAL CHEMISTRY and every recent Scientific Discovery is explained in a most popular manner. The COLOSSAL ELECTRICAL MACHINE, NEW MICROSCOPE (by Cary), DISSOLVING VIEWS, DIVER and DIVING BELL, &c. &c. ROBINSON'S DRYING MACHINE in operation daily.—Open Mornings and Evenings, except Saturday Evening. Admission, One Shilling. Schools, Half-price.

THE CHINESE COLLECTION, Hyde Park-corner.—This UNIQUE COLLECTION consists of objects *exclusively Chinese*, and surpasses in extent and grandeur any similar display in the known world. The SPACIOUS SALOON is 225 feet in length, and is crowded with rare and interesting specimens of virth. The Collection embraces upwards of SIXTY FIGURES AS LARGE AS LIFE, portraits from nature, appropriately attired in their native costume, from the MANDARIN of the highest rank to the wandering Mendicant; also MANY THOUSAND SPECIMENS in Natural History and Miscellaneous Curiosities, the whole illustrating the appearance, manners, customs, and social life of more than THREE HUNDRED MILLION CHINESE.—Open from 10 till 10.—Admittance 2*s.* 6*d.* Children under 12 years, 1*s.*

SCIENTIFIC AND LITERARY

Horticultural Society.—*Aug.* 1.—R. W. Barchard, Esq., in the chair. G. Banks, C. R. Colville, J. G. Dyne, P. P. Fitzpatrick, T. L. Hodges, R. N. Hunt, W. Shaw, E. Steer, and J. Tatham, Esqrs., were elected Fellows.—A communication from the Comte Lelieur respecting strawberries was read; it stated, that, in addition to the usual distinctive characters by which strawberries are recognized, several others might be added, viz. 1, the age at which each variety, raised from a runner, bears fruit; 2, the age at which each kind arrives at the maximum of its production; 3, how many years the same plant will continue in good bearing; and 4, what varieties will bear two crops in the same season: thus, for instance, Keen's seedlings and the British Queen will, if planted in the open border after being forced, grow luxuriantly, and produce a second crop more abundant than the first; whilst the Elton, under similar treatment, throws out nothing but runners; although these three sorts, after being forced, make extraordinary growth towards the end of the season, and bear a prodigious quantity of fine fruit for several succeeding years. Comte Lelieur was of opinion that it would be useful to select a certain number of plants of each of the best varieties after forcing, and to plant them in the open border, to ascertain which kinds will produce a second crop; and that it was a good plan, before turning them out of the pots, to withhold water entirely for a short time, in order that they might be excited into new growth by repeated waterings. The writer also observed that the temperature of pine stoves was too warm for strawberries, when first placed in heat to bring them forward; that the flowers of these plants, particularly of those kinds which throw out abundance of foliage before blooming, should be brought on gradually. Thus, for instance, the Elton is barren, while Keen's seedling succeeds in a rather high temperature, provided the house is kept cool until the fruit is set.—A paper from Mr. Dunsford, upon the cultivation of the pine-apple, was read. This was accompanied by the plan of a pit now in use, differing but slightly in external appearance from M'Phail's. The interior of the pit within the inner walls is filled up with brick rubbish so as to form a solid mass; and when level, the whole is covered with flat tiles or slates, upon which 9-inch draining-tiles are laid across the bed, commencing just above the front flue, and these are in their turn covered

Digitized by Google

with flat tiles. The draining-tiles convey the heat over the whole surface of the bed, so that a regular bottom-heat of 95° can be maintained. The depth of the pit from the glass to the tiles is 4½ ft. at the back and 4 ft. in front. In such a construction, the writer states, that, by the aid of dung-heat, every amateur and gardener may grow pines with as little trouble and expense as melons. A Providence pine, weighing 7 lb. 1 oz., so grown, accompanied the communication.—From B. Miller, Esq., was a Syon hybrid cucumber, exhibiting a natural graft, formed by the adhesion of the leaf-stalk to the side of the fruit; this kind is stated to be invaluable as a ridge cucumber in a cold wet season like the present, producing abundance of fine clean fruit, whereas the common hardy ridge sort, on the same bed, has been so much affected with canker as to be entirely useless. —Mr. Pepys exhibited two lupines, one planted on the 26th of April, when weighing 2.6 grains, in soil composed (in 100 parts) of silica, 75; alumina, 15; and carbonate of lime, 10: it was then watered with 3oz. 5drs. of distilled water, and afterwards with ½oz. of the same, every day; on the 30th of July it was in a dying state, and weighed 42.5 grains. The other, planted on the 8th of May, in peat and loam, and weighing 2.6 grains, was watered in the usual way, and weighed, on the 30th of July, 192.5 grains. Both plants were grown in glass pots. The experiment was made to ascertain how far it is possible to make plants grow without those elementary substances usually considered as forming their food.—From the garden of the Society were four plants of the common hydrangea, each of which had been treated in a different manner, to find out, if possible, what ingredient it was in the soil that changed the flowers from pink to blue. No. 1, treated in the usual way, was by far the most healthy plant, and bore pink flowers; 2, to which ½ oz. of phosphate of iron had been administered, was evidently in an unhealthy condition, the flowers being pink, small, and having with the leaves a yellowish tint; 3, treated with ½ oz. of caustic potash, bore small and pale pink flowers; while 4, to which ½ oz. of alum had been given, produced blue flowers—the dose had, however, been too strong, as was shown by the weak condition of the plant and the small size of the flowers; nevertheless it proved that alum will produce the desired effect.

MEETING FOR THE ENSUING WEEK.
TUES. Horticultural Society. 3, P.M.

FINE ARTS

NEW PUBLICATIONS.

THOUGH the fashion of cheap series of prints, if not on the wane, appears, like all other fashions, to have received a check from the bad times and the Income Tax,—still there are "works in progress" which require notice. We have the commencement of one publication, *The Book of German Ballads*, which promises to be vigorous enough to weather out any period of depression. Schroedter's illustration to the 'Rheinweinlied' is full of fancy, fine contrast of character and grace of design. Very picturesque and elegant, too, is Plueddemann's etching to 'Der Nächtliche Ritter.' Eber's group of 'Die Weiber von Weinsberg'—a capital and characteristic subject for any artist—is less satisfactory: but Steinbrück's 'Procession of the Crusaders' has the right spirit: there was no need of the celestial air-borne group, to point the path, on which those mailed pilgrims were bound. We pause for a moment at Schirmer's landscape, from being less familiar with the Germans in this, than in any other branch of art. Whatever poetry there be in the composition is neutralized by the feebleness of the drawing: strange, that hands so skilful in delineating mortal thews and sinews, should fail so signally when the limbs of oak, elm, and pine, are the subjects. Among the fifteen illustrations before us, several others claim regard: and what may be called the mere decorative portion of the work has an excellent propriety and coherence,—to be felt, though possibly it rests upon canons too capricious and delicate to be precisely laid down by line and rule.

Since our last report, Mr. Brockedon's beautiful work on *Italy* has reached its sixteenth number; developing as it proceeds new features of interest. The thirteenth Part contains a view of 'Assisi,' which is interesting as having been sketched by the late Sir Francis Chantrey, and, though ineffective, it shows his elegant taste in the composition of the lines. Two of the most striking and real-looking views are those of 'Florence' and 'Genoa,' from sketches by W. Turton, Esq., the architectural features of the scene being represented with attention to forms and massing not very common even in artists' drawings. The view of 'Castell'-a-mare,' by Wolfensberger, is remarkable for the extent of its range, the solidity of its masses, and the aerial effect of the distance; but the tone is too gloomy for a southern clime, a fault which injures another view by the same artist, in which the 'Church of St. John Lateran' forms a principal object. The distant view of 'Orvieto,' crowning a height, the road leading straight up to the walled city, and a cottage with its goats and vine-trellis by the side, is one of Mr. Brockedon's most attractive sketches; his group of buildings at 'Brescia' is a pleasing arrangement of Italian architecture; and the view of the 'Ruins of the Bridge of Augustus at Narni' presents a romantic scene of beauty. Then we have 'Naples from the Santa Lucia,' after Leitch, and 'Padua' after Prout and the Editor (a capital town scene) to say nothing of Mr. Stanfield's picturesque and truthful vision of 'Pisa' where the foreground, in the painter's best manner, is especially admirable; or of Mr. Brockedon's striking view of the steep entrance to 'Cortona'—the town which, as Forsyth graphically says, looks from a distance, "like a picture hung against a wall." Although skill and care are manifest in the execution of all these plates, still they bear too many traces of the manufacturing school. The engravings of Messrs. Willmore and J. B. Allen are distinguished above the rest for execution and pictorial effect.

Mr. Roberts's great work of the *Holy Land* proceeds satisfactorily; the last Part we have seen (VI.) is still devoted to the desert solitudes and rocky caves of Petra, with its half-built half-excavated temples; the stupendous proportions of whose columns, though dwarfed by the huge masses of the cliffs above, are made evident by the contrast with figures. The groups of Arabs introduced in these views are the most attractive points of the pictures, and the best executed portion of the lithography; the foregrounds and distances of the last Part showing signs of haste and inequality that we hope will be no more apparent in future than they have been in previous Parts.

Illuminated Illustrations of Froissart, Parts I. to VIII.—A beautiful work, worthy to stand beside those treasures of middle age Art, for which we are indebted to Mr. Shaw. The plates are fac-similes of the illuminations in the splendid Froissart MS. in the British Museum, and the work will be, when complete, a storehouse of portraits, costume, ornament, architecture, furniture, and Middle Age life, at the service of our historical painters; and for the public a most choice drawing-room table book, of equal interest and beauty. But "when complete" are words of significance—for one half the MS. is in the *Bibliothèque Royale*, and we fear, from the announcement that the work before us will be concluded in about twelve parts, that it is not intended to add to it the illustrations of the Paris MS. This would be a pity, and, considering the low price at which the work is published, we trust that the publisher will receive sufficient encouragement to induce him to make it "complete"—and then we may advert more at length to its merits, and the probable influence of such publications.

Subjects from the Designs of the Carracci, selected and executed by S. M. Maury.—The Carracci have been over-rated and under-rated, but very seldom justly rated; and we think Mrs. Maury must take rank with the partial, when she asserts that "in the union of grace with truth, of science with strict adherence to nature," they excelled all other artists. She has, however, done her best to justify this high eulogium, both by judicious selection and careful execution. The collection consists of ten subjects, besides portraits and vignettes, &c., all interesting, and some excellent—we would particularly instance *The Virgin and Child*, and *The Virgin and Child with Angels*, by Ludovico, both works of the highest class, and rendered with true artistic feeling by Mrs. Maury.

Two *Panoramic Views from the Round Tower of Windsor Castle*, looking east and west, drawn for Prince Esterhazy by Major Kretschmar, have been well lithographed by Messrs. Day & Haghe, and are remarkable for their minute accuracy, which, however, is so well managed as not to injure the general effect.

The third volume of *Winkles' Cathedrals*, comprising Lichfield, Gloucester, Hereford, Worcester, Durham, Carlisle, Chester, Ripon, St. David's, St. Asaph, Llandaff, and Bangor,—is now complete—the work being thereby terminated. Mr. Virtue's *Canadian Scenery Illustrated* is also brought to a close, at the end of the second volume. The *Scenery and Antiquities of Ireland*, by the same publisher, has arrived at its twenty-sixth Part. The illustrations of these publications are slight and mannered: one or two devices of atmospheric effect—such as the cloud and the sunburst—being resorted to, till the eye begins to long for a tranquil sky; but the works are creditable, considering the price. We must mention Mrs. Loudon's *Ladies' Flower Garden of Ornamental Perennials*, as having reached its twentieth number, and holding its place of beauty; and also the completion of the first volume of Mr. Westwood's *British Insects and their Transformations*.

As signs of the times, no less than for their intrinsic antiquarian curiosity, Part III. of *Examples of Encaustic Tiles, and Ancient Irish Pavement Tiles*, deserve attention. The student of symbols and the hunter for authorities will do well to consult these for heraldic ecclesiastical devices. We shall here merely announce the completion of Mr. Shaw's *Dresses and Decorations of the Middle Ages* (see No. 772): completed, as begun, with exquisite taste and care: and merely mention and reserve for future criticism, M. Gabailhaud's *Ancient and Modern Architecture*, now at its tenth number, a work of greater value than pretension.

MUSIC AND THE DRAMA

Mrs. GORDON, from EDINBURGH, has the honour to announce to the Nobility and Gentry, that she will give a CONCERT principally of SCOTTISH SONG, on TUESDAY EVENING NEXT, at 8 o'Clock, in the QUEEN'S CONCERT ROOM, HANOVER SQUARE, when she will be ably assisted by Mrs. Chatfield, Messrs. Holmes, Willy, F. Martin, &c. Mr. Phillips, Conductor.—Tickets, 5s. each; to be had at the Rooms, and at the Music Shops.

NEW PUBLICATIONS.

English Sacred Music.

Mass in D, by John Lodge Ellerton, Esq., *with an Accompaniment for the Organ or Pianoforte, arranged from the full score by the Author.*—Audrey's homespun question—"Is it a true thing?" might serve, in default of a better, by way of device for all critics on works of Art. Is this a true Mass?—is this a true full score? are inquiries naturally suggested by the title. The "*Esquire*" of the author may be presumed to imply amateurship—yet here he ventures to break a lance *only* with Palestrina, Jomelli, Bach, Mozart, Beethoven—only to measure himself against the greatest musicians! This is a work, therefore, to be perused with more than usual attention. It is not the first contribution to the stores of sacred music of a high order, ventured by an amateur. Not long ago we had an opportunity of offering an opinion on the original, though incomplete, Hymns and Anthems of Miss Flower: and we bear in agreeable recollection a Mass by M. le Prince de la Moskowa, which, though as a whole the work is unequally written, contains many unborrowed ideas and combinations. So much as this cannot be said for Mr. Lodge Ellerton, while the nature of his borrowings indicates an unusually low standard of taste. Nothing, for instance, can be more frivolous than the leading phrase in triple time, of the 'Kyrie'—except it be the 'Gratias agimus,' which it really required some hardihood to publish, so trite and secular is the melody. After a very incoherent episode on the words 'Agnus Dei,' a 'Qui tollis' succeeds, which we mention, because though the idea be any one's or every one's property, there is more substance in the movement than in the rest of the Mass. The 'Quoniam' is a repetition of the *adagio* introduction to the 'Kyrie,' while the 'Cum Sancto Spiritu' is an attempt at a fugue, of which the composer presently becomes so weary that he introduces a *poco stringendo* with pucrile pedal contrivances, etc., by way of ending the movement with *éclat*. In the 'Credo' will be found a false accent on the word *est* in the 'Et incarnatus'; and an episodical 'Crucifixus' which means to be sublime and mysterious, and is only unpleasing. The 'Et resurrexit' is more coherent. It is fair to inquire on what principles of interpretation our author has given a wailing solo and quartett,

Digitized by Google

in the most wailing of minor keys, to the 'Sanctus,' which, from time immemorial, has been treated as one of the most jubilant portions of the Mass—see even the well known movement in the 'Requiem' of Mozart, where the melancholy and funereal colouring thrown over the whole composition was laid by for one burst of adoration. Mr. Lodge Ellerton redeems himself a little in the 'Pleni' and 'Hosanna' which immediately follow, and, though elongated beyond all precedent, are still among the better parts of his work; but his 'Benedictus' is a *cento* of the most hackneyed ideas, not very skilfully compounded—while the 'Dona' is positively ridiculous in its combination of *solo* and chorus, which brings the sacred service to a close with something almost as tripping as a hornpipe, but alas! not half so gay. If any one should defend these trivialities by citing examples from Haydn and Mozart, we have but to repeat that such a defence indicates a low developement of taste and intelligence. Neither master was happy as a mass-writer; neither, it is true, could nod through a whole composition, but in the case of both, the works were wrung out of Fatigue by Importunity—and who can wonder, if the refuse of symphonic and operatic ideas was unconsciously permitted to cover the space which ought to have been filled by ampler outlines and forms more spiritual? Unless Mr. Lodge Ellerton could plead such an excuse as good-tempered Haydn in his domestic Xantippe, who would not be pacified unless her husband propitiated her monkish friends, by spinning sacred music for their benefit—or, like poor Mozart, that he wrote against time and for money—he cannot be forgiven for imitating commonplaces which were accidents, not essentials: evidences of passing weakness and want of thought, and not fruits of strength and meditation.

Laudes Diurnæ: the Psalter and Canticles in the Morning and Evening Service of the Church of England, set and pointed to the Gregorian Tones, by Richard Redhead; *with a Preface on Antiphonal Chanting*, by the Rev. Frederick Oakeley.—This attempt to thrust the Gregorian Chant upon the services of the Church of England claims attention for the sake of a preface, full of fallacies, though plausible and well written. The *animus* of it is contained in the following passage:—

"It needs but little skill in music," says Mr. Oakeley, "to perceive that the Gregorian tones are formed upon an idea of the nature and proper end of chanting, entirely different from that which has given rise to the tunes to which the psalms are commonly sung in our own cathedrals. Modern chants, to speak generally, seem to presuppose that music is intended to embellish and set off the sacred words of inspiration: whereas the very notion of a 'tone,' by which name the Gregorian chants are most fitly designated, is that of a simple form of recitation, a mere vehicle of the sacred words, not an elaborate and ornamental framework. Some modern chants, no doubt, there are, which are conducted upon the simpler principle; but by far the larger portion, though preserving a certain character of solemnity suited to their object, are too much surely of the nature of musical compositions, to be consistent with that high, self-forgetting reverence towards their subject, which is characteristic of the older melodies."

These Gregorian tones bear date and proportion with the palm-leaf vaults, or the natural rock caverns, under which the primitive congregations gathered for prayer and praise. Why should such relics, however interesting in themselves, be dragged out of oblivion, and put to uses for which the wisdom of our fathers pronounced them too crude and shapeless? The original services were chanted in a language now dead, to the cadences of which the Gregorian tones bear a certain relationship; but used with an English text, "the high and self-forgetting reverence" of the worshipper implies a barbarous mutilation of his mother tongue. It is hardly possible to go over a single psalm, as here set and pointed, without being repelled by the violence done to the sacred text, by contempt of accent, punctuation, of everything, in short, for which the Cathedralists so wisely provided, in their adjustment of the Romish service for the Church of England.

Yet more, the advocates of these fopperies are not self-consistent. We presume that Mr. Oakeley's Psalm-book would not be rejected by the members of the *Motett Society*,—one of whose avowed objects it is, to provide service-music of an orthodox quality for the Church. So far, however, from discountenancing musical composition, as interfering with a "self-forgetting and reverential spirit," they make it all-paramount, by forcing the English words into union with ancient Italian compositions, under a conviction of the artistic fitness of the latter;—since the sense of the text is utterly corrupted by omissions and cross-readings, the effect of which at times verges on the profane. Thus it was a point of conscience with cathedral writers, that every singer of the quartett should pronounce the consecutive words of the hymn, so as to enunciate them for himself, and those disposed to follow his part. Now we find, in the new version of the Creed, that one voice has to utter the following sentence—

And was made man,—under Pontius Pilate,

while a subsequent verse, given by the quartett, is so arranged that the entire effect must be—

One Catholic and Apostolic Church—Bap—for the remission of sins.

If this be not introducing confusion into our orderly cathedral service, the word has no meaning. Yet this measure is a branch of the same policy which has disinterred these Gregorian chants, for the sake of their clearness and simplicity, and that the words may be heard free from any meretricious musical excitement! These obvious mistakes are so steadily increasing as to make it necessary, from time to time, to examine and explain their bearings. The manner of publication, too, is sometimes remarkable, when taken in conjunction with the "high and self-forgetting reverence," announced as the principle of authorship. An advertisement before us recommends the Book of Common Prayer, noticed by us a week or two since, in the following unequivocal fashion:—"Independently of the interest attached to the musical part of the work, *it will be found a beautiful specimen of black and red letter typography* (!) and an elegant service-book, adapted either for private use or for the church desk and altar." We have yet to become accustomed to the fitness of this manner of advertising spiritual things.

Let us now, however, take a view of matters at the opposite extreme—as typified in a slim volume containing—

Psalms and Hymns as sung at the Sunday Evening Lectures in the Galilee of Durham Cathedral, by Thomas Brown, of the Durham Cathedral Choir.—If we are to accept this volume as a specimen, a musical "Thomas Brown the Younger" might employ his satirical pen worse than by exhibiting the disorderly practices sanctioned in some of our cathedrals. We have rarely looked into a tune-book for an "Ebenezer" or a "Bethel" more reprehensible than this collection, sung in the Durham "Galilee." On principle we object to the harmonized melody of Handel (page 3),—to the distortion of the 'Kyrie' of Mozart's Twelfth Mass (p. 4), with the unmeaning second part patched on,—to the style of Arnold's 23rd Psalm (p. 8), which gives scope to the uttermost vulgarity of singing; and, on like grounds, to the tunes 'Galilee' (p. 13), 'Monmouth' (p. 16), 'St. Elizabeth' (p. 24), 'Mount of Olives' (p. 29), 'Psalm 136' (p. 30). The 'Missionary Hymn,' too, (p. 32) is a very queer composition, apparently the uncouth and rambling production of an amateur. But the day of such publications as this is over.

We may here add a line, to notice a well-meant tract—*The Art of Reading Church Music*, by William Marshall—in which sound principles are advocated, and no royal road pointed out. The treatise, however, though sensible, wants clearness. Mr. Marshall has obviously knowledge, but not the means of communicating it in equal proportion.

A few words more, and this "Assize" for the trial of our new sacred music shall be closed. In the dedication of his *Sacred Harmony, a Collection of three hundred and fifty Psalm Tunes, Ancient and Modern*, to Her Majesty, Mr. Hamilton "humbly presumes" that it is the most extensive publication of the kind extant. On the strength of this, he has overlooked good taste and correctness with no ordinary courage. A good score of airs extracted from favourite instrumental and operatic compositions, are objectionable in the highest degree, the grievance beginning with No. 4—a harmonized melody by Onslow—and reaching its climax at No. 348: where one of Haydn's *andantes*, sprightly to the *tripping* point, is compelled to "come into church." Moreover, while merely turning over the leaves, oversights have forced themselves upon notice so glaring as to warrant general mistrust of this publication. Nos. 20 and 308, for instance, are one and the same tune:—so are Nos. 262 and 170 (the latter misentered in the index as No. 169.) Composers' names, too, have been mercilessly treated. Some of the "new arrangements" are very strange: *e. g.* the accidentals in the four first bars of the bass part of '*Milgrove*' (No. 170) aforesaid, to say nothing of half a hundred fine old tunes wrested out of their proper rhythms, and disfigured by crude harmonies. One or two of the modern melodies, however, by our young English composers, are smooth and tuneful. So very bad is Mr. Hamilton's editorship of this great book, that we dare not commend his less ambitious manual for chanting *the Morning and Evening Service* (Part 8th of the 'Library of Musical Knowledge') without a closer examination than the moment admits of.

Sonatas.
